

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

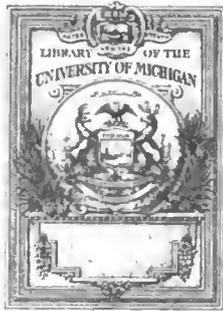

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Notes of the Soviet Government

(Chronologically Arranged)

The Index proper begins on page iii, but it was felt to be desirable to add as a separate list the documents issued officially by the Soviet Government, as for many readers these notes and appeals constitute the most important features of the collected volume.

| | | | |
|--------------------------------------------------------------------------------------------------------|-----|-------------------------------------------------------------------------------------------------------------|-----|
| Chicherin's Note to Poland's Foreign Minister Sapieha on Mutual Relations, December 1, 1920..... | 62 | Chicherin's Note to British Government on Trade Agreement, February 4, 1921 | 269 |
| Krassin's Note to England on Exchange of Civilian Prisoners, December 1, 1920 | 21 | Note of Karakhan (Chicherin's Representative) to Persian Representative, February 15, 1921 | 295 |
| Chicherin's Note to Curson on Trade Agreement, December 4, 1920 | 38 | Chicherin's Note to Lithuania on Sending International Troops to Vilna, February 16, 1921 | 295 |
| Krassin's Note to Lloyd George on Allied Protection to Wrangel, December 6, 1920 | 21 | Chicherin's Radio on Krasnodar Mutiny, March 14, 1921..... | 316 |
| Chicherin's Note to Lord Curson on Mutual Relations, Dec., 1920 | 318 | Proclamation to the Peasants on Tax in Kind, March 23, 1921.... | 448 |
| Chicherin's Cable to L. Martens, on Deportation from the United States, December 27, 1920 | 21 | Chicherin's Note to French Foreign Department on Repatriation of Russian Citizens, March 31, 1921..... | 438 |
| Note of the Soviet Government to the British Government on Trade Negotiations, December 30, 1920 | 222 | Chicherin's Note to Bulgaria on Mistreatment of Russian War Prisoners, March 31, 1921 | 438 |

And an Eight-Page Supplement, on glazed paper, with sixteen New Photographs from Soviet Russia.

New Buffer States in 1921?

IN OUR first issue for 1920, in an article entitled "1920 and After—A Promise and a Prospect", we pointed out the likelihood that during the year 1920 counter-revolution would be driven to find seats more and more to the westward, as the former bases of hostile military action against Soviet Russia would become more and more disinclined to be used as tools in the hands of the Western European imperialists, particularly French and English. At that time the public interest was centered chiefly on the sufferings of the population of the little republic of Esthonia, to which the Supreme Council of the League of Nations had granted autonomy, hoping that it would reward this distinction by consenting to be forever used as a reservoir of man power and as a foothold of intervening armies against Soviet Russia. But a few months earlier, Yudenich, preparing for the spectacular dash on Petrograd (which succeeded splendidly in its main objective—driving the ruble quotations in European and American foreign exchange markets to the "high" of six cents), had forced little Esthonian boys of fifteen into his army, after his and other similar enterprises had already wiped out most of the able-bodied males in the population of the little country. We then predicted that while Yudenich (who had been disastrously ejected from Soviet Russia in October, 1919) would make repeated efforts to involve the country in further operations against Soviet Russia, he would fail in all these, and the people of Esthonia would ultimately force their government—reactionary though it was, and still is—to make peace with the Russian Socialist Federal Soviet Republic, and that after Esthonia, all the other so-called marginal states would, one by one, find it advantageous to pursue a policy which whereupon the Allies would be

obliged to undertake to embroil other countries, lying to the westward, in the fratricidal conflict against the workers of Russia.

It is clear that the history of military operations on the Russian western front, as well as their diplomatic consequences, have followed the course indicated a year ago. Esthonia made peace with Soviet Russia in February, 1920, and during the summer she was followed by Latvia and Lithuania, who also signed complete peace treaties with Russia. The full texts of these treaties have already appeared in this weekly. In the fall, Finland followed (we shall print a translation of the treaty of peace with Finland this month). Rumania was on the point of signing a peace treaty with Soviet Russia, in spite of the furious threats and protests of all the reactionary powers in Europe, when suddenly unusual pressure was applied by France, and General Joffre himself was sent as an emissary to Rumania, bearing an ultimatum that seems to have destroyed all immediate hope of peace between that country and Soviet Russia. Allied machinations having been relatively successful in Rumania, Rumania is now even farther from peace with Russia than is Poland, which very probably—all Allied assurances to the contrary—will never again raise the cudgels in the service of the world reaction against the Russian workers.

While we have every reason to rejoice, therefore, in the fact that the general movement of counter-revolution during the past year has been westward, we are also obliged to record the fact that the second half of our prophecy has also come true. Counter-revolution, defeated in its effort to capture and exploit the first line of buffers against Soviet Russia, seeing them all make treaties with Soviet Russia, has gone to work to try its luck again, on the

next layer of land and treasure that lies to the west of the first cordon. Scandinavia and the small states of Central Europe are next to be tried. (It is, by the way, a fortunate omen that no one seems to speak seriously of dragging Germany into the struggle: it would seem that the German workers are at last understood to have learnt which way lies their own good.)

Last week, in our editorial pages, we printed comments from two daily newspapers in Europe, one Swedish and one Norwegian, on the proposed plan to send a "police guard" of three hundred men to Vilna, to police the city during the plebiscite—one hundred Danes, one hundred Norwegians, and one hundred Swedes. Our readers will find, on referring to these quotations, how eager the Scandinavian populations are to remain free from the struggle against Soviet Russia, and how fully they understand that this proposed borrowing of a few hundred men is merely the beginning of a comprehensive plot to mobilize all the resources of the Scandinavian countries in an outright war against Soviet Russia.

We need not point out to our readers by what mode the sending of this little force to Vilna would assume, in a short time, the proportions of a real war: the history of the last few years—the experiences of the Czecho-Slovaks in Siberia, for instance, who were to "police" the Trans-Siberian Railroad—is rich in such devices. But we must emphasize the fact that the new war would be a serious one. There would be the great advantage, for the sponsors of the new puppets, of the fact that there would be no land frontier across which the Soviet Government could send its propaganda; there would be the splendid resources, then serving the Allies, of the Swedish metallurgical and munitions industries, the Norwegian bottoms, the Danish port facilities and foodstuffs. And a population of ten million literate and comparatively healthy people, who could furnish physically sound soldiers, of good mental calibre.

But, on the other hand, the masters of Scandinavia, if they should thus do the bidding of the Allies and make themselves the potential hangmen of the Russian Revolution, would undoubtedly dig their own graves. For nowhere in the world has the message from Russia penetrated so deeply and found so many adherents as in the Scandinavian countries. These countries will be made more wretched by their intervention as counter-revolutionary forces than were—and are—the Russian border-states, for their populations are more largely industrial and much better fitted, therefore, for military exploitation.

It may be, however, that the Scandinavian nations would not need to fight long alone against Soviet Russia. It is possible that the defeat of their first troops, if they should really be coerced into sending troops into Lithuania, could be played up in such a way as to induce certain governing sections in nations not yet exhausted by war, to plunge the populations of those countries into the counter-revolutionary campaign. The recent reports of a

commercial treaty between Great Britain and Spain, the terms of which are not communicated to (or by?) the newspapers, may have some connection with a new adventure in Russia. It will be remembered that Spain was one of the countries originally mentioned as a possible source for a few hundred soldiers to be used in the prospective "police" duty at Vilna. And another little diplomatic incident, to which the press has also given very little attention, is the reported abrogation of the commercial treaty long in force (we believe since 1885) between Spain and Sweden, Spain being, by the way, the party denouncing the treaty. It is not at present certain that Great Britain is using Spain as a whip to force Sweden into line against Soviet Russia, but neither is it impossible that concessions made to Spain by Great Britain in the reported new secret commercial treaty may be an effective means of inducing Spanish diplomats to use their influence on Sweden by threatening a withdrawal of privileges provided for in the earlier commercial treaty between Spain and Sweden. As for the proposition to send Spanish troops to Vilna, it has met with a very warm and unfavorable reception in Spain itself, and no more is at present heard of it. It has either been completely laughed down by the Spanish people, or is being put over in secret.

Soviet Russia has done everything in her power, not only to remain at peace with her Scandinavian neighbors, but even to open up trade relations with them. The last of the three Scandinavian countries to indicate its unwillingness to enter into such relations is Norway. Last week's SOVIET RUSSIA printed from an official Norwegian source the documents passing at Christiania between Litvinov, acting for the Soviet Government, and the Norwegian Department of Commerce, and our readers have therefore had every opportunity to judge how ready the Soviet Government showed itself, in these negotiations, to meet every suggestion of the Norwegian Department of Commerce more than half-way, and how persistently the Department of Commerce admitted that its intentions were to avoid anything that might have the slightest appearance of a recognition of the Soviet Government. When Litvinov left Christiania on October 6, it was after he had done everything a man could do to make possible the inauguration of the commercial exchanges so important to the healthy existence of both countries. But the tone of the documents emanating from the Norwegian Department of Commerce is such that the presence behind Norway of some great foreign power "making suggestions" to the Norwegian Government is distinctly felt.

This Norwegian experience is all largely a repetition of what Litvinov had already had to face in Denmark. In that country he was able to work unmolested only so long as the British Government (represented by Mr. O'Grady) found it necessary to negotiate with him for the exchange of Russian and British prisoners, as well as other matters of interest to Great Britain and Russia. Denmark responded even more readily than Norway to pressure from without, and the r-

Litvinov left Denmark for Norway last summer there was no diplomatic officer of the Soviet Government in Copenhagen to represent Soviet Russia.

Not dissimilar has been the case with Sweden. Already in 1918 some trade had been effected between Russia and Sweden, some of it carried on across the solid frozen ice between the various parts of the Aland Islands. The Swedish Government, which had begun to look upon this trade with increasing disfavor, finally instructed Vorovsky, who then represented Soviet Russia for all the three Scandinavian countries, at Stockholm, to leave Sweden, which he did (January 30, 1919). The Soviet Government was obliged, after Vorovsky's departure, and after the duty of representing Soviet Russia in Sweden had devolved, unofficially, on Frederik Strom, a prominent Swedish Left Wing Socialist, to make frequent protests to the Swedish Government on such matters as propositions from the Entente to have Sweden take part in the blockade of Russia, attempts to recruit counter-revolutionary armies in Sweden, etc. With some of these expressions our readers are already acquainted. But very powerful voices against any use of Swedish means to frustrate the Russian workers and their government were raised within Sweden, by the Swedish workers themselves. Our columns, even in our first volume, have frequently reported such open protests from the Swedish people. One of the most characteristic bits of this kind, interesting also for what it disclosed of the attitude of the Swedish Government at the time, is the following, which we reprint from SOVIET RUSSIA of October 25, 1919 (Vol. I, No. 21):

A private telegram from Stockholm, dated September 1, is printed in German newspapers of subsequent dates. It runs as follows:

"As was reported some time ago, many hundreds of Swedish working-class families declared themselves ready to shelter undernourished Russian children, from Soviet Russia, in their own midst. The Swedish Red Cross also was prepared to dispatch a steamer to Petrograd for the purpose, and the Swedish Government gave the necessary permission for this transaction. Now the Ministry of Foreign Affairs declares that the English authorities have strictly prohibited the voyage of this steamer to Russia. A similar answer was given by the Government to the dele-

gation of the metal workers' union, who had requested a reopening of the commercial and diplomatic relations with Russia. The Minister for Foreign Affairs, Hellmer, declared that if any effort should be made from the Swedish side to break the blockade or to send ships under military escort to Russia, the Entente would frustrate such an effort. It was therefore impossible, for the present, to reopen relations with Russia."

The report which Soviet Russia recently printed (SOVIET RUSSIA, No. 16) of the latter incident was taken from a Swedish newspaper, and represented the minister as having declared that any effort to break the blockade of Soviet Russia on the part of Sweden would involve the country in war with the Entente.

We are firmly convinced that Mr. Hellmer spoke the truth: that Sweden was being prevented by England and France from opening up trade with Russia, even though Swedish metal workers were unemployed and their factories idle. And the situation at the opening of 1921 does not seem to be much different. England and France are preventing Norway and Sweden and Denmark from trading with Soviet Russia, even though England and France themselves are daily reported to be more ready to undertake exchanges of a commercial sort with Soviet Russia themselves. In fact, from the hazy way in which the newspaper reports (including the *New York Times*, Special Washington Article of December 19) now treat the Commercial Agreement between Soviet Russia and England, it appears very probable that the document has already been signed by both powers.

But the lesser nations may still earn approbation from their strong masters by keeping up, or entering, the fight. Accordingly a militaristic king has been restored to his throne at Athens, who will comply with the wishes of the Allies, and Rumania has been "permitted" openly to propose to equip an army for operations against Soviet Russia through Rumania. The southern "buffers" are preparing to be rebuffed (much against the will of their population, by the way), and the northern nations will not be permitted to live at peace unless they display a readiness to obey orders. But it is possible that events in 1921 may yet be such as to be ultimately of advantage to the working classes of all the small nations concerned.

Military Review

By LT.-COL. B. ROUSTAM BEK

INTO 1921, the Russian Socialist Federal Soviet Republic enters strategically victorious, in Europe as well as in Asia. Politically, the Soviet Government may be considered very powerful because its diplomacy is strongly backed by the formidable force of the Red Army, which in spite of the lull in the military operations on all engaged fronts still holds very favorable strategical positions, and is reinforced by fresh reserves instead of being demobilized. The latter decision of the Soviet Government is due to the bitter lesson which it learned in 1919 when, after the defeat

of Kolchak and Denikin, a part of the Red Army was demobilized as a fighting body, and turned into a labor organization. The result of this transformation was the sudden attack of imperialistic Poland in March, 1920, when there were not sufficiently strong reserves at hand in Soviet Russia to prevent the invasion. It was therefore necessary to form a new fighting body in Russia, not only in order to meet the western invaders, but also to put an end to their supporters in the south under the leadership of reactionary Wrangel. The lack of sufficiently strong reserves, fully equipped and sup-

plied, caused the suffering which the population of Southern and Western Russia, as well as Ukraine, had to endure. Carefully watching events in Western Europe, and far from thinking that the present cessation of hostilities is a sign of an approaching permanent peace, the Soviet Government knows well that the capitalistic coalition of world capitalism is by no means prepared to establish sincere friendly relations with the victorious Soviet Government. It is also fully realized by the leaders of the Russian proletarian republic that the danger threatening the Russian Revolution is still in existence and will menace Russia as long as the Allies, directly or indirectly, support the reactionary adventurers who are very eager to make a new attack against the Soviet Republic. B. Bakhmetiev, Balakhovich, Wrangel, Sazonov, Savinkov, Shkuro, and many similar to these usurpers and adventurers are still alive, they are enjoying the sympathy of their mighty protectors who approve their plans to overthrow the Soviet Government; and as long as there will exist in Europe the present rulers of the imperialistic countries inspired by such men as Winston Churchill, as long as the great powers, instead of keeping their repeated promise to decrease their military and naval forces, on the contrary strengthen and reinforce their army and navy, Soviet Russia must be and will be *en guard*.

The Great War which, it was said, had to crush forever German militarism, in reality not only did not put an end to it, but on the contrary created a new militarism throughout Europe and Asia.

Those who believed, at the time of the armistice, that the formation of the League of Nations would be succeeded by a general disarmament, are now very much disappointed at the way the league itself is busily arming its own; a very amusing army from a military standpoint, but still an international "army". The small states of Europe are rapidly increasing their military forces, and are easily obtaining, for the purpose, from the Allies any support for their fight against Bolshevism. The danger of Bolshevism which, as it is alleged, is menacing the whole world is a very comfortable camouflage for the great imperialistic powers to mobilize a new coalition of smaller states which, as they suppose, will support a new attempt at a counter-revolutionary attack on Russia.

Mr. Paul Scott Mowrer, the correspondent of the *New York Globe*, who recently finished a tour through eight states of Europe, firmly stated that "the military idea rules" in the southwestern part of that continent. Being very frank in communicating his observations, Mr. Mowrer offers a military observer very interesting material in estimating the real military strength which the Allies undoubtedly tried to create in Europe for a new war against Soviet Russia.

Fortunately for the Bolsheviki, the leading powers are acting as usual without any harmony at all, and instead of consolidating the small states into one strong military coalition which might serve capitalistic imperialism as a powerful fighting

body, they have produced such an atmosphere among the smaller nations of Europe that each of them has at last lost its faith in its protectors, and is looking with suspicion upon the others. For instance, in the Balkans, every country is armed against the possibility of attack from its neighbors. Such a situation rises from the fact that the larger powers can at present accord the smaller no real guaranty of safety, and, therefore, the latter have to look to themselves as best they can.

Studying the new military map of Europe with the change in the frontiers of the smaller states of Europe, as well as of Austria and Hungary, it is difficult to pass unnoticed the fact that only two countries, namely, Rumania and Jugo-Slavia, possess defensible frontiers, from a military standpoint, and still they are far from satisfied, and show their hostile attitude towards their neighbors. The other countries, Greece, Bulgaria, Czecho-Slovakia, Poland, Hungary, and Austria are practically separated only by artificial frontier-lines, which were only preliminarily traced either by the Peace Conference or by the "League", and in several cases by the respective countries themselves, in accordance with the strength of their armies at the actual moment.

Consequently, as Mr. Mowrer points out very aptly "they endeavor to conclude alliances with their neighbor's neighbor and for the rest, they build up their armies, gathering arms and material wherever and however they can" (*New York Globe*, December 9, 1920).

There are two classes of states among the smaller nations of Europe. Poland, Czecho-Slovakia, Rumania, Jugo-Slavia (Serbia), and Greece, considered members of the Entente, are allowed to develop whatever military system they choose, and are assisted materially in every way by the Great Powers, namely, Great Britain, France, Italy, and the United States. France, from the military standpoint considered the leading power of the Entente, was entitled to organize the armies of these countries, and is practically guiding their strategy. This activity of French officers in Europe was very important for the French Government which did not know what to do with demobilized troops after the great war, who sought employment. A great number of French officers and technicians are still serving with the Polish colors. The Polish army is purely a creation of the French who, after the inspection of the Polish volunteer forces raised during the Russian Revolution, finding this army too weak and imperfect to meet the Russian Red armies introduced, to the Poles, the conscript army suggesting two years of service, a plan rejected by the conservative militarists of the French War Office. It was a rare opportunity for the French experts to test that method in Poland, and they did it. The Polish army numbers about 600,000 men perfectly equipped, and well supplied with ammunition, artillery and other technical means for modern warfare, but suffers from a great lack of technicians, and, especially, of experienced superior officers, most of whom perished or became disabled

during the Russian campaign. The superior Polish command, when left to themselves, always suffered most tragic defeats, and appealed to the French General Staff for help. There was never full harmony between the French superior officers and those of Poland. Most bitter jealousy and discordance ruled them, and, on each occasion, when the Poles attained considerable success in the field, the Polish high command claimed absolute independence, and asked the French generals to withdraw, while at dangerous moments, excuses were sent to Paris and they begged for new moral support from the French strategists. The officers of the Czar's army, of Polish origin, played the most important part in the Polish command, and these are the bitterest opponents of the French methods of warfare and organization. The Polish officers of the German school are opposed to both French and Russian scholars, and there are a number of admirers of French military methods among the young Polish military elements. These three groups cannot agree with one another, and, consequently, cause great difficulty to the high command. Finally, the foremost military experts of the Entente came to the conclusion that the Polish army is far inferior to the Red Army of the Soviets, and that, in case of a new war between Poland and Soviet Russia, the Polish armies, if they were not supported by a powerful military alliance of certain bordering states, situated on the Russian frontier as, for instance, Rumania, they would be completely defeated by the Reds in spite of the moral and material support which Poland might expect from the Allies.

Czecho-Slovakia claims to be keeping a standing army of 150,000 men. This army arose under very exceptional circumstances, and its first deed was its unforgettable flight in Siberia before the victorious advance of the Russian Red Army during its dash on Kolchak. The part which the Czecho-Slovaks played in the Russian counter-revolution remained like a black spot in the history of the new republic, and is condemned by most of its population. We must not overlook the fact that the soldiers of Czecho-Slovakia are allowed to vote and that, in general, they are far from being extreme militarists. The Czechs and Slovaks are severely criticizing the two year's military system of service introduced among them by the French, and they are looking forward to the organization of a kind of people's militia. Present conditions in this republic indicate that it will not be long before events there will remove every possibility of any alliance with countries hostile to Soviet Russia.

Rumania also possesses a standing army of 150,000, but due to the necessity of keeping troops of occupation in Transylvania, the Banat, Bukovina, and Bessarabia there are now about 350,000 Rumanians under arms. As an organized body, the Rumanian army may be considered of very high standing. There exists the two year conscript method of service also, but the Rumanians are educated along the principles of so-called "easy wars". During the Russo-Turkish War, in 1877-78, their

famous entry in Plevna was a result of the superhuman sacrifices of the Russian army.

"The Rumanians," said the celebrated Turkish General Osman-Pasha, "entered Plevna by the open gates." During the Balkan War in 1912, the Rumanians attacked Bulgaria, at the moment when Bulgaria was defeated by her allies, and without any resistance marched on Sophia. Their invasion of Hungary and occupation of Bessarabia were accomplished in the period when the Hungarians and the Russians were struggling against their own counter-revolution. There was no opportunity for the Rumanian army to show its military quality except that it put up very feeble resistance to the Austro-Germans during the Great War. As an ambitious country, entirely under the influence of the imperialistic coalition of the west, and very faithful to the Roman Catholic Church, Rumania may join the Poles in their further possible aggression against Soviet Russia.

The Greek army numbers about 250,000 at the present moment, and can be considered an able fighting organization, well equipped and perfectly officered; but the interest which Greek policy took in Asia Minor enticed Greek strategy into such difficult positions that being confronted with its old enemy, Bulgaria, on one hand, and the Turks on the other hand, the Greeks have to fight for themselves, and will scarcely be able to sacrifice their military strength for any country whose actual interests differ from their own. The internal reaction in Greece, which is far from being in the interest of the Allies, and will bring serious troubles upon Greece, prevents this country from joining a campaign which the Allies may organize in Europe against Soviet Russia. Greece has lost her game in Anatolia, and after her army evacuates Smirna, the Greeks will be entirely preoccupied in organizing their state. It must not be forgotten that the shadow of revolution is already threatening the newly created Greek Empire.

The strongest and most dangerous nation among the smaller states of Europe is certainly Jugo-Slavia, under which name now is known the artificially enlarged Serbia. About eight years of continuous warfare created among the Serbians experienced military leaders who, even before the Great War, thanks to the exceptional geographical and political conditions of Serbia, were of very high standing, from a purely military point of view. The quality of the Serbian soldier has been well proven. The strength of the Serbian army presents about 150,000 well-trained, highly-disciplined and fully-equipped, permanent troops, led by excellent officers. The system of service is that of conscription for two years in the cavalry and artillery, and a year and a half in the infantry. In addition, in the new provinces, Croatia, Slovenia, Bosnia, Montenegro, Dalmatia, and the Banat, all men up to 33 years of age are being conscripted for two months' periods to accustom them to the Serbian method. Being disciplined on purely imperialistic lines, the Serbian farmers, like the German burghers and peasants, are extremely conservative and are entirely in the

hands of their military leaders, who they believe have reconquered for them their lost motherland. Had Jugo-Slavia been in a different geographical situation instead of being surrounded by enemies, the Serbian army would have been the first sent to Poland in order to fight Soviet Russia. The Serbian troops have shamelessly supported Russian counter-revolution, and we have heard nothing about Serbian soldiers having joined the Reds. Barred from Poland by Hungary and Czecho-Slovakia, in the presence of the neutrality of Rumania, the Serbian imperialistic government was absolutely unable to support the Polish campaign against the Soviet Government. All the efforts of the Allies to force Rumania to enter the conflict ended in complete failure. But had the intrigues of the imperialistic coalition succeeded, and had the Serbian army, together with the Rumanians, supported the Polish advance, the situation of the Red Army would have been very critical. Summing up the old situation of the smaller states in Europe friendly to the Allies, I arrive at the conclusion that the Entente may try to repeat its attack on Soviet Russia in the near future using for the purpose Poland, Rumania, and Jugo-Slavia, a military force representing about two and a half million men. But, fortunately for the Soviets, there exists the second group of smaller nations in Europe, namely Bulgaria, Austria, and Hungary which are considered enemy countries of the Entente. These countries, though they became the object of forcible disarmament and limitation of their military strength numerically, as well as by the method of volunteer enlistment, still represent a considerably strong fighting body in case of emergency.

Bulgaria, which is allowed a maximum of 20,000 soldiers and 10,000 military police, Hungary with about 35,000 soldiers, and Austria also with 35,000, are practically in possession of armies of much larger size. Bulgaria, for instance, gradually becoming revolutionized, is putting into effect a scheme of universal labor, which is nothing other than a military organization, stronger than it was in the past, and can mobilize a force equal in number to that of Serbia. Bulgaria, Austria, and Hungary never have surrendered their surplus arms to the Entente. The Bulgars and Magyars, faithful to their old traditions, are still hiding arsenals and weapons throughout their mountainous and woody country.

During my sojourn in Bulgaria, when I fought the Turks in Macedonia, being a leader of a Macedonian "cheta" of "comitajies" in 1903, then later during the Balkan War, I had several opportunities to inspect some of these secret arsenals, and I am sure that the ablest detectives in the world would be unable to find them without the help of one who knows, and if he succeeded, his discovery would be useless—he would never return from the place.

Jugo-Slavia and Rumania have to keep an eye on their neighbors who, though humiliated and vanquished, will have strength in case of emergency. More than half of their actual forces have to watch the frontiers of these neighbors, and, there-

fore, in joining the Poles, in case of a new war between Poland and Soviet Russia, both Jugo-Slavia and Rumania would scarcely be able to put in the field an army of one million men, which together with all the Polish military resources would present a force of two millions, a number scarcely to be compared with the five millions in the Red Army of the Russo-Ukrainian coalition.

On the other hand, in case of such a campaign in the west, Russian strategy would again be purely on the defensive, as it was in the past, with the difference that the rear of the Soviet Army is now in perfect order because the counter-revolution which existed at the time of the Polish war of 1920, is now completely beaten in Russia, while the rear of our possible enemies cannot be considered in a perfect state and fully guaranteed from turmoils.

In case of an unsuccessful campaign at the beginning, Russia can suffer only a series of tactical reverses, and finally would be strategically triumphant, first because of her numerical superiority over the enemy, and, secondly, because she can dispose of enormous space in order to accomplish great manoeuvres while retreating.

Quite the reverse can be said in regard to the enemies of Soviet Russia. A single tactical defeat inflicted upon them by the Reds would have fatal consequences for their imperialistic regime, namely, a revolutionary uprising in their respective countries which means a definite victory for the strategy of the Soviet Government.

In repeating their attack on Soviet Russia once again, imperialistic Poland, when in alliance with Rumania and Jugo-Slavia, would only hasten the establishment of the Soviet regime among the smaller states of Europe.

The Great War was the immediate cause of the Russian Revolution. The armed intervention of the Allied nations further strengthened the Soviets. The Polish war, backed by the powerful coalition of the leading imperialistic countries, increased the military force of the Russian proletariat.

Further intervention will leave Soviet Russia unshaken and can only give impetus to the revolutionary movement throughout all Europe.

New York, N. Y.

A Bibliography of Soviet Russia *

By A. C. FREEMAN

IT IS no longer accurate to say that judgment on Soviet Russia must be suspended for lack of reliable information. It is true that the censorship and passport restrictions imposed by the Allied governments have made communication with Russia difficult, and at times almost impossible. It is also true that American public opinion has been to some extent confused and misled by a vast amount of false propaganda, which has been circulated by interests hostile to the Russian Soviet Republic. This propaganda, however, has been pretty effectively refuted by the refusal of the Soviet Government to stay overthrown, by the refusal of Petrograd to stay burned, and by the refusal of various "famous revolutionists", supposed to have been shot by the Bolsheviki, to stay buried. Moreover, the very novelty and daring of the social experiment embodied in Soviet Russia has attracted a number of competent and impartial observers, who have recorded their impressions of various phases of the Russian Revolution in many books and articles.

For bibliographical purposes the history of Soviet Russia may be divided into three periods. During the first period, from the November Revolution to the late spring of 1918, we have an abundance of information from various sources. It is possible to construct a full and accurate picture of the first six months of the Revolution on the basis of books and articles which have been published in America. The next period, from the spring of 1918 to the fall of 1919, is distinctly barren. During this time the Allied governments enforced the policy of the *cordon sanitaire* in its utmost rigor. They apparently cherished the rather metaphysical conviction that they could annihilate Soviet Russia by simply refusing to acknowledge its existence.

The obvious power and stability of Soviet Russia, the decisive victories over Kolchak and Denikin, induced a considerable modification of this policy. The British Government especially relaxed its passport restrictions. From the fall of 1919 to the present time our knowledge of the workings of the Soviet Government has been freshened almost every month by the testimony of some new witness. Of late Russia has been almost overrun with "investigators", whose good intentions, in some cases, have surpassed their capacity to form objective judgments.

John Reed's "Ten Days That Shook the World" (Boni & Liveright) is undoubtedly the best book dealing with the early days of the Revolution. Combining literary brilliance with historical accuracy it gives a detailed, vivid, unforgettable picture of the notable events which attended the establishment of the Soviet Government. The author was in Petrograd and Moscow during these historic days; and his impressions are those of an eyewitness. At the same time he makes full use of newspapers,

documents and other sources of information in checking his personal observations. The work is crowded with valuable facts; and it describes the birth of the Russian Soviet Republic with the picturesque genius of a Carlyle.

A very fair and able interpretation of the Soviet Government is to be found in "Raymond Robins' Own Story", by William Hard (Harper's). Colonel Robins has absolutely no sympathy with Socialist economic philosophy. All the more impressive, therefore, is his eloquent testimony about the efficiency, good faith and representative character of the Russian Government. Inasmuch as it is a familiar fiction of reactionary propagandists that the Soviet authorities revel in breaking agreements with "bourgeois governments", it is interesting to learn that Colonel Robins never met with an instance of evasion and deception in all his dealings with the Soviet Government as head of the American Red Cross Mission. Colonel Robins also very effectively explodes the authenticity of that extraordinary collection of material commonly known as the Sisson Documents, and published for the purpose of branding the Bolsheviki as German agents. Colonel Robins testifies that Lenin offered to use his influence against the ratification of the Brest-Litovsk Peace, if Russia were given security against Japanese aggression and some reasonable amount of economic aid by the Allies. Further refutation of the Sisson Documents is contained in a *Liberator* pamphlet by John Reed, and in Santeri Nuorteva's "Letter to American Liberals" (Socialist Publication Society). In this connection it may be observed that Mr. H. E. Wilcox, an English correspondent of rabidly anti-Bolshevik sympathies, scouts the Sisson Documents as clumsy forgeries and presents conclusive evidence in support of his viewpoint in his book, "Russia's Ruin" (Scribner's).

An interesting philosophical commentary upon the early experiences of the Soviet Government is furnished by Etienne Antonelli, a French sociologist, in "Bolshevik Russia" (Knopf). M. Antonelli visited Russia as a French officer; and he can never altogether repudiate the Allied military prejudice against revolutionary Russia. Yet his whole attitude is generally sympathetic. The reasoned, farsighted conclusion of his book is worth quoting:

"I believe that Bolsheviki Russia will prepare for humanity the spectacle of a singular democracy, such as the world will not have known until then, a democracy which will not be made up of gradual conquests plucked by shreds from a plutocratic bourgeoisie, but which will build itself up out of the very stuff of the people, a democracy which will not descend from the powerful ones to the people, as in all present forms of society, but which will rise voluntarily and surely from the unorganized and uncultivated folk to an organizing intelligence."

* See also lists in *Facts and Fabrications About Soviet Russia*, by Evans Clark, New York, 1920.

An excellent, authoritative account of the problems which Soviet Russia was compelled to solve in the early days of its existence is contained in Leon Trotsky's work, "From October to Brest-Litovsk" (Socialist Publication Society). A large amount of informative historical material is also included in three pamphlets by M. Phillips Price, an English correspondent: "The Old Order in Europe and the New Order in Russia", "The Origin and Growth of the Russian Soviets" and "The Soviet, The Terror and Intervention" (Socialist Publication Society, New York).

The human side of the Russian Revolution is emphasized in the works of two American women: "The Red Heart of Russia", by Bessie Beatty (Century); and "Six Red Months in Russia", by Louise Bryant (Doran). Miss Beatty and Miss Bryant give a vivid, sympathetic picture of the life of the people in Petrograd and Moscow and of the soldiers at the front. They also describe their experiences during the November Revolution. Their works are full of fascinating, revealing sketches of Russia during her period of revolutionary travail.

Professor Edward Alsworth Ross, the well-known American sociologist, gives an intelligent, objective, impartial account of conditions in Russia at the time of the November Revolution in "Russia in Upheavals" (Century). Professor Ross traveled very extensively; his observations cover a wide field.

A distinctly specialized subject is admirably treated in "The Russian Theatre Under the Revolution," by Oliver M. Saylor (Little Brown). Mr. Saylor, who was formerly dramatic editor of the *Indianapolis News*, went to Russia in order to study the effect of revolution upon the drama. He arrived in Moscow on the day of the Bolshevik revolution; and remained in Russia for several months. His work reveals the extraordinary creative activity of Russian dramatists and producers under the regime, despite the handicaps imposed by war and blockade. Mr. Saylor is the author of another work, "Russia: White or Red" (Little Brown). This is an impartial account of general conditions in Russia. It includes a full explanation of the origin of the absurd "nationalization of women" canard.

A mass of documentary material is assembled in "Russia and Germany at Brest-Litovsk", by Judah Magnes (Rand School).

No bibliography of the first months of the Soviet Republic would be complete without a reference to Arthur Ransome's "Open Letter to the American People," originally printed in *The New Republic* of July 27, 1918, and subsequently reprinted in pamphlet form. Mr. Ransome defends the Soviet Government against the attacks of its critics with remarkable logical power and with passionate eloquence. His letter will remain a powerful testimony to the heroism and nobility of the revolutionary movement which inspired it.

It is Mr. Ransome again who relieves the barrenness, as regards historical material, of the period which sets in with the summer of 1918. His "Russia in 1919" (Huebsch) is a classic. With rare

insight and literary skill he sketches the condition of Russia in February and March, 1919. The book includes interviews with the Soviet leaders, descriptions of Moscow and Petrograd, vignettes of the life of the people. No book that has yet been written about Russia gives so human and lifelike a picture of the situation.

"The Bullitt Mission to Russia" (Huebsch) also reveals Russia in 1919 from the inside. This mission, consisting of William C. Bullitt, Lincoln Steffens and Captain Walter W. Pettit, went to Russia in order to investigate conditions and to open up tentative negotiations with the Soviet Government. The mission found the Russian Government eager for peace and willing to make considerable sacrifices in order to obtain it; but the negotiations broke down on account of the pertinacious hostility of the French and the irresolute attitude of the other Allied Powers. Aside from its diplomatic revelations the report contains valuable information about the situation in Russia in the early months of 1919.

The ill advised intervention of the Allies in northern Russia finds an able chronicler in Ralph Albertson, author of "Fighting Without a War" (Harcourt, Brace and Howe). Mr. Albertson was a Y. M. C. A. secretary attached to the forces in the Archangel district, and received several decorations from British and counter-revolutionist Russian officials. His exposure of the interventionist fraud is vigorous and convincing. He shows that the whole affair was carried out in British, not in Russian interests. He tells of many cases in which prisoners and suspects were shot by the British, and contrasts with this fact the excellent treatment which British prisoners were always given by the Bolsheviks.

With the fall of 1919 the Chinese Wall about Russia begins to break down. People are able to enter and leave the country with somewhat less difficulty; and the number of books steadily increases.

One of the first Americans to avail himself of the opportunity to visit Russia was Isaac McBride. Mr. McBride was compelled to enter Russia literally by "going over the top", as he was compelled to cross the battlefield of the Russian and Lettish armies. His work, "Barbarous Soviet Russia" (Seltzer) gives a spirited account of the courage and devotion of the Russian people, and of the herculean efforts of the Soviet Government to achieve at least a minimum of reconstruction in spite of the war and blockade. Many laws and decrees of the Soviet Government, together with other interesting documentary information, are included in a long appendix.

Several English observers went to Russia in the fall and winter of 1919-1920. Professor William T. Goode, in "Bolshevism at Work" (Harcourt, Brace and Howe), gives a brief but scholarly and highly valuable survey of the structure, aims and ideals of the present Russian Government. "The Russian Republic", by Colonel Cecil L'Estrange Malone (Harcourt, Brace and Howe), corroborates Professor Goode's impressions, and adds various original observations. Colonel Malone was espec-

ially impressed by the successful functioning of the Soviet program of social reform.

Another valuable witness is George Lansbury, editor of *The London Daily Herald*, who describes his Russian experiences in "What I Saw in Russia" (Boni and Liveright). Mr. Lansbury is a Christian and a pacifist; but he found a good deal of humanity and idealism in the leaders of Soviet Russia, even though most of them were atheists and unable to subscribe to his non-resistant views. His book very effectively refutes the silly counter-revolutionist story that he was hoodwinked, shown special favors and kept away from the masses of the people. He shared every discomfort that is characteristic of modern Russia, from short food rations to crowded railroad trains. He talked with opponents, as well as with friends of the present government. He saw a great deal of suffering; much more, for instance, than Mr. Bertrand Russell saw, or cared to see; but he justly ascribes it to its true causes: war and blockade. It is certainly not the fault of the Soviet Government that patients in hospitals are compelled to submit to operations without anaesthetics. Like other observers, Mr. Lansbury was profoundly impressed by the farsighted humanity of the measures taken by the Soviet authorities to ensure equal distribution of the scanty stores of food and clothing, with preference only for children and invalids.

Our knowledge of Soviet Russia during 1919 and the early part of 1920 is further enriched by the newspaper correspondence of Mr. Isaac Don Levine and Mr. Lincoln Eyre. Mr. Levine, whose articles appeared in the *New York Globe* and the *Chicago Daily News*, collected much interesting information during two flying trips to Russia in 1919. At a time when most of the American papers were putting Yudenich in Petrograd and Denikin in Moscow, Mr. Levine proved his capacity as a reporter by sending over despatches asserting that the majority of the Russian people were supporting the Soviet Government against the attacks of the counter-revolutionists.

Mr. Eyre's articles, describing life in Petrograd and Moscow, and general conditions in Russia, were justly celebrated by the *New York World* as a noteworthy journalistic achievement. Mr. Eyre showed little sympathy with the economic philosophy upon which the Soviet Government is based; but he gave a favorable account of its working out in practise. His despatches included interesting interviews with Lenin, Trotsky and Zinoviev.

A work that has been praised by journals of all shades of opinion for its accuracy, completeness and impartiality is "Russian-American Relations" (Harcourt, Brace and Howe). This book, which includes all available material about the diplomatic relations between Russia and America during the years 1917-1920, was compiled by C. W. Cumming and Walter W. Pettit under the auspices of the League of Free Nations Association. The case of the Soviet Government is greatly helped by this unbiased presentation of the truth.

As yet the Russian Revolution has not inspired

many biographies. There are two lives of Lenin which may be commended to the attention of those who are interested in the personality of this statesman. One is by Zinoviev, Chairman of the Petrograd Soviet, who was associated with Lenin throughout his years of exile. Zinoviev gives an excellent sketch of Lenin's career, emphasizing the development of his thought and his place among the great revolutionary thinkers and leaders of Russia. A more personal, anecdotal method is employed by Albert Rhys Williams in "Lenin: The Man and His Work" (Seltzer). Mr. Williams, an American correspondent in Russia during the period of the Revolution, relates a number of characteristic incidents which reveal various sides of Lenin's personality. Mr. Williams' book also includes the impressions of Lenin conceived by Arthur Ransome and Colonel Raymond Robins.

There are a number of books suited to students of the historical and sociological background of the November Revolution. Lenin himself is undoubtedly the foremost theoretical exponent of the movement which he led. In "The State and Revolution", written just before the November Revolution, he states his conception of the Marxist revolutionary theory and outlines the tasks which await the proletariat after it has attained power. "The Proletarian Revolution and Kautsky the Renegade", Lenin's side of a long-range debate with the well-known German Socialist on the respective merits of evolutionary and revolutionary Socialism, is intensely interesting, not only for its theoretical arguments, but also for its practical illustrations, drawn from the actual experiences of the Russian Revolution.

"The Proletarian Revolution", by N. Lenin and L. Trotsky, is an interesting collection of articles setting forth various aspects of Bolshevik theory, compiled by Louis C. Fraina. Trotsky's "A Paradise in This World" is an eloquent statement of the ultimate goal and ideal of the Soviet Revolution; while Lenin's "The Land Revolution in Russia" is a penetrating analysis of the agrarian problem. Two English works which present the underlying theoretical concepts of the Russian Revolution with measurable accuracy are "The Bolshevik Theory", by R. W. Postgate (Dodd Mead), and "Creative Revolution", by Eden and Cedar Paul (Seltzer).

By far the most significant literary product that has yet come out of Soviet Russia is Alexander Blok's poem, "The Twelve". Characterized at once by intense realism and high imaginative genius, it presents a most vivid interpretation of the wild, turbid, heroic early days of the Revolution. The poem is translated into English by Abraham Yarmolinsky and Babette Deutsch. Originally published in *The Freeman*, it is now available in the form of a pamphlet, printed by B. W. Huebsch.

Among magazines SOVIET RUSSIA may be recommended as a constant and reliable source of official and unofficial information about Russia. It has printed a large number of Soviet decrees, including a complete and accurate transcription of the much discussed Labor Laws of Russia. It has

also given the full texts of the peace treaties with Esthonia, Latvia, and Lithuania, together with the preliminary peace treaty with Poland. It has printed "Moscow in 1920", the book of Dr. Alfons Goldschmidt, of the German Independent Socialist Party delegation, the stories of McLaine and Clarke, and of other visitors to Soviet Russia. The military situation on the various revolutionary fronts has been accurately analyzed by Lt.-Col. B. Roustam Bek, the military expert of SOVIET RUSSIA. Moreover it contains a large amount of up-to-date news from Russia, gleaned from wireless despatches and other sources.

During the last two or three years *The Nation*, especially in its International Relations Section, has contained a fund of Russian material. It has reprinted the Russian Constitution, the Land Law and other important legislation of the Soviet Republic. During the last year it has also printed several instructive articles by Mr. Henry G. Alsborg, describing conditions in Russia and other parts of Eastern Europe.

Much valuable information about different phases of the Russian Revolution is also to be found in *The New Republic*. During the summer of 1919 this journal printed a number of well-informed and cleverly written articles by Mr. William Hard, in which the reasoning and characteristics of such well-known anti-Bolsheviks as Mr. Spargo, Mr. Sack and Mr. Bakhmetiev were analyzed. Mr. Hard's article on Spargo was a particularly illuminating exposure of some of the more glaring misrepresentations which appeared in Mr. Spargo's first book, "Bolshevism", and which he has repeated, with more or less variation, in his numerous subsequent publications. At the same time *The New Republic* printed an article by Dr. Joshua Rosett, entitled "Kolchak: Autocrat and Tyrant", which most effectively revealed the brutally despotic character of the Omsk government, so mendaciously praised by its partisans in this country as an experiment in pure democracy.

The New Republic made another valuable contribution to an understanding of the Russian problem by publishing an extensive analysis of the policy followed by the *New York Times* in handling Russian news. While it would require a work of encyclopedic proportions to correct all the prevarications and inaccurate reports about Russia which have appeared in this newspaper, *The New Republic's* supplement performed a useful service in showing how completely the news columns of *The Times* have been biased and colored by its editorial viewpoint. The policy of *The Times* has been imitated, in this respect, by the great majority of American papers. *The Springfield Republican*, *The Chicago Daily News*, *The New York American*, *The New York Globe* and a few radical journals stand out as honorable exceptions. Apparently *The New Republic's* searching critique stirred the slumbering conscience of *The Times*: for since it was published *The Times* has carried as prominent features the fair and interesting comments of Mr. H. G. Wells and Mrs. Clare Sheridan, even if it did

attempt to neutralize the effect of Mr. Wells' testimony by invoking the ponderous wit of Mr. H. A. Jones and new misrepresentations by Mr. Spargo.

The New Republic's last and most significant journalistic achievement, as regards Russia, is its publication of the articles of Mr. H. N. Brailsford. Mr. Brailsford stands head and shoulders above all the other foreign observers of Soviet Russia who have set down their observations in English. His technique of investigation is well nigh perfect. His articles are crammed with minute details of Russian life in town and country. At the same time he is fully capable of comprehending the Revolution in its broader aspects. He never commits the unpardonably stupid and unfair blunder of judging present conditions in Russia by English or American standards. Using the only approximately reasonable basis of comparison, the condition of Central Europe after the armistice, he asserts that there is less suffering from malnutrition in Russia than in Germany and Austria; although the latter countries, during the last eighteen months, have not been harassed by blockade and subsidized civil war. There is not a trace of bias or propaganda in Brailsford's writings; he presents a view of modern Soviet Russia that combines accuracy and impartiality with sympathy and discernment. More of the "truth about Russia" (a phrase often advertised but seldom realized) is to be found in Mr. Brailsford's account than in anything that has yet appeared in English. It is certainly significant that Mr. Brailsford, easily one of the best reporters, economists and historical students who have entered Soviet Russia, should have come back with such favorable impressions. The first of Mr. Brailsford's six articles appeared in the *New Republic* of November 24; anyone who wishes to gain a clear conception of what is going on in Russia today should read them all.

Before it eschewed politics and devoted itself exclusively to arts and letters, *The Dial* printed a number of interesting articles about Russia, including "A Voice Out of Russia", by Professor G. V. Lomonossov, who is now in charge of the task of reconstructing the Russian railway system. *The Liberator* may also be referred to for useful material, including correspondence from John Reed, and articles by Albert Rhys Williams, Mrs. Gertrude Tobinsson, and others. For those who read Russian a number of magazines and newspapers which have arrived in this country from Russia are available in the Slavonic Department of the New York Public Library.

So, by piercing together, comparing and correlating the testimony which already exists in English, it is possible to attain a fairly comprehensive view of the various stages of the Russian Revolution. Of course there are gaps in our knowledge, which can only be filled by freer communication, or perhaps by actual observation. But the books, pamphlets and articles mentioned in this bibliography provide abundant raw material from which to shape a reasoned, well informed judgment of the aims, ideals and achievements of the Russian Soviet Republic.

SOVIET RUSSIA

Official Organ of the

RUSSIAN SOVIET GOVERNMENT BUREAU
110 West 40th Street New York, N. Y.

This weekly will print articles by members of the Russian Soviet Government Bureau as well as by friends and supporters of Soviet Russia. Full responsibility is assumed by the Bureau only for unsigned articles. Manuscripts are not solicited; if sent in, their return is not promised.

EVERYWHERE in the world the nations are preparing for trade with Soviet Russia, and everywhere little makeshift devices are being set in motion to prevent the exchanges from beginning on a scale that would be commensurate with the great object pursued—the best interest of the populations of all the countries of the world. Norway discusses a draft agreement for trade relations with Soviet Russia, but suddenly discovers that she cannot continue the negotiations, and Litvinov leaves Christiania. German manufacturers are about to sell a large order of locomotives to Professor Lomonossov, Purchasing Agent for railroad material, but suddenly receive orders from somewhere that they had better find the objections as to prospects of payment a sufficient bar to further pursuit of the Russian market. English statesmen seriously take up with Soviet Russian representatives a draft agreement for commercial relations between the two countries, and meanwhile, even after probably signing the document themselves, continue in the most obstinate manner to aid in every way in rendering it difficult for other governments or financial interests to drive similar bargains with the Soviet Government. Even with the United States, which many persons had thought would be the first country to take up trade relations with Soviet Russia, the inauguration of the new exchanges has been proceeding with much slowness. But there has been some trade already between the United States and Russia, and Mr. J. B. Lewis, in an interesting article on the subject in the *New York Globe* of December 22, 1920, has this to say about the sales that have taken place:

"The American attitude, announced by Secretary of State Colby in his note to Italy on August 10, as being opposed to recognition of the Bolshevik Government, but in no way antagonistic to trading by private enterprise with Russia, is neither modified nor expanded by the action,* which is taken merely to facilitate commerce or exchange transactions. In the exchange market, the announcement did not even produce quotations on the dormant ruble.

"It goes without saying, however, that, in the interim since the American attitude was defined by Mr. Colby, there has been some new commerce between the United States and Russia. This has not been large and was undertaken by American dealers with trepidation, since Mr. Colby had emphasized that such transactions were at the risk of the trader, but some of these deals apparently have been so successful as to inspire the State Department to

* American permission to trade in rubles is meant.

make it specifically known that there was no actual hamper upon barter with Russia. What trading there has been has gone through Scandinavia, and some of it has been colored by the indirect system of consignment to Stockholm or Reval and reconsignment to the Soviet dealers."

MR. LEWIS' article, quoted above, is rather interesting also in what it says of the attitude of Italy. It is true that Italy has not much to send to Soviet Russia, and that England, in her possible eagerness to gobble up all of the Russian market for herself, would probably even go so far as to cut Italy off from coal and iron (of which Italy has none), in order to prevent her from becoming too active a rival in the race to be Russia's purveyor of manufactured products. Italy, by the way, has an economic and industrial capacity that may be of great value to Soviet Russia. It is a mistake to underestimate her productive capacity, just as it was a mistake, and still is a mistake, to keep on rehashing the old Menshevik argument that Russia's industrial development has not proceeded to the point where it would be possible to nationalize the industries and introduce a Socialist economy. Italy, like Russia, was both ruined and stimulated by the world war. Industrial establishments were developed in both countries during the war that far exceeded anything they had had before, and in many ways the new enterprises were of exceptionally large and efficient nature since they were established and expanded, in the respective countries, by the ablest Allied experts and engineers, with the purpose of enhancing the military power of the two countries for immediate use in the Great War. In the case of Italy, which depends more on foreign raw materials than any other country in Europe, the advantages of an adjustment to the Russian condition, which is just the opposite, are of course apparent. Italy, whether, as Mr. Lewis suggests, she is actuated by her Soviet sympathizers or not, is bound to become an important factor in the foreign trade of Soviet Russia.

SWEDEN is to have another opportunity to negotiate for Soviet Russian foreign trade. Professor G. V. Lomonossov arrived in Stockholm on Saturday, November 20, having come from Moscow, via Reval. He was accompanied by five prominent technical experts: the railroad engineers Filipov, Romanov, Professor Vladimir Fraehn, Lavrov, and Postnikov. Two of the latter are to remain in Sweden with Professor Lomonossov, to purchase locomotives and rolling stock in Sweden, while the remaining three have gone on to Berlin in order to supervise the execution of the contracts for the delivery of similar material by German shops which have signed such contracts. To pay for these deliveries, Professor Lomonossov brought to Sweden with him twenty tons of gold, on two small steamers chartered for the purpose. Later payments would be made with further consignments of gold, as well as of lumber and naphtha. In an interview given by Professor Lomonossov to a correspondent, short-

ly after his arrival in Stockholm (*Politiken*, November 23, 1920), the Professor said:

"But the deliveries indicated by us will depend entirely on a favorable course of the negotiations with the Swedish Government on the subject of the personnel of the Russian Trade Delegation.

"These negotiations between the Governments of Sweden and Russia have not a political character. Like any other business enterprise, however, the Soviet Government cannot send such great quantities of material to foreign countries without having an adequate commercial apparatus in those countries, and chiefly, persons who have its complete confidence."

The Stockholm office of Rosta (Official Russian Telegraph Agency) mentions in this connection the reports from London to the effect that Professor Lomonosov's gold is not pure, and again denies these reports. When the gold was shipped at Reval, the Rosta correspondent in that city had an interview with Gavrilov, Chief of the Gold Section of the People's Bank of Soviet Russia, who explained that when the ingots were made for the Siberian Bank, in Kolchak's regime, 0.25 per cent of bismuth was added to make the gold more workable, the necessary tools for such work being lacking; not 25 per cent, as was reported in the newspapers.

"This insignificant admixture of bismuth made the gold brittle, but did not in any way diminish its value. The Allies found it perfectly possible to receive it from Kolchak, but as soon as it passed to the Soviet Government, cries began to be raised over its '25 per cent' of bismuth, which, as we have said, is an outrageous invention.

"Equally untrue is the rumor, spread by a number of newspapers, to the effect that Soviet Russia's orders of locomotives in Germany have stranded. We have ourselves seen provisions of the Council of People's Commissars, proving the contrary to be the fact, namely, that the foreign orders for 1,200 locomotives are fully covered, and that payment for them by Russia is absolutely secured."

PROFESSOR LOMONOSOV had spent ten days in Moscow before his departure from that city for Reval and Stockholm. He was in Moscow while Mrs. Clare Sheridan was modeling busts, and left the city on the same train with her (November 5). Concerning general and other conditions in Russia, Professor Lomonosov had the following to say:

"A poor crop has hit the central and southeastern portions of Russia, but the fuel question, on the other hand, is incomparably more fully met than last year. The railroads are provided with naphtha, and wood, which was used for the railroads last winter, is being used now for the warming of houses only. All dwelling-rooms in Moscow are now heated.

"The crushing of Wrangel, which had already been accomplished while I was in Russia, opens up altogether new perspectives. There is no longer any such thing as a 'White' Russia.—It must be assumed that simultaneously with the insurrection of a new President of the United States, in March, 1921, commercial relations between that country and Soviet Russia will be resumed. This fact will change the entire economic situation of Russia.—To speak of economic bankruptcy in Russia, as is done by a portion of the press, is silly, for Russia's natural resources, her minerals, for instance, are inexhaustible. Soviet Russia's apparatus for foreign trade is improving day by day, and I am convinced that it will soon be as great a cause for pride in Soviet Russia as is already the Red Army, the world's first Socialist Army.

"The reports spread in the foreign press, to the effect that the Red troops crossed the Bay of Sivash over the ice, are

absolutely untrue, for the temperature in the Crimea is at present 20° Centigrade (about 64° Fahrenheit). Our troops waded across the Bay, sometimes up to their necks in the water, and some of them even had to swim. This heroic feat will go down as a landmark in the annals of war."

ENGLAND has or has not signed the Draft Agreement on Trade with Russia, of which the reader will find an older and approximate version in this issue of *SOVIET RUSSIA*. It looks, however, as if she had. Even the *New York Times*, in its editorial, "Trading With Russia" (December 22) while retaining the original aloofness from the idea of a complete plunge into the new trade, has already made great concessions in "spirit". Except in mind, however, she is still pure. English newspapers are far more open, however, in admitting the extent to which matters have gone between England and Russia. We regret papers are coming so slowly from England just now, but the following little notes will show the reader how much more realistically the English press takes the thing than does the American press:

1. "Trade With Russia" (London Correspondence—dated December 5—of the *Manchester Guardian*, December 6):

I understand that the reply from the Soviet Government to the trade agreement passed by the government and telegraphed to Moscow has now been received. It must necessarily consist of commentary on the wording of the draft, and will probably include some suggestions for amendment in detail.

All the main principles of the agreement have, of course, already been accepted by the two Governments in the exchange of Notes at the beginning of last July.

2. "The Russian Reply" (London Correspondence—dated December 8, of the *Manchester Guardian*, December 9):

There have been rumors of serious difficulties raised by the Russian Government against the draft trade agreement submitted to them. This, I am sure, is a mistake. It is true, however, that the Russian Government finds certain difficulties in the agreement as presented.

For one thing, there is the political preamble to the agreement, which has been added since the original draft and which the Russians regard as going beyond the principles agreed to in the exchange of Notes on June 3 and July 7. Probably the question is purely one of expression and interpretation, and in that case it should cause no prolonged difficulty. The political provisions, of course, are those relating to propaganda and hostile action.

Another point upon which the Russians wish to be reassured is what is to happen to any gold that they may deposit here to get trade started. As the law and the regulations stand at present it is easy to bring gold into this country, but forbidden to send it out. Here it is only exchangeable for sterling at par, and as the one-pound note is only worth about fourteen or fifteen shillings reckoned by the world market price of gold, this means that any gold deposited here under the restrictions would at once drop 20 per cent or more in value. This is not a very important point, because, as I have already stated, the Government are quite aware of it, and can easily provide for it by Order in Council. As it happens, however, it is not provided for in the agreement, and naturally the Russians desire that it should be provided for.

They do not intend, of course, to conduct their trade by cash payments in gold. They only intend to deposit gold as security until the return trade in goods comes through to balance their purchases. The gold, however, is important as a means of setting the wheels of trade.

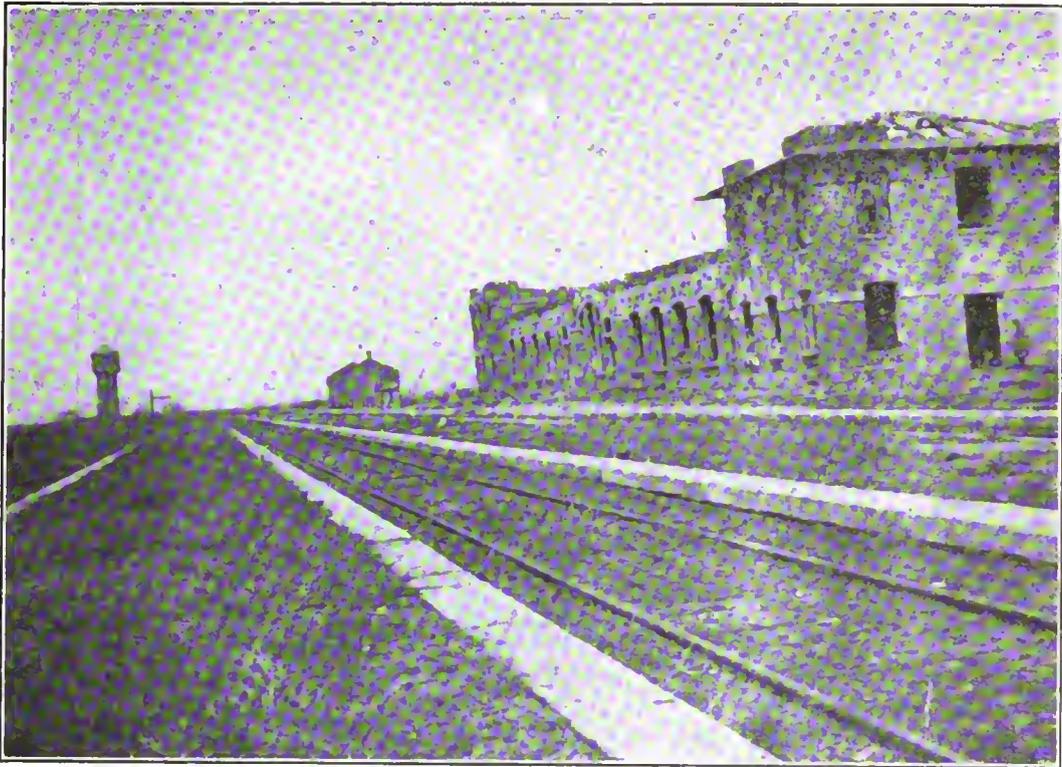

I. Electrical Power Station Destroyed by Denikin

The station is at Sarepta (near Tsaritsyn). A separate dynamite charge was exploded under each generating unit. The resulting destruction is quite complete. Note the steam cylinder blown up from within.

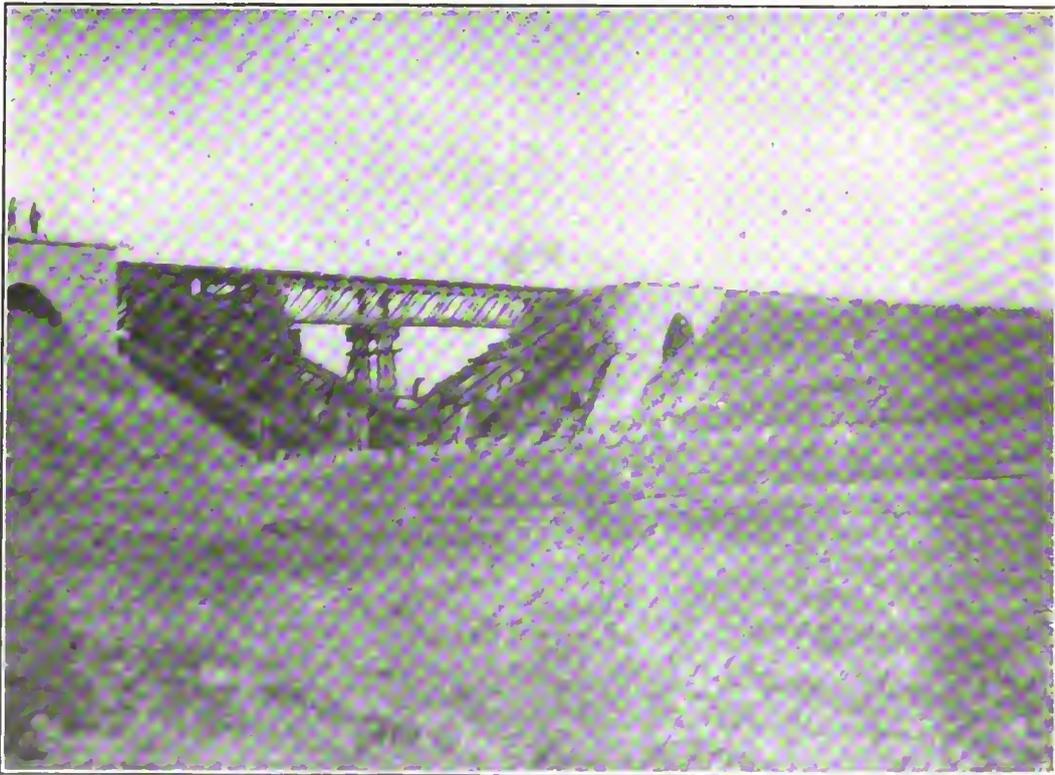

Destruction and Reconstruction in Soviet Russia

Professor Lomonossov, who was formerly with the Russian Soviet Government Bureau in New York, and who has recently again arrived in Stockho'm, Sweden, where he will attempt to open up commercial relations between Soviet Russia and that country, has just sent us the seven photographs with which this illustrated supplement begins. They illustrate better than words the way in which Denikin has tried to cripple transportation and industry in his native country. The other pictures show important statesmen in Soviet Russia, as well as social welfare activities in Soviet Russia.

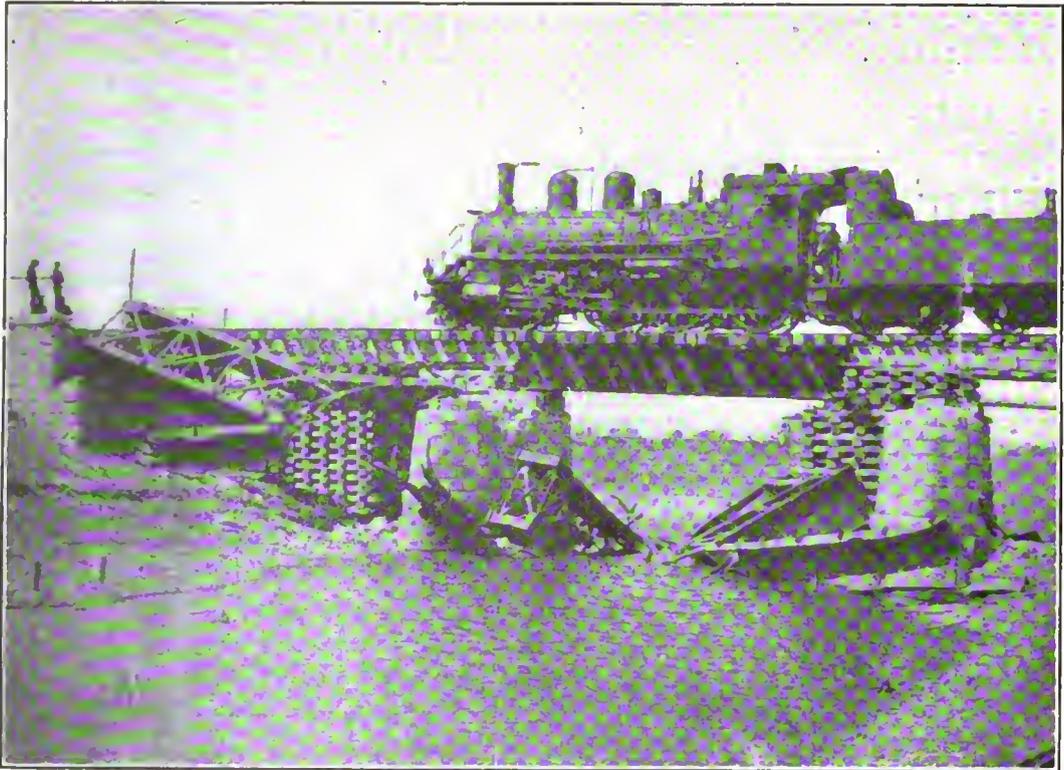

II. Railroad Station Destroyed by Denkin

Hundreds of stations were thus wrecked. This is a typical case of a station destroyed by fire.

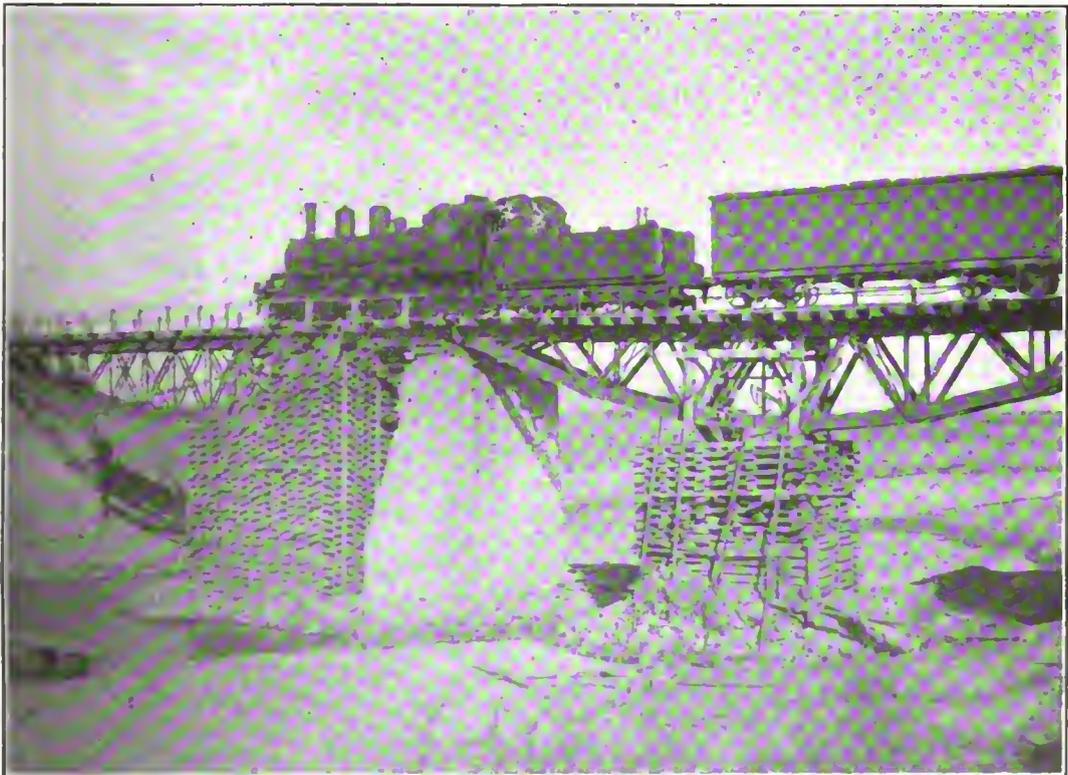

III. "104-Verst" Bridge

This bridge on the Tsaritsyn-Tikhoretskaya Line was blown up by Denikin. The temporary Soviet structure to replace it appears in the background.

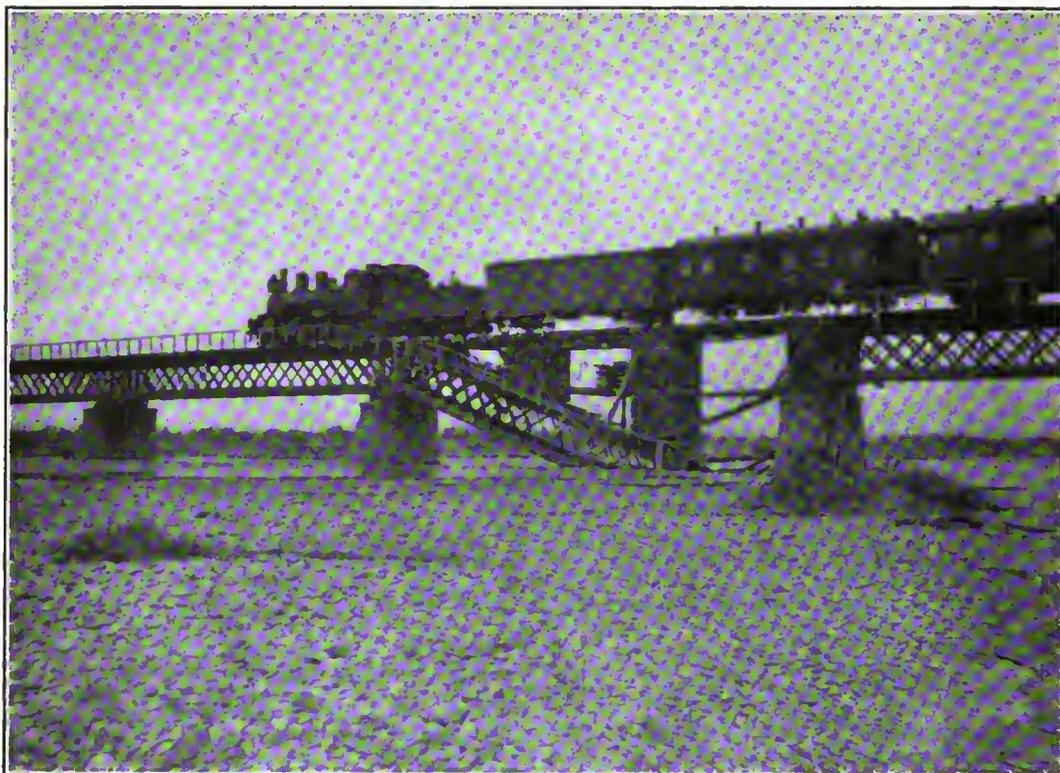

IV. "281-Verst" Bridge

On the Tsaritsyn-Tikhoretskaya Line. The original spans were quite completely wrecked, but steel girders and wooden beams, aided by the original stone piers, have enabled the Soviet engineers to put up a serviceable substitute. Note the temporary piers of wood.

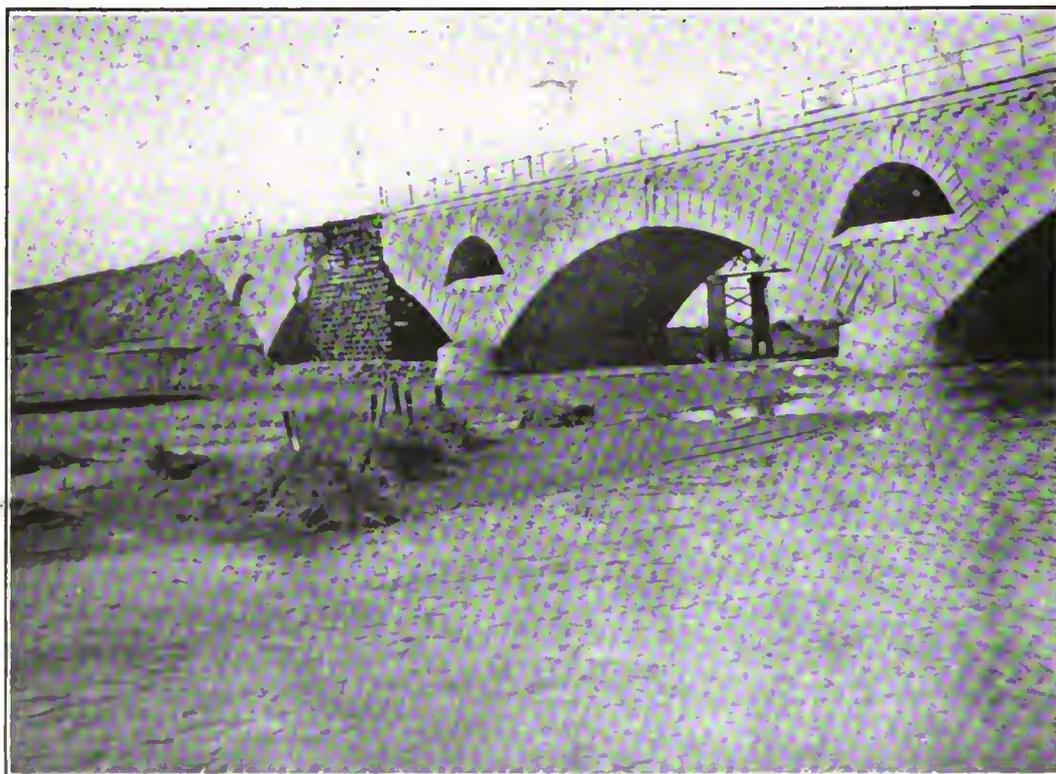

V. "321-Verst" Bridge

Another scene of destruction made by Denikin on the Tsaritsyn-Tikhoretskaya Line. He was particularly efficient in crippling bridges along this railroad. But here again the remnants of the original structure have been made use of in the new temporary bridge.

VI. The Sulakski Bridge

Another steel truss bridge destroyed by Denikin. The provisional Soviet structure, built on wooden piers, already in use. Not far from Rostov-on-Don.

VII. On the Line from Rostov to Vindikavkaz

This stone bridge is 296 versts from Rostov. The photograph was taken April 18, 1920, by Professor Lomonossov, who made a tour of inspection of the destruction wrought by Denikin. Rostov had been evacuated by counter-revolutionists a short time before.

VIII. Ryazanov

This prominent executive of the trade unions, who was one of the officials of that organization in London, before Kamenev was sent to England, to represent the Soviet Government, is here shown on an official errand, leaving his automobile.

IX. A Class in Free-Hand Drawing

Readers of SOVIET RUSSIA know how much work is being done by the Soviet Government to inculcate a love of art and the ability of artistic expression in the people of Soviet Russia.

X. A Kindergarten Class

Evidently the children have just been supplied with new toys.

XI. A Reading Circle

The workers have gathered in one of the many handsome apartments on the Isle of Rest (formerly *Kamenny Ostrov*), near Petrograd, which is the new recreation home for Petrograd workers. Other pictures from this island will be found in our Third Anniversary Issue (November 6, 1920).

XII. A. A. Yoffe

Former Soviet representative at Berlin, head of Soviet delegations to make peace with Esthonia, later with Poland.

XIII. A. I. Kamenev

President of the Moscow Soviet, Head of the Soviet Peace Delegation in London during a portion of 1920.

XIV. N. I. Podvoisky
Chairman of the Military Inspection.

XV. Russian Workers in Congress

A Group of Delegates to the Fifth All-Russian Congress of Soviets.

XVI. Muryalov

The Commandant of the Moscow Military District is conducting an inspection of new recruits on the Red Square, Moscow. The Church of St. Basil is seen in the background.

revolving, and it must be usable at the world market price of gold.

A third point of criticism concerns the recognition of private debts. As the agreement stands the Russian Government seem to think that it puts upon them the responsibility for the debts of any Russian private debtor whatever. That, of course, is an unlimited liability which I am sure the drafters of the agreement did not intend to ask Russia to assume. To take an absurd case, it would be ridiculous to ask the Russian Government to assume responsibility for jewelry obtained on credit by some Russian lady from a Paris firm.

All these points, as far as I can judge, are matters of the form of the contract—that is, of the exact drafting of the agreement. There is no reason to suppose that they will cause any difficulty or any long delay.

WE have received the following undated letter, contained in an envelope postmarked "Bennington, Vt., December 20, 1920." The signature "John Spargo" is typewritten:

To the Editor of SOVIET RUSSIA:

Sir.—I note your editorial comment, in the current issue of SOVIET RUSSIA, upon my articles in the New York Times in reply to H. G. Wells. Presumably, as a good Bolshevik, you have no regard for such a purely "bourgeois virtue" as ordinary honesty toward your opponents. In order to keep the record clear, however, I desire to direct your attention to two facts. They are:

1. In quoting from Dr. Goldschmidt (and *not* from SOVIET RUSSIA, by the way) I suppressed nothing which would have modified the passages quoted, and did not, therefore, misrepresent the author in any particular. As I made perfectly plain in my article, I quoted Dr. Goldschmidt's positive statement as to conditions because they confirmed certain accounts given by Wells and did not correspond with very different statements made by Brailsford. I did not say, nor did I intimate in any manner, that I considered the extract "particularly damaging to the Russian experiment in Communism." Your suggestion that I was guilty of misrepresentation by tearing text from context is, therefore, wholly unfounded.

2. I have not seen the review by Harold Kellock to which you refer. Perhaps the reason why I do not waste my time reading what that gentleman writes will be apparent to you when I say that, far from having "quoted" Antonelli in such a manner as to misrepresent him, as Mr. Kellock is said by you to have charged, I have never quoted Antonelli, in any manner, fairly or unfairly, directly or indirectly, in any book of mine. The statement is a lie.

Very truly yours,

JOHN SPARGO.

As for point 1, our original statement (SOVIET RUSSIA, Vol. III, No. 25), is not incorrect. As to point 2, Mr. Spargo is right in saying he did not quote Antonelli, and that the review by Mr. Kellock could not therefore have been a review of a book by Mr. Spargo. In *The Freeman* for September 8, 1920, Mr. Kellock treated, in an article entitled "Russian Contradictions", a book by Mr. William English Walling: *Sovietism*, together with a number of other books on Russia. We naturally find it difficult to distinguish between the authors of the many ill-informed books written about Soviet Russia, but assure Mr. Spargo that we should not, if our memory had not been at fault, have assigned to him errors that were really Mr. Walling's.

New article by Dr. Goldschmidt in next week's issue of SOVIET RUSSIA.

By the Kremlin Wall

To JOHN REED

"So, this is the place!
A simple plot—
Common earth
And graves made with iron shovels,
And here *they* rest . . ."

"But who is he that walks like a king by day?"

"Be silent, comrade,
Let us see his face."

"Has he come to rejoice
Where *they* sleep?"—

"Death by the Kremlin Wall!
Now I behold him unmasked!"

"And we thought him sour and drab,
Ugly and bloodless and grim,
Hallow-eyed, fearful, morose!"

"We never knew him before—
But this is the Kremlin Wall."

"He has changed his sombre robe—
How proudly he holds his head,
No more like a thief in the night.
True, it's the Kremlin Wall:
He may show himself here as he is—
What a kingdom is his by this Wall!"

"I'm thinking, comrade,
Here to lie at last
Beneath this common earth
And simple wreaths!—"

"What is a wreath but a wreath
Made with mechanical fingers
Where men have died before.
But here it's a different thing:
Twined with fragrance and love,
Kissed with burning lips,
Kept fresh with tears—
A nation's and a world's."

"Comrade, here to lie at last! . . .
You and I and He, the Silent One,
The red-robed king—"

"Do not stop; we are unworthy,
We who live.
Walk softly, hold your breath,
Each grain of dust is a God."

Further information as to protests from the people of the Scandinavian countries against being used as Allied cannon-fodder in the counter-revolutionary war, has just reached us, and will be included in the next issue of SOVIET RUSSIA.

The Educational Work of Soviet Russia

(An Interview With Lunacharsky)

By W. McLAIN

COMRADE LUNACHARSKY received us in his office in one of the Kremlin buildings, a building that at one time was a club for army officers. He bade us welcome and expressed his pleasure at our interest in the endeavors being made by Soviet Russia in the domain of education.

"Our first task," he began, "was the liquidation of illiteracy. Under the old regime only ten per cent of the population were literate, and by literate I mean able to read and write. We had before us a tremendous problem which had to be dealt with in a systematic fashion, if important results were to be obtained. We began in earnest, about the beginning of the year, when we separated the literates from the illiterates, and insisted upon compelling attendance at the elementary schools. The literates were mobilized and given a rapid course of instruction in teaching methods, based upon the American system of teaching from words rather than by means of formal grammar. Afterwards, these new teachers were given groups to teach.

"All literates have been called upon to attend evening schools for two months.

"By these methods, it is hoped that within three years, illiteracy will have been completely abolished. There have been certain important results already. For example, Petrograd, before the war, had a population of 1,600,000 with about half-a-million illiterates, now, with a population of between 800,000 and 900,000 there are no illiterates; Moscow had a million illiterates before and now has none. In the fleet, there were 25 per cent illiterates, and in the army there were but 15 per cent literates, but now in the combined services there are only about five to ten per cent who cannot read and write.

"However important it may be to give to adults some of the rudiments of education, the most important work is, of course, that of educating the children. We do not provide educational facilities for children under three years of age, but pay special attention to those from three to eight, who come within our first educational category. Under the old system, there were practically no schools for children of these ages, except a few kindergartens for rich children, and a few charity schools for poor ones. Within the last two years we have organized and maintained 200,000 of these schools, and have taken over all the old places. For all these schools we required a great number of new teachers, and as our methods of teaching were not the same as the old methods, it sometimes meant that those who had formerly been teachers were not as good as our new teachers taken from the working-class intelligentsia. The latter are whole-hearted in their work, and they are free from the old professional prejudices.

"All education is free and nationalized. There

are no private educational establishments. The state educates and maintains the children, providing breakfast, dinner, cloth for clothing, boots, books, etc. Not all is done that we wish to do because of the desperate position we are in, but food—difficult though it is to obtain—is provided. The supply of clothing, etc., is not so satisfactory. During the past two years, we have provided 18,000,000 yards of cloth and 9,000,000 pairs of boots, but as there are 10,000,000 children it is obvious that we are not doing enough. Even our present work must end if the wars continue. We are terribly short of appliances for physical culture and for the ordinary educational work. We can only supply one pen point for every 150 children, one pencil for the same number, and one exercise book for every two pupils. The situation is really desperate. We have several factories making goods for us, but of course all these things used to be imported. Now the demand is infinitely greater and the supply has been stopped by the blockade. I do not know what we shall do."

These last sentences were spoken with such sadness that they revealed to us how deeply the handicaps imposed on educational work by the wars and the blockade were affecting the speaker.

"In Europe and America, there are elementary and secondary schools. The instruction provided in the first named leads to an educational cul-de-sac, and only the richer children are able to go further, but even their education is not what it should be. In Russia we have inaugurated what we call the "Single Labor School" through which all children must pass.

"There are two stages in this school work, (1) for those between the ages of eight and twelve, and (2) for those from twelve to sixteen. Tremendous exertion has been necessary to put the scheme into operation. The peasants have been willing and eager to help. They have cut the wood, and helped to build the new schools, 11,000 of which have been furnished. There are still many for whom no schools have been provided, but we can say that 60 per cent of the children have a place to go to, and of course the towns have accommodations for almost all. It will take us seven years to build the real school buildings that we have planned.

"Schools suitable for our secondary scholars are not so plentiful, nor are the general facilities fully available. The old type secondary school was usually in the town area, and the workers lived outside the towns in the suburbs, so that our children are some distance away from these places, and have not yet got over the idea of associating them with snobbishness. To some extent we are getting around this by means of our school clubs, and it may be that in the future the club will so develop that it will become the school. At present our lack

of means forces us to limit the entrance of scholars to these schools to those who are bright and capable.

"Two ideas run through our teaching methods. First, that the scholar shall acquire knowledge by practice as well as by being taught, and second, that there shall be no specialization. Our children from eight to twelve years of age, learn by play, by excursions, by the care of animals, by doing woodwork, bookbinding and so on. We insist upon the importance of self-reliance and self-aid, and we encourage the children to do their own work and assist in the management of the schools. By means of a system of orderlies, who work in rotation and do the work of the day, we inculcate the principles of order, cleanliness, and civic obligation. We teach them science through their play and experience.

"In our secondary schools, we work upon the polytechnic method, and instruct by labor. There is no attempt made to produce specialized workers but a body of people with general knowledge. Our object is to industrialize education, and make it a part of our productive system. To this end we have established metal and woodworking shops in the schools, and the scholars are taken to visit factories. This attempt is hindered somewhat by the backwardness of Russia's economic development, but it will improve. We now have our central technical schools with other schools grouped round them.

"Our backward industrial development makes for an over-emphasis of the esthetic side of our work. We teach painting, drawing, and the like, not because we wish to produce a few fine painters but in order that children may be assisted to illustrate their ideas. Singing and music are taught, mainly because of the social value of music, and choirs are formed to enable this social aspect to work itself out. In our primary school music classes we simply arrange concerts and organize choirs, and then later, we pass on to the history and theory of music. Full attention is paid to the theatre, and theatres are established in all the schools. Lessons in labor are taught by means of plays, and often the costumes and scenery for the play are made by the children.

"Of what I might call our negative reforms the two most important are, (1) education is entirely secular, and (2) there is no segregation of the sexes. When coeducation began there was a great protest, but all are now agreed that it works very successfully.*

"A very important phase of our work is the agricultural school. The old government did nothing to foster agricultural development, but we have recognized that Russia's prosperity depends mainly upon it, and we have opened schools in every village. Last autumn we conducted an intensified educational campaign, and this autumn we intend to hold another. Our experts visit the villages and

train teachers in agricultural science, show the peasants how to use farm machinery, and instruct them in the newer methods of sowing and tending crops. Last year thousands attended these schools.

"Owing to the economic condition of the country we have had to make some concessions. Children fourteen years of age have to go to work, much as we regret it. However, they choose their own work, and a special Department of Technical Training has been created to watch over them. We have also been forced by facts to recognize that the standard of technical skill in Russia is low, and as soon as possible a general decree will be issued calling upon all workers between the ages of eighteen and forty to attend evening school for a five-month period of three and a half hours every evening. To assist them to do this, the hours of labor will be reduced from eight to six. We are preparing 200 courses of training to be started almost at once, although fully 1,000 are needed. We hope to get ten per cent of good workmen from these courses, and they can instruct others. We must have more engineers because of the great need for intensified output. Professor Zornov has worked out a shortened course from which all non-essentials have been eliminated. We are arranging to recall from the army all students who have reached an advanced stage in their studies, and we shall provide maintenance—housing and food—for them. By autumn we expect to have ready 2,900 engineers—using the term in its widest sense, and including railway and civil engineers—and these will be as many as would have left the technical schools in the ordinary way.

"In our advanced educational work, we are meeting with many successes. In the University of Petrograd, we are working out problems connected with X-ray, radium, medicine (particularly stomach troubles), photography, mining (in relation to the values of inferior coal), etc. Our universities all have a labor faculty which every boy or girl over 16 years of age may attend. Of course many of those who do attend have not a sufficiently high cultural development to profit by the regular curriculum, and so we have arranged preparatory courses for them. The Karl Marx University in Moscow has all its classes full and the attendance is good. The students are keen, practical people, anxious to learn and not as before merely anxious to secure certificates admitting them to posts. The professors say their work is happier working with this new material.* We had to abolish the old faculty of political economy because the old views of the social sciences were not in keeping with the new social order. We have a new department, and we have 1,000 students who are studying Soviet construction and organization. These workers will—after their one year course—go back to their own districts and become administrators or workers in

* We visited this university and saw the work in progress, including several scientific lantern-slide lectures, and the professors told us that the work was indeed happier. As I was at that time lecturer in Economics and History at the Scottish Labor College, I took advantage of the occasion to address the Moscow students.

* We visited schools in Moscow, Samara, Saratov, etc., and asked the teachers how coeducation worked out in actual practice, and we were always told that no sex troubles had arisen.

the local organizations. To assist in this department, every commissar lectures periodically on the work of his department. An English economist has told us that our students in these subjects are better than those elsewhere.

"We have opened libraries and reading-rooms everywhere, and a huge book fund has been collected to buy books. Owing to the scarcity of paper, we are obliged to concentrate our books in these public institutions. We have issued poetry, belles lettres and many scientific works. Most of our good printing used to be done in Germany and Esthonia, and of course we cannot import at present. Therefore, books cannot be sold, but must be read in the libraries and schools.*

"I must really deny the statement made in the American Press that our museums have been rifled. Probably the most brilliant aspect of the revolution is the way in which the palaces, museums and private collections have been safeguarded. In some of the remote country districts the peasants thought that when the squires had gone they could take the antiques and other treasures, and a little plundering went on, but it has been our special pride to take care of all the valuable collections throughout the country.** When the White troops came to Gatchina, the officer in charge called out to the curator of the museum, "Has it been plundered?" and the man took him inside to see tapestries which had been allowed to go moth-eaten in private houses, but which after the revolution had been removed to the museum to be preserved.

"We are not spending any time teaching domestic economy. Our view is that for the future we must concentrate on social and communal methods of cooking, feeding, and living so that the old methods are of no use to us.

"Our present difficulties make it hard for us to carry out some of our plans. Because of a shortage in cotton, for example, hundreds of textile mills are closed down and our skilled workers have gone back to the country where they will soon lose their skill. The country is always dragging us back to the old, and the town and the party are always working towards the new. We are trying to keep up the level of skill in the country districts by giving every encouragement to peasant art, and have opened many new schools of this kind.

"Yes, we have a great work in hand, we have done much during our period of government, but we have an enormous task before us. If we can get materials, appliances, books, etc., we can carry out our program, but it is very difficult to do without the things we need so much.

"Let me in conclusion again insist upon the two main ideas running through our 'Single Labor School System.' They are, self-aid, and the industrialization of education."

* Some books may be purchased, and I bought a number in the public bookshop in Petrograd.

** I was greatly interested when visiting the Kremlin to note what great care was being taken of the various objects d'arts, etc. Even the carpets were covered with white covers and all the furniture was protected in a similar manner. I went into several art galleries and museums, including the famous Tretyakov Gallery in Moscow and a wonderful private museum in Ivanovovo-Voznesensk, and all was in perfect order.

Preparing for Abolition of Money

U. Larin makes the following comment in *Pravda* concerning the transformation of the mode of life.

In one of its most recent sessions the Small Council of People's Commissars, on the basis of a report of the writer of these lines, adopted a resolution, and handed it to the Great Council, a resolution which commissions the People's Commissar for Finance to submit within one month, after consulting with the proper offices of the Council of People's Commissars, proposals for carefully elaborated decrees on the abolition of money payments for all products that are issued by the People's Commissar for Provisions, to the workers, employes and their families, as well as in general to bearers of cards of the first and second categories, as well as for the abolition of money payments for rent on dwellings of workers, clerks and their families, living in national or municipal lodgings, and finally, for fuel of all kinds that is provided to workers and clerks in institutions according to the plans of the Fuel Section. Also for gas, electric current, telephone, water supply, drainage, etc. At the same time, a commission was formed in the Council of People's Commissars, which was instructed to consider within one month the question of a complete abolition of money payments (including also so-called settlements), even between the productive Soviet enterprises and institutions.

In this way, very probably not later than January 1, this new, and as a principle, important improvement in the organization of the order of life of Soviet Russia will enter into force. Simultaneously, from January 1 on, our second regulation also will go into force,—the abolition of fees for railway transportation of all freight, and of almost all passengers, provided for by a decree approved August 24 by the Council of People's Commissars. This would include fares now paid by workers and clerks who are on leave or are traveling to their work, to their schools, to their congresses or with excursions of their unions.

"All citizens able to work have the right to employment at their vocations. . . ."

Section 10, Article II, of the Code of Labor Laws of the Russian Socialist Federal Soviet Republic.

THE LABOR LAWS OF SOVIET RUSSIA

New edition, translated from the official Russian text, with a supplement on *The Protection of Labor in Soviet Russia*, by S. Kaplun, of the Commissariat of Labor.

Echoes of Rasputin in the North

By John S. CLARKE

"If you can't be a star in the sky, then be a lamp in the chamber."—George Eliot.

THE largest lighters I have ever seen in any part of the world are on Lake Onega. They convey merchandise—little of it these days—and timber to and from the few villages lying around the shores of the lake. At Petrozavodsk they are discharged at a powerfully built wooden jetty, at the shore end of which there still stands a small shrine at which one may, by leaving a ruble or two, light a holy candle to the glory of the virgin and the profit of the soul. The harbor lies at the foot of the main street some two hundred yards below the huge white church, which, like most Russian buildings, is a pitiable imposition of wood, stucco, and white paint at close inspection.

Within there is wealth in plenty to be sure. Thousands of ikons hang on the walls, very many of them encased (with the exception of the face and hands of the image) in shells of silver studded with almost every kind of precious stone. The amazing and vulgar paraphernalia of ritualism everywhere conspicuous, ikons and other pictures grotesquely painted, images, candlesticks, candelabra, sacred carpets, vestments, crooks (some of them two-legged) and holy of holies, simply nauseates one with an unutterable disgust. The one consummation devoutly to be wished for by a lover of life and health and freedom, when he finds himself inside of a Greek church, is to get outside of it again into the pure air.

My second stay in Petrozavodsk was more profitable than the first. We reached it at three o'clock in the morning and left it again at eight o'clock at night. After breakfast in the train Sergeyev asked me to come with him to town, he not knowing the road. We set off together, along the line and over the sandhills, past the cemetery, and then down the steep hill. Sergeyev was as charming a companion as one could wish for. A thorough "Slav" with clean-shaven, strong-looking healthy face, a perfectly healthy mind, a vigorous body, and an extraordinarily voluble tongue. On this latter point he confessed that his loquacity was intentional, inasmuch as being en route for England and in the company of an educated Englishman, he wanted to practice speaking in English to gain fluency, and to take advantage of my companionship to be corrected and coached.*

Sergeyev's life had been, like that of most of the members of the Russian Communist Party Executive, a hard and thorny one. He was arrested in 1907, and after the usual travesty of a trial, in which he was defended by no other than Alexander Feodorovich Kerensky, he was sentenced for life and sent to Siberia. He escaped and walked seven hundred versts through Siberia, working at one

place as a ferryman for eleven months, at others as a casual laborer, exploited the more mercilessly by the peasants and woodsmen because they knew him to be an escaped "political". Eventually he reached Australia, where he worked for some years on the railway (hence his good grip of the English language), returning home in 1917 to help in the Revolution. His subsequent career was meteoric. He organized the Red Guards in the south against the attack of Kaledin, the Cossack ataman, who, unlike Kerensky, was honorable enough to blow his brains out rather than sacrifice his principles or escape alone. By means of a clever ruse successfully carried out, Sergeyev was instrumental in saving a town from being sacked and its population massacred by Kaledin's "beasts", as he called them, and in clearing the entire railway line to Moscow. He became one of the most valuable organizers of the Russian Railwaymen's Union, and is at present the chairman of the All-Russian Council of Railway Workers and a member of the Executive of the Communist Party.

Our chief topic, of course, was about various aspects of the Revolution, on which subject I let Sergeyev talk for five solid hours, only opening my mouth to correct his English, as he had previously requested me to do. He was particularly interesting on the subject of Gregory Rasputin, whose career, almost cradle to grave, he was well acquainted with.

It is a common mistake to suppose that Rasputin only lent his malignant influence to the reactionary forces during the great war period. This arch-conspirator, debauchee, and fraudulent saint began his sinister operations more than ten years ago. He was born of Siberian peasants at Tobolsk in 1873, and in his childhood exhibited the precocious sexuality which later earned him the opprobrious nickname "Rasputin", which virtually means "dirty beast". Gregory accepted it and actually adopted it as his surname throughout life. He was expelled from a theological academy for immoral practices and became a tramp, being virtually arrested for horse-stealing. Gifted with a glib tongue, large luminous eyes set behind shaggy eyebrows, and a somewhat pugnacious disposition, he succeeded in passing himself off as a "monk", a prophet, or saint to the credulous and superstitious peasantry, affecting to cure their bodily ills and save their souls at the same time by intercession with the Almighty. How he landed at Court and became the master of Czar Nicholas II is an interesting story to Communists. It appears that after the disturbances of 1905 the Russian aristocracy were so stricken with panic that superstition increased among them to a tremendous degree. Religious revivalism then received a stimulus, and was seized upon by certain astute nobles as a means to obtain political ascendancy in Court circles.

To play upon the superstitious fears of the weak

* He spent a very strenuous time in Petrograd trying to teach me Russian.

Nicholas and his family, until he was completely under the thumb of the plotters, a tool was necessary—one that was absolutely ignorant of political intrigue, as plastic as putty, and yet could exercise a will of sufficient magnetic power to become master of the Royal circle and so influence it in any way desired. Rasputin was the ideal man. His notoriety as a faith-healer, his impostures carried out so successfully among the peasants, and his peasant backwoods origin, were all in his favor—and, so they thought, in the favor of the plotters. Accordingly Rasputin was interviewed in prison and accepted the job.

The plot progressed rapidly. The strangely-garbed mysterious high priest of a new cult established himself in Petrograd, attracted numerous women admirers through the "puffing" exertions of the Court plotters, and proceeded to preach a new religious doctrine, the genuineness of which was abundantly proved by the performance of "miracles". Rasputin knew the tricks of the trade too well. His dogma was that no one could ever hope to be saved unless he had already given grounds for salvation by committing a sin.

As might be expected, from Gregory's salacious past, the "sin" especially elaborated for ladies was of a character which enabled him to assist them in the commission of it. Morbid religious mania has almost always been wedded to sexual perversion in some form or other.

Soon Rasputin's holy fame reached the Palace of the Czar, as it was intended to do, and he was commanded to appear there and intercede on behalf of the feeble, delicate heir-apparent—the Grand Duke Alexis, the only baby-boy born to the royal couple during their wedded life. This child was born on August 12, 1904, and like most royal infants was a sickly creature born with a congenital disease which developed to haemophilia—a complaint so highly dangerous that a mere scratch often leads to bleeding to death. The Salic Law, operating in Russia, made it very necessary that the boy's life should be saved at all costs, and Rasputin working with drugs obtained from one Doctor Badmaev on the sly, succeeded in restoring some apparent measure of health to the child—attributing his results to his "saintliness" of course, and not to material means. This firmly established Rasputin in the affections of the Empress Alexandra, and he was practically made a member of the family in order to be always on guard over the child.

It was then that the astonishing astuteness or cunning of Rasputin showed itself. Instead of the plastic tool to be used as they thought fit, the conspirators, who had pitchforked Rasputin into his place of power, found that he intended to manipulate that power solely for his own ends. Threats to expose him only drew forth the counter threat from his sham holiness that if they did not do exactly as he wished he would encompass their destruction.

By the extraordinary influence he wielded over

the Czaritsa, partly superstitious and partly through working on her maternal affections, Rasputin became the supreme master of Nicholas Romanov, and virtually of all Russia. His amazing career is like a page torn from medieval history. He never washed himself or cut his finger nails; he kept to his peasant garb; his language was of the coarsest, and he eschewed every form of refinement—eating with his filthy fingers and insisting on being kissed on the tips thereof by his aristocratic devotees. Sergeyev averred that the impostor did these things out of sheer contempt for the ruling class whom he, a peasant, had become the master of.

To show how powerful he actually was it is but necessary to instance the attempt made to have him banished. Every time he departed, the studious doting of the child stopped, supernatural fear took possession of the Czaritsa, and Nicholas was compelled to entreat him to return.* The Rasputin scandal grew and grew, as one high personage after another discovered that his wife was lending herself to the lubricity of this sensual monster, but Rasputin only laughed at their threats, and actually chaffed them on the physical shortcomings of their wives. When the war broke out Rasputin had an office already established in Petrograd, where for high fees he engineered appointments from the lowest services in the state to the very highest ministries.

During the war he became a Minister without portfolio, and his reactionary advice was acted upon on every occasion. Word was sent through the Russian Revolutionary movement that Rasputin was to be left severely alone, as his policy was suicidal to autocracy, and that the hatred of him among the nobility and bourgeoisie was so intense that his fate could be safely left to them. Sergeyev said, as a matter of fact, that Rasputin was the most valuable asset the Revolutionary movement possessed. His reactionary schemes and measures were dividing the ruling class into warring factions, and his licentious roguery was stirring up a bitter antagonism to his statecraft.

Everyone remembers the climax to the career of this scoundrel and voluptuary. Lured to the house of Prince Yussupov, that gentleman put five bullets into his giant body, which was then thrust into a hole in the Neva ice. The bereaved Empress later had the carcass buried in the Palace garden, and caused a mausoleum to be built over the grave.

From Rasputin the conversation drifted to priestcraft in general, and Sergeyev told me that at one period in the history of the Bolsheviki the feeling

* "Allusions to Rasputin were very disagreeable to the Czar. He must have felt that there was truth in the warning that gossip (concerning the influence attributed to Gregory) was undermining his position, and at the same time he had given up all intention of banishing Rasputin; therefore he hated to be reminded of the matter. So distasteful was this subject to the Czar that he used to dismiss anyone who referred to it, and when Prince Vladimir Orlov, who was one of his most intimate friends, and had never before touched on this sore point, considered it his duty to warn the Czar of approaching danger, and told him in 1915 that Rasputin ought to be sent away, he received a letter from Nicholas II in which the latter ordered him to join the Grand Duke Nicholas in the Caucasus, and declined to see him before his departure."—Baron Graevenitz.

against orthodox Christianity was so great that some branches demanded the passing of a disciplinary measure authorizing the expulsion from the Party of any Communist who, from love sentiment, compromised with a half-religious sweetheart by submitting to the church marriage ceremony. Reaching the shores of the lake, we both sat down near the gaudy little shrine, Sergeyev's tongue going "nineteen to the dozen", much to my edification and delight. Suddenly he thrust his hand into his great-coat pocket and produced a small package, which he handed to me with the remark: "You must be hungry already; take this, I will have mine in a little while!"

I opened the parcel, and to my utter astonishment beheld a brown flour-made sausage roll. Never did human eyes gaze with such rapture upon a groaning table as mine did upon that delicacy, that food for angels, that ambrosial-bedewed sausage roll. Within two minutes it was gratefully entombed in the stomach of a famished Britisher, who skilfully licked every stray crumb adhering to the wrapper, and sighed in concert with the melancholy moanings of the Onega waters. With querulous eyes I looked at my companion, who still pattered away, and thanked him for his gift with a vehemence that made him smile. "If you have finished it," he said, "I will begin on my dinner." Once again he dived into his pocket, and after much blind searching brought to light—a small piece of chocolate no larger than a Woodbine cigarette packet, which he proceeded to devour.

It is a small incident, no doubt, but worth the mention, for it exemplifies the new spirit of Russia. Chocolate and sausage rolls in war-afflicted, blockaded Russia are as scarce as angels' visits to the planet. In Sergeyev's case they had, no doubt, been given him when he left Petrograd by some admiring comrade, and carefully hoarded by him until that moment. He knew right well that had I known there was but one pastry I would have blankly refused to eat it unless he shared it with me. To be perfectly certain that I would not only accept it but enjoy it, and to defeat any suspicion that he was acting altruistically, he adopted the subterfuge of suggesting that he had another in his pocket. I remembered an incident that occurred at Moscow during supper time after a Congress meeting one night, which drew into relief by contrast the perplexing contradictions of what is known as human nature. I was sitting opposite to Herr Dittmann, the German "Independent", a dandy and a violent anti-Bolshevik. Everyone received three little sweetmeats on this occasion in lieu of sugar to sweeten the "chi" with, and Dittmann had not yet touched his. Flynn, an American Communist, occupied the chair next to the important Dittmann, and in a moment of mental abstraction picked up one of the German's sweets. Dittmann glared at him but said nothing, until the comrade who waited upon us brought Flynn his own sweetmeats, when to my utter disgust Dittmann intercepted them with "Mein! mein!"—pushing his own two across to Flynn. I was blazing with wrath myself at the

childish display of miserable covetousness and greed, and picking up my own sweets I deliberately dropped them into Dittmann's saucer with a malevolent grin and left the table.

And this is the Kautskyan hero who recently led the opposition against affiliation to the Third International in Germany—a creature whose Second International microscopic soul could swell to exploding because an alien "comrade" innocently swallowed one of his little lollipops.

From the lake side Sergeyev and I drifted to the outskirts of the little town, visited the prison, the power station, and finally the Communist Party headquarters. Here I witnessed another exhibition of the almost preternatural versatility of my worthy comrade. He had stirred audiences in my presence with his oratory, he had interpreted many of my own speeches, he could lead battalions to battle and plan successful military manoeuvres, he was a brilliant organizer of labor, a clever business expert, and was, at the moment, the chairman of a diplomatic mission to foreign countries.

The moment our greetings were over in the editorial office of the Communist paper; we were asked to write messages of encouragement for the next issue. Without a moment's hesitation Sergeyev sat down and rapidly filled sheet after sheet with his handwriting, working away for at least one and a half hours. My own effort, naturally, had to be brief, for I was whisked away and treated to a comprehensive account of the Revolutionary history of Petrozavodsk, its battles, defences, heroes, and future expectations. With a bundle of books, pamphlets, papers, posters, and photographs, liberally bestowed upon me by the comrades at Petrozavodsk, which, alas! were as liberally plundered from me by the Norwegian police, we bade farewell and wended our way back to the train.

Bound Volumes for 1920

Volume II, of which a number of copies, splendidly bound, are still to be obtained by persons desiring them, is sold at five dollars. Check or money order should accompany order. Volume I (June-December, 1919) is sold out and will not be reprinted. Volume III will be bound, with title-page and index, as soon as the issues have all appeared (January 1, 1921). Readers may place orders now for Volume III, and should send the cost of the volume—five dollars—with their orders:

SOVIET RUSSIA

Room 304

110 W. 40th St.

New York, N. Y.

The Text of the Commercial Treaty

[The text of the trade agreement the signing of which, between Soviet Russia and Great Britain, is still in doubt, is not in our possession. The following is the text proposed last summer, before negotiations were broken off, which may be of interest to readers as giving a general idea of the points discussed. It was published in London on October 5; we take it from the "Manchester Guardian Weekly", of October 8.]

Draft Trade Agreement between His Britannic Majesty's Government and the Russian Soviet Government.

Whereas it is desirable in the interest both of Russia and the United Kingdom that peaceful trade and commerce should be resumed forthwith between these countries, and whereas for this purpose it is necessary pending the conclusion of a formal treaty between the Governments of these countries, by which their permanent economic and political relations shall be regulated, that a preliminary agreement should be arrived at between the Government of the United Kingdom and the Russian Soviet Government.

The aforesaid parties have accordingly entered into the following agreement, without prejudice to the view which either of them may hold as to the legal status of the other, and subject always to the fulfilment of the conditions specified in the British Note dated June 30, 1920, and accepted in the telegram from the Russian Soviet Government dated July 7, 1920, with regard to the mutual cessation of hostilities and propaganda directed against the institutions or interests of the other party, and the repatriation of prisoners.

I

Both parties agree to remove forthwith all obstacles hitherto placed in the way of the resumption of trade between the United Kingdom and Russia in any commodities (other than arms and ammunition) which may be legally exported from or imported into their respective territories to or from any foreign country, and not to exercise any discrimination against such trade as compared with that carried on with any other foreign country.

Nothing in this provision shall be construed as overriding the provisions of any international convention which is binding on either party, by which the trade in any particular article is regulated.

II

British and Russian merchant ships, their masters, crews, and cargoes shall in ports of Russia and of the United Kingdom respectively, receive in all respects the treatment, privileges, facilities, immunities, and protection which are usually accorded by the established practice of commercial nations to foreign merchant ships, their masters, crews, and cargoes, visiting their ports.

Provided that nothing in this article shall impair the right of either party to take such precautions as are authorized by their respective laws with regard to the admission of aliens into their territories.

III

Each party may nominate such members of its nationals as may be agreed from time to time as being reasonably necessary to enable proper effect to be given to this agreement, having regard to the conditions under which trade is carried on in its territories, and the other party shall permit such persons to enter its territories, and to reside and carry on trade there, provided that either party may restrict the admittance of any such persons into any specified areas, and may refuse admittance to or sojourn in its territories to any individual who is *persona non grata* to itself, or who does not comply with this agreement, or with the conditions precedent thereto.

Persons admitted in pursuance of this Article into the territories of either party shall, while residing therein for purposes of trade, be exempted from all compulsory service whatsoever, whether civil, naval, military, or other, and from any contributions, whether pecuniary or in kind, imposed as an equivalent for personal service, and shall have the right of egress.

Persons admitted into Russia under this arrangement shall be permitted freely to import commodities destined solely for their household use or consumption.

IV

Either party may appoint one or more official agents to

reside and exercise their functions in the territories of the other, who shall enjoy all the rights and the privileges set forth in the preceding article, and also immunity from arrest, provided that either party may refuse to admit any individual as an official agent who is *persona non grata* to itself, or may require the other party to withdraw him should it find it necessary to do so on grounds of public interest or security. Such agents shall have access to the authorities of the country in which they reside for the purpose of facilitating the carrying out of this agreement and of protecting the interests of their nationals.

Official agents shall be the competent authorities to visa the passports of persons seeking admission, in pursuance of the preceding Article, into the territories of the parties.

V

Each party undertakes to ensure generally that persons admitted into its territories under the last two Articles shall enjoy all protection, rights, and facilities which are necessary to enable them to carry on trade.

They shall be at liberty to communicate freely by post, telegraph and wireless telegraphy, and to use telegraph codes and ciphers, under the conditions and subject to the regulations laid down in the International Telegraph Convention of St. Petersburg 1875 (Lisbon Revision of 1908).

Each party undertakes to account for and to pay all balances due to the other in respect of terminal and transit telegrams in accordance with the provisions of the said International Telegraph Convention and Regulations.

VI

Passports, documents of identity, Powers of Attorney and similar documents issued or certified by the competent authorities in either country for the purpose of enabling trade to be carried on in pursuance of this agreement, shall be treated in the other country as if they were issued or certified by the authorities of a recognized foreign government.

VII

The preceding Articles shall continue in force until the expiration of six months from the date on which either party shall have given notice to the other of its intention to terminate them. The parties mutually undertake, even in the event of such notice having expired, to continue to afford all the necessary facilities for the completion or winding-up of any transactions entered into in pursuance of such Articles.

VIII

The Russian Soviet Government hereby declares that it recognizes its liability to pay compensation to British subjects in respect of goods supplied or services rendered to it or to the former Government of Russia, or to Russian citizens, for which payment has not been made owing to the Russian Revolution. The detailed mode of discharging this liability, together with all other questions with regard to the liability of each of the parties towards the other party or its nationals, shall be regulated by the Treaty referred to in the preamble.

The British Government makes a corresponding declaration.

IX

In consideration of the declaration in the preceding Article the British Government hereby declare that they will not take or encourage any steps with a view to attach or to take possession of any gold, securities, or commodities (not being articles identifiable as the property of the British or of any Allied Government) which may be exported by Russia in payment for imports or as security for such payment, on the ground of any claim against Russian citizens, or against the former Government of Russia.

X

The Russian Soviet Government undertakes to make no

claim to dispose in any way of the funds of the late Russian Government in London. The British Government gives a corresponding undertaking as regards British Government funds in Petrograd. This Article is not to prejudice the inclusion in the formal Treaty referred to in the preamble of any provision dealing with the subject-matter of this Article.

Latest Notes to Great Britain

I

December 1, 1920.

Mr. Krassin presents his compliments to Mr. Lloyd George and wishes to bring the following matter to his personal notice.

He is obliged to communicate direct with the Prime Minister because of the fact that up to now notes directed to the Foreign Office have been left unanswered and unacknowledged.

The agreement between Mr. O'Grady and Mr. Litvinov, signed on February 12 last, provided for the exchange of Russian citizens held against their will in England for British citizens held in Russia.

Under its terms, up to June 30 a large number of British subjects were repatriated from Russia to Great Britain. No Russian subjects were repatriated during this period.

In the proposals put forward in the British Government's Notes of June 30, the British Government insisted upon the completion of the process of the exchange of prisoners as a preliminary to the resumption of trade relations.

The Russian Government accepted this condition in its Note of July 7 and has faithfully carried it into effect. Every British subject within the territory of Russia is free to return. All facilities and every possible assistance have been given to them and all those who wish to leave have now been handed over on the Finnish territory or elsewhere.

Actually, the Russian Government has gone beyond the terms of the agreement of June 30 and July 7 and has used its good offices to persuade the Government of Azerbaijan to release the British naval prisoners held at Baku. In spite of this, of the Russian citizens held in Great Britain against their will, not one has yet been sent home. Lists have been sent by Mr. Krassin to the Foreign Office, but still these unfortunate people are held here. There are amongst them men who have for months been unemployed. Their families are on the verge of starvation. Through trusting to the honor of the British Government they have sold up their homes believing that they were to be repatriated. They have waited week after week, month after month. They are still waiting.

The Foreign Office, at the expense of these unhappy people, is failing to carry out the solemn undertaking of the British Government. Mr. Krassin therefore feels bound to bring directly to the notice of the Prime Minister, a matter which involves not only the undeserved suffering of these people, but also the violation of the terms of the agreement signed by Mr. O'Grady and Mr. Litvinov.

The Rt. Hon. D. Lloyd George,
10 Downing Street, S.W.1.

II

December 6, 1920.

Mr. Krassin presents his compliments to Mr. Lloyd George, and begs to draw his attention to the serious position which is being created by the presence at Chataldja and other places in the neighborhood of Constantinople and the Straits, of armed forces under the command of Baron von Wrangel.

These forces were removed by allied shipping from the Crimea, and are now under allied protection in Turkey.

They have been neither disarmed, nor interned. On the contrary, it is openly avowed that they are being reconstructed and reequipped with French assistance. It is also openly avowed that, when it is again fit for war, this force will be employed in a new attack upon the territory of the Russian Republic.

For a government to permit, protect and encourage the formation and equipment upon its territory of a filibustering army openly intended for lawless attack upon the ter-

ritory of a neighboring people, is not merely an unfriendly act. It is virtually an act of war.

Technically it is true the territory upon which Baron von Wrangel's filibustering contingents are being reformed is under the sovereignty of Turkey. Actually, it is under the control of the principal Allied Powers—Great Britain, France, and Italy; and it is they who must be held jointly and severally responsible for the protection and assistance given to these contingents.

Mr. Krassin would, therefore, be glad to receive from the British Government a definite assurance that it will take steps to prevent Baron von Wrangel from using as a military base territory under the control of itself and its allies; and that the necessary measures will be taken in accordance with international practice to disarm and disband his troops, to intern them, or in some effective manner to prevent them from being again used for military action against the Russian Republic.

The Rt. Hon. D. Lloyd George, M.P.,
10 Downing Street, S.W.1.

CABLE FROM THE COMMISSARIAT FOR FOREIGN AFFAIRS

December 27, 1920.

Mr. L. Martens, Representative of the Russian Soviet Government, has received the following cablegram from Mr. George Chicherin, People's Commissar for Foreign Affairs at Moscow:

"Your telegram of December 18, reporting the decision of the United States Government to deport you received. The hostility of the present American Administration expressed in this act cannot reflect the opinion of the American people, especially of the American workers who have given so many warmly appreciated proofs of sympathy with the workers and peasants of Russia. Under the most trying circumstances you have during two years honorably and patiently endeavored to carry out the instructions received by you to establish friendly relations with the United States. You did so, notwithstanding malicious insults and petty persecutions on the part of some elements in America, convinced that eventually the common interests of the people of America and Russia would eliminate the obstacle to understanding. Even now we are certain the masses of the American people will in due time bring about such an understanding. At present moment, however, we are confronted with the cold fact that America, who repeatedly avowed her good will towards the people of Russia and with whom Russia for many reasons was eager to develop mutually advantageous cooperation in the economic field, makes such cooperation impossible. This is done at a time when most of the other nations of the world, even such as openly conducted war against us and wasted no time on sentimental assurances of friendship, are entering into economic relations with Russia. We must resign ourselves to the fact that Russia for the time being, due to the hostile attitude of the present American administration, will have to get along without such cooperation. You are instructed to return to Russia without delay, together with the Russian citizens who are members of your staff, and to cancel and liquidate, in accordance with instructions you will receive from the Commissariat of Foreign Trade, all orders placed with American firms."

Workers' and Peasants' Universities in Russia

SOME time ago there appeared in a Russian publication two monographs about the activity of the Communist University named after J. M. Sverdlov in Moscow, and of the university named after Zinoviev in Petrograd, written by V. Nevsky and S. Ravich respectively. We are giving below an analysis of these important monographs.

The Sverdlov University was an outgrowth of the courses for propagandists organized in June, 1918, by the All-Russian Central Executive Committee of the Soviets, on the initiative of Comrade J. M. Sverdlov, the President of the Central Executive Committee. The aim of these lectures was to give to the workers active in the movement a rapid training, and to provide them with essential information as to the most pressing actual problems. Thus

| | OCCUPATION | | | PROPERTY HOLDERS | | SEX | | Great Russians | No. of Graduates |
|-------------------|------------|----------|------------------|------------------|-------|------|-------|----------------|------------------|
| | Workers | Peasants | Professional Men | Non | Small | Men | Women | | |
| January, 1919.... | 43.38 | 29.54 | 27.08 | 71.2 | 28.7 | 94.1 | 5.8 | | 341 |
| March, 1919..... | 40.0 | 25.0 | 20.0 | 64.44 | 33.62 | 95.0 | 5.0 | | 464 |
| October, 1919.... | 52.9 | 15.8 | 31.1 | 88.5 | 11.5 | 85.7 | 14.1 | 72.5 | 998 |
| February, 1920... | 50.6 | 3.6 | 45.8 | 90.4 | 9.6 | 81.6 | 18.4 | 88.4 | 166 |

This table shows that at every opening of the courses the number of the workers was on the increase. Consequently they form the predominant element at the Communist University. And as the fourth column shows us, they are non-property holding proletarians. The number of property-holding peasants visiting the school was decreasing correspondingly. The seventh column indicates the increase of the number of female students. This is a direct consequence of the remarkable increase of the social activity of women in Soviet Russia.

The political character of the audience of the Communist University is indicated by the following table:

| | COMMUNISTS | | | | |
|------------------|--------------|---------------|--------------|---------|-------|
| | Non-partisan | Diff. parties | Sympathizers | Members | Total |
| January, 1919... | 5.5 | 9.0 | 16.4 | 68.9 | 85.3 |
| March, 1919.... | 8.14 | .. | 5.3 | 82.6 | 87.9 |
| October, 1919... | 34.4 | 1.2 | 16.2 | 48.8 | 65.0 |
| February, 1920.. | 9.1 | .. | 31.9 | 59.0 | 90.9 |

Thus the overwhelming majority of the students are Communists (party members or sympathizers); the figures indicate moreover, at every re-opening of the courses, an increase of the percentage of Communists, a decrease of the "non-partisans" and the total disappearance of the representatives of other parties. The temporary increase of the number of "non-partisans" and the decrease of the number of Communists for the period of October, 1919, correspond to the time when the offensive of the "Whites" started, and the organizations had to mobilize almost all active members occupying positions of trust.

Judging from the age of the students, they were recruited from among the flower of the working class, from men who were in the prime of their strength and their health. From the point of view of education, at least three fourths of the students were equipped with the insignificant preparation that

it became possible to entrust them with the positions of commissars, representatives, etc. A course did not take more than two weeks. The majority of the students were workers.

The duration of the courses was obviously insufficient; therefore it became necessary to lengthen this period after the completion of each course. The courses were organized in the most systematic manner; moreover, a number of subdivisions were introduced.

During 1919 the lectures of the school were attended by 2,500 persons; it was possible to collect detailed information as to the occupation and the social condition of 2,217 of them. The table below gives a summary of this investigation as well as percentages:

they had received in the elementary school of the old regime. Five per cent had received no school education at all and had learned how to read and write by themselves. Over 16 per cent had received a high-school education. The number of those who are equipped with a higher education is on the increase. In this last category we have to do with a great number of comrades, technical specialists in some branch of industry, who joined the party recently, having given to the Soviet Government satisfactory evidence of their devotion, but who—to their great shame—were absolutely ignorant in all matters concerning Socialism and social sciences. Besides, there is to be mentioned also, the organization of special courses for Cossack groups, for the most part natives from the eastern front.

The original program of these two-week courses comprised the following subjects:

1. Class struggle.
2. Development of capitalism, imperialism, war, revolution.
3. Dictatorship of the bourgeoisie, dictatorship of the proletariat, party.
4. The land problem.
5. The problem of food supply.
6. Nationalization of industry, of trade, and of banking.
7. The Red Army.
8. The organization of the Soviet Government.

From the very beginning the organizers of these courses realized that by limiting themselves to such a narrow task of instructing the workers active in the movement hurriedly on important questions of the hour, it was impossible—although it was necessary—to furnish the provincial Soviets with experienced instructors.

The program of the quarterly course was much more extensive; one-fourth of the lessons was devoted to theoretical questions; the remaining three-

fourths of the lessons were concerned with practical education referring to the constructive work of the Socialist commonwealth. There were organized two different series of studies; one for the benefit of larger districts lasting three months, and the other which was much abridged, for the rural communities. This first differentiation is not sufficient at all. Experience has shown that a much larger and wider specialization is necessary, first in the two big fields of action—the Party and the Soviets—and afterwards a much closer specialization in the special branches of these two fields. This led—in May, 1919—to the elaboration of a new program of studies providing for a much larger specialization in the details and for more practical work.

We are giving below a tabular synopsis of the situation which was finally brought about:

Theoretical course, common for both sections (240 hours; moreover the student must choose some definite branch of work in the Soviet organization or in the Communist party).

1. Section of the Soviet Institutions comprising:
 - a. 9 sub-sections (transport, labor, etc., 160 hours);
 - b. 19 sections of practical studies of Soviet work.
2. Section of the Party, comprising:
 - a. the sub-section for the press;
 - b. the sub-section for organization;
 - c. the sub-section for propaganda (120 hours).

This is how, in the fourth chapter of "The Experience of a Year of Activity", the author sums up the first results that were obtained. Reading alone proved to be insufficient; demonstration, discussions, work in ordinary and special groups had to take its place.

But this rendered a great number of instructors necessary. Owing to the great scarcity of available forces, attempts were made to find them among the pupils. The most capable among the former pupils remain at the school and direct the work of the groups at every new session.

It has been proven, moreover, that the most serious study must be interrupted by periods of rest and esthetic pursuits. A vast program is now being applied along these lines.

In addition, it was necessary to give some abridged introductory courses in natural sciences and history before starting the theoretical studies:

1. Introduction into physics, chemistry, etc.
2. Brief repetition of mathematics, the Russian language and literature.
3. The courses which originally lasted only two weeks, were thereafter extended to three months and later on to six months.

Among the theoretical courses we may mention: Introduction into physics and chemistry; History of Culture, by Comrade Lunacharsky, with musical, dramatic and other demonstrations; Political Economy; General History; History of Russia; a course named "Class and Party Struggles in Western Europe"; statistics; Marxism (7th week); History

of the peasants' movement, of the Communist Party, etc. Among the teachers we may mention: Lenin, Bukharin, Pokrovsky, Lunacharsky, Ryazanov, Zinoviev, and others.

Within 18 months of the existence of the school about 5,000 pupils attended the courses. More than 4,000 of these students were later sent to the front. Everybody is aware of the importance of this result for the Red Army. It is their valor as well as their devotion to the cause of the revolution that enabled the Russian militant revolutionists to conduct the Red troops and often, through their sacrifice, to open to them the road to Victory.

At the end the author lays stress upon the material situation and the administration of the university. It is headed by a Council of Studies composed of the delegates of the Central Executive Committee, of the Central Committee of the Party, of the staff of teachers of the Commissariat of Popular Education and of the body of students. This Council is in charge of the program of studies, it discusses the appointment of new professors, etc. The general assembly of the students elects a committee of the courses, assuming the direction thereof; it decides upon the employment of the time of the students, it creates a series of commissions (economic, administrative, etc.) which together with the Council of Studies, the Director of the University, and the manager, take care of the different aspects of the activity of the school.

The material situation is, in spite of considerable governmental subsidies, extremely hard. "It is impossible not to mention the underfed condition of our pupils, the lack of linen, of shoes and clothes, from which they suffer, the lack of books, the unhealthy lodgings, the lack of means of communication, and sometimes the lack of teachers . . . When thinking of it, one is astonished at the courage of the students who succeed in holding out for three or four months at a ration which is reduced to less than a pound of bread daily.

According to V. Nevsky, the future development of the university should proceed along the following lines:

1. The courses ought to become more thorough and should be extended up to one year.
2. Simultaneously with these continued courses, there should be organized a series of short courses (e. g. for the Cossacks, the Tartars, etc.).
3. The lessons should be reduced to a minimum and in their stead there should be discussions, discourses, informal debates, practical work, special groups;
4. The teachers should be only the intellectual guides.
5. The initiative and the autonomy of the pupils should be encouraged all the time.
6. Their material situation should be improved.

The monograph of Comrade S. Ravich is concerned with the Zinoviev University at Petrograd. This is mainly a school for instructors. It came into being while the November Revolution was in full swing, out of the necessity to propagate the slogans and the aims of the Communists. Originally

only the following subjects were treated in a number of hurried lectures:

1. The November Revolution and the Proletarian Revolution.
2. The Land Problem in Russia.
3. The Peace Treaty (Brest-Litovsk).

Later on the program was extended and the duration of the courses lengthened. The university passed extremely critical periods, especially at the time of the offensive of Yudenich against Petrograd.

It has been now transferred to the Uritsky Palace (formerly the Duma building). It has a capacity of 600 to 1,000 persons. The courses are extended over a period of six months. In addition to a general introductory course, the university has the following special sections:

1. Soviet Militia.
2. Public Safety.
3. Agriculture.
4. Soviet Administration.
5. Public Maintenance of the City.
6. Activity of the Party and the Press of the Party.

Moreover, since the beginning of the studies there has been formed a group for teaching the illiterates.

The section of general education contains among others, courses on the following topics: History of Russian Literature; History of Religion and of the Church in Russia; History of Social Movements in Western Europe; History of the French Revolution; History of Culture; Social Legislation; Natural Sciences; Biology, etc.

The "special sections" comprise a great number of courses; the studies are in connection with practical work and investigations.

Among the men concerned with the activities of the university we may mention the following names: Zinoviev, Radek, Nevsky, Bukharin, Milyutin, M. Gorki, etc. We may state that this university does not confer any privileges. Its only task is preparation. In order to occupy any position, the comrades who finish their studies at the university have to prove their ability in the field of agitation and propaganda. They must be elected to the different institutions.

In spite of their recent foundation and the great hardships of a period of civil war and economic disorganization, the proletariat has shown through the example of these schools what the workers will be capable of doing as soon as they are placed in a more favorable condition.

The analysis of their origin and their development shows that the success of these universities is due, first of all, to the fact that they are pre-eminently composed of proletarians and that they are the result of collective endeavor.

EDUCATIONAL EXHIBIT

Moscow, November 18, 1920.—At the former Winter Palace in Petrograd an exhibition of popular education has been opened, occupying almost the entire palace. In this exposition all the work of the Commissariat for Public Instruction for three years is represented.

Material Crowded out of this Issue

Our readers will observe that we have very few small items of wireless or press origin in this issue of SOVIET RUSSIA. They have been crowded out by pressure of other matter. This condition also obliges us to omit the first instalment of

Collapse and Reconstruction in Russia

By DR. ALFONS GOLDSCHMIDT

This analysis of the economic situation preceding the Revolution, in a style even more brilliant than the same author's "Moscow in 1920", will appear in two instalments in SOVIET RUSSIA (January 8 and January 15). It is one of the important chapters of Goldschmidt's new book, "Economic Life in Soviet Russia," which has just come out in Germany. The January 8 number will also have many other interesting articles.

Collapse and Construction in Russia

By DR. ALFONS GOLDSCHMIDT

[The following is a chapter from Dr. Goldschmidt's book, "Economic Organization in Soviet Russia", translated from the German for SOVIET RUSSIA.]

I

War and the Russian Proletariat

WAR accentuates the social-psychological transformation. The following was the social-psychological state of Russia before the war: the class-conscious proletariat, a really revolutionary proletariat, existed chiefly along the northern border, in the Petrograd region, and in the Baltic provinces. To be sure, emanating from these regions were scatterings, mixtures, of proletarian class-consciousness, but no systematic revolutionary process. The chief contingent of the Russian working class was the semi-proletariat, i.e., half of it a peasant proletariat, half of it an industrial proletariat. Regardless of other causes, this was implied, so to say, in the nature of the case. The proletarian predisposition moves in a sliding scale with the character of peoples. Peoples at a primitive stage of economy have but a small percentage of persons who are capable of industrial labor. The percentage of such persons capable of industrial labor in the Russian population was very small before the war. It was a matter of a few units only, altogether but a few millions. And even among these few millions there were considerable difficulties in the industrial-psychological scale, which had first to be somewhat adjusted, brought into at least a partial uniformity of social-psychological character, before the social revolution could become possible.

The war accelerated this process tremendously. Petersburg, Riga, Reval (in other words, the revo-

lutionary border region), were left without supplies of coal and ores. They were obliged to rely upon southern raw materials. At first, however, Petersburg was industrialized even more extensively. The armament industry made this necessary. All the necessities were not yet completely understood. Although the railroads were overburdened by the mobilization, the Petersburg armament industry was lashed into a gallop and expanded as much as possible. It was not until the German offensive that industry was obliged to travel towards raw materials. This involved also a migration of the revolutionary proletariat. A sort of "seasonal" labor movement of revolutionary nature.

The evacuation of Riga, the first step in this process, was not undertaken by an impotent state, but by economic self-action. The machines and the proletariat were taken to Moscow and the surroundings, to Nizhni-Novgorod, to the Urals, to Kharkov, Yekaterinoslav, Tver (building of railroad cars), to Warsaw. The hinterland now became the seat of factories after the European pattern, with a considerable staff of technologists, and groups, or at least splashes, of class-conscious proletarians. This could not fail to have an effect on the social-psychological transformation.

Industry now developed rapidly. The war quickened the pace. For example, a great chemical industry arose quickly in the coal regions, where poison gases were chiefly produced. The Entente accelerated the process by furnishing capital and special technicians. In this the Entente policy pur-

sued a double purpose: the fighting force of their ally was to be strengthened, and the strengthening, i.e., the financing, of Russia's technical war was likewise to yield enormous advantages to the Entente. The promotion of the concession activity of the Entente in Russia, the occupation of important economic regions, industries, banks, franchises, and tracts, by Entente capital is a matter of common knowledge. While they riveted the giant's armor, they sucked out his blood. In the Caucasus, in the Urals, in Central Asia, in Siberia, in European Russia, everywhere where there was anything to lay hands on, they cast anchor, they syndicated, they took hold and gobbled up. It was a hectic continuation of that colonial penetration from the west which had already produced the Russian economic crisis. The Allies were continuing with the speed of an express train, and on a gigantic scale, what a healthier Russia might wish to eliminate or weaken. We are at this moment passing through a new attempt to continue the process. Or, an attempt to recover, to rescue, to pocket finally what the Russian proletariat has acquired. The permeation of industrial Russia with class-conscious proletarians was prevented by an intentional disregard of the Polish textile industry when the evacuation took place. The Polish textile industry was the object of the hatred of the Central Russian textile industry, for the central Russian textile industry was a quality industry, while the Polish textile industry represented a forced marketing of lower grades and a dumping process with the aid of big advertising. This is one of the most important reasons for the hatred against the Jews. The Russian tradesman was slower to act than the Jewish tradesman, slower too than the German tradesman. As trading and Judaism were considered identical in Russia, this hatred placed the German and the Jew on the same footing. This was not without effect in the war and in pogroms.

At any rate, only a few Polish textile machines were actually taken to the Russian hinterland. Race-hatred, national-industrial hatred, hatred of big tradesmen, handed over the Polish textile machinery to destruction by war. It was considered proper to have the German army destroy the competition on the internal market, or at least cripple it. The struggle was between heavy Moscow cloth and light Lodz cloth, between a native, established industry, and an industry for markets, between slow, big tradesmen, and light, little tradesmen.

Although in this manner a semi-proletariat with a tendency toward revolutionary energy was kept away from Russia, the process of infiltration was nevertheless a considerable one. There were added numbers of persons recalled from the front to the armament industry. They were not at once class-conscious proletarians, but they were proletarians with a desire for peace. It was not a case of stabbing the front to death from the rear, but a self-evident consequence of the brutalities at the front and of the duration of the front. Let us here interpolate the following in order to make clear what were the necessary conditions of the revolution.

The Russian industrial proletarian before the war and during the war was a slave. He was bent under the club of the police, or, at least, the club of the police was swung over him. The swinger of the club was the engineer, the executor of the Russian policy over the proletariat. We shall say more later concerning the role of the Russian engineer in the Revolution.

All were opposed to the worker. Even the clerical employes of industry. In other words, the state, the technologists, and the office help, and, of course, the private owners.

The houses of the workers were wretched places, houses below the surface of the earth, cellars. In the great textile establishments, two families were often living in one room, men and women together. The state cared practically nothing about these things. Certain owners saw more clearly than the state. They carried on so-called welfare work. And the proletariat was grateful even for these little mercies, as is shown by the difference in the treatment received by the various employers during the revolution.

Scarcity of technologists had made the Russian engineer a big gun. His situation in the textile industry was different from that of the engineer in the metal industry. But, if only for the privilege of maintenance money, this position was hostile to the workers. In many factories, engineers were splendidly situated. They received fine houses, high salaries, high royalties, carriages. Yet, the Russian engineers carried on a revolutionary policy. But they did not desire a proletarian revolution, but a revolution against the privileged classes of the Russian state, against the Russian officials. The Russian bourgeois *intelligentsia* aimed at attaining a social position, after they had become rich. Their wealth should not only fill their stomachs, but also make them shine.

This pressure, this contempt, this clubbing, this assigning of the worker to a herd position (he was always addressed by the familiar ТЫ), the persecution of those who felt rebellious, made the proletariat see more clearly, made them more conscious. At least this is true of the proletariat in great industries. From 1905 on this training found its expression through the Soviets.

Let me insert a word in explanation. Before the Russian Revolution, European Marxists said Russia was not ripe for revolution, because it was an agricultural country. After the revolution, those same Marxists said Russia was ripe for revolution because it was an agricultural country. They said this and they still say today that it was a peasant revolution, a transformation of the desire for land, which the Bolshevik power had exploited.

But it is a mistake to try to simplify things as much as all that, for such formulations require that somewhat more pains be taken. To be sure the industrial proletariat was enabled to undertake to lead the agrarian revolution—in fact had to undertake this—because the agrarian problem had become an industrial problem. Western capitalism (first, by its preliminary effect, its permeation with

the western capitalistic spirit, with the Manchester spirit, and later the infiltration of the money economy) had created a semi-proletariat which was neither fish nor flesh. The peasant was alienated from his task and wanted nevertheless to remain a peasant. Industrial occupations had become for him a substitute for land, speaking in terms of money economy. The money economy was his ruin. If he was once more to become a usable peasant, a peasant capable of intensive agriculture, the money economy would have to be eliminated. This elimination means not only land for the peasant, but also industrial products. For the elimination of the money economy means the erection of a socialistic economy, and takes place chiefly with the object of increasing the production of commodities, which is useful to the peasant also. Industry had made the peasant poor; industry must make him rich again. It was necessary for him to be freed from taxes, in other words, from the old state, and he had to be freed from excessive payments to industry. The amelioration of agriculture is equivalent to a solution of the problem of agricultural intensification, the chief peasant problem in Russia. And this is possible only with the aid of an industry that has been expanded to gigantic proportions. The completion of the capitalistic forms of industry and the insertion of a powerful new content into them is simultaneously an effective agricultural reform; it is an unheard of enhancement of agricultural production. In this book we shall speak of the matter again, especially of the tasks of electricity and of those fertilizers that are produced in factories. Aside from other necessities, from necessities arising from serfdom, from misery and from the war situation, it is self evident that the Russian industrial proletariat had to undertake to lead in the revolution. Much as it may be an agricultural revolution, an agrarian revolution, the Russian agrarian revolution is none the less an industrial revolution. The essence of this revolution is: to deliver the industrial resources of the country, by accelerated industrialization, to the agricultural districts, with the aid of the liberated proletarians, the industrial proletariat and the land proletariat, but all this under the leadership of the really class-conscious proletariat, namely the industrial proletariat. It is impossible really to understand the sense of the world revolutionary movement, unless we recognize in it the opposition between city and country, and the necessity of adjusting this opposition. Industrial production and agricultural production are not essentially different. They belong together, they are complementary to each other, they are really one. Russian agriculture was shouting for technological improvement. Can you then still speak of an agrarian revolution which is merely being exploited by an industrial proletariat? Or can you maintain that an increase in the size of the peasant land holdings may be carried out without a technical improvement, in other words, without having the industrial proletariat assume leadership in the revolution?

II

The Struggle for the New Organization

The March Revolution was the first visible and formal collapse of the Russian centralism, the old centralism which had not been put down either by the communal self-governments of peace times or by the self-government bodies formed during the war (liberal agrarian organizations, and unions of cities). Both the centralizing bodies collapsed: the military-political and the economic centralism. It was a necessary collapse, a collapse based on the nature of the case, a collapse of what had been outlived. The centralism ruling from above was past; a new centralization, a centralization of self-control could only be built up from below. The state aimed to draw the reins tighter; the bourgeoisie was ready to dominate a tenser structure (the opposition then was that of a compulsory syndication with national supervision as opposed to an unimpeded trustification). It was not possible to hold the strings together; the bourgeoisie did not have the power to do it, nor was it any longer its task to shatter the old centralization and to administer the economic control. This task had now to be assumed by the proletariat.

Some days after the outbreak of the March Revolution many industrial organizations established factory committees. These committees were too large. This was the first great mistake of the Soviet Revolution. The control from below was too broad, and not sharp enough; its power was frustrated by its own work.

The committees sought at once to carry out productional functions in the factories and in the war economy organizations. At the head of these organizations stood military men aided by technologists and scientists. These organizations were built up essentially on the German model, their main pattern being the German military raw material section, which means a militarization of industry. The workers were not present in this organization. After the March revolution the proletariat went into them and 50 per cent of the total representation was to be from the workers. Industrial leaders protested vehemently. Their protest was an economic protest, but even more a political one. The bourgeoisie already felt that the power was passing into other hands. There began a campaign of lies against the Soviets, which were at first called (a play of words) Soviets of Dogs' Delegates. The boiling point of the hatred against the Soviets (Factory Soviets, Peasant and Soldier Soviets) was reached in April, 1917. But the proletariat succeeded in maintaining itself more or less and in keeping its representatives in the war economy organizations. Some of them welcomed equality as a revolutionary improvement. They were farseeing grands bourgeois, petis bourgeois and demi-bourgeois.

There began a policy of classification. The Russian Factory Owners' Union declared it was ready to accept the eight-hour working day, as well as the increased wage scale. The first outspoken wishes expressed by the factory committees were

for increasing pay at the urgent request of their constituencies. The factory administration had to accept this condition. The trade unions, which only at this moment began to exist, or at least to develop, demanded wage-scales, fixed hours of labor, rest periods, etc. The factory committees were to supervise the execution of this agreement. They acted accordingly, and with great energy.

The first months were not only months of pressure for control, months of assumption of control, months of confusion of control, but also months of struggle against the power of the individual unit, against the factory administrations. Gagging directors, private managers, engineers, and masters of works were removed. There was much folly, much impropriety, injustice, persecution. The consequence was a rapid formation of unions of clerical workers and engineers. They were productive and defensive unions, for there was a danger that their income payments would be delayed; their policy aimed at increases in salary, decreasing of work, etc.

In this movement the Russian engineers attempted to secure a safe position, by declaring themselves neutral, or at least by declaring the neutrality of their production. They said: We belong to no party; we are working for the whole. As a matter of fact the engineer became a sort of technical non-partisan in the war economy organizations. But the engineers were not able to make use of this success. They remained hostile to the Soviets, hostile to the proletariat. They did not recognize the transformation that was going on in society. Therefore their declaration that they were working for the whole was only a declaration for self-defence; a declaration necessary to rescue themselves. The whole system had become a different one. The Russian engineers would have had to come out for the proletariat if they had really wanted to work for the whole. The attitude of the engineers is very significant for a judgment of the economic revolution in Russia. To this day this declaration of self-defence, this attitude of aloofness on the part of the Russian engineers, still has its effects.

The Russian proletariat, except at the very beginning, was by no means hostile to the engineers. It hated the organizations of officials, the high-collar organizations which were carrying out a policy of social position. As many engineers went into the bureaucratic unions and not into the engineers unions, this hatred was also transferred to the engineers. Finally, arbitration courts were formed. A contract was made, requiring every dismissal of an engineer to be investigated. These arbitration courts continued until after the November Revolution. They softened relations, but often had to order a dismissal because the engineer in question was not capable of understanding the social-psychological transformation. It was impossible for him to adapt himself, and he therefore became a hindrance to production; his task was therefore gone, for he did not feel he had a task.

Meanwhile the Russian economic crisis was becoming sharper. In May 1917 the impending fuel and raw material crisis already became quite per-

ceptible. Prices were shooting upward and many factories were closing their works for reasons of economy. This aroused the working class tremendously. The workers' representatives in the economic organizations demanded investigations, careful investigations, of all closings down. Investigating commissions went into the factories. A representative of the clerical employes would take part in the investigations. Often the work was hard. It was always necessary to go through all the details of the business, and therefore it had an educational result, as a supervisory training for the proletariat. Long-winded auditings of books and functions were undertaken. The commissions very often decided against the factory owners and removed them, even before the November Revolution. The factory owners were replaced by Government Commissars who were already representatives of the interests of the workers, as well as of the economic organizations. But as they had come at the request of the working class, as a result of the tests demanded by their constituencies, they were actually an expression of the victory of the workers, of the predominance of the workers, regardless of whether they felt that to be their position or not.

Some factories were sequestered by the investigating commissions, and others were given new financing on the report of the commissions. This already opens up a view of the transformation; it suggests the attachment of the industry to the factory committees, the industrial Soviets. The power of these committees was already so great that it expressed itself as a power to produce. They could already demand the maintenance, the financing, of individual production units, the sequestration of an industry, etc. Closing down was rarely approved or asked, because the idleness thus brought about would again involve unemployment and loss of wages.

We must distinguish between the desire to rescue production and the impossibility of rescuing production during this period. Already the will was becoming apparent, but the struggle was crippling the will. Every factory was a scene of battle. The struggle was being carried on with the most varied combinations of management, workers, clerical employes, against each other, with each other, and mixed up together. The consequence was a continuous drop in production. Meetings, investigations of guilt, and such like things, were pushing work down. The factory committees had not yet enough accelerating power, the centralized bodies were not yet operating in single lines with them. Everywhere there were oppositions. It was a general breakdown of production.

In the middle of August, 1917, the Bolsheviks began to conquer the power of the factory committees. This was not a progress of usurpation, a tyrannical act, but a challenge, an acceptance of a challenge, a seizure of power owing to mistrust of the old representatives and hope of the more radical ones.

At first the factory committees consisted chiefly of Mensheviks. As they were not able to under-

stand the will of the proletariat to control production, and therefore to carry out this will, the confusion, the opposition, the above described conflict, as well as the breakdown of production, remained permanent. The working class began to set down this halting of production to the account of the Mensheviks. They had no more confidence in them. This was not a simple, unmistakable process, but nevertheless one that was clearly discernible.

In September, 1917, the defeat of Kerensky became manifest. Brusilov's offensive had already failed, and people felt that the armament industry had become purposeless. This considerably sharpened the recession of production. Many factories dismissed the workers although the conditions of dismissal were not easy (two months' pay).

Under these circumstances something positive had to be done. The national centralization, the so-called autonomy of economic management, the Menshevik factory committees, had broken down. The Soviets had already done good work. In some respects their work of control and education was invaluable. But this was not equivalent to rescuing production. It was not an unmistakable gathering up of all the strings, an elimination of conflict, of confusion, but rather in many cases even an aggravation of confusion. The whole economic system was crying out for unification.

Already before the November Revolution the Bolsheviks had been again and again loudly demanding the control of production. The closer private economy looked at the control of production, the more violent became its struggle against the Bolsheviks, against those that were demanding the control of private economy. Already many owners were selling their works to foreign capital.

This was a period of feverish transactions to withdraw capital, it was the well-known period of general fraud, which every country passes through before a proletarian revolution and during a proletarian revolution. It is a flight of capitalistic money, it is an assignment of mortgages to foreign capitalists, which is later called upon to fight the expropriating activities of the revolution. It is an accumulation of demands for payment, by which later an aggressive attack against the expropriating revolution is provided with a "moral" basis.

During this period an extremely interesting development was taking place within the Russian Engineers' Society. The engineers came to the executive body of the Society with this request: Give us instructions what to do. Shall we go or shall we place ourselves at their disposal?

A discord arose. Some said the engineer must remain with production, since he is the instrument of production and not an instrument of money capital. Others called the engineer an agent of capital. This latter designation attracted a number of industrial leaders, who had engineers' training, into the Engineers' Society, with the result that a sort of class struggle was inaugurated within the society. Both characterizations were hostile, however, to the proletariat, which was demanding production.

The factory owners in the Engineers' Society

threw out various baits, but to no avail. The question was one of life and death, and the lives of the engineers had become dependent on the will of the proletariat. Consequently the society decided to call upon its members in the name of productive mechanism. Production, as was stated in this appeal, was a property of the whole nation. The engineer might leave his post, according to this decision, only in cases of the most serious conscientious sacrifices. The decision saved some situations, but it had no radical effect.

There was much discussion before the November Revolution; necessities of production and regulation were emphasized; organs with a formal parity were created, but for reasons connected with private property these were not actually parity organs. There were no serious appeals, however, no serious decisions. That resolution of the Engineers' Society was, however, an echo of the imperative shout of the proletariat for productive and regulative economy. It shows a timid recognition of the necessities of the case. It shows an understanding that there could be no further doubt of the fact of the conquest of the war economy organs by the proletariat, or of the firm determination of the proletariat to make these organs effective centers of regulation. Nor could there be any further doubt of the determination of the factory committees to exercise full control. For the obtaining of a completely visible and transparent organization, of an organic cooperation, a regular diffusion of organizations and industries had now become absolutely imperative.

May I here recall a few appeals I once made myself. Not long after the outbreak of the German revolution, which aimed at eliminating the military centralization, the political imperialism, the old political centralization, I called for an immediate rescue by expansion of the war economy organizations. I demanded a confiscation of all war materials, of all the material, fragmentary and misrepresented though it might be, but nevertheless fundamental and capable of supervision. But nothing was done. Some exposures of sins were undertaken, but in other cases a stormy demand was put forth to demolish the organizations. The German bourgeoisie has a good instinct. It knows very well and feels what it is that will benefit it and do harm to the country. The sacrificing of the war materials, the concealment and peddling of this material, the demolition of the organizations, they shall still pay for all that. The German proletariat will now stand and face the mass of debris and confusion and its work will be twice as hard. And in this period of a crumbling of all the pillars of organization, of a twisting and devaluing of the clockwork, Socialists constructed Soviet forms which are actually playthings which have succeeded in confusing the heads and hands of millions. In Russia I learned how well justified my appeal had been. If we are to draw any social consequences from the war, we must not permit the war economy organizations to be destroyed or frittered away. If we do we shall lose contact with things.

The Russo-Polish War and the French Proletariat

By PAUL LOUIS

NEVER since 1914 has the French proletariat expended as much energy as at the end of August, 1920, when there rose the ghost of inter-allied intervention in the affairs of Russia and Poland. And never did the awakening of the French proletariat, all its factions, all its component parties, mean quite so much.

During the twenty-five years of the existence of the Franco-Russian Alliance the workers of the great industrial centers had their eyes fixed on the government with regard to the terms and demands of the agreement. They knew nothing of its details, and the secrecy that attended it excited their suspicions. They saw in the rapprochement of the imperialisms of both countries a war-friendship to oppose the triple alliance. They saw in the agreement concluded between the national-capitalistic republic and the empire of the Romanovs' the union of the forces of political reaction in the face of approaching revolution. One needs only to recall the speeches of Jaures against Czarism and its agent in France—Izvol'sky.*

Nothing helped to change the opinion of the French proletariat so much as the publication of the secret treaty of 1915, according to the terms of which Constantinople was to be given to Russia.

The French proletariat met the final defeat of Czarism in 1917 with great enthusiasm, beholding in it the prologue of the world revolution, a historical event to be compared only to the death of the old regime in 1789.

A time will yet arrive when the intrigues current among French diplomats from March to October, 1917, intrigues that planned the extermination of the free spirit of Russia, will receive their just deserts. The entire bourgeois press took the part of Kornilov against Kerensky. Bolshevism drew the bitterest attention of all in France who supported the social *status quo*.

And the more the forces of reaction tried to destroy the Russian revolution, the more strongly did the proletariat of the country support the Russian revolution; it saw that its own liberation depended on the revolution, it understood that all hope of liberation was lost if the revolution was permitted to be strangled.

Has then the French proletariat forgotten its duty for three years, or is there truth in the accusation that it is weak and inactive? I do not wish to touch on this question, but I do wish to point out that last month, when it was seen that Paris was planning a new counter-revolutionary offensive against Russia, the proletariat serried its ranks, united all its Socialist factions, all its various unions, to prevent that offensive.

A new spirit arose, a spirit that grew stronger and stronger among the French working-class, the spirit of love for the Russian revolution, for the

example that it has shown; the French working-class loves it in spite of the present masters of France, who are instinctively and with good reason set against it.

The workers of the great industrial cities are persuaded that the republic, led by Poincare, Clemenceau, and Millerand, is at the very head of world reaction. The latest news we receive from the regions of the Danube strengthens the impression that was created last year by the defeat of the Soviets in Budapest. The intrigues conducted by certain monarchistic officers in Budapest and in other places, have excited the Socialist and syndicalist masses to the highest degree. The bourgeois press, from the *Action Francaise* to the *Temps*, tries as much as possible to create certain opinions, interpreting the facts received in its own old way. Not long ago it printed enthusiastically the compliments paid by the American judge, Gary, who knows the country, to the national bloc and its ministers.

The French proletariat assumes its larger duties along with the workmen of all other countries, just as the government takes the same position as it did a hundred years ago at the time of the Holy Alliance and Metternich. The elections of November 16 were conducted on this platform: the defence of the Russian revolution.

When Kolchak, Denikin, and Yudenich were defeated, the workmen of Lille and Marseilles demonstrated in their great joy.

The Russian revolution has raised not only its own poor, but the oppressed of all countries. When Poland, at the call of those who wished to oppose Russia with a powerful coalition, began to move on Russia, the distrust of Poland, which had long festered among the French workers, turned into open enmity.

As strongly as Poland deserved the sympathy of the working-class when it was still enchained, so strongly did it create distrust and energetic condemnation when it was no longer satisfied with its newly-won freedom, but wished to suppress the liberty of others through an imperialism which allowed it, brutally and foolishly, to return to the Middle Ages. Poland with its government, which is openly under the influence of reaction, which listens and bends to the will of the worst nationalistic and chauvinistic impulses, has suddenly arisen as the destroyer of peace and the tool of the western bourgeoisie. The feelings of the French proletariat have not changed. It wants an independent Poland within its ethnographic borders, but wholeheartedly hoping for the triumph of the Russian revolution over all its enemies, it sees that its salvation lies in the defeat of the Warsaw government.

Therefore, it was glad when Finland, the Baltic republics, Czecho-Slovakia, and Rumania, urged by politics, justice and fear, refused to support Millerand. Therefore, it was glad when it heard that

* Unfortunately, Jaures did not always take the correct stand on the Franco-Russian alliance. See "Open Letter" by Rosa Luxemburg in the *Neue Zeit*, Stuttgart, Vol. 26, No. 43, 1908. —Editor SOVIET RUSSIA.

Lloyd George was bending before the pressure of the Committee of Action of the trade unions, that Giolitti had capitulated to the Italian Socialists, and to the unions. For this reason did it stage its demonstrations—not to allow the French Government to take any military steps against Russia.

The beginning of August marked a very critical period in this direction. The recognition of Wrangel was a symptom of the times, an action undertaken with clearly ulterior purposes. There is no doubt that the Spa conferences considered very seriously the problem of strangling Soviet Russia.

Hundreds of meetings were organized by the Socialist parties and the unions. Thousands of workmen took part in them. Never before were such streams of people seen in the largest halls of France. A sort of religious enthusiasm prevailed. From the meetings there issued a thoroughly con-

sidered and serious will to do. The French proletariat declared that it would use all its strength against intervention because Poland was counter-revolutionary, and because it was preparing for a new continental war.

The government of the citizens' republic sent a military mission to Warsaw; it sent Pilsudski ammunition; it conducted negotiations with Hungary under conditions that have as yet been unexplained; it recognized Wrangel and sent a diplomatic representative to the adventurer,—but not a single army division has been moved. When Millerand declares that he never thought of any military action, he consciously lies. He tries to cover the tracks of his capitulation to the French proletariat, which would never have allowed him to take any military action.

White Russia

By A. D.

ON JULY 30, in the city of Minsk, the establishment of a White Russian Soviet Republic as an integral part of the Russian Federal Soviet Republic was proclaimed. Upon this occasion, in the whole of White Russia freed from Polish occupation great celebrations took place in which the local labor organizations participated. It is necessary to point out that the Jewish Socialist Union "Bund", which has a strong organization in the provinces of Minsk, Grodno, and Mohilev, also participated in proclaiming the White Russian Soviet Republic.

In the declaration proclaiming independence, the following paragraph is found among others:

"Based upon the decision expressed at the Soviet Convention of February, 1919, an independent White Russian Republic is declared in the name of workers and peasants. All the laws and decrees of the Polish occupation as well as the reestablishment of private property are abrogated; the right of private property in land is abrogated forever. The 'Supreme Council' and all White guard governments of landowners and capitalists are declared abolished. The Soviet of the Republic is to determine its ethnographic boundaries with the western bourgeois states. Up to the time of a convention of the Soviets the power is vested in the Military Revolutionary Committee."

In the Declaration of Independence the fact is emphasized that in White Russia there is established a Soviet regime, based on the principle of proletarian dictatorship. White Russia will have an army, diplomacy, and Supreme Council of National Economy, in common with Soviet Russia. The official languages of White Russia will be, besides the White Russian, also the Russian, Polish and Jewish languages.

Two chief problems are facing the Soviet Government of White Russia at the present time: the liquidation of the Polish inheritance and the laying down of a foundation for Socialistic construction. The Polish government of occupation (and prior

to it the German) have done nothing in the sphere of bettering the economic life. On the contrary in this respect much has been destroyed by them. The economy of the large estates was almost completely destroyed. The Polish land owners, the proprietors of these estates, fled to Warsaw long ago. It is unnecessary to say that to improve and perfect the new economic apparatus in these former nests of noblemen will prove extremely difficult. The peasant households suffered tremendously from constant requisitions. An acute lack of agricultural machinery is felt. The village life has been demolished to the roots. The displacing of the Czar's officials, first by the Germans, and later by the Polish authorities from Warsaw, and the movements of tremendous armies, have destroyed the traditional habits and the normal course of the country life and work. The collapse of the agricultural life has assumed extreme proportions. We need hardly state that the upbuilding of a new communistic life under these conditions must be accompanied by the greatest difficulties. But that is not all.

In White Russia there are very few intelligent workers and intellectuals in general. The White Russian national rebirth took place only in the year 1905 when the waves of the revolution had finally reached the White Russian woodlands. In the year 1905, there was organized in White Russia the first socialist organization—the White Russian Socialist Hromada.* This organization played the roll of a pioneer in the life of White Russia. In Minsk, Vilna, and Grodno there were organized the first circles of class-conscious workers. In 1906, in Vilna there was published the first socialist weekly in the White Russian language, *Nasza Dolia*. During the same year, in Petrograd, there was established a publishing society which had for its aim the publishing of socialistic pamphlets in the White Rus-

* The pioneer socialist organization in White Russia has had the defect, however, of laying more stress on national than on socialist problems.—Editor SOVIET RUSSIA.

sian language. However, *Nasza Dolia* (Our Fate), and its publishing society, could not exist long. The reaction which conquered the revolution in 1907 was on the march throughout Russia. In White Russia the reaction throttled the first labor organization of White Russia—the White Russian Socialist Hromada. *Nasza Dolia* was closed. Its place was taken by a semi-socialist weekly *Nasza Niva* (Our Field). The White Russian popular movement developed very slowly, chiefly because it was first of all a movement of peasants. The majority of laborers in the small cities of White Russia as well as in the towns were Jews, Poles, and Russianized White Russians. White Russian literature, schools, and in general the national creative labor, will only now under the conditions of a free life receive the possibility of developing normally.

Only half of all the White Russians make up the population of the White Russian Soviet Republic. More than three millions of White Russians live in those provinces which according to the Riga Compact went to Poland. The question of their future fate is yet to be decided, and we must believe that the deciding word in this question will belong to the White Russians themselves, when their consciousness will completely ripen, to speak with Poland in a different language than the one in which they have spoken until now.

The Warsaw government and in general the Polish bourgeoisie believe that the question of these three million White Russians which went to Poland will be decided by their assimilation. Warsaw thinks that the White Russians of the province of Grodno, southern part of Vilna, and western part of the province of Minsk who are in the majority Catholics (half of the White Russians belong to

the Greek Orthodox Church, the other half are Catholics) will sooner or later be Polonized. The Polish clergy of White Russia, which never declines the role of Polish assimilators, has been working in this direction for a long time. It is hardly necessary to conceal that individuals amongst the White Russian intellectuals also sympathize with the Polonizing plans of Warsaw. However the culture bearers of Poland will not succeed in White Russia for the simple reason that the White Russians make up that social element which cannot be reconciled with the Polish bourgeoisie. The White Russians are peasants, poor peasants in their majority. Capitalistic Poland, ruled as it is by the *Ksiondz* (Polish Catholic priest), landlords, and bankers will never be able to satisfy the White Russian landless peasantry. The White Russian peasants will never be reconciled with the Polish *szlachta*, the owners of tremendous estates in White Russia.

The very fact that the eastern part of White Russia will exist as a Soviet Republic, this very fact alone will revolutionize the western part which at present belongs to the Polish Republic. The example of Soviet White Russia will be extremely contagious for the White Russian peasants who will have to live under the domination of the Polish landlords. All this taken together will create a spirit in favor of uniting both parts of White Russia, and when the psychological moment will arrive to transform this spirit into a political fact there can be no doubt that the best form of government structure for the United White Russia will be a Soviet regime. But we repeat the deciding word in this case will belong to the White Russian people, when the latter has realized its interest and has finally broken with the tradition of economic and political slavery.

Electrification of Soviet Russia

(An interview with Engineer Krzijanovsky)

In an interview with the *Russian Press* representative, Engineer Krzijanovsky, the chairman of the State Commission for the Electrification of Russia, communicated the following details as to the work of the commission.

The State Commission for Electrification is at present concluding the organization work which it was charged with by the Central Executive Committee. Considerable data on the electrification of Russia has already been collected. In all, eight regions have been investigated and a broad plan of electrification has been marked out.

In connection with the problem of electrification, the question came up as to how our transport, food, and fuel crisis might be obviated by electrification. The specialists, who have been working on the solution of this question, arrived at the conclusions, that, by the introduction of a system of electric stations and electric transmissions, we could lay down firm foundations for the reconstruction of the whole system of our economy. After

a close inquiry into the problems before us, we decided, during the coming ten years, to build not less than 27 big electric stations in European Russia and three stations in Western Siberia and Turkestan. The 28 stations must be of 1½ million kilowatt of which one-half million would be generated by water power and one million by fuel.

I should point out that, in the past, even capitalism in our country, was about to take the course we are adopting at present in the matter of electrification.

In 1918 the first big electric stations at Moscow and Petrograd, which already were of a European type, were built. Electrification had been planned even before the war, and there is nothing new in the idea itself. The new feature about this matter is that, at present, we have considerably more favorable conditions for the development of electrification. Capitalism which had planned electrification, was at the same time a hindrance to its accomplishment. For, under private ownership in

land, it was impossible to count upon a broad utilization of waterfalls and upon the construction of a sufficient number of electric stations. The November Revolution removed all obstacles, and made it possible to solve the problems of electrification on the whole territory of Soviet Russia at once.

While analyzing the various moments of our economic life which are connected with electrification, we had to pay special attention to the problem of transport. Our main resources in fuel, petroleum and mineral coal, are situated at a distance of two to three thousand versts from the consuming centers. At the same time, the consuming provinces are getting their food from the distant black-earth provinces. In view of such conditions it is quite clear that every disturbance of transport simultaneously means fuel and food-crises. The transport crisis must therefore receive our greatest attention.

In view of these circumstances we appointed a group of specialists who worked on the problems of electrification of the railways. As a result of its work, this commission arrived at the conclusion that it is necessary, through the electrification of transport, to solve two fundamental problems: in the longitudinal direction it is necessary to electrify the Moscow-Kursk railway with its ramifications into the western part of the Donets Basin; in the latitudinal direction it is necessary to relieve the railway congestion in the South Donets region and to connect this region by electric transport, through the station of Belaya Kalitva, with Tsaritsin, thus giving the Donets anthracite an outlet into the Volga Basin.

With the plan of electrification upon a wide scale in our minds, we still pay due attention and exert all our efforts to bring into order, to organize and to socialize the existing electric establishments. We are thus utilizing most widely the electric stations, we abolish the division of electric stations into groups for general and private use, we grade them according to their economic value and we unite the electric stations into a uniform body and create the basis for a uniform state electrical system.

Of the program of broad electrification we are, at present, carrying out the following work: We considerably enlarged the only big electric station which we inherited from the pre-war period, the so-called "State Electric Station"—"Electric Transmission." In this station we installed a new turbine of 5,000 kilowatt power, new large boilers and the necessary equipment. This station supplies, at present, 20,000 kilowatt-power instead of the previous 10,000 kilowatt. At the same time experiments on a large scale were made here to procure peat mechanically by the hydraulic system. The results of these experiments in 1920 show that we may expect a revolution in the matter of procuring peat in the nearest future.

Great work was being done to build the Shaturskaya station on the peat beds. There, the construction of the first skeleton of the future experimental regional station was completed. Great pro-

gress was also made in the work of procuring peat and building the factory, station and settlements.

At the same time the work to construct the Kashirskaya regional station on the Oka river is rapidly being proceeded with. This station is situated in the neighborhood of two railway systems passing through the Moscow coal region, at a distance of 60 versts from Moscow. The station will be of over 40,000 kilowatt. The work on the construction of this station is well under way and the rough part of the task is already completed. A great deal has also been done to construct the auxiliary parts of this station and, particularly, the difficult problem of the water supply for the station and of getting the builders to help in the installation of its engine room. We may expect that the station will be finished in the course of 12 to 18 months.

Besides these three stations, preparations are being made to start work on the construction of a number of other stations. Thus, work is being done to construct the regional Taykorskaya station in the neighborhood of Ivanovo-Voznessensk. Near Petrograd work is going on to install a regional station on the Neva River at the so-called Utkinsky factory, where there is already a building suitable for the station and a possibility to complete the work in the course of one to one and a half years. The most important, however, is the work to construct the hydraulic station on the Volkhov River with 80,000 horsepower and on the Svir River with 140,000. It is planned to complete first two hydraulic plants on the Svir and one on the Volkhov. The responsible superintendent of the works on the Volkhov stations supposes that the work will be completed by 1924. Projects are being worked out for the construction of the following stations: on the peat beds near Nizhni-Novgorod, in the Kashpura shale district near Sizran, and near Shterovka in the Donets region. In the Urals, work is under way to construct the regional station on the Kislovsk mines. It is planned to construct in the first place the stations which will be situated on the Cheliabinsk mines, on the Yegorshin anthracite and a hydraulic plant on the Chusovaya River.

THE FACTORY WORKERS AND AGRICULTURE

One of the consequences of the great Russian Revolution is the fact that the proletariat engaged in factories and mills has begun to play a conspicuous part in agriculture. That seems somewhat unusual. It is rather strange that the proletariat, especially that section which is working in factories and in mills, should be engaged in vegetable gardening and corn growing. Yet such are the facts. The following is the history of this new part played by the proletariat. The total arable area of the Moscow province began to shrink systematically from 1864 until recently. In 1903 the arable land of the Moscow province amounted to 460,000 dessiatins, in 1916 this area decreased to 337,249 dessiatins, i.e., by 27 per cent. This of course had a great effect upon the food supply of

the workers of this district. The position grew most acute after the November Revolution. The disorganization of the transport, the ineffectiveness of the new food organizations and the resistance of the village profiteering elements, all resulted in the winter of 1918-1919 being one of the most difficult for the proletariat. Notwithstanding the efforts of the Workers' Food Detachments, there was no bread as the villages which were in the grip of the profiteering peasantry refused to supply corn to the town. The hard facts of life suggested to the proletariat the idea of procuring bread by its own means and efforts. In the spring of 1919 we witnessed the beginning of the allotment system, under which factory workers were supplied with land by the aid of the Soviet authorities, and which gave a stimulus to the development of agriculture in town, suburb, and country districts. Towards the spring of 1920 collective land farming by the proletariat became very extensive. In the province of Moscow alone we already have 126 such farms, the total arable area of which amounts to 24,093½ dessiatins. It should be kept in mind that the peasantry is responsible for the cultivation of only 11 per cent of the arable area of the province, so that the proletariat holds the maximum of arable land in the province. Thus it may be said that the gains in this sphere have been most considerable for so short a period. Another fact worthy of notice is that these gains are the more solid for the reason that the methods employed by the factory workers are different from those employed by the ordinary growers of agricultural produce, that is to say, by the peasantry. The peasantry ordinarily are conservative, sticking to old methods of cultivation. The working class, on the other hand, manifests itself here as elsewhere, as the leading class, the bearer of civilization. As a consequence of this, the proletarian farms are better cultivated than the regular peasant farms. The proletarian farms are the harbingers of new principles in agriculture; they are becoming the models and schools for the average masses of the peasantry. This statement can be supported by a number of facts; we witness neglected sites, flooded meadows, and unarable land, to the great surprise of the peasantry, turn into gardens and verdant pastures by means of tractors, irrigation, and the perseverance of the proletariat. This new activity of the proletariat has the additional advantage in this that it is not the main body of the workers, who are engaged in this work, but invalids, women, etc., who are thus given an opportunity to restore their health. Another reason why the entire country is interested in the development of these farms is the fact that they are the means of bringing about a close contact between the proletariat and the peasantry, in which the former brings its healthy political, educational, and general influence to bear upon the latter. All these considerations impell the Supreme Council of Public Economy to take measures in order that this new activity of the proletariat is given every opportunity to live to develop in a direction undoubtedly useful for the Republic.

PEAT IN RUSSIA

The number of people engaged in the peat trade in 1919 was 57,910. The total amount of peat produced was 67,000,000 poods, which comes to 1,155 poods during the season or 33 poods a day for each worker.

The peat workers, in view of the difficult conditions of the work, receive higher rations than any other workers in the republic. The results obtained are 350 poods of peat for each pood of food rationed to the workers.

At the present moment we witness a complete revolution in Russian peat cutting introduced by the new invention of the engineers Classon and Kirpichnikov, the result of several years of experiment with the hydraulic method of procuring peat.

The method consists in turning a strong current of water upon the peat turning into a paste. A special suction pump is then used which diffuses the paste through pipes over the drying ground in a layer about three inches thick. Before this mass has dried completely it is traversed by a specially adapted car with two wheels each about two yards in diameter with rims fitted with briquette-shaping moulds. A special method is used for the final drying of the peat. It must be mentioned, however, that attempts are being made to invent a method of mechanical drying, by extracting all the moisture from the peat by pressure.

The present method of sun-drying, as used by the engineers Classon and Kirpichnikov, affects a saving of eight to ten times the ordinary amount of labor. The general methods of procuring and drying peat are steadily improving.

As the question of the electrification of Russia has been favorably settled by the All-Russian Central Committee, it may be expected that the hydraulic method will make it possible to run a number of electric power stations upon local peat fuel.

The inventions made by the engineers Classon and Kirpichnikov will eventually put the Russian peat production on a higher level than elsewhere.

In addition to Classon and Kirpichnikov there are a number of other talented engineers, such as Misner, working in different directions on the improvement of the process of producing peat.

"All citizens able to work have the right to employment at their vocations. . . ."

THE LABOR LAWS OF SOVIET RUSSIA

New edition, translated from the official Russian text, with a supplement on *The Protection of Labor in Soviet Russia*, by S. Kaplun, of the Commissariat of Labor.

93 pages, bound in heavy paper covers, price 25c.

ADDRESS

SOVIET RUSSIA

110 West 40th Street

New York City

M. I. Kalinin, Russia's First Worker

MICHAEL IVANOVICH KALININ has occupied the position of Chairman of the All-Russian Central Executive Committee, the highest body in Soviet Russia, since the death of Sverdlov in March, 1918. Kalinin's career may be considered as typical in the revolutionary workers' movement of Russia. Born in 1875, he entered the Social Democratic Party in 1898, at the time of its secret founding. There then began for him persecutions on the part of the Russian police. A speaker in the session of the Central Executive Committee pointed out, when Kalinin was elected to his post, that he had been arrested twenty times in his life. Kalinin has been in prison on countless occasions, was banished to Siberia and other places, lived in Petrograd illegally, i.e., without proper papers. In this period of persecution he would return again and again to his little peasant home in the country, taking up his farm work. As an industrial laborer Kalinin was also employed, among other things, as a lathe worker in the Putilov Works.

He is one of the best representatives of the class conscious workers of Russia. Since earliest youth, he has acquired considerable knowledge, particularly in the field of sociology, by a very versatile reading. Kalinin was for many years one of the most active members of the Bolshevik Party.

Kalinin does not like to speak of himself. *Pravda* in an interview with him reports, among other things:

"I consider my appointment as Chairman of the Central Executive Committee as symbolic. I am a peasant and a worker at the same time. I incorporate as it were the union of city and country. I worked on agriculture, and will continue to work on it as far as my time allows . . . I stand between the medium peasant and the poor peasant. My farm is small but well worked. I am used to country life; I know the peasant psychology very well. I know that the peasant must love the Soviet Government. Just because I am a peasant I am taking part in the Revolution and serve the Soviet Government. From the standpoint of his agricultural interests the medium peasant must support the Soviet Government."

On April 26, 1920, Kalinin began his tour of Russia. His trip took him through all of Soviet Russia, along the following route: the Urals, Kursk, Voronezh, Lisky, Novokhopersk, Balashov, Penza, Inza, Ryazan, Zhitomir, Kiev, Yelizavetgrad, Odessa, Kherson, and to the Crimean Peninsula. The real object of this trip was to become acquainted with the country population, as well as with the country and its needs. Aside from this, however, Kalinin imparted to his journey a propagandist and educational character. He took a whole stock of books with him, a moving picture machine, a theater, exhibitions, a museum, etc. Wherever he came, he would begin to converse with the peasants, asking to know their wishes, their grievances, etc. Later he undertook several other journeys of this character.

Everywhere the peasants handed him petitions and grievances which were immediately considered and in most cases quickly adjusted. In the cities he summoned meetings of the delegates to the local Executive Committees, in which he would himself participate.

At several places, Simbirsk, Samara, Penza, Tula, etc., Kalinin obtained first hand knowledge of the work of the local Soviet organs, and wherever irregularities appeared, he had the guilty haled before the People's Tribunal. The masses of workers and peasants gathered around the representative of the Republic with enthusiasm.

Kalinin's speeches were free from all foreign expressions and were understood by all. The workers immediately grasped that this man, both in origin and in career, is fitted for his present post of honor. The impression made by his speeches is always overpowering. A selection of these has just appeared in Moscow in two volumes.

SOVIET RUSSIA

Official Organ of the

RUSSIAN SOVIET GOVERNMENT BUREAU
110 West 40th Street New York, N. Y.

This weekly will print articles by members of the Russian Soviet Government Bureau as well as by friends and supporters of Soviet Russia. Full responsibility is assumed by the Bureau only for unsigned articles. Manuscripts are not solicited; if sent in, their return is not promised.

FEARS are felt in Allied quarters lest concentrations of Soviet troops, alleged in the daily newspapers to be in progress along the borders of Esthonia, Latvia, and Lithuania, may within three months result in the incorporation of those nations with Soviet Russia. This is the interesting conjecture of Mr. Walter Duranty, in a Paris cable of December 25, which appeared in the *New York Times* on the following day. We always have our suspicions of the motives underlying such predictions. As we pointed out when similar predictions were made with regard to Poland a year ago—and the later developments have fully borne out our suspicions—declarations that Soviet troops are about to attack any of the new creations of Allied diplomacy almost invariably are a smoke-screen behind which these little states are being prepared for a savage onslaught against Soviet Russia; but Soviet Russia is to be made to appear the aggressor. It is not impossible that such an attempt by the Allies may bring about the condition, apparently deplored by Mr. Duranty, where “the Soviet Federation will include Reval, Riga, and Kovno, with the Baltic Sea once more the western boundary of Russia,” for the troops of the Red Army have the habit of advancing where it is intended by the enemy to throw them back. Mr. Duranty’s “well-informed authority”, who remains, as they always do, anonymous, declares that “such events would raise serious problems not only for France and Great Britain, but also for the United States.”

And then Mr. Duranty reviews the pretty little scheme, now so old and well-known, by which Great Britain was to win control over “Russia’s western windows.” It will be remembered that these little states were really the creation of England, which hoped, by keeping them “independent”, to use them in order to secure to England an unrivaled position toward Russia, both in the spheres of political influence and trade. Monopoly rights for England over the principal industries of the three states (timber and flax) had been preempted in definite financial and economic agreements with those states, “which would have stabilized them financially.” The Esthonian and Latvian governments were expecting to ratify these agreements, through action of their Parliaments, by January 1, 1920, but, according to Mr. Duranty’s delicate insinuation, so

typical of the irresponsible manner in which such news is spread by the press, “this, however, was afterward refused largely, it is said, owing to the secret influence of Soviet gold.” As a matter of fact, the commercial agreements with England were rejected by Esthonia, Latvia, and Lithuania because they included conditions of military aid to England in maintaining counter-revolutionary armies on the Russian border (the case of Yudenich, England’s direct tool, cannot be forgotten), and the three states were already beginning to view more favorably the genuine commercial, non-military and non-political propositions that were being made by Soviet Russia, which became the power with whom each of them actually concluded a treaty, instead of England. And to stabilize their finances, the Soviet Government did pay them gold, as the treaties, which our readers have had before them, duly provided.

Mr. Duranty points out the interesting circumstance that the United States Government had always declined to recognize the sovereignty of these border-states, and repeats that this refusal was always based on the conviction that the regions formerly comprising Russia must still be considered as portions of Russia. He does not fail to suggest, by implication, that the opposite policy of Great Britain, namely that of encouraging the separate establishments in the Baltic region, was due to a desire to develop the new countries colonially and through them to exploit Soviet Russia. England has carried out her policy, we may add, to the extent of recognizing and trading with the small states. The United States, which is about to send home the representative of Soviet Russia, does not seem to mean to do anything to support that Russia—Soviet Russia—which alone can organize and maintain a united country.

* * *

THE only interest Mr. Duranty concedes to the United States Government in the possible absorption of the Baltic States by Soviet Russia, is a desire to prevent Red Cross supplies from being used in the service of the people of Soviet Russia, a consummation in which he strangely suggests the American Red Cross would aid by continuing to remain at its post, even though the little States be occupied by Soviet troops. Here are Mr. Duranty’s words on this subject:

“The problem that would confront America as a result of Bolshevism of the Baltic States is less political than in the case of France or Britain. The American Red Cross and Children’s Relief Associations have got big organizations in the Baltic area, where upwards of one hundred Americans are engaged in fighting disease, feeding children, housing the homeless, clothing the destitute and generally succoring the impoverished and devitalized population. Not only are there large stocks of Red Cross and Relief Association goods in the Baltic area which it is impossible to remove quickly, but I know that a great majority of Americans engaged in the work would decline to abandon it under the threat of a Bolshevik upheaval. If the Baltic States ‘go Red’ it will happen at a moment’s notice, and the result would be the same as if American organizations concerned were now working in Soviet Russia proper, a practice to which both the State Department and the Bolshevik leaders hitherto have been opposed.”

Again we must point out that there is no danger of the American Red Cross Society's giving any aid to Soviet Russia. No doubt the American Red Cross is "fighting disease, feeding children, housing the homeless, clothing the destitute and generally succoring the impoverished and devitalized population"—outside of Soviet Russia, and even in the former Russian border provinces. But anyone who recalls the attitude of the organization in Russia proper will have no fears of their rendering excessive assistance in the improbable, if unprovoked, event of a Soviet Russian occupation of Latvia, Lithuania, and Esthonia. If nothing else should intervene, providential fires might descend to destroy the "large stocks of Red Cross and Relief Association goods in the Baltic area, which it is impossible to remove quickly." Such a fire, it will be remembered, came just in the nick of time to prevent similar supplies in the Crimea from falling into the hands of the advancing Red Army.

As for the suggestion that "both the State Department and the Bolshevik leaders have hitherto been opposed" to relief work by American organizations, the first half is, we regret to say, probably true; those who read the statements quoted by us, in our issue of Christmas Day (December 25), from Mr. Allen Wardwell, will no doubt have the impression that it was the United States Department of State that ordered Mr. Wardwell's organization from Russia. We know it was not the Soviet Government who ordered them out, and Mr. Wardwell knows it and says it, all Mr. Duranty's assurances to the contrary notwithstanding. By the way, why does not some newspaper man question Mr. Wardwell on this subject? The information he would receive would be final.

* * *

FRANCE, says Mr. Duranty, also has reason to view with concern a possible Bolshevization of the Baltic area, and for two reasons: "the menace to France's ally, Poland, who would be militarily outflanked by the extension of the Soviet boundaries in the northwest, and again faced with war or submission to the Bolsheviks as a result of the Red support of the Lithuanian claim to Vilna. Secondly, the destruction of the barrier between Russia and Germany." Again in Mr. Duranty's words:

"Ever since the armistice the French have done their utmost to prevent a common frontier between Germany and Soviet Russia. They are haunted by the dread of a combination of German efficiency and Russian millions." Thus the game of Allied diplomacy goes on. Mr. Duranty suggests that the Soviets may intervene in the Baltic States, and then openly states that both France and England have been doing nothing else since the armistice and, we may add, since before the armistice. Should regions be added to Soviet Russia that would really be of value to Soviet Russia industrially—Mr. O. Preedin will point out the value of the industries of Latvia to Soviet Russia in an article, "The Decline of Latvia", in our next issue—a great misfortune would have occurred, which must be prevented at all hazards.

And should these colonial protectorates be lost to England, or should Poland lose her buffer-states, the Allies would also consider that the whole world had suffered. But should Soviet Russia and Germany have a mutual boundary, or should anything else occur that would make trade and communications easy between these countries that need each other so much, the discomfort of French statesmen would become great indeed, for one of the world's greatest economic problems would then be solved. Evidently the desire of the Allied statesmen is not to see the world's economic problems solved, but to maintain the present state of unstable equilibrium which seems to be the only condition on which they can continue their existence.

Altogether, it is a benevolent company that Mr. Duranty portrays when he reviews the interest shown by the various powers in the welfare of Esthonia, Latvia, Lithuania, and Poland.

* * *

ON DECEMBER 1 a mass meeting was held in Christiania, to protest against recruiting and sending one hundred Norwegian soldiers to Vilna, there to serve as a police guard during the taking of the plebiscite. And the very next day, the Norwegian Storting, the legislative body of the country, passed the motion to send the one hundred soldiers, with only eighteen wilful votes of dissent. For all we know, the soldiers may be already in Vilna, or elsewhere, and the Allies will not have much difficulty in pretending that they have been attacked by Soviet troops, and thus in launching a new international war against Soviet Russia. As the Norwegians must now be saying who protested against the sending of Norwegian troops: *vox populi vox dei*.

But, although the protest apparently failed to impress the Storting, it was nevertheless a big protest; the following is the text of the resolution passed at the December 1 meeting by Norwegian workers, and the fact that the text as issued is followed by the signatures of the official organs of the Norwegian Workers' Party shows that the party officially endorses the protest:

"In connection with the demand to send troops to Vilna, the meeting calls upon the Secretariat of the National Organization of Workers' Trade Unions and on the Central Executive Committee of the Norwegian Workers' Party to declare a boycott of any such sending of Norwegian troops. Participation in the imperialistic guard at Vilna will be an open breach of neutrality and may lead our country into a destructive and devastating struggle with a friendly neighbor.

"Such a crime against our people must be prevented by every means at our disposal. Everyone who complies with an order to report, or who voluntarily enlists for this lackey's service to the League of Nations, should therefore be branded and treated as a strikebreaker."

The official addition to the protest is the following, with the signatures of three men well known in the Norwegian workers' movement:

"The Storting, in its session of December 1, decided to agree to the sending of one hundred men to Vilna. Our approved policy of neutrality is thus broken. The consequences of the Storting's decision may involve us in the greatest complications and disasters.

"It is every man's duty to prevent so frivolous and irresponsible a policy of adventure. The principal organizations of the workers are therefore declaring herewith that the expression of the great protest meeting at Christiania has its unconditional approval.

"Not a single decent man for the imperialistic guard duty at Vilna! Make the boycott effective! And treat eventual breakers of this boycott just as you would treat regular strike-breakers!"

NEW NOTE TO GREAT BRITAIN

Telegram received by Mr. Krassin addressed to Lord Curzon of Kedleston, from Chicherin, dated December 4.

December 7, 1920.

The Russian Government having, through Mr. Krassin, received the Draft Trade Agreement of the British Government, wishes to point out that the fundamental political principles dealt with in the above draft have already been agreed upon by both parties as laid down in the British Memorandum of June 30 and in the Russian Note of July 7. This refers both to the question of mutual refraining from hostile action and official propaganda and that of the compensation to private citizens who had supplied goods or services to Soviet Russia. It had further been agreed that on the acceptance of these principles as a basis of the subsequent political agreement, all further details and the elaboration of the political agreement would be referred to the pending conference of delegates and experts properly nominated by both governments. The British Government in its Memorandum describes the condition that would be created between the two governments by the adoption of these principles as an armistice preceding the conclusion of peace. In its answer of July 7 the Russian Government emphasized with no less clearness that it adopts the proposed principles as the basis of an agreement which would be the object of negotiations subsequently to be conducted between the two governments. The Russian Government on its part sent for this purpose a plenipotentiary delegation to London, but unfortunately the British Government, by forcibly eliminating one member of the delegation after another, has been deliberately avoiding for five months any discussion and thus postponing the carrying into effect of the agreement.

The Russian Government is therefore not a little surprised to find in the draft now presented to it the principles agreed upon altered and particularized in such a way as to suggest a considerable amplification and extension of the engagements of one party only, namely, of Russia. It can be well understood that the British Government have been temporizing in coming to a final agreement with the Russian Government in the hope that the war of Poland and the mutiny of Wrangel might go against Soviet Russia and thus make the latter amenable to harsher terms than those accepted in July, when the fortunes of the war seemed to the misinformed outside world to be in the balance. But now that the conflict with Poland is obviously nearing a peaceful solution, that the last organized forces of the counter revolution have been utterly crushed, that peace with Finland has been concluded and ratified and that the popularity of Soviet Russia is growing from day to day both in the west and more particularly in the East, one fails to see on what expectations the British Government bases its attempts to impose upon the Russian Republic new obligations as to which no discussion had taken place and no consent had been obtained from it. Although in spite of its repeated friendly and peaceful assurances the British Government, during the interval in the negotiations, has on many occasions been a party to acts injurious and detrimental to the interests of Russia, as, for instance, in the case of Bessarabia and of Danzig, the Russian Government, true to its peaceful in-

tentions, declares its readiness to abide by the basis of the agreement of June and July, but much as it would like to see trade with Britain renewed, it is not prepared to go beyond that agreement or to alter herein a single point without properly conducted political negotiations at which both parties could formulate their understanding in the main principles and meet each other's desires by way of mutual concessions as laid down once more by the Russian Government in its Note of November 9. In that Note the Russian Government expressed once more the view that the Trade Agreement between Great Britain and Russia will have to be accompanied or followed by negotiations of a political nature in London or some neutral city selected by mutual consent. As to mutual abstentions from hostile actions and propaganda and recognition of claims of British citizens for goods delivered and services rendered to Soviet Russia, it is quite ready to mention in the Trade Agreement the simultaneous adoptions of the principles as worded in the exchange of Notes of June 30 and July 7 as of the basis of a subsequent elaborate agreement which must be the object of a political conference between Russia and Great Britain. The engagements which Russia will enter upon towards Great Britain in every particular political question referred to in this respect will be discussed and negotiated at this conference, paralleled with engagements which Great Britain will enter upon towards Russia. Such has always been the basis upon which the Russian Government was ready to bind itself as to its action in different parts of the world, in particular in Asia, in its relations towards Great Britain, and it does not see any reason why it should adopt a new attitude in this respect. The preamble of the proposed Draft and Article 8 must therefore be removed and replaced by a simultaneously adopted repetition of the principles laid down in the June and July Notes as of the basis of the pending conference. As to the other articles of the Draft, strictly referring to trade, their final formulation will have to be discussed between the British Government and Mr. Krassin to whom the necessary instructions are forthcoming. The final draft will then have to be forwarded to the Russian Government for examination and adoption.

The negotiations as to the Trade Agreement or immediately after this has been signed and independently from such political conference provided for in June and July Notes will have to be convened in order to settle on the basis of the principles agreed upon all outstanding political questions between Great Britain and Russia.

The Russian Government hopes that the British Government will agree with it as to the expediency of a speedy reply and of a prompt solution of all pending questions and that it will meet the sincere desire of the Russian Government for establishing peaceful and friendly relations to the mutual advantage of both parties.

(Signed) CHICHERIN.

Bound Volumes for 1920

Volume II, of which a number of copies, splendidly bound, are still to be obtained by persons desiring them, is sold at five dollars. Check or money order should accompany order. Volume I (June-December, 1919) is sold out and will not be reprinted. Volume III will be bound, with title-page and index, as soon as the issues have all appeared (January 1, 1921). Readers may place orders now for Volume III, and should send the cost of the volume—five dollars—with their orders.

SOVIET RUSSIA

110 W. 40th St. Room 304 New York, N. Y.

An Evening Spent with Counter-Revolutionists

By PIERRE PASCAL

A GROUP of former financiers, bank directors, big industrials, merchants, promoters of mining enterprises, imperial senators, councillors of state, state prosecutors, rich engineers, academicians, recently formed at Petrograd a "League of Intellectual Workers", and published a declaration condemning all foreign intervention, demanding the lifting of the physical and moral blockade, loudly proclaiming the right of the revolutionary inhabitants of Russia to find for themselves a political and social regime according to their desires, and finally, inviting all the liberal classes to collaborate honestly with the system in power in order to re-establish the economic prosperity of the country.

What can be more significant than such a manifesto, no longer proceeding from the semi-proletariat, or from the intellectual *petite bourgeoisie*, but from a veritable privileged aristocracy, which the Soviet Government has deprived of its titles, of its property, and of the very sources of its revenue!

My counter-revolutionists are simply intellectuals of mature age, who have been placed by their studies, their habits, in a material incapacity—truly abnormal and I believe incurable—to understand the new world that is being born before their eyes.

Small as is this number of Russians, it is interesting to note what they think, because they include precisely the men on whose blindness it is hoped to depend in directing the Russian policy after an overthrow of the Bolsheviks. They are the brothers of the emigres in Paris and London. But having been at a better school than the latter, they have in spite of everything learned something in the revolutionary torments, and their development deserves some study.

They are quite incapable of overthrowing the Soviet regime, and furthermore, it is long since that they have believed in such a thing themselves. But if, by any such cataclysm as is now becoming more and more impossible, the Soviet Government should be overthrown, they would immediately attain an enormous influence. In fact, all the Socialist parties being now either absolutely discredited or more or less absorbed by Communism, there is no longer any middle ground possible between the latter and the Cadet-Monarchist reaction which the counter-revolution would automatically put into power. We must add that the Soviet Government, knowing these men and understanding their opinions, is so conscious of its strength, rooted in the will of the masses of the people, that it will give them the most complete liberty and even presses its magnanimity to the point of assuring their material subsistence.

These honorary counter-revolutionists, if I may term them thus, are filling all the non-compromising posts of keepers of archives, librarians, custodians of museums, or draw large royalties as authors of works which have not yet been produced.

I shall perhaps speak again on the liberality with which the "State Publishing House" subsidizes every kind of independent organization of literary men, poets, artists, or publicists.

The other day I went to see a noted counter-revolutionist who receives about a score of his ilk every Thursday evening.

The never-ending subject of Russian intellectuals was under discussion: Slavophilism, or Occidentalism, Rome or Byzantium, Moscow or St. Petersburg. Insoluble and therefore inexhaustible antithesis; source of ingenious constructions both infinite and futile, exploited for eighty years by hundreds of writers and dillitentists.

The revolution has served to rejuvenate this time-worn theme, for it is possible now to make attempts to find in Bolshevism elements originating from one pole or the other of these antithesis. In the company in question there were represented rather varied nuances. The speaker was an Old Believer, representing a dissident church whose influence is by no means negligible since it counts about 20,000,000 faithful and fanatical adherents. By his side was a dyed-in-the-wool Cadet politician, not to mention financial economists, writers, bourgeois well-known in Russia, and besides, younger men, well informed on economic and social problems, and eager to play a political role in a society to their taste. There was even a Menshevik, Cherevanin, as I learned when he began to speak, for I should never have suspected that this man in a black coat, reclining in an armchair, with a bored and tired expression, having every mark of the banker, or, as is said in Russia, the man of affairs, should belong to the Social-Democratic Party of the Workers. The master of the house, Berdyaiev, is one of the most original philosophers and thinkers of the old Russia. The speaker points out that the Bolshevik revolution is in accord with the Russian tradition; he quotes Dostoyevsky, Gogol, and some monarchist theorist, Durnovo, but particularly Leontiev, with his prophecy according to which it would not be Europe that would carry the Revolution but Russia that would carry Communism to the Occident.

It is clear to me that in spite of all, these Russian intellectuals, irreconcilable enemies of Bolshevism, are pleased with the idea that thanks to the latter Russia is finally playing a part in the revolution of humanity.

I shall not record the long discussions that took place during these three hours or more. I shall simply outline the inferences I have drawn from them for myself.

1. All the bourgeois thinkers and politicians who are of the Cadet shade now admit this: Bolshevism, the Soviet power, is an essential and fundamental force, with an incalculable scope, destined to evolve, but certainly to endure during its evolution, because it corresponds to a series of economic

and moral requirements. We are already far from the old theory of the *coup de force*, which says that a small band of people with no support in the country has seized the power. This idea is now completely discredited, even in the *milieu* I am describing.

2. Bolshevism is not only Russian. It is universal human phenomena affecting the entire world. The profound revolution which we are witnessing is not only political or even social, it is overturning the juridic, moral, and philosophical conception, undermining all values. The *leitmotif* again recurring is that of "irreparable bankruptcy", collapse of "bourgeois culture". It is an irresistible and predestined movement. It is making an epic in the most literal sense of the word, in the history of the world, as did Christianity, the Reformation, and the French Revolution. We are far from the alleged state of "Asiatic" socialism. There is no longer a question, says Berdyaiev, of Rome or Byzantium, but of the new world, a new type of civilization, infinitely exceeding all the ancient categories, embracing and uniting at once the Orient and the Occident and the entire world. Thus the Russian counter-revolutionists are closer to the truth than many social democrats of Germany and elsewhere.

3. In Russia, under the form of the Soviet power, Communism represents national unity, national integrity, the material dignity and interest of the country, defending itself against all the aggressions of Germany, Poland, England, or France as well as Denikin, Kolchak, Yudenich, and the others who have lacerated Russia in order to sell it retail to foreigners. The Soviet power is truly the only Russian Government. It is not by accident that Lenin's seat is in the Kremlin, the heart of Russia.

4. Finally, Bolshevism itself may be as hateful as you like but it has at least one good side, one profound truth, it is destroying the democratic superstition.

Evidently the Menshevik Cherevanin is not of this opinion; for belonging to the extreme right of his party he still believes in a pure democracy.

But I have had the pleasure of all these typical Cadets, now disillusioned, hurl themselves with raised arms against parliamentarism, against the separation of powers, against the English constitution, of which they were once so enamored.

What folly, they say, to think that you can impose upon the Russian people, or any other people, abstract forms made to order, which may not suit it. The Soviet power is in the right, in affirming the right of the Russian people to create by experience a government and a social system that may be suitable to it. Bolshevism has also the right in belittling the liberal illusions that have never been other than harmful deceptions. It seemed to me I was hearing the sentences of "State and Revolution" by Lenin, so striking was the coincidence. In truth, parliamentarism and bourgeois democracy have become quite impossible in Russia. The Cadets themselves don't want them. These are the inferences that I have drawn from my visit, the opinions expressed with various shades, but nevertheless show-

ing a remarkable identity at bottom by the typical representatives of the various tendencies of the intellectual counter-revolutionary world.

But I must also note in passing an opinion that struck me by reason of the unanimous sympathy with which it met. Russia was wrong to ally herself with the Entente against Germany in the last war, for the Entente represents precisely the parliamentarism and liberal fiction, and, in general, the interests of Russia are much closer to those of Germany than to those of the Entente.

The outcome has well proved the error of the Ententophile policy since Russia has been put by the Allies by the side of Germany among the vanquished of the war.

I repeat that this opinion is not that of ultramonarchism nor of the old German party which once existed in the Court, but of Russian patriots rallying around the Constitutional Democracy signpost, the opinion of former participants in the Ententophile policy of the Duma, of even those on whom the Entente governments were counting.

An immense transformation has taken place in all minds. I had already heard some echoes of this new Germanophile tendencies spreading in anti-Soviet quarters, but I should never have considered them to be so full grown. While listening to these gentlemen state their ideas and reasoning without end on the world role of Bolshevism, on the philosophy of history, and the destiny of Russia, I could not help thinking of those hundreds of thousands, of those millions of peasants, workers and soldiers, who are themselves creating with their blood, with their sweat, and with their labor a new society.

These intellectuals, shiny with well-being, are tossing futile repartee about the steaming samovar, in a comfortable parlor. They have learned a little but they will never altogether understand Communism, because they do not want to live it. Their generation is doomed by history. In their presence a whole people of workers has risen in a heroic effort of energy and endurance against cold, hunger, and savage nature, to snatch from almost superhuman opposition the first accomplishments of the future world. Vanity, on one side; fruitful heroism on the other.

Soviet Russia

will continue publication; we make this statement in answer to several inquiries on the subject. Continue to send us lists of your friends who might appreciate sample copies. Subscription remittances should be made payable to L. C. Martens.

Poles and Cossacks in Grodno

By M. GLEBOVICH

[The following interesting articles showing the change in the Russian Cossack under Soviet rule is taken from a recent issue of the Jewish "Forward."]

HOW times have changed! Not long ago the word "Cossack" was used to frighten children in their cradles. "The Cossacks are coming. The Cossacks are coming!"—these words filled the hearts of men with fear. The Cossack was the embodiment of carnage and murder.

But the Bolsheviks have made an altogether different man of the Cossack. In the Soviet army the Cossack has become a fighter for freedom and a defender of the Russian Revolution.

Mr. Albert Douglas, an American citizen whom the United Grodno Relief Committee sent as its representative to Grodno, tells that when he arrived there, at the time of the Bolshevik occupation, he could hardly believe his own eyes, at least in what he saw of the Kuban Cossacks.

He talked with them of world politics, about the relation of the English, American, and French governments to Soviet Russia, and they showed both knowledge and understanding in all these matters.

They behaved so well to the Jews of the city that one could not wish for anything better. They did not touch, hurt, or insult a single human being.

"When they entered Grodno in July, under the leadership of Commander Gow," says Mr. Douglas, "I was in the street because it interested me to see what the Cossacks of the Red Army looked like. I saw a group of them gathered on a street corner, approached them, and distributed some cigarettes among them. Not a man took more than one cigarette, and those who were not smokers, excused themselves, saying, 'You can give it to this comrade. I do not smoke.'"

Later they talked to him about Russia's foreign relations and about the purpose of the Soviet army in its attack on Poland.

Mr. Douglas tells marvelously interesting things about Commander Gow. He describes him as a man with an iron fist and a heart of gold. He tells the following characteristic anecdote:

Once I met a soldier of the Red Army in the street who ordered me to come with him. It was dangerous not to obey, so I went. The soldier led me into an enclosed yard and began to go through my pockets. He found a gold watch.

"Are you robbing me, comrade?" I asked him.

"Don't speak," the soldier returned, and went away. I followed him. I met a Cossack on the way and told him that the soldier had taken my watch. The Cossack gnashed his teeth in rage. "So. He robbed you?"

The Cossack captured the soldier and led him to Commander Gow, who passed just at that time on horseback.

Gow himself a young man between twenty-eight and thirty, with long black mustaches and with the

usual Cossack fur hat on his head, measured the soldier from head to foot, and cried out angrily: "Give him his watch."

"I didn't take any watch."

"You have taken it. Give it back."

"I have not taken it."

Gow began to swear and gnash his teeth, and suddenly drawing his revolver he shot into the air.

The soldier was frightened. He became very pale—and returned my watch.

"Don't dare to smirch the name of the Red Army," Gow shouted.

It was later discovered that the soldier in the case was an ex-member of Petlura's army.

Although Gow is very severe, the Cossacks love him. He treats them like comrades, and many of them call him "thou".

The following story told by Mr. Douglas shows how different the Cossacks of the Red Army are from those old Cossacks who were the fear of all Russia:

When the Poles retreated from the Grodno suburbs they committed terrible atrocities against the Jews. Four Jews—Hirsch Alexandrovich, Nathan Yonkovsky, Abraham Eberpik, and Nahum Starovliansky were later found mangled and disfigured on the road. Their tongues were cut out and all the bones in their bodies were broken. They were put in a wagon and taken to the Jewish cemetery in Grodno.

Just as they were being taken through the city a mass-meeting of the Cossacks was in progress. The speaker ordered the wagon to stop. All the Cossacks bared their heads, and when the speaker began to describe the Polish atrocities in Jewish towns and villages all the Cossacks and the other soldiers of the Red Army wept.

The military band played the funeral march and the four Jewish martyrs were conducted in state to their eternal rest.

The soldiers of the Red Army love Trotsky to an extent hardly believable. His speeches put the spark to the flame of enthusiasm in the hearts of the soldiers. Although they wear ragged clothes, though they endure much suffering, their lives and souls are dedicated to the Revolution.

Here is an example of it. On one of the corners in Grodno Mr. Douglas saw a barefoot soldier.

"How far is it to Warsaw?" asked the soldier.

"Quite a distance," answered Mr. Douglas, and pointing to the soldier's feet, added, "You are barefoot."

"That does not matter. It is warm. The sun is hot, and it is easier to walk without shoes."

"But what will happen in the winter?"

"I'm not worrying much about the winter," answered the soldier. "Comrade Trotsky is making boots for all of us."

England Must Trade with Russia

By G. D. H. COLE

(Hon. Secretary Labor Research Department, London.)

From the point of view of the whole world it is absolutely necessary that the productive power of Russia should be restored and its resources made available for the peoples of the west. This is so not only, or even so much, because the industrial products and raw materials of Russia are needed by us and by all Europe, as because the revival and increase of agricultural production is essential if the world is to be preserved from the danger of famine.

Russia includes some of the richest corn-growing lands in the world. Her methods of agriculture have always been primitive, and at the present time they are becoming more and more primitive every day because the implements needed for scientific agriculture simply are not available. Russia is doing her best to procure tractors and other agricultural implements from abroad, and to manufacture them herself so far as her depleted resources will allow. The Soviet Government has shown its keen anxiety to do everything possible to help and encourage the peasants to improve their agricultural methods; and there are plenty of signs that the few implements which are available are being eagerly received and utilized up to their fullest capacity by the peasants. But the possibility of a real scientific organization of agriculture depends on the reopening of trade.

This is, of course, only one among many reasons why we should trade with Russia, but it is a very cogent reason, and one of which it is easy to miss the importance. Contact with the outside world will make it possible for the Bolsheviks immensely to develop Russia's agricultural resources and to increase the production of all sorts of food-stuffs of which the world stands sorely in need. For a long while past the more far-sighted economists have been watching with dismay the failure of the world's agricultural production and development to keep pace with the growing needs of the population. They have realized that, even apart from the war, we might at any time have been menaced by a failure of the world to produce sufficient crops to sustain its population. They have seen the grain growing lands of the world gradually occupied, and they have asked with dismay whence the next great necessary expansion of the world's agricultural output was to come.

The vast territories of Russia can, if we will, provide us with the answer to that question. Not only can we, by opening trade with Russia, hope to bring fresh lands under cultivation; we can also immensely expand the productivity of the lands which are already being inadequately cultivated. Moreover, in doing this, so far from harming ourselves, we shall be providing necessary employment for our own people, not only on the manufacture of agricultural machinery and implements, but also

in satisfying the countless other needs which the population of Russia will be able to convert into effective economic demands as soon as the restoration of Russian agriculture and industry is made possible by the removal of the political and economic blockade.

We are now supposed to be on the eve of reaching a trade agreement with the Russian Soviet Government. We have seen too many "eves of peace" not to be sceptical on the present occasion. We knew how easily a crisis can be manufactured at the eleventh hour, and a new excuse made for the breaking off of relations. British labor must determine that no manufactured crisis shall be allowed on the present occasion to interfere with the completion of the trade agreement. It must insure that no attempt is made to impose upon the Soviet Government at the last moment fresh demands which will make agreement impossible. It must see to it that no "minor drafting amendment" is inserted in the agreement by the British Government, in such a way that in it may be concealed a vital point of principle.

In the interests not only of our own unemployed, not only of the proletariat of Britain and of Russia, but of the whole world and all its peoples, labor must insist that on this occasion there shall be no hitch, and that the agreement shall be not only signed but promptly made the basis for an actual resumption of trade relations.

I pointed out above that the engineer who wants at the same time to secure employment for the engineering industry and to strike a blow for the world's workers must concentrate all his energy on securing the resumption of effective trade relations with Russia. But this is not a matter for the engineer alone.

While the most obvious of Russia's economic needs is the need for rolling stock, machinery, and implements of production generally, because upon these the possibility of a restoration of Russian industry depends, there are many other cases of workers who are vitally concerned in this restoration and in furthering the steps which are necessary to bring it about.

Today the need of Russia is above all for things that the consumer can actually use—for boots and clothing, textile goods, drugs, and all manner of necessities of a reasonable civilized life.

The Russians are doing their best to make these things for themselves; but their resources are pitifully inadequate to the task of clothing the Russian people and of supplying them with the requisites of human health and comfort. A restoration of Russia's productive power would at once generate an immense demand—an economic as well as a human demand—for all manner of products which British workers in the textile, clothing, boot and

shoe, and many other industries are well able to make.

At present, factory workers in this country are being told to expect a period of industrial depression. We have passed, we are told, the period of artificial prosperity which immediately followed the conclusion of the war. We must look forward to a time of increasing unemployment, which the government and the employers alike profess themselves to be powerless to prevent. But are they really powerless? Is it not the case that, in maintaining the artificial blockade of Soviet Russia and in endeavoring to starve out the Russian Soviet Government, they are deliberately keeping out of employment many thousands of British workers who might be making goods for their Russian comrades?

The obstacles, in fact, to good employment in this country at the present time are far more political than economic. They arise largely from the condition of armed semi-warfare into which Europe has been brought by the Versailles Treaty and the imperialism of the victorious Allied Powers. They are immensely worsened by the determination of the Allied governments that, no matter how many of the workers may be starved in Russia, or deprived of employment and half-starved here, the destruction of the Soviet power—that is, of the power of our fellow-workers in Russia—is the aim

that must be kept principally in mind by Allied statecraft. Our rulers would like us to believe that the growing unemployment is an act of God, or, at least, of some higher power which presides over the operations of capitalism, and with whose august will even Mr. Lloyd George and the Federation of British Industries are powerless to interfere.

The workers know better. The textile workers and the clothing operatives know that there are millions of people inadequately clothed in Russia, and that an artificial barrier has been erected to prevent the supply of goods to these people. The boot and shoe operatives know that there is hardly a sound pair of boots, except, perhaps, in the Red Army, left from one end to another of the Russian Soviet Republic. They know that they are in a position to supply these needs, and that, if they were supplied, Russia would be in a position speedily to give out of her immense resources an ample return. They know that the restoration of Russian industry would be likely to bring with it a fall in prices and an increase in real purchasing power for the workers everywhere.

That is why they mean to have no further nonsense and to insist that the Russian Trade Agreement shall be not only concluded at once on terms satisfactory to the workers of Britain and Russia, but that it shall be fully carried out in the spirit as well as in the letter.

Workingwomen in Soviet Russia

(*Seamstress Nikolayeva*)

By N. N.

It was in the fall of 1919, a few months before the final collapse of Denikin, when labor for the front was the slogan of the day. The workingwomen's sections of the Communist Party recognized in addition to this task only one other task, namely, getting workingwomen to work in the Soviet organs, so that they might learn to take part in the administration of the country and in other ways to keep a watchful proletarian eye on these institutions, in which the former bourgeoisie was also working. In a delegates' meeting at that time, I made the acquaintance of the seamstress Nikolayeva, a quiet, introspective woman, who looked the part of a Communist, of a sensible, thorough person.

"Why will you not work in some Soviet office?" I asked her. "You could be very useful, and may find satisfaction in it also."

"No," said she, "I do not want to leave the shop in which I am working. We have much to do. We are turning out finished clothing, which is sold on certificate. Our shop has been working for many years. It is very large and employs many working girls who are minors. Our first task was to remove the children under fourteen years from the workshop and put them into schools. The young workingwomen between the ages of 14 and 18 were put into a special room and a sort of trade school was there set up for them. Formerly

the young girls were used chiefly as errand girls and were given only such work as it was most in the interest of the proprietress to give them. They were hardly given an opportunity to learn the work of tailoring. Now each one is trained in a special vocation, and soon all of them will be good seamstresses. Their working day is of six hours' duration, according to the decree. And now the workshops in which grownups are working are also introducing new customs. Formerly, you know, we liked all the more to sew a dress when the materials were expensive. It was not a love of beauty that inspired us with these preferences, but merely an abject servility to the bourgeoisie. My working girls were still attached to their old habits.

"We were accustomed to work with silks and chiffons. (Our shop before the November Revolution had produced only expensive clothing.) But now, in our work over cotton and sateen we shall spoil our hands and our taste.

"I had to argue with them much about it, and to attempt to teach them: 'for whom did you seamstresses and garment makers work formerly? For your oppressors and their women who never lifted a finger, but now you are sewing for your sisters, for working women who are working for you in exchange. Show what you can do. Sew beautifully and elegantly with your sateen material. How contented the working woman will feel when she

receives a fine dress in exchange for her certificate."

"They finally agreed with me, and now our work proceeds smoothly. I should like to give them a little more political and mental training, for it would, aside from other things, turn their minds away from their rags, not the rags on which they are working, but the rags which they wear. Unfortunately I have not the time. We work from 9 to 5, but I arrive at 8 and leave at 5.30 or 6, for I must open and lock the shop."

"How about your family?"

"My husband is at the front and I have sent my little four-year-old daughter to the country. As I am very busy, I cannot bring her up in town as I should like to. But in the country she lives under healthy conditions."

Comrade Nikolayeva invited me to her shop, in order to tell me there about the Seventh Congress of Soviets, which had just taken place, and I was glad to take advantage of her invitation. The workshop made an excellent impression in every respect. The working women were more cheerful and more interested than in other places, for the simple reason that there was among them a sensible Communist worker, devoted to her work, whose influence had transformed everything. Nikolayeva

succeeded in training the working women to discipline and order, in awakening interest for the work. She has put into actual life in her workshop the principle of the Soviet Government with regard to the labor of minors; she takes care of the spiritual and moral development of her workingwomen. In a word, imperceptibly, and with no ostentation, she is creating one of the cells of the future Communist society. For the sake of this work she has voluntarily separated herself from her child and lengthened her working day by two hours. In the great Revolution which has cleared the path for every conscientious worker, she has found her own place, and since November, 1917, she has been carrying out the slogan which the Communist Party of Russia did not proclaim till March, 1920, two and one half years later, as a general watchword: "All for the bloodless front!" No other slogan could have turned her aside during this period from the path which she had entered. She remained firm in her decision to stick to her job. She is a real working woman, who loves her shop. She is one of those thousands who, under the leadership of the Communist Party, are accomplishing the great creative work of the masses for the introduction of Communism.

England's Reactionary Policy Revealed

Pravda is publishing documents clearly indicating England's Russian policy and showing it in its true light. The anxiety which the working class is causing the British Government is also made apparent. As these documents are clear enough in themselves, no further comment is needed. A verbatim translation follows:

Copy of a telegram from Russia's Charge d'Affaires, M. Nabokov.

London, No. 496.
Forwarded June 13, 1919.
Omsk.....

Received July 26, 1919.
Confidential.

General Golovin begs Russia's chief executive (Kolchak) to receive the following communication: On June 11, I was called to see the Chief of the Operative Division of the British War Ministry. He spoke to me as follows: "The necessity of relieving the difficult situation on the Siberian front demands an energetic prosecution of the operations against St. Petersburg. Meanwhile, the limited number and the lamentable condition of the Russian troops not only render such action impossible, but also compel us to question the reliability of the troops. On this account, it would be desirable to obtain the help of the Finnish troops in order directly to carry on the operations and capture St. Petersburg. Operations could proceed along a different line. To this end the following conditions should be observed: 1. For the operations against St. Petersburg all Russian military forces are to be collected, which need only to be mobilized. 2. The Russian Commander-in-Chief is Yudenich. 3. The joint direction of operations is to devolve upon the Entente and not upon Finland. 4. If St. Petersburg is captured, Yudenich is to have complete power in the city and in the occupied territory, so that the troops may be grouped as quickly as possible on the new front."

I answered that in view of the immediate situation, I consider it strategically necessary to continue the operations in order to drive the Bolsheviki from the Siberian

front. But since General Yudenich, formerly the chief executive, has been appointed Commander-in-Chief of the St. Petersburg front, and as absolute power is in his hands, this plan must be carried out also by the General. I may add further that the difficult question of provisioning the troops is to be dealt with by a special official of the British Mission and the British War Ministry. The provisioning of the St. Petersburg district is to be in the hands of the President of the Allied Provisioning Commission in Paris.

(Signed) NABOKOV.

Diary No. 1. Confidential Correspondence.
First Political Division for M.I.D.
Diary No. 21 (Relative to intervention by the Allies).

Secret telegram from the Minister for Foreign Affairs in Paris, dated July 16, 1919, received July 21, addressed to the Chief of the Foreign Office.

According to a communication received by Nabokov from Churchill, we must, in consequence of the sentiment of English labor, reckon with the possibility that English troops in Russia will be gradually withdrawn beginning with September 1. Aid in munitions, etc., will be continued.

SAZONOV (Foreign Minister in Russia).

A confidential telegram from the Charge d'Affaires in London, dated July 1, 1919, No. 329, addressed to the Foreign Ministry.

Churchill requests that preparations be made for the possible gradual withdrawal of troops from all fronts, beginning in September, and necessitated by the sentiment of English labor. Also that every possible measure be taken to reach a decisive result this year. Meanwhile, he promises to continue furnishing aid without interruption.

(Signed) NABOKOV.

A confidential telegram from General Miller, Archangel, August 18, 1919.

No. 82 a.....

Withdrawal of English troops from the front begins on September 1. The regimental commander declares that later it will be impossible to enforce the obedience of the Russian infantry divisions at the front. Excesses are feared against officers as well as English citizens. The population of Archangel is not untainted by Bolshevism. First Political Division for M.I.D. Diary No. 27.

Relative to Chaikovski's regime, and the North Front.

A confidential telegram from the Chief of the London Legation to the Foreign Minister, dated February 5, 1919, No. 61.

Churchill, who has recently taken over the Foreign Minister's portfolio, told me confidentially that the War Ministry would continue to furnish with war material the English army in Russia and the Russian military forces fighting Bolshevism. "I shall continue to furnish such aid," he said, "until I receive absolute orders to discontinue it." But no such order has hitherto been issued. It will depend upon the solution of the general question of the Paris conference's Russian policy.

In my opinion the important thing here will be the attitude of the new Parliament and, further, the development in England of the growing strike movement.

(Signed) NABOKOV.

Diary No. 21.

Relative to intervention by the Allies.

RUSSIA AND REALITY

Some of our political commentators seem to lose touch with reality as soon as they have to deal with Russia, although our two years' experience should have taught us to be at last realists and severely practical. No sooner is Wrangel overthrown than those who have supported the French policy of "unceasing war" on the Russian borders seek to show both that the Soviet Government is now so powerful that it will menace the West and that it is so weak that it may yet be seriously injured by Wrangel's successor to the mantle of White Russian Liberator, General Balakhovich, who leads the "People's Voluntary Army". Little is known of this general and his army, but it is certain that his force is small, and as it is avowedly voluntary the chances are not good that it ever will be strong, for Kolchak, Denikin, and Wrangel were all driven to forced service by their simple inability to procure an army in any other way. But all these three had large forces, well organized and well equipped, compared with Balakhovich, and all three were routed at the finish. But the *Times* is not content to furbish up Balakhovich as a new threat to Bolshevism; it also furbishes up Bolshevism as a new threat to Poland. It seems that the Soviet Government, which is so weak as to fear a leader of irregular bands, is also so strong that it may throw itself on Poland, its recent conqueror and the most formidable of its enemies. Similarly, although we have been told repeatedly that it is of no use to agree to trade with Soviet Russia because she has no goods to offer us, we are assured that the Political Committee which is behind Balakhovich has unlimited timber and flax to bargain with. The general upshot of the argument, we suppose, is that we should prolong this interminable war until we see whether Balakhovich or the succeeding adventure can shake the Bolsheviks. Has not the time come at last to recognize realities? Foreign-supported campaigns do not shake but strengthen the Bolsheviks. The Bolsheviks desire peace with Western Europe as they did with the Poles. Although they no more love us than we love them, they have had to recognize their need of us for the reestablishment of their country. Europe and we, on our side, have need of

Russia. And whether or not it be true that Russia has at the moment little to offer us, we might have the frankness to admit that a prolongation by us of the present agony will not enable her to offer more.—*Manchester Guardian*, November 17, 1920.

PRESIDENTIAL CANDIDATE ON DEPORTATION

Parley Parker Christensen, candidate for President on the Farmer-Labor ticket in the late election, dispatched the following to President Wilson from Chicago on December 28:

"Permit me, Mr. President, to assure you that 'Russia and America are friends,' and the treatment accorded to Mr. Martens by your administration does violence to the expressed sentiment of America. I know. I have heard from the people. During July, August, September, October and November, from the Atlantic to the Pacific, in crowded halls, I addressed thousands of my countrymen, of all classes, and practically without exception they are friends of Russia. At every meeting I spoke of Russia, and the mere mention of the word was electrifying; and when I urged, as I always did, the recognition of the Russian Soviet Republic, the affirmative response was tremendous.

"Though your Secretary of State seems ignorant of the fact, our people are friendly to Soviet Russia, and they should be encouraged to trade with each other. If the 'lesson of the ballots' at the November election is not sufficient, give us a referendum, and 'Russia, Yes' will be practically unanimous."

MEDICAL SUPPLIES TO RUSSIA

Statement of Medical Supplies Shipped to Soviet Russia on Account of the Soviet Russia Medical Relief Committee.

November 30, 1920.

| | | |
|---------------------------------------------------------------------------------------------------------|-------------|-------------|
| Total Shipped to October 31, 1920..... | | \$36,580.12 |
| Purchased during November and shipped via S. S. "Indiana Bridge", consigned to Centrosoyuz, Reval | 7,791.53 | |
| Purchased during November and shipped via S. S. "Ripon", consigned to Centrosoyuz, Reval | 3,687.43 | |

The Russian Soviet Government Bureau does not object to the reprinting in other periodicals of articles taken from SOVIET RUSSIA. It asks, however, that in return for the privilege of reprinting, editors extend the courtesy of sending a marked copy to SOVIET RUSSIA of each of their issues containing a reprinted article.

Wireless and Other News

EXCHANGE OF PRISONERS

BERLIN, November 30.—Well-instructed quarters report that since the beginning of the exchange of prisoners which opened in May of this year, 92,682 prisoners in all have reached Germany from Russia and Siberia, including 28,556 citizens of the German empire, of whom 25,597 came by way of the Baltic and 2,595 by way of Vladivostok. The number of Russian prisoners transported from Germany is 108,000 in round numbers.—*Politiken*, Stockholm, December 2, 1920.

RUSSO-POLISH PEACE NEGOTIATIONS

Moscow, November 28, 1920.—Several sessions of the financial, economic, and territorial commissions have been held. In the opinion of the Polish Delegation, the financial-economic commission should discuss questions of state, private debt and obligations, claims of compensation from Germany on the basis of the Versailles treaty, and reevacuation. In reply, the Russian Delegation showed the complexity of the Polish program, much of which was not provided for even by the preliminary peace treaty; and stated that such details could be discussed after written presentation of their intentions by the Polish delegates. The chairman of the Russian Delegation, Yoffe, presented a note to the Chairman of the Polish Delegation concerning the refusal of the Polish command to hand over to the Ukrainian Government the sugar factories awarded by the preliminary peace treaty, despite the fact that all necessary measures had already been taken by the Ukrainian Government through its economic organs as well as by the local military authorities. Owing to this delay the Russian and Ukrainian governments can assume no responsibility for the possible damage to these factories.

TROTSKY ON RECONSTRUCTION

Moscow, November 26, 1920.—Trotsky writes in the Moscow Soviet papers as follows: Toiling Russia can contemplate with pride the work of her Red Army. Superhuman efforts and unparalleled sacrifices were crowned by unparalleled successes. Glory to the heroes and grateful memory to the fallen! But even now, in the hour of the greatest and most justifiable jubilation, we must not for one moment forget that our main task, the elevation of the toiling masses, is still ahead of us. By defeating counter-revolution, we only secure for ourselves the opportunity for extensive economic work. We must take in hand, hammer, axe, and broom and sweep out squalor, poverty, and ignorance in order to build the new Soviet house on a firm foundation.

THE SERBIAN RED CROSS

Moscow, November 17.—The representatives of the Serbian Red Cross arrived in Petrograd and brought as a gift for the Petrograd population medicaments and foodstuffs for the children.

WRANGEL AND HUNGARY

BUDAPEST, November 25, 1920.—General Maruzovsky, chief of Wrangel's military mission in Budapest, declares that Wrangel has asked the permission of the Hungarian Government to recruit the Russians in Hungary into his army. General Maruzovsky expresses his heartfelt thanks for the gratifying reception accorded him.

PICKING SWEDES FOR VILNA

The Department for the National Defence, Section for Forwarding Troops, reports on November 30: The Vilna Detachment shall be organized in the Svea Life Guard Barracks. The men shall be volunteers and the number of privates and volunteers required shall be attached to the regiment by contract. Only such will be accepted as can prove that they have already seen satisfactory service in the army. Applications shall be received in the Svea Life Guard up to December 5, noon. Pay for service in this expedition will vary from 467.10 crowns to 313.80 for a month, plus full maintenance.—*Politiken*, December 2, 1920.

SELF-DETERMINATION IN RUSSIA

Moscow, November 27, 1920.—The Congress of the Tribes of the Terek region convened to form a mountain Soviet Republic, and declared that the mountain nations, oppressed for hundreds of years, owed their freedom to the heroic Red Army. The Congress sent greetings to Lenin, Trotsky, Zinoviev, and Stalin.

IMPORTANCE OF THE COAL INDUSTRY

Moscow, November 26, 1920.—In a recent speech Trotsky says that Soviet Russia's main front is now the front of the coal industry.

All Moscow is now publishing appeals to make supreme efforts to alleviate the extreme distress of the coal miners in the Donetz Coal Basin, who are now suffering unheard of privations as a result of raids by Wrangel and other counter-revolutionary bandits. The consensus of press opinion is that the conditions for the Donetz Basin coal miners must be speedily remedied to save for Soviet Russia her most important industry.

AMERICAN CARGOES FOR MURMANSK

Moscow, November 27, 1920.—In the Soviet port of Murmansk, coal is being discharged from three American ships. At the end of November, nine more ships with American goods are expected.

FIREPROOFING INDUSTRY IN RUSSIA

Moscow, November 27, 1920.—The supreme economic organs of Soviet Russia are discussing the question of developing the fireproofing industry in Russia.

AGRICULTURAL EDUCATION

Moscow, November 26, 1920.—An All-Russian conference is being convened in Moscow to solve urgent questions in connection with spreading modern agricultural education.

CULTURAL WORK

Moscow, November 24, 1920.—The anniversary Leo Tolstoy's death (November 20) was celebrated by meetings and lectures. A state museum bearing his name was dedicated in Moscow.

At Bukharin's instigation, a society for scientific search was formed to investigate the causes of the revolution. The society is named, "Revolution and Theory", and will be led by the best scientific theoreticians.

The All-Russian Central Executive Committee recommended to all local Soviets to erect Palaces of Labor, which shall afford all workers' associations the fullest facilities to organize.

The executive bureau of the Workers' Council in Moscow has resolved to publish a history of the labor movement in cities and villages of the entire world.

ECONOMIC CONDITIONS IN SOVIET RUSSIA

Moscow, November 24, 1920.—According to the latest reports, 4,500,000 poods of fish have been shipped from Astrakhan to the large cities since the reopening of navigation. The figures for November are not yet complete, but they exceed those of the preceding months considerably. Last week 1,200,000 poods of cotton were loaded. According to a statement of the Council of People's Commissars, a detailed plan for procuring cotton will be elaborated by January 1, 1921, for which purpose special committees have been designated.

FISH SITUATION

Moscow, November 24, 1920.—In Minsk the fish catch is increasing rapidly and becoming more regular.

The fisheries of Astrakhan and Petrosk have been yielding more and more fish. Springs and barrels, cars and barges have been furnished to carry 3,200 poods daily. *Ekonomicheskaya Zhizn* states: From the lower Ob and Irtish 40,000 poods of fish have been delivered, to which must be added 12,500 poods from farther south. In Obdorsk Surgut 119,900 poods of fish have been gathered. The total of fish registered in the regional center from January 1 to September 10 is as follows: January 1, 147,514 poods; toward September, 390,785 poods; total 513,299 poods.

POTATO SUPPLY

Moscow, November 26, 1920.—Last year, in 1919, Soviet Russia collected 8,171,598 poods of potatoes up to November 21. For the same period in 1920, six times as many, or 48,367,585 poods of potatoes were collected.

AUTONOMY OF THE CALMUCKS

Moscow, November 24, 1920.—The granting of autonomy to the Calmucks by the All-Russian Central Executive Committee called forth an unusually graceful answer. The Calmuck Congress sent the heartiest greetings to the Executive Committee. The Calmucks, of their own accord, formed a cavalry division, which expressed its readiness to fight for the Soviets.

SOAP PRODUCTION

Ekonomicheskaya Zhizn writes: The production in the state soap works has augmented, due to the more energetic delivery of raw materials. In the Zhukov Factory it rose from 10,000 to 30,000 poods, and in the Nevsky mill from 5,000 to 15,000 poods per month. The actual program was almost fully accomplished in July, August and September, 15,000 poods of soap being manufactured each month. Special branches have been added to the state soap works for producing glycerine.

The Situation in Ukraine

The formal inaugural session of the new Workers' and Soldiers' Soviet of Kharkov took place on the 2nd of November, at 7 o'clock in the evening, in the presence of an immense crowd. The greetings of the army were given by the Commander of the south front, Frunze, and by the commander of the reserve army, Bazilievich. At the session, there were present delegates of the Rumanian Socialist Party, Christescu and Popovich, who spoke in the name of the Rumanian workers and peasants. Then the Soviet dealt with the questions on the order of the day. After the report on the military situation, Rakovsky, President of the Council of People's Commissars and People's Commissar for Foreign Affairs, explained the foreign policy of the government. Amongst other things, Rakovsky stated that the Polish Government had refused to take responsibility for the action of the army of Petlura, who with the friendly assistance of the Polish General Staff, and in agreement with the troops of the Russian counter-revolutionary general, Balakhovich, is continuing operations. In the course of the discussion which arose on this matter, several delegates gave expression to the indignation with which the whole of the Ukraine is filled against the dishonest policy of the Polish Government, which on the one hand concluded peace, on the other, under the cover of Petlura and Balakhovich continues the war against Ukraine. Amongst other things it was declared that the Germans, in spite of all their cynicism, had been by far more honest than the Polish White Guards: when in 1918 they concluded an armistice with Soviet Russia and fixed the demarcation line in a way which reserved for them their whole freedom of action at the Rostov front, as for instance in Kraynov, they refused to make any kind of agreement on this front. The Polish Command, on the contrary, accepted a demarcation line between Ukraine and Poland, a line going along the Zbruch to the Dniester; yet it refuses to guarantee this line and thus it reckons on continuing a war of exploitation against Ukraine with Petlura's assistance. The resolution drawn up by the Soviet of Kharkov summons the Ukrainian Government to enter an energetic protest to the Polish Government against such a proceeding and to beg the Soviet Government of Russia to join in this protest.

GENERAL AMNESTY DECLARATION

The All-Russian Central Executive Committee of the Soviets declared a general amnesty, to take effect November 7, 1920, on the occasion of the Third Anniversary of the founding of the Soviet Republic. The text of the amnesty resolution is as follows:

The imperialistic and counter-revolutionary attacks launched by the Entente during the last three years against the Republic of the Workers and Peasants were valiantly repelled by the workers and peasants on the revolutionary fronts and suppressed in the interior of the country by the organs for combating the counter-revolution. Each year the Soviet power gained in strength and displayed its ability in the field of the reconstruction of a new society which knows no oppressed and no exploited. At present, when the Red Army is accomplishing its victory over the last stronghold of the bourgeois dictatorship, the Crimea, the struggle is approaching its end. About to accomplish its complete victory over the enemy, the proletariat celebrates the third anniversary of the proletarian revolution.

The All-Russian Central Executive Committee considers it possible to ease the lot of all those who have been sentenced by the revolutionary tribunals, peoples' courts, and other authorities, or have been subjected to detention, because of offenses perpetrated against the Soviet Government, and whose further captivity is not absolutely necessary for the safety of the Soviet Republic. Therefore the All-Russian Central Executive Committee resolves as follows:

1. To apply amnesty to the greatest extent to

those who were guilty of offenses against the Soviet Republic before November 7, 1920, and to liberate them entirely from the punishments imposed upon them except insofar as these punishments involve the loss of liberty; to undertake such alleviations as for instance the transfer from prisons to compulsory labor without loss of liberty, or a complete liberation without compulsory labor (shortening of captivity).

2. The amnesty applies to those already sentenced as well as to those under preliminary detention.

3. The revolutionary tribunals are under the obligation to review all cases of sentences to imprisonment for life, and to shorten such sentences.

4. The authorities are under the obligation to review sentences which read "to the conclusion of the civil war," and either to dismiss those sentenced from captivity or to set a fixed period of detention, not over five years from the day of sentence.

5. The authorities are under the obligation to stop all sentences not carried out by November 7, 1920, and to make every attempt to alleviate the lot of the persons in question.

6. The Extraordinary Commission and its sections are under obligation to review the lists of hostages and prisoners of war, taken in the civil war, at the earliest possible moment, and to liberate those persons whose detention is not absolutely necessary.

7. To ease the lot of those who have been sentenced for desertion or for rendering aid in desertion, and to remit punishments imposed upon village communities for having been instrumental in the concealment of deserters.

*THE NEXT ISSUE OF***SOVIET RUSSIA**

will contain, in addition to the concluding instalment of Dr. Goldschmidt's article, "Collapse and Construction in Russia," a new article by Leon Trotsky, People's Commissar for War, entitled

"The Soviet Power and Industry"

An exhaustive, brilliant and concise study of the manner in which, by labor armies and other forms of organization, the Soviet Government has been solving the problems of organization which it has been forced to meet.

Besides, this issue of SOVIET RUSSIA will have all the regular weekly features and many other items of interest.

Subscription Price: \$5.00 per year; \$2.50 per half year; \$1.00 for ten weeks. (Make all checks payable to L. C. A. K. Martens.)

Problems of Organization of Labor

By LEON TROTSKY

[The following article is a chapter of Leon Trotsky's latest book, "Terrorismus und Kommunismus—Anti-Kautsky", written as an answer to Karl Kautsky's "Terrorismus und Kommunismus", an attack on the policies and practices of the Soviet Government. This is the entire first chapter that we are printing from Trotsky's book; like all the rest of the work, it is in the characteristically trenchant style of the editor of "Nashe Slovo", of Paris, now People's Commissar for War of the Soviet Republic.]

THE SOVIET POWER AND INDUSTRY

WHILE during the first period of the Soviet Revolution the chief complaints of the bourgeois world were concerning our cruelty and blood-thirstiness, we were later made responsible, after this argument had lost its edge through too frequent use, for the economic collapse of the country. Kautsky, carrying out his present mission, translates into the language of pseudo-Marxism all the bourgeois complaints alleging that the Soviet power had ruined the industrial life of Russia: the Bolsheviki approached socialization without any plan, socialized what was not mature for socialization, and finally, the Russian working class is by no means fitted for conducting industry, etc.

In repeating and combining these complaints, Kautsky obtusely and stubbornly conceals the chief causes of our economic decline: the imperialistic slaughter, civil war, the blockade. In the very first months of its existence, Soviet Russia was deprived of coal, naphtha, metals and cotton. First the Austro-German, then the Entente imperialism, cooperating with Russian White Guardists, cut off Soviet Russia from the coal and ore basin of the Donetz, from the Caucasian naphtha region, from Turkestan with its cotton, from the Urals with its rich mines, from Siberia with its cereals and meat. The Donetz Basin commonly furnished our industry with 94 per cent of its total coal fuel, and 74 per

cent of its metal ores. The Urals furnished an additional 20 per cent of the metal and four per cent of the coal. These two regions were separated from us in the course of the civil war. We lost half a milliard of poods of coal, which had been imported from foreign countries; simultaneously we were left without naphtha—absolutely all the wells passed into the hands of our enemies. One must be a veritable block-head, to speak, if one knows these facts, of the destructive influence of the "untimely", "barbarous", etc., socialization of an industry that has neither fuel nor raw materials. Whether your enterprise belongs to a capitalistic trust, or to a workers' state, whether your industry is socialized or not, its chimney will emit no smoke unless there is coal or naphtha. Austria had experiences of this kind: not even German industry was spared. A weaving mill, even if obtained by Kautsky's best methods—if one may assume anything may be conducted by the metal industry Kautsky aside from his own inkpot—this mill will furnish no calico if it is not supplied with cotton. But we simultaneously lost both the American kewan and the American fiber. And as I have said, we had no fuel.

Of course blockade and civil war have so the peasant-sequences of the proletarian transfer. Soviet state sia. But this does not mean that the toilers devastations that were necessary labor power to the eco-

American-French blockade, and the bandit raids of Kolchak and Denikin, must be ascribed to the incapacity of the economic methods of the Soviets.

The imperialistic war preceding the revolution, with its all-devouring material demands, taxed our young industry much more than it did the industry of the powerful capitalist countries. Our transportation suffered particularly. The exploitation of railroads was tremendously increased, which meant a corresponding increase of depreciation, while repairs were limited to the lowest possible needs. The inevitable day of collapse was brought nearer by the fuel crisis. As we lost, almost at the same moment, the Donetz coal, foreign coal and the Caucasian naphtha, we had to proceed to the use of wood as fuel for transportation. But as the stocks of wood on hand were by no means sufficient, the locomotives had to be fed with freshly cut green wood, which had an extremely destructive effect on the already considerably run down mechanism of the locomotives. We therefore see that the chief causes of the decline in transportation were before November, 1917. But the causes also which are directly or indirectly connected with the November Revolution are related to it by political bonds and do not in any way touch the Socialist methods of economy.

The influence of political shocks on the economic field was of course not limited to problems of transportation and fuel. If world industry in the last decades was transformed more and more into a uniform organism, this is all the more true of the industry of a single nation. And in addition, war and revolution had torn and cut up Russian industry in every possible manner.

The industrial destruction of Poland, of the Baltic provinces, and later of Petrograd began under Czarism, and continued under Kerensky, including more and more new regions.

The endless evacuations, together with the destruction of industry, also involved the destruction of transportation. During the civil war, with its much-moving fronts, the evacuations assumed a feverish and all the more destructive character. Each party that temporarily or definitely evacuated one industrial center or another, made every effort to render the most important industrial enterprise of the region useless for the enemy—all valuable machines or at least their most essential parts were taken away, together with the technicians and the workers. The evacuations were followed by operations, which not infrequently completed the fiction both of the goods transported and the workers themselves. Some of the most important industrial centers—particularly in Ukraine and the other frequently changed hands.

While the destruction of the technical Subsc was going on to an extent unparalleled influx of machines from foreign countries was our chief source of supply, had been used. But not only the dead objects of production—factories, machines, tracks, fuels and raw materials, suffered so much by the combined blows of the war and the

the chief factor of industry, its living creative force, the proletariat, suffered not less but rather more. The proletariat achieved the November overthrow, built up the Soviet apparatus, defended it, waged tireless war with the White Guards. The skilled workers are, as a rule, also the most advanced. The civil war has snatched many tens of thousands of the best workers from productive work for long periods, besides devouring irrecoverably many thousands of lives. The Socialist Revolution has imposed the main burden of sacrifices on the vanguard of the proletariat, and therefore on industry.

The chief attention of the Soviet State during the two and one half years of its existence has been turned to war defences: its best powers and most of its resources have been placed at the disposal of the front.

The class war means damage to industry under the best circumstances. All the philosophers of the class war, long before Kautsky, have pointed out this difficulty. In ordinary economic strikes the workers consume but do not produce. All the harder are the blows dealt to economic life by the class war in its sharpest form, that of armed conflict. It is plain that civil war cannot in any way be enumerated among Socialistic modes of work.

The reasons assigned more than suffice to explain the difficult economic situation in Soviet Russia. No fuel, no metal, no cotton, transportation destroyed, technical plants not fit for use, living working forces scattered all over the country, many of them killed at the front—does one need to look for further causes for the decline of our industry? Far from it. Each of the causes indicated is sufficient to justify the question: how, under these circumstances, is any factory or industrial activity possible at all?

And yet, this activity continues—particularly in the form of the war industry, which at present lives at the expense of the rest of industry. The Soviet power was forced to resurrect this industry, just as it resurrected the army, from the debris. The military industry it created under these unheard of difficult circumstances has discharged and is discharging its task. The Red Army has clothing, shoes, guns, machine guns, cannon, cartridges, projectors, airplanes, and everything else it needs.

Hardly did we have a gleam of light, after the crushing of Kolchak, Yudenich and Denikin, than we approached the question of economic organization in full. And already after three or four months of intense work in this field it became unmistakably clear that the Soviet power, in consequence of its extremely close connection with the masses of the people, and of the flexibility of its state apparatus and its revolutionary initiative, has at its service such sources and methods for the rebuilding of its economy as were not at the disposal of any other state.

To be sure we were here met by absolutely new problems and new difficulties in the field of labor organization. The Socialist theory had no ready-made answers to these questions, and could not have any such. Decisions had to be made as the

result of experience, and had to be checked up by experience. Kautskyism is a whole generation behind the gigantic economic problems that are to be solved by the Soviet power. In the form of Menshevism it creeps around our feet and opposes the practical measures of our economic reconstruction with philistine prejudices and an intellectual bureaucratic skepticism.

In order to initiate the reader in the essential points of the questions of labor organization, I am here inserting my own report at the Third Congress of All-Russian Trade Unions. To make my treatment more comprehensive, the text of the speech has been rounded out with rather long extracts from my report to the All-Russian Congress of Economic Soviets, and at the Ninth Convention of the Russian Communist Party.

Comrades! The internal civil war is approaching its end. On the western front the situation is still unclear. It is possible that the Polish bourgeoisie may challenge its fate . . . but even if this should be the case—we are not seeking this encounter—the war will not require of us the same all-devouring exertion of energy which has been forced upon us by a simultaneous struggle on four fronts. The terrible pressure of war is weakening.

The economic needs and problems are more and more occupying the foreground. History is putting us face to face with our principal task—the organization of society—every form of society in history has been at bottom a form of labor organization. If every previous system of society has been an organization of labor in the interests of the minority, enabling this minority to organize its form of state compulsion over the suppressed majority of the workers, we are for the first time in history making an attempt to organize labor in the interest of the toiling majority itself. This of course does not, however, exclude the element of force in every possible manifestation, from the most gentle to the most severe. The element of obligation, of national compulsion, does not only make its exit from the stage of history, but on the contrary will still have a great role to play in the course of a rather extended period.

As a rule man seeks to avoid work. A love of labor is by no means an innate quality: labor is brought about by economic pressure and social training. In fact one may say that man is a lazy animal. It is on this quality of his that human progress is to a considerable degree based, for if man were not inclined to husband his forces, to seek to obtain as many commodities as possible for a small expenditure of energy, we should not have had a great development of machines and of social culture. From this standpoint therefore man's laziness is a progressive force. The old Italian Marxist Antonio Labriola went so far as to portray the man of the future as a "happy and inspired idler." But we need not infer from this that the party and the trade unions must preach this quality in their agitation as a moral duty. By no means. We have quite enough of it without preaching it. The problem of social organization consists in

putting this laziness into definite bounds, in order to discipline it, in order to spur man on by ways and means perfected by himself.

Obligatory Labor

The key of economy lies in labor power, in skilled labor, rudimentary unskilled labor, half skilled labor, rough or common labor. The working out of means for the proper registration, mobilization, distribution, productive application, of this labor, is the practical solution of the task of economic reconstruction. It is a task for a whole epoch, an immense task. Its difficulty is enhanced by the fact that the transformation of labor on a socialistic basis must be carried out by us while in a condition of unparalleled impoverishment, of frightful misery.

The more our machine plant is depreciating, the more unusable our railroads are becoming, the smaller will be our prospect of obtaining machinery in anything like a sufficient quantity from abroad, and all the greater becomes the importance of the question of living labor power. You might think that this labor power is available in great quantities. But how shall we obtain access to it? We already met with great difficulty when we were cleaning up the railroad tracks. It was impossible to solve this question by the hiring of labor power in the open market, owing to the present insignificant purchasing power of money, and to the almost total lack of manufactured products. The need for fuel cannot be even partly satisfied unless we have recourse to a hitherto unparalleled application of mass labor in the cutting of wood, the digging of peat, and the mining of combustible slate. The civil war has damaged the railroad tracks, the bridges, the station buildings. Tens of thousands of hands are necessary to restore order in these matters. In order to organize the winning of kindling wood and of peat on a large scale, dwellings must be provided for the workers, if only barracks. And this again will mean a great demand for labor to be used in building construction.

Numerous laborers will also be needed for the organization of lumbering, rafting, etc.

Capitalistic industry was provided with labor resources to a very great extent in the form of extra work done by the peasants. The village, oppressed by the poverty of the rural districts, always threw its surplus of labor power on the market. The state forced these conditions by demanding taxes. The market offered goods to the peasant. Now all that is past. The village has obtained more land, but the agricultural machines are insufficient; the land needs labor power; industry can at present give practically nothing to the village; the market exerts no great power of attraction for the laborers.

But labor power is more urgently necessary than ever. Not only the worker but also the peasant must give his labor power to the Soviet state so that toiling Russia and therefore the toilers themselves may not be crushed. The only means of assigning the necessary labor power to the eco-

conomic problems is the introduction of *obligatory labor*.

The principle of obligatory labor is beyond dispute for the Communist: "He who does not work shall not eat." But as all must eat, all must also work. Labor duty is set down in our Constitution and in the Code of Labor Laws, but it has thus far remained a principle only. Its application has always been merely fortuitous, partial, sporadic. Only now, when we are directly approaching the problems of economic reconstruction of the country, have the questions of labor duty been brought before us with absolute concreteness. The only solution of the economic difficulties which is correct both in principle and in practice is to regard the population of the whole country as a reservoir for the necessary labor power—an almost inexhaustible source—and to regulate strictly the registration, mobilization, and application of this labor.

How shall we now take up in practice the obtaining of labor power on the basis of obligatory labor?

Hitherto only the military establishment had any experience with regard to the registration, mobilization, formation, and transportation of great masses of men.

These technical devices and methods our military establishment inherited in great part from the past. In the economic field we have no such heritage, as the principle of profit always prevailed in that field, and labor power was taken from the market into the individual enterprise. It is therefore natural that we were obliged at least in our first period to make use of our military apparatus to the widest possible extent in carrying out mobilization for labor.

We created several organs for introducing compulsory labor, both in the capitals as well as in the provincial districts and communes. Committees for compulsory labor are already active in our country. They are based principally on the central organ and on the local organs of the military establishment. Our economic centers—the Supreme Council of National Economy, the People's Commissariat for Agriculture, the People's Commissariat for Transportation, and the People's Commissariat for Provisions,—are elaborating demands for the labor power which they need. The Main Committee for Obligatory Labor receives these demands, adjusts them with reference to each other, formulates them in accordance with the local supplies of labor power, issues the necessary commissions to its local organs, and thus, through these local organs, achieves the labor mobilization in question. Within the regions, provinces, and districts, the local organs carry out this work independently, in order to satisfy the local economic needs.

This whole organization is as yet completed only in skeleton outline. It must be considered as still very imperfect. But the course we have begun to follow is absolutely a correct one.

If the organization of the new society aims essentially at a new organization of labor, the organization of labor, in turn, consists in a proper exe-

cution of the universal labor duty. This task can by no means be exhausted by merely organizational and administrative measures. It embraces also the bases of economy and of conduct. It collides with tremendous psychology habits and prejudices. The carrying out of labor duty presupposes on the one hand a vast campaign of education and on the other hand the greatest tact in its practical execution.

The exploitation of the labor power must proceed with the utmost possible economy. In labor mobilizations we must reckon with the condition of the economic and private life of each district, with the demands made by the main occupations of the local population, i.e., those of agriculture. We must begin as far as possible with the former subsidiary occupations and avocations of the local population. The transportation of mobilized labor must be undertaken by the shortest route, i.e., it must be assigned to the nearest sections of the labor front. The number of mobilized workers must correspond to the size of the economic task. Those mobilized must be provided promptly with the necessary working tools and means of sustenance. Those mobilized must be able to convince themselves on the spot that their labor power is being applied intelligently and economically and not wasted fruitlessly; wherever possible, outright mobilization must be replaced by a definite labor task, i.e., a commune will be assigned the duty of furnishing a certain number of cords of wood by a certain time, or of transporting on wagons to a certain railroad station so and so many poods of cast iron. In this field the experiences gathered must be studied with great care; the economic apparatus must be made extremely flexible; much attention must be given to local interests and peculiarities. In a word, the measures, methods, and organization for carrying out the mobilization of labor power must be made definite, improved, perfected. Simultaneously, however, we must make clear to ourselves once for all the fact that the principle of compulsory labor has just as radically and irrevocably replaced the principle of free employment as the socialization of means of production has replaced the principle of capitalistic property.

(To be continued)

Soviet Russia

will continue publication; we make this statement in answer to several inquiries on the subject. Continue to send us lists of your friends who might appreciate sample copies. Subscription remittances should be made payable to L. C. Martens.

"SOVIET RUSSIA"

Room 304

110 West 40th St.

New York, N. Y.

Military Review

By LT.-COL. B. ROUSTAM BEK

THERE is no fighting just at present anywhere in Soviet Russia.

The Red Army is busy with the reorganization of the newly liberated regions as well as with the regrouping of its forces in order to be fully prepared for any undesirable surprises.

The Soviet Government, meanwhile, does not consider present conditions, which are unsettled and dangerous from a strategical point of view, satisfactory. It wants a firm and lasting peace with the rest of the world, but unfortunately such a peace is not wanted either in Paris or in London; and therefore the Soviet Government, confronted with an enormous economic problem, is obliged to keep along the boundaries of the republic a huge military force, even *stronger* than before, to the moment of the cessation of hostilities.

We must not overlook the fact that since the industrial region of the Donetz Basin is not in any danger of attack by the enemy, thanks to the favorable situation in the Caucasus and Armenia, the metal industries and the coal mines of that region are in full progress of development; and this required a great number of experienced workers the majority of whom were with the Red Army far away in the battlefield. It was not an easy task for the Soviet War Office to get these men back to their productive industrial work, and in the meantime replace them with a fresh well-trained element recruited from the new Russian generation.

This grave task is being successfully accomplished, thanks to the genuine ability of the Soviet administration in accordance with Trotsky's extraordinary plan. This plan was based on the principle of decreasing the number of men in the army, but at the same time increasing their fighting ability. The system of general education in Russia, introduced by the Soviet Government, together with universal military training on the basis of an entirely new type of military morale which is possible only in a proletarian state made it possible for the Soviets to succeed in solving what seemed like impossible problems.

For many reasons it would be unwise at the present moment to even try to guess how such a process is being carried on in Soviet Russia, but one thing can be firmly stated and without any hesitation, that the military correspondents of the capitalistic press who recently spread news about the alleged demobilization of a part of the Red Army, thus trying to impress public opinion with the possible weakening of the Soviet military force, are far from being correct.

As far as I can see, studying the strategical situation of the Soviet Republic, it has never been in such a favorable position as it is at present. The strategical bases of the silent fronts, those of Poland, Rumania, the Caucasus, Turkestan, and the Far East, are splendidly organized and completed

with a number of intermediary bases of supply which have to play such an important part due to the lack of railway communication in Russia. The presence of a strong and responsible government which gradually and obstinately is carrying out the determined policy of the Congress of Soviets by means of a devoted and uncorrupt administration, greatly supports the military leaders of the country. Thanks to the fact that the Red Army is far from being only a fighting body isolated from the rest of the population of the Soviet Republic, but on the contrary, is bound to them by common political and economic interests and in close touch with all that happens at home through an extremely efficient news organization known as *Rosta*, it loses the specific military character of all existing capitalistic armies in the world. Therefore, the so-called demobilization of the Red Army cannot be interpreted as "demobilization" in the sense in which western military experts understand such a process. The secret of the strength of the Red Army lies in the fact that even when demobilized its tactical units still remain intact, the fighting bodies fully equipped and officered, always ready to start to the front when ordered to the support of their comrades on the battlefield.

Therefore, it is foolish to believe that the Russian Soviet Army, victorious after three years of constant fighting, suddenly is beginning to demobilize its forces at the moment when a new dangerous plot is on foot among the leaders of the capitalistic enemies of the proletarian republic of Russia. Had such "demobilization" taken place in reality, Comrade Trotsky never would have been able to say to Louise Bryant the following significant words, which I read in the *San Francisco Call* of December 22, 1920: "We want peace," said Trotsky, "but we are going to hit back if we are attacked."

If Paris and London are basing their newly designed strategical plan of campaign against Soviet Russia on this imaginary demobilization of the Red Army there is no doubt that their plan will fail again. According to news from Paris, Rumania is mobilizing its army, and by the order of the king, the classes of 1913, 1914, and 1915 are being called to the colors. The Rumanian railways are also militarized, which means that the state is undertaking some definite steps for a determined campaign. It is said that a clash between the Soviet Government and Rumania is expected in the spring over the possession of Bessarabia. This unprovoked military movement on the part of Rumania greatly surprised the Soviet Government which, as late as December 29, categorically denied any aggressive intention against Rumania.

The presence of very strong forces of the Red Army in Podolia, namely in the region between Kamenetz-Podolsk and Yampol, where the Dniester serves as the border of North Bessarabia

occupied by the Rumanians, is an absolutely normal thing, and in no case can it be interpreted as a concentration of the Reds against Rumania. This part of the western front of the Soviet Government represents the extreme left wing of the Russian front of the Polish battleline, and is of great strategical significance for the Russians, especially in the presence of possible new conflict with the imperialistic shliakhta. Therefore the two notes which the Rumanian Government sent to Moscow at the end of last December, objecting to the concentration of the Red troops on the northern Rumanian frontier, was a baseless complaint of Rumania and can be considered only as a pretext for the mobilization which was secretly in progress in Rumania for a long time, and which can not be camouflaged any longer.

Therefore, there is nothing surprising if, in reply to this Rumanian movement, the Red Field Staff of the Soviet Army, as it was stated in a dispatch to *The New York Times* of January 3, 1921, from Paris, had sent to the Dniester front "six new divisions" and if "the cavalry of General Budenny is concentrated in the region of Moghilev, a town on the Dniester between Kamenetz and Yampol in Podolia.

In reality, even if this is true, such a regrouping of the Red Army can scarcely be considered a deliberate concentration of the Russian forces against Rumania, because a part of the Red infantry and almost all of Budenny's cavalry, after the armistice was signed with Poland, were ordered to proceed to Crimea against Wrangel.

It is quite natural that once these troops had accomplished their task their presence in Crimea was no longer necessary and finally they had to return in order to reoccupy their original position on the Polish battlefield, namely, on the left wing. Thanks to the geographical situation of Bessarabia, annexed by the Rumanians, the latter is automatically outflanked by the left wing of the Red Army, for which the Polish command is entirely responsible, because it was unable to force the Russians back farther east in Podolia, thus straightening the Bessarabian frontier line, and thereby improving the strategical situation of Rumania. Moreover, the internal state of affairs in Bessarabia is of a very gloomy character. That flat country, situated between the rivers Prut and Dniester, and on the southeast bounded by the Black Sea, is populated by 2,000,000 people, mostly Moldavians and Jews. As far as I am informed, from very reliable sources, the Rumanian Government is having a hard time with this newly annexed province, and several suggestions were offered in the Rumanian Parliament to return Bessarabia to Russia, first, in order to get rid of the Jews whom, as it is well-known, the Rumanians hate, and secondly, to restore the former frontier with Russia which is strategically less dangerous than the present frontier. The Soviets, on the other hand, do not at all want to annex Bessarabia by force. The Soviet Government is ready to recognize an independent Bessarabian Republic, and this is perfectly well-known

to its population. There cannot be any doubt that all of the original population of that part of the "Rumanian Empire" is in full sympathy with the Bolsheviki.

The situation is aggravated by the fact that during the Peace Conference the American delegates opposed giving Bessarabia to Rumania, but the latter occupied it, nevertheless. The Allies also hesitated to recognize the province annexed from Russia as Rumanian territory, as they were confronted by a most energetic protest from the Russian reactionary leaders, who plan to restore a great imperialistic Russia, but the Polish campaign, which was already in project, forced them to decide the contrary, thanks to purely strategical combinations.

Rumania, it was believed, would cooperate with the Polish shliakhta and Wrangel and was to attack the Red Army in the rear in case of its invasion of Galicia. Several months after the withdrawal of the Americans from the Peace Conference, France and Italy signed an agreement with Rumania, under which that country annexed Bessarabia. In spite of the fact that the Rumanian Government was obliged by that agreement to fight the Bolsheviki in case the Polish army suffered serious defeat, Rumania was unable to fulfill her obligations to the Allies, partly due to the uncertain internal political conditions, partly due to fear of the titanic strength of the Soviet Army which defeated the Polish legions and pursued them as far as Warsaw. When the collapse of the Bolshevik pursuit took place, the Rumanian Government still hesitated, due to the growing Hungarian army, and the outbreak of the Bolshevik movement in Bulgaria. Then the collapse of the Wrangel adventure took place which complicated the general situation. From a purely military standpoint it is an absolute absurdity to believe that Rumania can meet the Soviet Army alone, which in the course of a very few days can very easily invade Bessarabia and push the enemy back behind its original boundary, namely, on the western banks of Prut. The Rumanians can attack Soviet Russia only in coalition with Poland, and possibly with Yugoslavia. Therefore, the sudden mobilization of the Rumanian army may be considered a movement which has close connection with the one existing in imperialistic Poland, which is remarkably well camouflaged by the peace negotiations at Riga, and it must be taken with serious consideration.

In one of my former articles I foresaw the possible combination of the smaller states of Europe which the imperialistic coalition may send against Soviet Russia, and I expressed the personal view that I am expecting a new armed conflict in Europe with the coming of spring.

Now, without surprise I notice that the capitalistic press of England, France, and America is gradually preparing public opinion for the possibility of approaching danger.

Naturally, as is the rule of the western military experts, they are predicting that it is the Bolsheviki who will attack their neighbors.

Walter Duranty, for instance, in the *New York*

Times of January 4, in the most outrageous manner, states: "Drive by Red Army Believed Imminent". "The war party has got control at Moscow," he says, "and it is only a matter of days, perhaps hours, before a huge Red drive is launched against the Baltic States." (?)

That is the substance of information which reaches Mr. Duranty "from an authoritative source."

Mr. Duranty's accuracy in forecasting events we have fortunately had an opportunity to appreciate in the past, but in the present case he is going far beyond the limits of probability, even for him. Soviet Russia is formally at peace with all the Baltic republics, which are glad to be able to do business with Moscow, and have already entered into a period of economic reconstruction.

The Estonians, Letts, and Lithuanians are absolutely sure of the fact that Soviet Russia has no idea of invasion or annexation, and if Mr. Duranty noticed that a certain movement is growing in the respective states, that movement has nothing to do with the military plans of the Soviet Republic; it is growing from within, in the Baltic states and sooner or later must break out in the form of revolution. Only a blind man can deny the fact that the time is at hand for these newly created republics to become Soviet republics, and that this will certainly be accomplished by a Red Army, but not by the Russian Red Army. Does Mr. Duranty suppose that the Letts who formed the nucleus of the Red forces in Petrograd and in Moscow are not capable of forming their own Red army in their

own country? I think that this military prophet who on so many occasions foretold the fall of Lenin and Trotsky, the victorious entry into Moscow of Kolchak, Denikin, and Wrangel, the capture of Petrograd by Yudenich, and the complete dismemberment of Turkey, in spite of the very instructive example of Armenia, is now once more wrong in his judgment, trying as he always has in his capacity as an Allied advocate, to mislead the Americans by means of his awkwardly constructed lies. How can I term otherwise than as a lie the statement, for instance, that Trotsky "agreed to unleash the Red Army on a new campaign of conquest." "Esthonia and Latvia are threatened first," says Mr. Duranty, "but the attacks will be continued until Poland and Lithuania accept the rule of the Bolsheviki."

Armenia, for instance, became Soviet, let Mr. Duranty realize, not because the Bolsheviki attacked her, but because the Allies forced the Armenian people to fight the Bolsheviki. The same has taken place in Azerbaijan and may in Georgia. We may witness a similar movement in Rumania, in Poland, and in Lithuania, and in all these countries where the bourgeoisie is trying to save its existence, terrorizing the population by means of Allied arms given to the ruling minority, bribed by imperialistic gold, who are leading their so-called standing armies by means of the White Terror known to the world under the name of imperialistic discipline against the Bolsheviki, for the sake of "democracy".

Collapse and Construction in Russia

By DR. ALFONS GOLDSCHMIDT
(Second and Last Instalment)

III RECONSTRUCTION

The November Revolution came. It had to come. Revolution, a regulated, summarizing revolution, had to come; a revolution that would unify what was pursuing divergent ends, as well as activities that were overlapping or sporadic in the system of committees and controls. The worker from the first period of the Bolshevik rule showed clearly that this task had been fully grasped.

The drawing power, the concentrating power, the absorbing power of the new authority was not at once understood by the so-called *intelligentsia*. The sabotage that had already begun during the Kerensky period assumed aggravated forms. The employes of the Moscow Municipal administration, for instance, declared that they would only go to work after the driving out of the Bolsheviki. The sabotage of these employes lasted from three to four months. Then it was over.

At the beginning of December, 1917, the nationalization of the banks was suddenly declared. There had been no preparation, no preliminary organization. One fine day the troops occupied the bank

buildings and ordered the bank clerks to remain at their work. We shall take this up again in another chapter of this book. Now sabotage was practiced even by the bank employes. This sabotage lasted from four to five months. But then it too was over.

The nationalization of the banks was a radical measure in order to attach all activities and industries to a single central apparatus, with the aid of regulations as to bank checks (registration of checks and indication of purpose), with the aid of approved imposts issued by the factory committees and the local Soviets, and also with the aid of the limitations of imposts, etc.

At first there was considerable confusion. Corruption sucked its way into the banking mechanism, approved checks were fraudulantly assigned by some factory owners to other factory owners. Demands were forged. After this experience, control committees were installed in the factories, whose task it was to undertake an inventory, to audit accounts, to go through the pay rolls. This was the beginning of a production budget which will be further discussed in this book.

There were now three authorities in the factory: the factory committee, the control committee, and the management, which, to be sure, were frequently or partially fused in *personal* union.

The Soviet Government did not intend a hasty nationalization, in fact it advocated a nationalization that would proceed with the maturity of the situation. But it was forced against its will to undertake certain nationalizations. Problems were forced upon the central administration, and a unification of all activities was demanded by evolution.

During this period some nationalizations were undertaken for punitive reasons. For example, the Konovalov textile factory was nationalized. Konovalov was the Minister of Commerce under Kerensky. Besides, the manufactories of the former minister Smirnov were nationalized, and the directing body of this factory consisted of workers and engineers after the nationalization, to be sure, without fixed or determined relations. The composition of the body depended on the presence of men of ability; some quite usable engineering directors also came to Konovalov.

Although at first only individual and punitive nationalizations were undertaken, the installation of the control commissions was already the beginning of a general nationalization process. For one of the chief factors of nationalization is the production budget. The control committees performed an enormous task, a task of deliverance. They succeeded in keeping up Russian industry until the moment of a more radical nationalization, but cutting off the financial capital of industry from possibilities of flight. They did not always succeed in this, but they succeeded to such an extent that we may speak of a veritable activity of redemption in this connection.

But the struggle between the industrial employes (clerical forces) and the workers continued throughout most of the year 1918. Not until September, 1918, were the organizations of these employes dissolved and their members brought into the trade unions. The employes were assigned to the trade unions. The factory physicians also had to be members of the trade unions. The physician of the textile factory, for instance, was a member of the textile union (now, on the other hand, he is a member of the sanitary union).

The struggle with the Engineering Society was also not yet over. The above-mentioned resolution had been a decision for reservation, not a decision to adapt oneself to the situation. The consequence was a considerable drop in the incomes of the engineers. In May, 1918, there were still engineers who had not succeeded in raising their incomes above the average for 1917.

In spite of the severity of the conflict, the unions protected the engineers because they recognized how indispensable the engineers were. They obtained the right to form engineers' sections in the trade unions, by which all special questions peculiar to this calling were discussed. The All-Russian Organization was formed for the treatment of technical scientific problems, which was composed of

representatives of these engineers' sections. This organization remained in existence. It is particularly thorough in the metal industries, in which engineers, by the way, have made up for some of their previous neglect. Their influence in this industry is strong. In other industrial unions it is weak because the latent sabotage has there not yet been overcome.

The new centralization, which alone could save Russia, deprived as it was of its important border resources, but which was sabotaged by the *intelligentsia* and in addition had to struggle against inability, phrase-making and crookedness of every kind, was aided by Germany. The German bourgeoisie in June, 1919, attempted to limit, put an end to, the Russian nationalization. The German bourgeoisie wanted to have its private interests in Russia. This also meant saving those Russian private industrial interests which bore German firm names. For a sort of firm name swindle, a straw-man process, a buying up of puppets for purposes of fraud, has already become very frequent.

A decree for nationalization, a measure for a complete nation-wide nationalization was what was needed. It was almost forced by the necessities of development. But the German bourgeois efforts, the German efforts to rescue German financial capital, accelerated this unification. The famous decree for nationalization of all the Russian industries, the decree of July 28, 1918, was the answer to these efforts, and was simultaneously the realization in advance of this necessity. This decree forced the directors of the stock companies to remain with the undertakings, make them tax free, but forbade them to withdraw any capital from the companies. They were therefore bound to draw up an initial balance-sheet for nationalization, and forbidden to sell the factories. The decree applied to all stock companies having a capital of more than one million rubles. The problem became clearer and clearer, the process of unification easier, the nationalization and centralization more and more automatic. Occasional nationalization, punitive nationalization, the stage of waiting for the process to maturity, were now passed, and there was substituted a planful nationalization. The Socialist nationalization, a nationalization with a centralistic purpose, but with a *new* centralistic purpose. The former confusing nationalization, the locally scattered nationalization, had passed over into a nationalization of the main branches of production, at first only of the main industries in the main branches, the object being to stretch out one's arms, to make the trustification comprehensive. In other words, the expropriation of the means of production, the rule of the proletariat over the means of production was being carried out.

Already the first All-Russian Congress of Economic Soviets decided:

"In the domain of the organization of production a final nationalization is necessary. It is necessary to pass on from a nationalization of a few enterprises (thus far only 304) to a consistent na-

tionalization of industry as a whole. This nationalization must not be a merely occasional nationalization, and must be ordered only by the Supreme Council of National Economy or by the Council of People's Commissars, with the approval of the Supreme Council of National Economy." This was an essential difference between mere nationalization and centralization; it meant a carrying out of nationalization by the new centralization.

The Second All-Russian Congress of Economic Soviets (1919) already observed that "at present the nationalization of industry has been essentially completed," and established measures "for the purpose of further organization of production, of registration, and of industrial supply."

"The fundamental question of economic life," we read in the resolutions of this Congress, is the question of unifying the national economy, both rural and urban, and developing the productive forces in the field of the industries providing raw materials, as well as those working them, and also in agriculture." The matter had therefore already progressed to the point where it was possible to set up a unified economic plan. We here clearly see the relation of centralization to purposefulness and it may be observed that the development took the following course: first there was a period of distress in production and distribution, then a forced nationalization, then a centralization for abolishing the distress in production and distribution, with the aid of nationalization. This line is followed in a single and unbroken course.

It is only logical, only self-evident, that the decision of the Third All-Russian Congress of Economic Soviets should begin with the following words:

"The centralization of the administration of national economy is the surest means in the hands of the victorious proletariat for the swiftest possible development of the productive forces of the country. It is likewise the necessary prerequisite for a Socialist reconstruction of the national economy, and for drawing the smaller enterprises into the unification of economy. Centralization is the only means of preventing a scattering of the national economy."

Immediately after that, the necessity of an auxiliary decentralization became the subject of discussion, a problem that will occupy us later. In this chapter we had first to discuss the necessity of centralization, as a revolutionary necessity, as an obligation of the proletariat, if the latter was to carry out its redeeming function.

The period of local nationalization had thus been overcome. The autonomy of nationalization was hostile to the revolution, much as it may have aided the revolution and made it possible. It was necessary for the revolution at one time. Later arose the question of recovering these self-determining powers, of preserving them, of reestablishing them. Centralization and individual unit determination, these are the two poles of the modern economic revolution.

The French Revolution, as a proletarian revolu-

tion, went to pieces owing to the weakness of the central authority, the impossibility of uniting or securing a common effort on the part of all the cells. There was, as a matter of fact, no possibility as yet of a proletarian revolution. It was only a relaxation of what had been rigid, a birth of bourgeois spirit. The Russian Revolution was faced with other difficulties. It had to unite the scattered bourgeois remnants. It was obliged to secure union. The French Revolution had to dissolve, to split up.

We must note this: the evolution was, so to say, more conscious of revolution than the leaders of the revolution. Many managers cast aside the guiding rope, deserted the helm, paid no more wages, left the factory. The complaining workers called upon the local Soviet, which was asked to nationalize and provide financing. This resulted in a confusion, a lack of unity which was contrary to the essence of this revolution. This revolution was at first nothing more than a hasty expansion of capitalistic forms of administration, with a socialistic tendency.

After that decree a systematic nationalization began, a trustification by the application of centralized power was undertaken. For example, all great machine building industries in the Moscow, Nizhni-Novgorod, Kolomna regions were centralized by trustification. (Gomza — G-O-M-Za — "National United Machine Construction Works.")

The thing was not accomplished at a single stroke, but it was accomplished quickly. The first administration of this trust was a pure workers' administration, with a few engineers aiding. The chairman was a worker, Chubar, a member of the Supreme Council of National Economy. He did all business with that as his sole source of power. The trust was placed under the Metal Section of the Supreme Council of National Economy (the organization of the Supreme Council of National Economy will be described later).

The second nationalized contraction was the Volga-Kama Trust (chemical industry). There were placed in it chiefly the enterprises of the firm of Ushkov. The chairman was a director of the capitalistic Ushkov company, an old revolutionist of 1905, not a Communist. The Supreme Council of National Economy sent Bogdanov (now President of the Armament Industry) as a delegate to the administration). In addition to the representative of the Supreme Council of National Economy, all the members of the administration were elected by the workers, including Ushkov, and they were confirmed by the trade unions after their election by the workers. Here began the influence of the trade unions on the economic organization. This influence is today of decisive nature. But these are questions of organization that cannot be discussed in this place.

Further, the great labor factories, whose trustification had already been prepared by private capital, were nationalized and combined. The administration was as follows: three representatives of the workers, three representatives of the engineers and

technologists, three representatives of the Supreme Council of National Economy.

There were all sorts of nationalizations which were really not nationalizations in purpose. A number of factory owners demanded nationalization in order to get raw materials, fuel, etc. For the delivery of raw materials and fuels was already in the hands of central bodies. These manufacturers had no idea however of actually delivering any finished products. They were perfectly willing, hoping that the Bolsheviki would some day be eliminated, to be served by them, but they had no thought of themselves serving. They obtained permission for new constructions, extensions, transfers of machinery. Their object was to obtain installations by the use of which they could fight down competition after the fall of the Soviet power. It is self-evident that this period was simply a period of general profiteering.

In November, 1918, a great textile trust was organized (Centro-Textile). These were the beginnings of a new system. Now the advances were very fast. By the end of 1919 the nationalization of Russian industry, the centralization of production as well as its distribution, had been carried out. That is a condition that can no longer be changed. The centralizing power is so great, the fact of centralization so impregnable, that it must be recognized willy-nilly. You cannot change the situation.

What was the origin of and what is therefore, the Russian economic revolution, as far as we have pursued it?

It is a continuation, accelerated by the war, of the great economic crisis of Russia. It was accelerated and hastened by the war, by the devastations and destructions of resources by the war. The November Revolution was the consolidation and the continuation of an already present condition. It simply drew the inferences from this condition.

What were these consequences? A gathering together of all productive forces, with the aid of the liberated proletariat, an elimination of the depreciated money system, an expropriation of the means of production.

After many delays, it was a swift expansion of the forms of administration that had been created in peace and in war by private economy and by the old state, with the assistance of ever more rigid centralization, and with the aid of individual unit forces, that is, the workers, engineers, etc., in the industries.

It was the beginning of socialistic economy, made possible by the Communist Party of Russia.

The problem of the Russian Revolution is therefore a production problem and the production problem is a problem of organization. The production problem being a problem of organization (decentralization up to the point of an actual self-determination by each cell is also a problem of organization), this book will occupy itself essentially with the organization of Soviet Russian economy, and particularly with the organization of Soviet Russian industrial economy,

But let us say at once: organization arises from mechanical and organic causes. At any rate, organization is the executor of an unheard of elemental force, which is simply moving towards order. An elemental force that will adjust all economic human handiwork, all the mobilizations achieved by human power, so that an organic whole will be produced.

Crisis may possibly arise in the course of this process. But it is to be hoped, possibly even to be proved, that these crises will be eliminated by the elemental force of which mention has been made. The profundity of Communism lies, to my opinion, right here.

If you understand the Russian economic revolution, you must recognize not only its inevitability, but also its rigidly consistent course. You must furthermore recognize that the economic organization that is to be described is not an outline imposed from above, but nothing more than a means of order created by that elemental force itself. Organization is the revolution. It is the revolution to the point of its own self-destruction, to the point of that absence of organization which is the final form of the organization of economy.

GREETINGS TO A REBORN UKRAINE

By LEON TROTSKY

Ukraine has suffered severely from the imperialist war and from the countless changes of regimes. Its industry is ruined, its life is shaken. It will take long to heal the wounds. Nevertheless it may be said even now that the turning point has been reached. Ukraine is recovering, its industry, its life is on the upgrade.

The village is improving. The poor peasantry are uniting in Committees of the Poor, they are becoming the masters of their own destiny. The Soviet Government is getting firm support in the country.

Grain deliveries are being fully and regularly carried out creating a basis for the regenerated industries of the country.

The devastated, depopulated basin of the Donetz is being restored. The output of coal is increasing. All the indications are that the Donetz Basin will again become the bunker not only of Ukraine, but of the whole of the Soviet Republic.

In consequence of the Committees of the Poor the Petlura and other bands are losing ground in the country.

The working population of Ukraine is becoming more and more infused with the consciousness that the industries and transport must be regenerated. The productivity of labor is increasing. The working population which has suffered in succession from the Rada, the German oppression, Skoropadsky, Petlura and the French is now desirous of establishing a firm Soviet order. As soon as Wrangel is done with, Ukraine will devote all its energy to free and brotherly work.

The body of Ukraine is covered with severe wounds, but the turning point has been reached already. The process of recovery has already set in.

Greetings to a reborn Ukraine!

The Finnish Treaty

[From the "Manchester Guardian" of December 8 we take the following description of the Finnish Treaty, with the accompanying map.]

The preamble having established the fact that "Russia has recognized Finland as an independent and sovereign state within the frontiers of the Grand Duchy of Finland," the first three articles are devoted to a detailed delimitation of these frontiers. They follow in essentials the old boundary lines. But Russia cedes to Finland "the territory of Pechenga" (art. 4), along with the coast and the territorial waters belonging to it, "for all time in full sovereignty." Finland undertakes not to establish naval bases on its coastal territory at the Arctic Ocean, or to maintain in those waters armed vessels with a displacement exceeding 400 tons each.

"The Russian State and Russian citizens are guaranteed free right of transit through the Pechenga territory to Norway and back therefrom" (art 8). Goods in transit will be exempted of all inspection or charges.

Map to indicate boundaries of Finland and Russian territory ceded to Finland.

By article 10 Finland undertakes to withdraw its forces "from the communes of Repola and Porajarvi. These will be reunited with the Russian State and incorporated with the territory of Eastern Karelia, to be formed, on the basis of national self-determination, by the Karelian populations in the Archangel and Olonets provinces." (This solution apparently is based on the principle of "personal nationality.")

"The contracting powers will severally support the principle of the neutralization of the Gulf of Finland and of the whole Baltic Sea, and will cooperate towards its realization" (art 2). The following article enumerates a number of minor islands which are to be neutralized in a military sense in the Gulf of Finland. And according to art.

14 "Finland shall take measures, immediately after the coming into force of the Treaty of Peace, for the military neutralization of Hogland, with international guarantee. . . . Russia pledges herself to give support in obtaining that international guarantee."

By article 16 "the contracting parties undertake not to maintain military establishments, for offensive purposes, on Lake Ladoga and its banks, nor on the rivers and canals debouching into Lake Ladoga, nor on the River Neva, as far as the Ivanovska falls. . . . They further undertake, in the event of the Gulf of Finland and the Baltic Sea becoming neutralized, to extend the system also to Lake Ladoga."

The very liberal economic provisions of the treaty go a long way towards the establishment of free intercourse and economic cooperation between the two countries. By article 17, for instance, "Russia pledges itself to allow to Finnish merchantmen unimpeded navigation on the Neva between the Gulf of Finland and Lake Ladoga, on the same conditions as obtain for Russian vessels. Finnish vessels may not, however, carry war material or military requisites."

Special agreements are foreshadowed for the regulation of passport and customs matters, of traffic, of fishing, &c.

Article 22 lays down that "property of the Russian State and its establishments in Finland passes, without compensation, into the possession of the Finnish State. In the same way property of the Finnish State and its establishments in Russia passes without compensation to the Russian State."

"The contracting powers mutually forego all claims to compensation for war expenditure. Finland will bear no share of the expenditure incurred by Russia for the purposes of the world war, 1914-1918." (Article 24.)

"Neither of the contracting powers is under a liability to be held responsible for the other's public debts and other obligations." (Article 25.) "The debts and other liabilities of the Russian State and its establishments towards the Finnish State and the Bank of Finland, and the debts and other liabilities of the Finnish State and its establishments towards the Russian State and its establishments, shall be regarded as liquidated on both sides." (Article 26.)

A special committee is to be set up at once to draw up proposals for the immediate resumption of trade relations, as well as for a commercial treaty. (Article 31.) In the meanwhile certain preliminary principles are laid down. Among them, that the "imposition of import, export, and transport restrictions will be reciprocally permitted only in pursuance of legislation concerning public safety, sanitation, the control of spirits and of the internal food supply." The contracting parties "reserve to themselves the right to monopolize various branches of commerce and industry." The subsequent arrangements are to be governed, in general, by the "most favored nation" principle. "Finnish natural and industrial products exported to Russia will be exempt of all customs and other import duties." (Article 32.)

Article 33 provides for direct goods and passenger traffic on the railways, while article 34 recognizes to Russia the exclusive use, until 1946, of a number of telegraphic lines running across Finland.

After a number of other provisions relating to the exchange of prisoners, &c., the treaty establishes a joint authority which shall direct the execution of its clauses, and which shall seemingly have power to deal also with "matters of urgency" not necessarily included in the present agreement. The decisions of the committee and of the special sub-committees it may appoint shall be taken by a majority of votes. If in a question submitted to a plenary session of the committee an equal number of votes shall be cast on each side, the matter shall be referred to the governments for decision.

SOVIET RUSSIA

Official Organ of the

RUSSIAN SOVIET GOVERNMENT BUREAU
110 West 40th Street New York, N. Y.

This weekly will print articles by members of the Russian Soviet Government Bureau as well as by friends and supporters of Soviet Russia. Full responsibility is assumed by the Bureau only for unsigned articles. Manuscripts are not solicited; if sent in, their return is not promised.

THE poem, "Death by the Kremlin Wall, to John Reed," which was printed on one of the editorial pages of SOVIET RUSSIA in the issue of January 1, was not accompanied by the name of its author. For this omission we present our regrets to the latter, Mr. Joseph Koven, and assure him the omission was not intentional.

* * *

ON THE last day of the old year France sent a threatening note to Germany, charging that country with deliberate failure to carry out her disarmament pledges. On January 19, according to Lincoln Eyre's January 5 message from Paris to the *New York World* (printed January 6), the premiers of all the Allied governments are to convene in Paris in order to determine what will be their attitude with regard to the German reply to this note, which is now in the hands of all the Allied governments. Mr. Eyre suggests that in spite of former frictions between the governments of Great Britain and France on the subject of France's treatment of Germany, a common ground has been found between the two countries for a new basis of conciliation with Germany, for he believes that before the premiers meet the representatives of Italy, Belgium, and Japan, there is to be another, quite different conference at Paris, one far more important than the formal consideration of Germany's reply to the recriminations recently addressed to her by France. This conference is to be an "informal" conversation between Raiberti, the French Minister of War, and Winston Churchill, British Minister of War. Mr. Eyre can put his surmise very well in his own words:

"I learn on high diplomatic authority that Minister Churchill is coming to urge upon the French Government a project he has long cherished—namely, to use Germany against the Bolsheviks. He hopes to advance this project not only with the French War Office, but also with Marshal Pilsudski, Chief of the Polish state, should Pilsudski arrive here in the near future, as he is expected to do.

"It is understood that he will lay stress on the perils in prospect for Poland and the other Russian border states, from an offensive by the Red Army in the spring. Taking this much heralded menace as a text, the British War Minister is expected, according to advices received here, to urge that Germany be made a second line of defense against Bolshevik advances.

"Adoption of any such measure would entail postponement of the plan for German disarmament, and for the maintenance under arms of the *Einwohnerwehr*, or Ger-

man communal guards. This is an essential part of the Churchill scheme."

For a moment the reader will be tempted to reflect on the volume of abuse that issued forth from all the Allied countries only a few years ago on the uncivilized nature of the Hun, his savage and untutored love of peculiar and inscrutable modes of thought, the impossibility for cultured people to live in the same world with him. Evidently these observations were as little intended to be taken seriously as were the corresponding effusions on the part of the Germans, on the subject of "treacherous England", "decadent France", "dollar-hunting America". A well-known German novelist, Thomas Mann, wrote early in the war a brilliant and quite engaging—though entirely misleading—essay, called "Civilization and Kultur" (*Neue Deutsche Rundschau*), in which he showed to his own satisfaction that "civilization" was an Allied phenomenon, "Kultur" a German.

But tables have turned. Thomas Mann will have to rewrite his specious epigrams. The time has come for reconciliation: England, the "master mind" of Western Capitalism, has discovered that in order to crush the example of a proletarian dictatorship, the interests of the British Empire and of the German Republic will make them act together as "saviors of civilization." Again all the paid geniuses of the European forcing-house will rally to the new slogan, and English pedagogues who have not yet recovered from the momentarily profitable task of damning the Hun will be taught that the historian Edward Augustus Freeman considered the Teutonic heritage of language and customs to be the common property of both the English and German peoples. The ideologies will operate as smoothly as did opposite ideologies a year or two ago, for the rulers of England and Germany, both eager to put down the Russian manifestation of proletarian dictatorship, know on which side their bread is buttered.

It is a pretty plan, and our readers may have already noticed some of the details of it. A similar proposal is quoted in this week's *SOVIET RUSSIA* from a Swedish daily. The *New York Volkszeitung*, a daily printed in German, has been repeatedly pointing out suggestions in the Entente press to place the reins of the next anti-Bolshevik campaign in the hands of General Hoffmann of Brest-Litovsk fame, who, while consulting with Trotsky and the other Soviet delegates to the conference, placed his booted foot on the table and looked bored. "General Hoffmann's boot," said Trotsky at the time, "was the only tangible and frank assertion at the conference, and his putting it on the table was a refreshing illustration of candor otherwise absent from the proceedings." This frank and unconcealed German militarist is seriously proposed as the mentor of the new onslaught against Soviet Russia. Without committing ourselves as to General Hoffmann's military abilities, concerning which we know little, we have no reason to assume that the Allied leaders would make a poor choice in the person of a general needed for so serious a job. But we

do think it is a big task and that it will immensely accelerate the process which the Allies are most eager to put down.

No doubt if any great nation in Europe could be mobilized in a military sense as perfectly as it was mobilized in 1914, a serious campaign against Soviet Russia could be undertaken, and a big advance could be made against the proletarian armies. But neither Germany, the proposed new buffer-state, nor any other country of the Europe of 1914, is really still in existence. The nations are no longer military units, as unfortunately they still were, contrary to all expectations, in 1914; they are now overlaid by class lines: revolution everywhere in Europe is delayed only by the military measures of "Socialist" governments, and accelerated by the slings of awkward reactionaries.

It is possible therefore, that an effort will be made to drag Germany's rulers into the open attack that will be launched against Soviet Russia in the Spring. It is more than likely that the effort, if made, will stimulate the revolutionary movement in Germany to such an extent as finally to overthrow the "socialist" government of Germany that is so ready to condone the slaughter its former masters aided in bringing on, and equally ready itself to bring upon the German people a more disgraceful servitude still—that of helping to put down the proletarian revolution in Russia.

FINLAND'S Treaty with Soviet Russia, signed three months ago at Dorpat, appears in this issue of SOVIET RUSSIA in a complete translation from the official Finnish text. There are also official texts in Russian, French, and Swedish, but we have not yet seen these versions. Concerning a text of the treaty, in its possession, the *Manchester Guardian* says (December 8):

"The Russo-Finnish Treaty of Peace, of which we are able to publish the main features today, is a moderate and satisfactory document. Its advent had been long delayed by the stubborn claim of Finland to Eastern Karelia. However plausible this may have been in view of the character of the population, the demand suffered from the fatal disability of involving the surrender of Russia's line of communication with the ice-free section of the Murman coast. With the cessation of hostilities in the west, Finland evidently no longer was in a position to press this claim. On the other hand recovery of power does not seem to have made the Soviet Government unreasonable. To begin with, it has granted the Karelian population national autonomy; and it has, in addition, ceded to Finland a strip of the Pechenga territory on the extreme north which provides it with an outlet to the unfrozen coast of the Arctic Ocean. This is an invaluable concession, and it is also an arrangement not without importance to the outside world, for it brings a new power into the waters through which access can be had to Russia all the year round. The Russian Government has made it a condition of this cession that Finland shall not maintain any armed forces on the Arctic coast. There are some other excellent provisions aiming at the promotion of general peace. Thus the contracting parties undertake to work for the neutralization of the Baltic, of the Gulf of Finland, and of Lake Ladoga. The financial and economic clauses of the treaty are drawn up with a like apparent desire for friendly co-operation. Both parties wisely renounce all claim to a war indemnity, and they agree to resume relations upon conditions which may be summed up as free traffic and free trade. Not the least interesting and hopeful provision

is that setting up what almost amounts to a permanent joint arbitration committee, charged not only with the application of the treaty, but also with the handling of any other urgent matters likely to threaten the peace so well begun. As to all of which we can only add: Other European States please copy."

New Attack on Russia

The counter-revolutionary newspaper *Volya Rossii* published at Prague, prints a letter from Paris containing an interesting document. The matter concerns one of the well-known Western adventurers, Avalov-Bermond, who wrote a memorandum in which he, according to the correspondent of *Volya Rossii*, submits to French Government circles a new plan for a Russian Allied intervention. This "memorandum" contains, as the newspaper states, the following magnificent new plan:

1. Prince Avalov shall place, on territory to be assigned in accordance with the French and Polish Supreme Command, a large army recruited from the following contingents, which it is assumed are completely at his disposal: (a) The remainder of General Bredov's detachment at Posen; (b) the remainder of the Western Army; (c) the remainder of General Livens' troops; (d) the Ukrainian prisoners of war in Germany; (e) the remainder of Avalov's army; (f) the remainder of the detachments of Virgolin, Glazenap, and Count Pahlen, organized as sections of the soldiers of the Red Army interned in East Prussia (!); the Baltic Landwehr.

2. All the work of organization as well as that of the general staff shall be assumed by a special officer from the French General Staff, to be designated for this purpose by the Chief of the Army Staff, and whose duty it shall be to call together a staff and instructors from France, at his own discretion.

3. After the occupation of Moscow, the government shall be installed according to agreement between Wrangel and the French Government, whereupon the newly established government shall immediately conclude a treaty with France on the exploitation of the mineral resources of Russia.

4. Parallel with the erection of this army an intensive anti-Bolshevik propaganda shall be carried on behind the front.

5. The enterprise is to be financed by France and Poland, partly by a consortium of Scandinavian bankers (an offer to do this is at hand), partly by commercial contracts with the French firms.

6. The formation of the army may proceed either with the assistance of Germany, as the price for a number of concessions to Germany with regard to the fulfillment of the Versailles Treaty, or, should this turn out to be impossible, in some one of the following manners: (1) under the cloak of a Red Army in Prussia, that is, with the occupation of German "left" circles; (2) under the cloak of a White anti-Allied and anti-Polish Army, that is to say, one supported by Germany's "right" parties; or (3) in a private manner, that is to say by bribing Germans who are interested.—*Politiiken*, Stockholm, December 4.

New Note to Poland

The following telegram was sent out by Chicherin to the Polish Foreign Minister Sapieha and received on December 1, 1920:

"In reply to your radio dated November 26 the Governments of Russia and Ukraine cannot restrain from expressing their great astonishment in the face of the unusual procedure of carrying on negotiations by means of radios, setting aside both the properly accredited delegations, which are at Riga. The guiding line of conduct of the Russo-Ukrainian delegation strictly corresponds with the views of their governments, which do not see any reason compelling them to choose a different mode of negotiations with Poland. It is all the more improper on the part of the Polish Government to express any dissatisfaction because of the well-grounded protests of the Russo-Ukrainian delegation since, in view of the constant violations by Poland of the Riga agreement, Russia and Ukraine cannot pass them by and proceed to the order of the day without formal opposition, basing themselves on their rights.

"To wit, was it not a flagrant violation of the Riga agreement on the part of Poland to permit the bands of Petlura and Balakhovich to prepare for military operations under the protection of the Polish military occupation forces, leaving to Petlura the whole zone called the 'neutral Zone of Petlura'? Was not the refusal on the part of the Polish troops to retreat to the new boundaries a violation of that agreement, after the exchange of ratifications? Was it not a violation of the supplementary agreements from November 14 when the Polish troops were reluctant to retreat at the time designated and the speed agreed upon, to new lines which they were to occupy? Other violations of the terms of the treaty were enumerated in the appeals of the Chairman of the Russo-Ukrainian delegation at Riga. Even the demobilization of seven annual contingents, referred to in your radio, had as its aim to make it easy for the Polish Government to conduct military operations against Russia and Ukraine, through the medium of Petlura and Balakhovich, supported and maintained by the Polish Government.

"These violations of the treaty already concluded shall not be forgotten when the accounts between Poland on the one hand, and Russia and Ukraine on the other, shall undergo their final adjustment, for the latter have been rejecting unswervingly any thought of violating the agreements already concluded by them.

"In contradiction to the Polish Government, which had signed the treaties and the protocols and later violated the obligations assumed by itself, the Russian and the Ukrainian Governments have stood immovably on the position of their treaty obligations and are carrying them out strictly. Not only are they not following the steps of the Polish Government in the way of suspicions, which might endanger the cause of peace that concerns them

greatly, but the conciliatory spirit which animates them is so strong that they hail with joy the suggestion of the Polish Government to accelerate the negotiations of the Peace Conference, and therefore propose that the Chairmen of the respective delegations be entrusted with the elaboration of a program of peace negotiations, in order to be able at the first opportunity to determine the final date for the conclusion of peace.

"A speeding up of the work of the conference is much the more desirable, since the late arrival of Chairman Dombiski, and the principal members of the Polish delegation, their not presenting new powers after their arrival, and the long absence of the most important Polish experts have already considerably delayed the work of concluding peace. Already the Polish delegation quite often refuses to assign time for the session of the commission, in consequence of which the work of the commission is being protracted. The delay of the Polish delegation in presenting its new credentials is still more surprising inasmuch as the Polish Government, at the time when it was negotiating for the transfer of the peace conference from Minsk to Riga, emphasized the necessity for the Polish delegates to provide themselves with new plenipotentiaries while those in possession of the Russo-Ukrainian delegation had been empowered from the very start to conclude peace, although at that time only preliminary peace terms were under consideration.

"In the hope that the obstacles created by the Polish delegation in the conduct of the negotiations will be removed in the future, the Russian and the Ukrainian Governments simultaneously state that military guarantees may be given by Russia and Ukraine only in case they receive corresponding guaranties from all hostile governments, which may be brought to fruition by means of negotiations with all the governments mentioned.

"Russia and Ukraine fully share Poland's desire for peace, and the allied Soviet Governments express the conviction that upon such a basis the work of peace can be built on a firm and durable basis at the conference in Riga.

*"People's Commissar for Foreign Affairs
of the Russian Soviet Government,*

EVACUATION OF THE CRIMEA

MOSCOW, December 20, 1920.—While the evacuation of Sebastopol was in full swing, and Wrangel's band were murdering and plundering in the city, a revolutionary committee was set up to restore peace and security in the town. However, Kutepov's White Guards captured all members of the Revolutionary Committee and killed them. The resistance against the advancing Soviet troops was continued, and there were many victims. After the setting up of the Soviet power, no more countermeasures were adopted, and only the normal procedure for the preservation of orders was put into effect.

The Self-Exiled Intelligentsia

By MOSES KATZ

Languishing in many lands. Suffering terribly and consoling themselves with dreams of revenge.

THERE are at present two Russias. One, Soviet Russia, which is struggling and creating, and arousing in the rest of the world either passionate enthusiasm or burning hate; a Russia which is toiling and starving, but which serves at the same time as a torch for the world and inspires in half of mankind a desire to emulate her.

And there is another Russia—the former Russia, the old, rotten and decayed Russia of the princes, the generals, the officers, the manufacturers, the speculators, and the writers who sold themselves like harlots, who now live like prostitutes, after losing through hunger and suffering, every last bit of shame. This Russia is now scattered over the whole world; like rats that flee a plague, they have fled to every corner of the earth, and you can find them in New York and in Washington, in Japan and in Czecho-Slovakia; in Paris and in Constantinople; in Egypt and in Siberia; in Bulgaria and in Poland; in China and in Jugo-Slavia—in a word, wherever there is a crevice into which they can crawl.

Their life is not an enviable one. In general they do not know the foreign languages, they cannot or will not do any work; few of them have money, for what they had was either left behind in Russia or spent abroad. They had only their hopes—hopes that they would soon see a return of the good old times in Russia, and that they would some day obtain again the means not only to “live a grand life” there, but also to avenge themselves upon the hated peasants and workers for the suffering which they had to go through in exile. But the stronger the Soviet Government becomes, and the more decisive the defeat of the various counter-revolutionary generals, the more completely do their present hopes vanish, and in their place remain only a wild, powerless rage, and a mere dream of how good it would be if they should some day be able to obtain some revenge. . . .

The Russian newspapers now being published in Paris and in Warsaw, in Vienna and in Prague, in Berlin and in Riga, print much that characterizes the survivors among the exiled Russian counter-revolutionaries.

In the Russian newspaper, *Svobodnaya Misl*, now appearing in Paris under the editorship of Vassilievski, are being published articles by the well-known Russian publicist, Teffi. Teffi was at one time one of the best known among the Russian writers in the liberal press, but after the Soviet revolution she went to Kiev, where she poured out in the counter-revolutionary press her hatred of the Bolsheviks. Vassilievski, who also fled to Kiev from the Bolsheviks, tried, after the Soviet power had occupied Ukraine, to “adapt” himself, and in the middle of the year 1918, he wrote pamphlets for the Red Army. They are now both in Paris,

and Teffi expresses her feelings as follows in Vassilievski's paper:

“I am sick today, and unhappy,
Of thoughts my head is empty,
And though of perfumes I have spilt a whole flagon,
I cannot finish my feuilleton.
And so now a new form has my weariness taken,
And every norm has forsaken.
My lot is beyond even the words of a critic,
What I want is a birch rod and a sober muzhik.
Of Moscow I dream, and of Lobnoye Place*
And of how they will give me on a platter,
In order to make me a little happier,
That same muzhik in the same Lobnoye Place,
And the self-same birch rod,
That I may inflict without mercy a fine dose,
A portion of a few hundred blows
That he would never forget . . .
Such is at present my longing . . .”

A fine longing, is it not? And it must be remembered that it is not just any body at all who thus longs to deal those blows to the unwilling muzhik; it is not some former gendarme, or general, or petty officer, but a woman, one of the most intelligent women in the old Russia, one of the most respected among the women writers in the bourgeois press.

And do you think that there is any question here of sentimental ideals, of any longing for a higher and more beautiful life that which the Bolsheviks have attained? Nothing of the kind! Let us see of just what the suffering of the exiled Russian consists, according to the description of another talented Russian publicist, a former radical, Arkadi Averchenko, who in the same number of the same paper writes an article under the title “A Russian Tale”:

A father is sitting with his small son in a cold room in Sebastopol, and he tells him a wonderful story of the fine life he lived in the good old times. The child, grown up in exile, cannot understand much of the story, and either does not believe it or laughs at it. The father speaks:

“Mother and I used to go to balls.”

“How?”

“Simply took and went. We had music, we would hire a whole choir . . ., we decorated the garden with colored lanterns, and we danced.”

“What kind of a thing is that?”

“Dancing? It is this way: the man takes the lady's hand with his, and with his other hand he holds her where you have your bottom button, and then both begin to beat with their feet and jump. The music plays and they jump.”

“What for?”

“Just so. Only just so. There's no use in it. And after dancing they were all given something to eat.”

“I suppose they had to have tickets to eat?”

* The place where, formerly, criminals were tried and beaten.

"Who?"

"They."

"God bless you—who takes money from guests for eating. One doesn't charge for it, but any way I did my best for them. The cook prepared the food, champagne, fruit."

"What did it cost you? A nice sum, I suppose."

"Well, how shall I tell you? I have it . . . This afternoon we drank some nasty warm stuff with saccarine. Citra, do they call it, or what? Well, do you remember how much I paid for the bottle?"

"Fifteen hundred."

"Right. Well, at one time, the whole ball, with the eating, the music, the lanterns, cost half the price of such a bottle."

"Does that mean I drank out a whole ball today?"

"And imagine, you have not burst at all."

"Ah, that's a fine story. A little has a whole ball in his belly, Ha, Ha, Ha!"

"Ha, Ha, Ha! You see, that's a nicer story than the one about the witch. May she perish!"

"He, He! Certainly, and even nicer than the one about the mother and the three sons . . . The devil take them!"

"Of course . . . And it is especially unlike the story about the little girl who had a red cap, a curse take her from now to next year!"

That is how those of the Russian intelligentsia now feel, who fled their homes to await the downfall of the Bolsheviks, and who have only fallen upon real disaster abroad, or under General Wrangel's "strong hand".

Now as to how they live in the Crimea, after General Wrangel established "absolute order" and again revived the dying Russian capitalism. In the advertisements printed in the Russian newspapers in the Crimea we find such interesting bits as this:

"Wanted: a room in center of city, electricity and steam-heat, to cost not more than 100 thousand rubles a month. Deposit, 100 thousand rubles."

"Wanted: room and board with quiet family. Willing to pay 300 thousand rubles a month and three months in advance."

"An American journalist is seeking stenographer who understands English. Fifty thousand rubles a month for four hours a day."

"Wanted: five-room apartment in center of city. Willing to pay five hundred thousand rubles to vacate."

From these figures only can we get an idea of the value of Wrangel's rubles even in the Crimea, and also the crowded conditions in the cities which he occupied. The American correspondents who report such "terrible" stories with regard to the high cost of living in Soviet Russia have not, so far as I know, mentioned a single fact showing how "well" the people in Crimea are living under Wrangel's revived capitalism. And one can imagine further how the counter-revolutionary intellectual lives, who saved himself from the Bolshevik "hell" by fleeing to Wrangel "Paradise".

It is no wonder that the counter-revolutionaries remain abroad in terrible suffering; their only con-

solation is in their empty fantasies with regard to Russia, which they themselves create, or in the empty dreams of revenge upon Russia which enter their heads.

For example, there is Alexander Kuprin, the well-known Russian writer, now in Paris, who writes in Burtsev's *Obshcheye Delo*, a daily newspaper supported by the French Government, this story claiming to come from Moscow:

"A terrible story has recently come out of the Moscow schools. It is confirmed by a member of the Commissariat of Popular Education (what commissar, his name, and where he confirmed the story, are of course, not mentioned, not even the name of the school is given. M. K.). A ten-year-old boy persuaded another, thirteen years old, to murder a little fellow and bury him in a garden. For several days they ate the flesh of the murdered boy, which they roasted on sticks or swallowed raw. At the trial the younger boy said cold-bloodedly:

"At first it did not taste so bad, but later it was not so good . . ."

And again: when, with whom, it happened, not a fact, no place, no name, is given. The story bears all the ear-marks of a wild fantasy born in a brain on fire with alcohol or insanity (Kuprin is a terrible drunkard, as is well known), but a famous Russian writer has written it, a newspaper owned by a former revolutionist prints it, and the wonder is only that the story has not yet been cabled to America from Paris,* or given out as an "authentic report" from Washington . . .

And if Kuprin writes such fantasies about a few children, why should not another refugee, Professor Antsiferov, do the same with regard to all Russia? And Professor Antsiferov does actually write in the Paris *Svobodnaye Misl* an article under the title, "Perishing Russia", in which he draws the following conclusion:

"Russia is dying. According to reports from Soviet sources, there are now per thousand 26 more deaths than births. Let us suppose that in the future 20 die out of every thousand. Simple calculation shows that in five years there will remain of Russia's present population of 150 millions, only 71 millions. In ten years (in 1930), there will be only 20 millions, in 15 years—less than 2 millions, and in 17 years only a few hundred thousand . . ."

I do not know which shows the greater demoralization among the Russian "refugees": Kuprin's fantasy or Antsiferov's statistical reckoning.—*Jewish Daily Forward*, November 16, 1920.

* As a matter of fact, this little morsel has been "literarily" treated in a letter addressed by the Russian literary critic, Dimitri Merezhkovsky, to the English novelist, H. G. Wells, reprinted in a recent Sunday edition of the *New York Times*.

The Russian Soviet Government Bureau does not object to the reprinting in other periodicals of articles taken from SOVIET RUSSIA. It asks, however, that in return for the privilege of reprinting, editors extend the courtesy of sending a marked copy to SOVIET RUSSIA of each of their issues containing a reprinted article.

Books Reviewed

By A. C. FREEMAN

THE GROPING GIANT. By William Adams Brown, Jr. Yale University Press.

THE IMPERIAL ORGY. By Edgar Saltus. Boni and Liveright.

Mr. Brown's work bears the subtitle: "Revolutionary Russia as seen by an American Democrat." Now a genuine democrat could scarcely have failed to experience a distinctly favorable reaction to Soviet Russia. The Soviet educational system, which aims to give every child in Russia an equal measure of technical and cultural instruction, is one of the most ambitious experiments in pure democracy ever undertaken. The equality of food rationing, which excludes the possibility of profiteers feasting in the midst of starvation and grants special favors only to children, invalids and active workers, is another impressive demonstration of the democratic ideals which animate the Russian republic.

Mr. Brown's democracy, however, seems to function with only seven per cent efficiency. The workers and peasants who formed approximately ninety-three per cent of the Russian population at the time of the November Revolution are pretty effectively excluded from its beneficent consideration. So, arriving in Moscow, rather inopportunistically, on the day of the Bolshevik revolution, he anxiously asks:

"What would it really mean if the force represented by that angry, red-faced peasant, and that slouching, dark-complexioned shifty-looking workman of the Red Guard became all-powerful in the land?"

The author's democracy operates under other restrictions as well. Such phrases as "ladies and gentlemen of the better class," "my admiration and respect and friendly feeling for Russian people of the better classes," "a group of Russian better class people," sounded rather incongruous in the mouth of a self-styled apostle of democracy. Mr. Brown deplors the tendency of Russian revolutionists to emphasize the theory of the class struggle. Yet he constantly recognizes class lines himself. Describing the civil war in Moscow he speaks of the "side with which an American college man's natural sympathies lay." Mr. Brown had scarcely been in Russia long enough to familiarize himself with the points at issue between the Bolsheviks and the Kerensky government. But he knew instinctively that his sympathies were with the cultured, refined, aristocratic "Russian people of the better classes" and against the rough, uncouth Red Guards, whom he rather amusingly characterizes as "slovenly-looking workmen, of menacing appearance, armed with rifles."

Mr. Brown's democratic sensibilities were frequently offended in revolutionary Russia. He finds a strange and sinister meaning in the slogans of the Revolution: "Down with War, Long live the

brotherhood of peoples." He is shocked to find a regiment of common soldiers quartered in the former Nobles' Club of Petrograd. His naive outburst of democratic indignation at this desecration of a hallowed edifice might well have been uttered by the dispossessed nobles themselves:

"What a life of confusion and squalor was going on here in the very place where the beauties of Petrograd had sat looking down at the splendors of their exalted caste!"

Mr. Brown, sturdy champion of democracy that he is, shows himself completely captivated by the members of the former Russian aristocracy whom he met. He speaks with sentimental pity of "that brilliant Russian aristocracy which had sinned so deeply and had now to suffer so much, but whose representatives could boast a refinement of civilization unsurpassed anywhere."

If Mr. Brown were less impressionable, or better acquainted with Russian history and Russian life, he would know that Russia's contributions to culture and civilization have come not from her aristocracy, but from her intelligentsia, who were generally revolutionists. The Russian aristocrats, with few exceptions, were as frivolous and pleasure-loving, as incapable of mental and practical achievement, as their French predecessors in 1789.

The author is generally content merely to record impressions; and seldom ventures to make statements of historical fact. He is unquestionably well advised in pursuing this policy: for his knowledge of Russian revolutionary history is, to say the least, very imperfect. For instance, he observes that "in September, 1918, the Czechs, who had been fighting their way eastward toward the sea against overwhelming odds in their effort to join the Allies on the western front, at last joined forces with Semionov at Manchuria Station." This statement is grossly inaccurate. So long as the Czechs showed any inclination to join the Allies on the western front, the Soviet Government did everything in its power to expedite their departure. The fighting began when the Czechs, acting under orders from the Allies, made a treacherous attack upon the Soviet Republic and seized a large stretch of the Trans-Siberian railroad. In the light of Mr. Brown's statement that the Czechs were moving eastward in September, it is interesting to recall that the American-Japanese note on intervention in Russia, issued early in August, refers to "the westward moving Czecho-Slovaks."

Mr. Brown mentions "the Zemstvo—that peculiarly Russian organ of self-government."

The Zemstvos doubtless had their uses under the Czar; but they were certainly not organs of self-government. They were bodies originated from above, in which the landowners and propertied classes always held predominant power. They were in no sense the spontaneous creation of the masses,

like the Soviets. Since the Revolution they have served only as centers and instruments of reaction and counter-revolution.

Good intentions, combined with an invincible crust of provincial prejudices, constitute rather scanty equipment for an intelligent interpretation and appraisal of a mighty and unprecedented revolution in a strange country. Mr. Brown's work is more interesting for its revelation of his own peculiar brand of democracy than for any information it gives about revolutionary Russia.

"The Imperial Orgy" is a vivid narrative of the crimes of the Czars, written in Mr. Saltus' familiar

brilliant, rhetorical, flamboyant style. It reveals the saturnalia of lust and cruelty that characterized the Russian court, which emulated all the vices of Versailles under Louis XV without any of the redeeming wit and grace of the earlier period. At the present time, when an attempt is being made in some quarters to arouse sentimental pity for the fate of the late Czar Nicholas, Mr. Saltus' book serves a useful purpose. It reveals the true features of the barbarous, degenerate despotism from which Russia was delivered by the November Revolution and the subsequent victories of the Red Army over Kolchak and Denikin.

The Same Old Story

By KARL RADEK

THE Batum correspondent of *Pravda* describes in a very humorous way the entrance of Messrs. Vandervelde, Huyamans, and Kautsky, the latter with his inseparable Louise,* mounted on an ass, in a country where there blossomed not only speculators (of the political-economic variety), semi-socialism, and a rathskeller democracy, but also the luscious grapes of Kazbek and Kachetia, of which Mr. Huysmans—and no doubt rightly—speaks with such enthusiasm in his farewell letter. Apparently Huysmans, through affection for his Flemish ancestors, was unable to renounce his love for these charms. You may gather out of the Georgian press quite an accumulation of the most amusing sketches from this visit. For instance, picture to yourself the situation of the unhappy Kautsky, with his whole staff, deserting water-logged Germany and decaying France, like a Sancho Panza, and seeking in the Caucasus, like another Jason, a land ready to greet the "enthusiastic" Second International. Or, picture to yourself the entire usurious press of Georgia placing a wreath of laurel on the bald pate of the honored teacher of the Second International, and repeating with tears in its eyes the words: "Behold how Georgia has separated from the barbarous Muscovites and attained contact with European culture." But even if we might admit that the honored theoretical mummy of the Second International, in spite of his chronic stomach trouble, has weathered the storms of the Black Sea, on his voyage to Georgia, merely in order to secure a moral repose after all the mixup of that cursed European trouble, with its imperialism—which is only the consequence of an incomprehensible error on the part of capitalism**—and with its thrice cursed Communism, which has its origin in the crass ignorance of the workers and the evil character of Lenin—we can nevertheless by no means make the concession that either M. Renaudel, or Minister Vandervelde, or Thomas Shaw, the courageous pioneer of the Parliamentary Commit-

tee of the British Labor Party, went to Georgia merely for the sake of the Kachetian grapes, no matter how greatly they may admire the latter, from what follows below the reader will learn what these gentlemen were really looking for in Georgia.

The Geneva Congress of the Second International declared itself opposed to military intervention in Soviet Russia on the part of the Allies. Simultaneously, however, it expressed its opposition to the alleged Soviet imperialism, which was said to be annexing independent countries, such as Azerbaijan. When Azerbaijan was occupied by the English, the leaders of the Second International displayed not the slightest interest in the affairs of that country, aside from the fact that the police agency at Baku was administered by worthy British trade unionists. Only after the Tartar usurers, the party of the Musselman bourgeoisie, was overthrown, and the oil stocks and oil tanks of Baku had fallen in the hands of the workers of Baku, who, in spite of the difficulties of the situation, made every exertion to supply the Russian workers with oil, only then did Shaw learn of the existence of Azerbaijan and it was only then that the Second International began to take an active interest in their affairs.

The trip of the delegates of the Second International to Georgia coincides with the negotiations between the British Government and that of Georgia on the subject of a loan to the latter. Georgia can give but little security for this loan. Its deposits of brown coal are very insufficient in the opinion of the British financial world, and the British Government asks as a substitute that Batum be leased to it. The British need Batum as a base against the Turkish rebels, and as an outpost for the conquest of the Caucasus, and, above all, of the Baku region. Once they have Batum in their hands, the British imperialists hope to destroy the center of Bolshevik and Communist agitation in the Near East, and simultaneously to cut off Soviet Russia from its oil wells.

It is clear that so extended an operation cannot be undertaken without some political "excavations",

* Mrs. Louise Kautsky, wife of the well-known Second International theorist.

** A facetious allusion to Kautsky's erroneous interpretation of Imperialism.

and precisely this work was done by the delegates of the Second International. Some of the members of the delegation, such as Kautsky and Debroukere, are unconscious tools, while others, such as His Excellency Vandervelde, M. Renaudel—no one knows who paid the expenses of his trip to Poland—and Mr. Shaw are well known political agents of England.

How did these gentlemen go to work to carry out the criminal game of the British Foreign Office? They spoke not only as admirers of Georgian independence and democracy as opposed to the barbarous Soviet regime, but also as defenders of Georgian independence against the encroachments of the United States.

It will be recalled that shortly before the arrival of the Delegation of the Second International, the American Secretary for Foreign Affairs (Secretary of State) sent to Georgia a long note directed against Soviet Russia, and also against the British policy of splitting up Russia. While British capitalism is engaged in the effort of cutting off Russia from its border states, which served either as commercial gateways to Russia, such as Latvia and Esthonia, or which united Russia with the Near East, so much desired by England, as is the case with the Caucasus—American capitalism on the other hand would like to keep Russia intact in order to be able to exploit the country uniformly through its trusts. American capitalism has accepted the idea of a separate Poland and of an independent Finland, for these countries have all represented a certain military power, but is decidedly opposed to the independence of the small border states. Secretary Colby's note disturbed the Georgian Government considerably. Messrs. Tseretelli, Giordani, and other, who grew up in the struggle against the separatist tendencies, of course advocate the independence of Georgia only in so far, and for so long, as Russia shall remain in the hands of the working class. Should Russia tomorrow have a capitalistic government, they would immediately fall upon the breasts of the Kuchkovs with tears of joy while Mr. Gegechkory, in his answer to Colby's note, in the columns of the *Tribuna* of Rome, proves that Russia, by failing to fulfill the obligations assumed toward Georgia, has thus annulled the treaty of unity voluntarily undertaken with Georgia; the party organs of the Georgia Mensheviks swear that they are separatists only through compulsion, not through their own desire. But aside from the reasons impelling the Georgian Mensheviks, who have otherwise always been good Russian patriots, now to come out for the independence of Georgia, they would for the present like their independence to be recognized by the Allies, since it would be very difficult for them to obtain a loan without such recognition. Now that the English Government, with the approval of the Georgian traitors, is about to lead a new attack against Soviet Russia through Georgian territory, and intending, with the approval of the Georgian Government, to occupy Batum, it sends out the gentlemen of the Second International to Georgia, and thus trans-

forms a burlesque donkey journey to the source of the Kachetian wine into a skilful political intrigue.

The esteemed delegation of the Second International plays its role without a hitch. It shakes its fist at Soviet Russia, even rages against Soviet imperialism, and simultaneously declares to Georgia that the Second International, in whose ranks there are ministers of the Entente, will defend Georgian liberty and Georgian independence. (See Renaudel's speech in *Tifliskoye Slovo*, September 21).

This declaration is intended to smooth up the matter raised by Colby's note. We have before us the preparations for an agreement between the Georgian Mensheviks and British imperialism, under the banner of the Second International. The Second International is simply continuing its old policy. During the war it served, with its various parties, as a channel through which the belligerent governments of both camps might influence the working classes. With the victory of the Allies it became an agent of their influence and spread among the masses a belief in Wilsonism. Now the Second International has been transferred to London, and has become a tool of the British policy. It would like to conceal this fact with pacificistic and democratic phrases, but then, even Lord Curzon is a pacifist, an adherent of democracy, not to mention Mr. Lloyd George, who literally oozes pacifism whenever he gets ready to deliver a speech. Those who are surprised by this new role of the Second International know very little of the world situation. While it opposes the dictatorship of the proletariat, the Second International must support bourgeois democracy against this dictatorship. The leading power in Europe is now England, which knows better than anyone else how to veil the dictatorship of capital in democratic phrases, and therefore Lloyd George is a Messiah for Messrs. Huysmans, Vandervelde, and the other brethren of the Second International. On his suggestion they will now go out to prepare the soil for the attacks of British imperialism. Their journey to Tiflis was only the first step on this road.

Volume Three

of SOVIET RUSSIA will be offered for sale and delivery. Orders should be sent immediately, accompanied by remittance of amount, five dollars. The volume is durably bound in cloth, stamped in gold, with title page and index. It is the largest volume of SOVIET RUSSIA thus far issued; there are 652 pages of text and illustrations, including many maps and facsimiles, in addition to sixteen full pages of half-tone plates on calendared paper.

New York, N. Y.

Peace Treaty Between Finland and Soviet Russia

The government of the Finnish Republic and the Government of the Russian Socialist Federal Soviet Republic, in view of the fact that Finland in the year 1917 declared itself an independent state and that Russia has recognized the State of Finland not to be obligated by the boundaries of the Grand Duchy of Finland, and to be sovereign, and desiring to put an end to the war that later broke out between the two states, to create permanent peaceful relations between them and to settle definitely the relations growing out of the former union between Finland and Russia, have decided to enter into an agreement to that effect and have, for this purpose, appointed as their plenipotentiaries:

The government of the Finnish Republic:

Juho Kusti Paasikivi, Juho Heikki Vennola, Alexander Frey, Karl Rudolph Kalden, Väinö Tanner, Väinö Voionmaa and Väinö Gabriel Kivilinna.

The Russian Socialist Federal Soviet Republic:

Ivan Antonovich Berzin, Plato Mihailovich Kerzhentsev and Nikolai Sergeyevich Tihmenyev.

who after meeting in the City of Dorpat, and after a reciprocal exchange of credentials which were found to be in the proper form and in good order, have agreed as follows:

ARTICLE I

As soon as the treaty of peace goes into effect the state of war between the contracting parties shall cease, and both states pledge themselves to a mutual state of peace and to maintain good neighborly spirit.

ARTICLE II

The frontier between the states of Finland and Russia shall be as follows:

1. Dividing the Bay of Vaidalahti to the point of the eastern peninsula in its remotest corner (close to 69 degrees, 57 minutes latitude, and 31 degrees, 58 minutes and 5 seconds longitude); thence south along the meridian until it crosses the northerly chain of the Cherv Lakes; thence southwest along this chain of lakes to the meridian at 32 degrees, 18 minutes longitude; thence to a point at 69 degrees, 46 minutes latitude and 32 degrees, 6 minutes, and 5 seconds longitude; thence dividing in two at its narrowest point the isthmus Puumangi (Bolshaya-Volovkovaya-Guba) and Oserko Fjords to a point that is midway between the mainland and the Sredin Peninsula (69 degrees, 39 minutes, 1 second latitude, and 31 degrees, 47 minutes longitude); thence in a straight line along the present boundary between Finland and Russia to the Korvatunturi boundary stone No. 90 to the Ladoga and across it, and along the Isthmus of Karelia following the present boundary between Finland and Russia all the way to the mouth of the Rajajoki (Systerbäck).

Note 1. The Heinasaari (Ainoviostrova) and Kiisaari Islands become Finnish territory.

Note 2. The boundary set forth in this article is marked by an imperfect line on the maps attached to this treaty, viz., the Russian marine chart No. 1270 and the land map. The boundaries mentioned in the first clause of this article shall be surveyed in accordance with these maps, taking into consideration wherever possible the natural features of the places if the text and maps are found to be conflicting. In reference to the Kalastaya and Sredin Peninsulas the marine chart shall be final, but in reference to the other boundaries the text shall be binding. All measures of longitude are figured from Greenwich.

ARTICLE III

The extent of the territorial waters of the contracting parties shall be four nautical miles measured from the coastline; or where there are islands, from the farthest island or reef rising above the surface of the water. The following exceptions are made to this:

1. From the main point of the land boundary between Finland and Russia on the shores of the Gulf of Finland to the meridian at the Seivästö lighthouse, the extent of the Finnish territorial waters shall be one and one-half nautical miles and shall run at the beginning of this boundary along the parallel with the Sevästö lighthouse meridian beginning from a point 60 degrees, 8 minutes, 9 sec-

onds latitude. The boundary of the Finnish territorial waters shall run along a line which connects this point with a point 59 degrees, 58 minutes, 8 seconds latitude and 28 degrees, 24 minutes, 5 seconds longitude south of Seiskari, to the point where this line intersects the four nautical mile territorial water boundary of Hogland.

3. The extent of the territorial waters around the islands belonging to Finland and located outside the united territorial waters of Finland shall be three nautical miles; the following exceptions, however, are made in this instance:

On the south side of Seiskari and Lavansaari the boundary of the Finnish territorial waters shall run through the following points:

(1). Latitude 60 degrees, 0 minutes, and longitude 28 degrees, 31 minutes, 4 seconds. (2). Latitude 59 degrees, 58 minutes, 8 seconds; and longitude 28 degrees, 24 minutes, 5 seconds. (3) Latitude 25 degrees, 58 minutes, and longitude 27 degrees, 55 minutes. (4). Latitude 59 degrees, 54 minutes, 6 seconds, and longitude 27 degrees, 52 minutes, 2 seconds. On the meridian on the northerly cape of Suuri Tytärsaari, beginning at a point located three nautical miles north of this cape, the boundary of the territorial waters of Finland runs in a straight line to the meridian on the northerly cape of Riuskari, and through a point one nautical mile north of this cape until the line cuts the three nautical mile boundary of the Riuskari territorial waters.

4. Finland does not and will not object that the boundary of the Russian territorial waters in the eastern portion of the Gulf of Finland shall run as follows:

Along the boundary of the Finnish territorial waters, beginning at the point of ending of the Finnish and Russian land boundary, and until it reaches the meridian of the Seivästö lighthouse and a point at 60 degrees, 8 minutes, 9 seconds latitude; thence to a point on the south-side of Seiskari, 59 degrees, 58 minutes, 8 seconds latitude and 28 degrees, 24 minutes, 5 seconds longitude; thence to a point at 59 degrees, 58 minutes latitude and 27 degrees, 55 minutes longitude; thence toward the Lighthouse Tower of Wigrund until a line drawn in this manner intersects the Russian general four nautical mile territorial water boundary, and thence along this line.

Note. The boundaries of all these territorial waters have been marked on the Russian nautical charts. Number 1492 and 1416, appended to this peace treaty. In case the text and charts are found to be in conflict, the chart shall be decisive. All measures of longitude have been figured from Greenwich.

ARTICLE IV

The Territory of Pechenga, which is bounded on the southeast and east by the boundary mentioned in paragraph 1 of Article 2; on the west by the present boundary between Finland and Russia from the Korvatunturi boundary stone No. 90 near Kauri Lake to the tri-state boundary stone No. 94, where the Finnish, Russian, and Norwegian boundaries join; and on the northwest by the present boundaries of Russia and Norway; immediately after the ratification of the peace treaty Russia shall relinquish its territorial waters to Finland for all time to be owned with full sovereign rights, and Russia shall surrender for the benefit of Finland all its privileges and claims in reference to the territory thus relinquished. Russia shall remove its troops from the territory of Pechenga within 45 days after the ratification of this treaty.

ARTICLE V

During one month after the treaty of peace has gone into effect the governments of Finland and Russia shall each select two members on a special commission, which shall, during a period of nine months, perform the surveying of boundary marks, as set forth in paragraph 1 of Article 2.

ARTICLE VI

1. Finland binds itself not to keep any battleships or other armed vessels in the waters on the coast of the Arctic Ocean owned by it, not including armed vessels of less

than one hundred tons, which Finland may keep without limit, and not more than fifteen battleships and other armed vessels, each of which shall not be over four hundred (400) tons. Finland further binds itself not to keep in the waters aforementioned any submarines nor any armed aeroplanes.

2. Finland also binds itself not to build on this coast any naval harbors, naval bases, or naval repair shops which are larger in scope than the aforementioned vessels and their arming make necessary.

ARTICLE VII

1. The contracting parties hereby grant to the citizens of the other contracting party the right to carry on fishing and to ply freely with fishing boats in the territorial waters on the coast of the Arctic Ocean, relinquished to Finland, as well as on the territorial waters off the northern and eastern shores of the Kalastaya Peninsula, which remain the property of Russia, as far as the Sharapov Point.

2. On the coast territory mentioned in the foregoing paragraph the citizens of both states shall have the right to land and to build necessary shelters and storage sheds, as well as other buildings and establishments necessary to carry on fishing and dressing of fish.

3. The contracting parties hereby agree after the peace treaty goes into effect to draw up a special agreement on the conditions and regulations governing fishing and the plying of fishing craft in the territorial waters on the coast mentioned in the first paragraph.

ARTICLE VIII

1. The State of Russia and Russian citizens are granted free passage through the territory of Pechenga to Norway and back.

2. Goods which are transported from Russia to Norway through the territory of Pechenga as well as goods which are transported through the same territory from Norway to Russia, shall be free of all inspection and overseeing, except such overseeing as is necessary for arranging through traffic. And no customs fees shall be collected on these goods, nor transit nor other charges. The supervision of the above-mentioned goods in transit shall be permitted only in the form established in international transportation in cases of this nature.

3. Russian citizens, who travel through the territory of Pechenga to Norway and from Norway back to Russia, shall be entitled to free through passage on passports granted by the proper Russian officials.

4. While complying with the general regulations now in effect, unarmed Russian aeroplanes shall have the right to carry on aerial transportation between Russia and Norway over the territory of Pechenga.

5. Through fares on lines over which travel and transportation of goods from Russia to Norway and vice versa, through the territory of Pechenga, is permitted without hindrance, and further conditions for carrying out the regulations mentioned in the foregoing paragraph, as well as the consular representation of Russia in the Pechenga Territory, shall be set forth in a special agreement to be drawn up between Finland and Russia after the treaty of peace has gone into effect.

ARTICLE IX

Russian citizens, who have their domicile within the Pechenga territory, shall without further action become citizens of Finland, with the exception, however, that those who have passed the age of eighteen years shall have the right, within one year from the day the treaty of peace goes into effect to choose Russian citizenship. The husband shall make the choice for his wife, providing no agreement has been made between them to the contrary, and the parents for their children until the age of eighteen. Persons choosing Russian citizenship may, during the following year, freely move away from the territory, and transport with them all their chattels free of all customs and export duties. These persons shall retain all their rights in real property which they leave in the territory relinquished to Finland.

ARTICLE X

Within forty-five days after the treaty of peace has gone

into effect Finland shall remove its troops from the parishes of Rapola and Porajärvi, which shall be restored to the State of Russia and shall be annexed to the East-Karelian autonomous territory, formed by the Karelian population of the governments of Archangel and Olonets and now enjoying the right of national self-determination.

ARTICLE XI

In reference to the more definite conditions for the annexation of the parishes of Repola and Porajärvi to the East-Karelian autonomous territory, as mentioned in the foregoing article, the following has been agreed upon for the benefit of the local population.

1. Residents of the parishes shall be granted full amnesty in accordance with Article 35 of this treaty.

2. The maintenance of local public peace within the territory of the parishes during the two years following the ratification of this treaty shall be left to a militia organized by the local population.

3. The residents of the parishes shall be guaranteed the right of ownership of all their personal belongings within their parishes, as well as the right freely to control and use the estates owned and cultivated by them, and other real estate in their possession, within the limits of the laws in effect in the East-Karelian autonomous territory.

4. Every resident of these parishes, who desires, shall have the right during one year after the peace treaty has gone into effect, freely to move away from Russia. Those moving away from Russia in this manner are entitled to carry away with them all their personal belongings, and to retain all their rights in the real property they leave in the territory of the parishes within the bounds of the laws in effect in the East-Karelian autonomous territory.

5. Finnish citizens and Finnish companies, having in their possession timber-cutting contracts made prior to June 1, 1920, shall retain the right, during one year after the peace treaty has gone into effect, to carry out within the parishes mentioned the terms of their contracts in reference to the cutting of timber, and to carry away the timber so cut.

ARTICLE XII

The contracting parties support in principle the neutralization of the Gulf of Finland and the entire Baltic Sea, and pledge themselves to cooperate for the realization of this object.

ARTICLE XIII

Finland shall neutralize in a military sense the following islands belonging to it in the Gulf of Finland; Someri, Narvi, Peninsulaari, Lavansaari, Suuri Tytärsaari, Pieni Tytärsaari, and Riuseri. This military neutralization shall include, that no forts, batteries, war harbors nor naval bases shall be built or located upon these islands, nor any stores of military property or supplies, and that no troops excepting those necessary to maintain public order shall be stationed there. Finland, however, is entitled to maintain military observation stations on the islands of Someri and Narvi.

ARTICLE XIV

Finland shall, immediately after the peace treaty has gone into effect, commence the military neutralization of Suursaari Island under any international guarantee. This neutralization shall include, that no forts, batteries, radio stations of greater strength than one kilowatt, no war harbors and naval stations, stores of military and war supplies shall be built or located upon this island, and that more troops than are necessary for upholding public order shall not be stationed there. Russia pledges itself to support the obtaining of the aforementioned international guarantee.

ARTICLE XV

Finland shall, within three months after the peace treaty has gone into effect, remove the locks of all cannons, all aiming and directing apparatus and munitions from the forts of Ino and Puumala, and shall demolish these forts within one year after the peace treaty has gone into effect. Finland pledges itself not to build on the coast between Seivästö and Inonniemi, within 20 km. from the shore, any armored towers or batteries, the firing sectors of which make it possible to fire across the boundary of the Finnish

territorial waters, or on the coast between Inonniemi and Rajajoki (Systerbäck) within 20 km. from the shore any batteries the carrying capacity of which reaches over the boundary of the Finnish territorial waters.

ARTICLE XVI

1. The contracting parties pledge themselves not to maintain on the Ladoga, on its coasts, on the rivers flowing into the Ladoga, on the canals tributary thereto, nor on the Neva River from Ivanoski to Porori, any military fortifications serving offensive purposes; but warships of a capacity not exceeding one hundred tons and which are not provided with guns of a caliber over 47 millimeters may be kept, as well as naval stations corresponding in size. Russia, however, shall have the right to bring war vessels into its internal waters through the canals on the southern coast of the Ladoga, or in case traffic through the canals is blocked, also through the southern portion of the Ladoga.

ARTICLE XVII

1. Russia hereby grants Finnish trading and freight vessels unhindered passage on the Neva River between the Gulf of Finland and the Ladoga on the same conditions as Russian vessels. These vessels, however, shall not transport war materials nor military supplies. The contracting parties agree, in the event that either party so demands, not later than one year after the demand is presented, to commence negotiations for drawing up a treaty defining the conditions set forth in this article. This, however, shall not prevent the use of the right herein granted.

ARTICLE XVIII

The height of the water in the Ladoga shall not be changed without a prearranged agreement between Finland and Russia.

ARTICLE XIX

Questions concerning customs inspection, fishing, the care of maritime commercial establishments, the upholding of order beyond the territorial waters in the Gulf of Finland, the sweeping of this free portion of the Gulf of Finland of mines, the unification of the pilot service, and other similar questions, shall be left for consideration with one or more Finnish-Russian mixed committees.

ARTICLE XX

1. The contracting parties shall without delay, after the peace treaty has gone into effect, undertake to formulate an agreement to establish passport and customs regulations and the general organization of frontier trade on the Isthmus of Karelia with a view to satisfying the local conditions and the practical needs of both sides.

2. Frontier traffic on the other portions of the Finnish and Russian frontier shall also be arranged by the means of special agreements.

3. After the peace treaty has gone into effect, a mixed committee shall immediately be appointed to draw up a proposal for the adjustment of the aforementioned relations.

ARTICLE XXI

1. The contracting parties agree immediately after the peace treaty has gone into effect to begin negotiations for an agreement for the purpose of arranging the transportation and rafting of timber in the waters running from the territory of one of the signatories to the territory of the other. This agreement must be based upon the following principles: That transportation and rafting in such waters are permitted for both sides without hindrance as well across the frontiers as within the territory of the contracting parties as far as the sea, and concerning the rafting in particular the citizens of the states that are parties to the treaty are given the rights of the most favored rafter.

2. The contracting parties will also open negotiations with the purpose of effecting an agreement as to the maintenance of a main channel for passage as well as to the arrangement of fishing, and of taking measures that will advance pisciculture in the waters mentioned in the preceding paragraph, and also in the waters adjacent to the frontier between the contracting parties.

ARTICLE XXII

The property of the Russian State and state institutions in Finland is declared to be the exclusive property of the Finnish State without compensation. Likewise the property of the Finnish State or state institutions in Russia is declared to be the exclusive property of the Russian state without compensation.

N. B. Both contracting parties retain for themselves three city real estates with land and buildings of their former state property for diplomatic and consular service.

ARTICLE XXIII

1. The Finnish Government agrees immediately after the peace treaty goes into effect, to deliver to the Russian State Russian ships located within its territory or used by it, which were left there in the year 1918, according to a list appended to this treaty.

2. If private persons or companies present any claims concerning ships delivered to the Russian State, the Russian Government frees Finland of all responsibility for the delivery of these ships to Russia and agrees to assume the responsibility for settling all claims which may possibly be presented to the Finnish Government. The Russian Government undertakes to settle the question of ownership concerning these ships and therefore all such claims should be presented to it.

3. The Russian Government agrees to return to the former owners all ships owned by Finnish citizens or companies enjoying the right of domicile in Finland, which were confiscated by the Russian Government during the World War without any compensation to their owners as well as Finnish ships which without compensation have become the property of the Russian State. The ships mentioned in this clause are given in a list appended to the peace treaty.

ARTICLE XXIV

Both contracting parties renounce all claims to its payment of war expenditures. Finland does not take part in the payment of expenditures caused to Russia by the world war of 1914-18.

ARTICLE XXV

Neither contracting party is responsible for the state debts or other obligations incurred by the other party.

ARTICLE XXVI

The debts and other obligations of the Russian State and state institutions to the Finnish State and to the Bank of Finland as well as the debts and other obligations of the Finnish State and state institutions to the Russian State and state institutions are declared to be liquidated on both sides. Therefore the contract in regard to supplying grain made between the Finnish and Russian governments in 1917 as well as the agreement concerning rates of exchange made in the same year between the Bank of Finland and the Russian Chancery of Credit are considered null and void.

ARTICLE XXVII

Russia recognizes that Finland is not responsible for the losses of the ships or other property of citizens or companies of a third power that they have had in Finland, and that they suffered through the acts of Russian officials during the world war, before Finland became independent. Claims of this nature must be submitted to the Russian Government.

ARTICLE XXVIII

Finnish citizens and companies or associations enjoying domicile rights in Finland have in regard to their property in Russia as well as to their claims and other demands from the Russian state or its state institutions, the same rights and privileges as Russia has granted or will grant to the citizens of the most favored country.

ARTICLE XXIX

1. The contracting parties agree to return immediately the archives and documents of public offices and institutions, which are within its territory and which relate exclusively or chiefly to the other contracting party or its history.

In consequence hereof, the Russian Government will deliver to the Finnish Government also the archives of the

state secretariat of the former Grand Duchy of Finland with the exception, however, that the Russian Government retains for itself those documents of these archives which relate exclusively or chiefly to Russia or its history. The Finnish Government shall have the right to take copies of these documents retained by the Russian Government.

2. The Russian Government shall deliver to the Finnish Government copies of the latest topographical and hydrographical charts of Finland as well as materials concerning the unfinished triangulation work within the Finnish territory which charts and material are in the possession of the Russian Government.

ARTICLE XXX

The Finnish Government agrees to reserve in the Halila Sanatorium in the parish of Uusikirkko half of the sick beds for the inhabitants of Petrograd and its vicinity for the period of ten years under the same conditions as for the Finnish citizens.

ARTICLE XXXI

After the peace treaty has gone into effect economic relations shall be renewed between the contracting parties. For this purpose the contracting parties shall immediately after the peace treaty goes into effect appoint a committee consisting of representatives of both states to draft a plan for arranging the commercial relations between both countries and for bringing about a commercial agreement.

ARTICLE XXXII

Until the conclusion of a commercial agreement the following temporary provisions shall be followed in the commercial relations between Finland and Russia, both contracting parties having the right to give notice of the termination of this agreement to the other party six months beforehand.

1. Goods in transit passing through the territory of the contracting parties must be allowed to be transported on all transportation lines opened for through traffic, or transportation lines opened in the future, observing the rules given for the organization of traffic and for the ability of transportation and for the satisfaction of the traffic needs of their own country and for the general safety.

2. Freight rates and other fees involved, levied on the goods in transit or goods transported on state railroads or state ships shall not be higher than the rates of the same kind transported in the home country. The other fees of these shall be according to the principle accorded to the most favored nation. If the freight rates for transporting home goods in Russia are discontinued, the rates for goods in transit from Finland shall not be higher than the rates charged for the goods in transit of the most favored nation.

3. Freight rates for goods transported from one country to another, shall not be higher nor shall there be any other transportation fees than those charged for the same kind of goods for transportation in the home country. If the freight rates for transporting home goods in Russia are discontinued, the freight rates and other fees for Finnish goods shall not be higher than those charged for the goods of the most favored nation.

4. Prohibitive measures concerning import, export or transit are allowed only to the extent that they are based on legislation concerning public safety, public health, alcoholic liquors and adjustment of the economic life of one's own country.

5. The contracting parties reserve for themselves the privilege of subjecting certain commercial and industrial fields to a monopoly.

6. The freight and passenger carrying vessels of the contracting parties, under the obligation that they comply with regulations that are now in force in the respective countries or such as will be passed in the future, concerning the vessels of each country as well as with regulations and ordinances made necessary by the maintenance of public safety or by customs service supervision, are entitled to go to all those ports of the other country, use the harbor establishments and to fare through the territorial and inland waters, rivers and canals of the other country, which have been opened or in the future will be opened for the vessels of the home country. Charges that will be imposed

upon the vessels of the other country and their cargoes as well as fees for using the harbor establishments shall not be higher than charges that are levied upon the vessels of the most favored country and their cargoes. An exception can be made to these regulations in regard to traffic by coastal craft and fishing vessels. The traffic between Baltic and other regular Russian frontier ports and inland harbors will not be considered as coastal traffic. Russian trading and passenger vessels will be allowed free passage in all channels of traffic within Finnish territorial waters open to Finnish vessels, under condition that they comply with piloting regulations in force in Finland regarding foreign vessels.

7. Finnish raw materials, home industry and manufacture are, when exported to Russia, freed from all customs and other import duties.

ARTICLE XXXIII

The contracting parties will proceed immediately after the peace treaty has gone into effect to take necessary measures to arrange the railroad traffic between Finland and Russia and from Russia to Finland, to and from stations between Rajaoki and Petrograd, including the station at Petrograd, and to take up negotiations with the purpose of uniting the railroad systems of both countries and bringing about a direct connection between both countries.

ARTICLE XXXIV

The postal and telegraphic communication between Finland and Russia will be resumed after the peace treaty has gone into effect, and the contracting states have to enter into a separate agreement concerning the same. The Finnish Government does not place any obstacles in the way of arranging that the Russian state will to the end of the year 1946 be given the exclusive use, for the purposes of telegraphic communication, of the three direct telegraphic lines (former numbers 13, 60 and 42), that pass through the Finnish territory from Rajajoki to Nystad, connecting Petrograd with Stockholm, Newcastle and Fredericia and which the Finnish Government by an agreement of January 9, 1920, has transferred to "Det Store Nordiske Telegraf Selskabet" to be used by it for telegraphic exchange with Russia under the condition that the provision of the said agreement regarding the arrangement of the telegraphic communication be complied with. The Russian Government will remit to the Finnish State all the transit charges to Finland as an independent state in accordance with the regulations contained in the manual of the International Telegraph Association and the rules and regulations attached thereto, until these charges become payable by the sender on the basis of a mutual agreement of the respective states. The Russian State will also retain for the same period of time the rights, which it possesses on the strength of an agreement made with the Det Store Nordiske Telegraf-Selskabet" to two cables running from Nystad to Grislehamn and maintaining a direct telegraphic connection with Sweden.

ARTICLE XXXV

1. Finnish citizens dwelling in Russia and Russian citizens dwelling in Finland are allowed after the ratification of the peace treaty to return to Finland, unless they have been arrested in the other country for a felony.

2. All war prisoners of the contracting parties shall as soon as possible be returned to their native country. The contracting parties will determine in a separate agreement, in which order this repatriation shall be effected.

3. Other citizens of the other state, who have been detained or confined on account of the state of war or for political reasons, shall be liberated at once and returned to their native country at the earliest opportunity.

4. A Finnish or Russian citizen, upon whom a sentence has been inflicted before the signing of this peace treaty for a political offense perpetrated in favor of one of the contracting parties or because he has had connections with the armies or the governmental organs of the other contracting party or because he has committed a punishable act with the purpose of accomplishing the right of national self-determination, will be freed from suffering any fur-

ther punishment and liberated at once. If he is under indictment or under arrest for such an offense, but has not yet been tried and sentenced or if he has not yet been indicted, the right of indictment will be annulled, whether he be within or without the borders of the country and in the future no such indictment shall be resorted to. If he has either in addition or exclusively been guilty of any other offense against the prevailing political or social order of his country and after that fled to the territory of the other contracting party, he shall enjoy the amnesty proclaimed in his home country about such offenses in the same manner as those remaining in the home country, who have been indicted and sentenced, enjoy it.

ARTICLE XXXVI

The diplomatic and consular relations between the contracting parties shall be arranged immediately after the peace treaty has gone into effect. After the peace treaty has gone into effect the contracting parties will proceed to draw an agreement about the consular service.

ARTICLE XXXVII

To carry out the peace treaty as well as to settle any such questions of common or private law as may be evolved from the peace treaty, a Finno-Russian mixed committee will be created immediately after that has gone into effect, which committee is authorized to create sub-committees to deal with territorial questions, to arrange economic rela-

tions, to exchange war prisoners and refugees, and to deal with other necessary questions. The composition and the program of work of the committee mentioned in this article will be determined by an agreement to be entered into later on. The tasks, privileges and duties of each sub-committee will be determined by separate regulations, which will be approved by the committee. Whenever no decision will be arrived at in the sub-committee on account of a draw, the question shall be submitted to the plenary session of the committee for decision. If there is a draw also in the committee, the question will be submitted to the governments for settlement.

ARTICLE XXXVIII

Of this peace treaty copies have been drawn in the Finnish, Swedish, Russian, and French languages and the texts of all these have the same validity.

ARTICLE XXXIX

This peace treaty has to be ratified. The exchange of the ratified copies will take place at Moscow. The peace treaty will become legally valid immediately after the exchange of the ratified copies. In faith whereof the delegates of both contracting parties have set their hand under this peace treaty and attached their seals thereto. The original has been drawn in two copies in each language and signed at Dorpat October 14, 1920.

THE NEXT ISSUE OF

SOVIET RUSSIA

which will appear January 22, coincides with the Sixteenth Anniversary of "Bloody Sunday", the first open incident that precipitated the Russian Revolution of 1905. January 22 is a legal holiday in Soviet Russia, and this issue will be largely devoted to material commemorative of the 1905 events. Among other items of interest will be:

Leon Trotsky: The Revolution of October 1917 [disposes of the fiction that the revolution was a Soviet coup d'etat executed by a small circle].

Lincoln Colcord: British Denial of Russian Sovereignty.

Alfons Goldschmidt: Russia's Resources of Potash.

Subscription Price: \$5.00 per year; \$2.50 per half year; \$1.00 for ten weeks. (Make all checks payable to L. C. A. K. Martens.)

The Proletariat on Its Knees

By ROSA LUXEMBURG (Born May 5, 1871—Murdered January 15, 1919)

[This article appeared in 1905 in one of the February numbers of "Die Neue Zeit", which was then edited by Karl Kautsky. Its brilliant analysis is perhaps better understood by those who are acquainted with the German conditions to which reference is frequently made, as the author was then living in Germany. Particularly amusing is the analogy suggested between Gapon and Friedrich Naumann, the "Christian" Socialist who was destined to become one of the leading pan-Germans.]

THERE is nothing so well calculated to liberate our modes of thought from the restrictive fetters of routine as a revolutionary period. Real history, like creative nature, is far more bizarre and fruitful in its caprices than the classifying and systematizing pedant.

When the first news of the entreating pilgrimage of the Petersburg proletariat reached foreign countries, it universally aroused very mixed and no doubt depressed feelings. It was a strange scene of primitive simplicity, not without a strain of tragic splendor, veiled in mystic, strange and disturbing raiment, that presented itself to the realistic eyes of the sober European, who shook his head regretfully over this disastrous blindness of a whole people. We were reminded of Paris, of the barricades, of the entirely western nature of the situation, only by the cannon brought up to Vassili Ostrov, by the literally "dead" earnest with which the strange procession was received by the Czarism. And we were completely convinced that it was not an oriental caravan, but a modern proletarian revolution, when we read of the commotions in all the other cities of Russia, which were assuming the Russian form, that of the general strike, together with a very extensive distribution of socialistic leaflets. In spite of all our respect for these leaflets, we must nevertheless point out how erroneous it would be to assume that it was they that put the

revolution in motion. In the Russian Revolution also, which we now witness, the task of the Social-Democracy is simply that of formulating the revolutionary aspect of the proletarian revolution, of affording it clear expression, of freeing it from the envelope of an elementary eruption. The revolutionary kernel is present from the very start, in all the manifestations—both in the general strike, spreading with the speed of lightning, and in the entreaties of the Petersburg proletariat itself.

The illusion that the political troubles in the country are to be assigned to a "misunderstanding" between the monarch and his people, maintained by a systematic intrigue on the part of the "advisers" of the crown as well as the entire court clique, who insert themselves between the people and its misled monarch, does not even need to be regarded as an exotic outgrowth of the peculiar circumstances in Russia, or of its mystic semi-darkness. We in Germany have no need to cast about elsewhere in the world for a parallel example. Is it not an old and yet ever-new device of the political stock in trade of German liberalism to convince itself and others that the German kaiser is "badly informed" by his advisers, and prevented from securing a direct understanding with the people? The fact that in Germany "the people" means all the liberal champions themselves, with their many grievances over Jewish judges not admitted

to office, and other like troubles, does not alter anything about this profound interpretation.

But there is a profound difference between the political value of such an illusion in the minds of a declining liberal bourgeoisie and of a rising modern working class. The theory of the "misled monarch" is a completely adequate political expression of the political aspirations now dwelling in the breasts of present-day German liberalism. An ingratiating whine at the foot of the throne, as a *means*, and an old-maidish carping at the minor blemishes of the best of all worlds, in which we live, as the *purpose* of the liberal policy, furnish together a perfect harmony, a perfect balance, one that assures to this policy a century of undisturbed existence, with no less prospect of success, enabling German liberalism to look ever hopefully heavenward, ever attending the celestial dew of the imperial favor, ever patiently removing from its countenance whatever other fluids may descend from above.

On the other hand, between the myth of the "good monarch" and the historical ambitions, the class interests, of the modern proletariat, there lies a great gulf. All those who were dismayed at the first moment by the humbly beseeching attitude of the people of Petersburg, when solemnly, with moist eyes, the image of the Crucified in their hands, they set out to meet the Czar, forgot the principle for the spectacle, the little point that the humble "entreaty" of the masses to the Czar meant nothing else than a request that His Holy Majesty might with his own gracious hands decapitate himself as the Sole Ruler of All the Russias. It was a request that the Autocrat exterminate Autocracy, that the wolf now feed on tender herbs instead of warm blood. It was the most radical political program, clothed in the form of a touching patriarchal idyll, the most modern class impulse of a profoundly earnest and mature proletariat, concealed as a phantastic whim of an old nurse's fairy tale. And it is precisely this contradiction between the revolutionary kernel of the proletarian interests and the primitive shell of the illusion of the "good monarch" that could not fail to produce the kindling spark of street revolution as soon as it met the test of reality.

But this test was not slow in coming. With the full elemental power of popular masses in times of storm the working classes rush to put their conception to the test, for their attitude toward their beliefs is just as much one of holy faith as that of the liberal bourgeoisie, to its own creed, is one of cowardly cynicism. The Petersburg proletariat acts seriously on its faith in the Czar, and, with the impressive simplicity of great decision it marches to the palace of the Autocrat. But here it becomes at once apparent that the monarchic idea—in Russia as well as elsewhere—simply cannot exist without the protective wall of the "bad advisers", the court clique, and the bureaucracy, without the screen of half-darkness behind which it conceals itself from its subjects. It is enough to have the aroused masses hit upon the thought, childish in

appearance, but terrible in reality, of looking their country's ruler in the eye, and realizing the myth of the "social royalty", or "social empire",—to reveal the encounter necessarily as a collision between two mortal enemies, a day of reckoning between two worlds, a battle of two eras.

Only the indestructible stupidity of the present-day liberal crowd could sooth itself with the notion that all that was to blame for the revolutionary outcome of the episode of the Neva was the circumstances that the Czar did not come out good-naturedly to the Petersburg "mob" and listen graciously to them, that it was only the ill-advised reception of the proletarian procession with cold lead that prevented the whole scene from being transformed into a genuine liberal farce of reconciliation between the country's ruler and his dear children, with mingled tears of both, and mutual hurrahs, a touching "play for the people", after the Iffland pattern, such as German liberalism has executed in innumerable performances, from the memorable Rotteck Mayoralty days of 1833 at Freiburg, to the very latest times.

For such a spectacle was not entirely new in history, and it began quite in accordance with the liberal recipe. On October 5, 1789, when the Paris proletariat, with their women at the head, marched to Versailles to bring back their fat Capet and have a word alone with him at Paris, the matter at first proceeded with due decorum and without a hitch. Louis XVI, with quaking lips, to be sure, gave assurance that he would return "confidently and gladly" to his dear Parisians, and soon thereafter there was a great display on the Champ de Mars of mutual exchanges of oaths of fealty and eternity, which really did seem to be unending, somewhat in the manner of a lovesick Frenchman and a blushing "chicken", under the mistletoe. And yet the kindly Louis became so involved in the play, with his people, so idyllically inaugurated, that he finally lost his fat head altogether.

The Russian Revolution has begun differently, but might very easily have a similar outcome in this respect. And we must give little Nicholas and his "poor advisers" the credit of admitting that from *their* standpoint they have evaluated the situation much more correctly than the German-Liberal shysters of restricted despotism, and that they grasped the dangerous revolutionary content of the humble utterance of the Petersburg proletariat much more rapidly than did even many a Western European Social-Democrat, when they decided to answer the very first step of the proletarian petition with despotism's very last card.

If the dear cousins and colleagues of Nicholas desire to draw a lesson from the events of the immediate past, it would be first of all that they should threaten "with the severest penalty, including penal servitude", not those workers who are on strike and engaged in frank and sober conflict, but those who seek to cherish and spread among the people the belief in the "good, misled monarch". It is from such heretical teachings that the most dangerous notion of the popular masses may later

arise to have direct conversation, face to face, with their ruler, and "beg" him for certain things that may be just as hard to grant as the striking off of one's own head.

And we ourselves may also, among the many other teachings of the Russian Revolution, learn from the Petersburg events the habit of removing from the content of the revolutionary mass movements their often contradictory outer shell, instead of permitting them to be confused one for the other. Should the proletariat in some country or other

hit upon the idea of moving spontaneously before the honored legislative assemblies and government buildings, with the solemn decision to demand a transfer of the helm of state from the hands of the ruling classes to those of the toiling masses, or else, as said the Petersburg workers, "rather die themselves", even if Pastor Naumann himself be their leader, we may with due peace of mind prepare for the strongholds of capitalist wage-slavery those placards that once adorned the square of the already taken Bastille, "Dancing Here".

The Beginning of the Revolution in Russia

(From "Vperyod", Geneva, January 31, 1905)

[The periodical from which the following article is taken was the official organ of the Bolshevik section of the Social-Democratic Party, appearing under the editorship of N. Lenin, with the assistance of Bonch-Bruyevich and others. The article itself is very probably from the pen of Lenin himself. The division between the Bolshevik and Menshevik sections of the Social-Democratic Party had already taken place in 1903.]

Geneva, Wednesday, January 25, 1905.

THE greatest political events are taking place in Russia. The proletariat has revolted against Czarism. The proletariat has been brought to revolt by the government. At present there can hardly be any doubt as to the fact that the government had purposely permitted the strike movement to develop without hindrance and the great demonstration to start, in order to bring matters to the point of applying armed force. And this is the result! Thousands of killed and wounded—such is the outcome of the bloody Sunday of January 9 (22) in Petersburg. The army conquered the unarmed workers, women and children. The army overpowered the enemy, killing the workmen lying on the ground. "We gave you a good lesson," with unspeakable cynicism the czarist servants now say, and their European lackeys from the conservative bourgeoisie repeat their words.

The lesson was great, indeed! The Russian proletariat will not forget it. The most unprepared, the most backward strata of the working class, who had had faith in the Czar and who had sincerely desired to hand peacefully to the "Czar himself" the supplications of the exhausted people, all of them received a lesson from the armed force, led by the Czar or by the Czar's uncle, the Grand Duke Vladimir.

The Russian proletariat has received a great lesson in civil war; the revolutionary education of the proletariat has made in one day such progress as it could not have achieved by months or years of its gray, dull life of every-day. The slogans of the heroic Petersburg proletariat: "Life or Liberty!" are reverberating and resounding over all of Russia. Events are developing with a striking rapidity. The general strike in Petersburg is growing. The entire industrial, social, and political life is paralyzed. On Monday, January 10 (23), collisions between the workmen and the army are becoming sharper. Contrary to the lying official communiques, blood is running in many, many

parts of the capital. The workers of Kolpino rise. The proletariat is arming itself and the people. The workers are said to have captured the armory of Sestroretsk. The workers are providing themselves with revolvers, they are forging their instruments into arms, and seizing bombs for the desperate struggle for freedom. The general strike has even embraced the provinces. In Moscow, 10,000 workmen have struck already. For tomorrow (Thursday, January 13 (26), a general strike is declared in Moscow. A riot took place in Riga. Workers are making demonstrations in Lodz; an uprising is in preparation in Warsaw; demonstrations of the proletariat are taking place in Helsingfors. In Baku, Odessa, Kiev, Kharkov, Kovno, and Vilna unrest is growing among the workmen, and the strike is spreading. In Sebastopol the store and arsenals of the Naval Department are in flames, —and the army refuses to shoot at the revolting sailors. There is strike in Reval and Saratov. An armed encounter has taken place between the army of the workmen and the reserves at Radom.

The revolution is growing. The government begins already to stagger and to lose its head. From a policy of bloody repression it tries now to shift to economic concessions and to extricate itself by means of a sop or a promise of a nine-hour working-day. But the lesson of the bloody day cannot pass by in vain. The demand of the Petersburg workers—immediate convocation of a constituent assembly on the basis of a general, direct, equal, and secret vote—must become the demand of all the workers on strike. Immediate overthrow of the government: this is the slogan in response to the slaughter of January 9 (22), on the part of the Petersburg workers, even those who have faith in the Czar, which was expressed by their leader, the priest Gapon, who said after the bloody day: "We have no more a Czar; a river of blood separates the Czar from the people. Hail the struggle for freedom!"

Hail the revolutionary proletariat! say we. The

general strike raises and mobilizes the masses of the working class and of the city poor. The arming of the people becomes one of the immediate aims of the revolutionary moment.

Only an armed people can be a true support of the people's freedom. And the sooner the proletariat shall succeed in arming itself, the longer it will be able to withstand, on the war position of a striker-revolutionist, the sooner will the army stagger, the more numerous will become among the soldiers such men as will understand at last what they are doing, who will side with the people against the outcasts, the tyrants, against the murderers of unarmed workmen, their wives and children. Whatever may be the outcome of the present uprising in Petersburg itself, at any rate it will inevitably and infallibly become the first step to a wider, more conscious, and more carefully prepared uprising. The government may perhaps succeed in delaying the hour of accounting, but the delay will only make the next step of the revolutionary onslaught the more grandiose. The delay will be merely of use to the Social-Democratic Party for rallying the ranks of the organized fighters and spreading the news of the initiative of the Petersburg workers. The proletariat will join in the struggle, leaving the factories and shops, and making arms for themselves. In the midst of the city poor, in the midst of the millions of peasants will spread wider and wider the slogans of the struggle for freedom. Revolutionary committees will be founded in every factory, in every district of the city, in every larger village. The revolting people will overthrow each and every governmental institution of the Czarist absolutism, proclaiming the immediate convocation of a constituent assembly.

Immediate arming of workers and all citizens in

general, preparation and organization of all revolutionary forces for the annihilation of all governmental authorities and institutions: this is the practical basis upon which all revolutionists may and ought to unite for the common weal. The proletariat must always march its own independent road, without losing its connection with the Social-Democratic Party, aware of its great ultimate aims of liberating all mankind from every form of exploitation. But this independence of the Social-Democratic proletarian party will never make us forget the importance of a common revolutionary onslaught at the moment of real revolution. We, Social-Democrats may and must march independently of the revolutionists from the bourgeois democracy, but we must march hand in hand at the time of insurrection, while delivering direct blows at Czarism, resisting the army, attacking the bastille of the cursed enemy of the Russian people.

The proletariat of the whole world is looking now with feverish impatience upon the proletariat of all Russia. The overthrow of Czarism in Russia, heroically initiated by our working class, will be the turning point in the history of all countries; it will make easier the cause of all the workers of all countries, in all states, at all the ends of the earth. And let every Social-Democrat, let every class conscious worker remember how great are the aims of the struggle of a whole people, aims resting also upon his shoulders. Let him not forget that he represents the interests also of the whole peasantry of the whole mass of laboring and exploited people, of the whole people, against the enemy of all the people. All behold now the example of the hero-proletarians of Petersburg.

Long live the Revolution!

Long live the proletariat that has risen!

The November Revolution

By LEON TROTSKY

[The following article was written by the People's Commissar for War, in connection with the celebration of the third anniversary of the establishment of the Soviet power. It is particularly interesting for the light it throws on the methods used in the seizure of power, and for its emphasis of the fact that this seizure was not accomplished by a small group of conspirators, but was supported by the entire people, with the full knowledge of when the coup d'état would take place.]

IN CONNECTION with the November Revolution it is a good point to emphasize a fact that various reports and articles have not sufficiently considered. The November Revolution had so to speak, been set in advance for a definite date, namely, November 7 (October 25 according to the old calendar). It was not fixed in a secret conference but openly, before the whole people, and this victorious revolution took place just as it had been planned, on November 7, 1917.

The history of the world records many revolts and revolutionary uprisings. But one would seek in vain a second revolution by oppressed classes, which fixed in advance for a certain day, was accomplished on the day indicated, and with com-

plete success. From this standpoint, as from many others, the November Revolution is unique, without parallel. It was decided that the seizure of power at Petrograd was to coincide with the Second Congress of Soviets. This "coincidence" was not due to calculation on the part of conspirators. It was the direct consequence of the preceding course of the Revolution, and particularly of the work of organization and propaganda by our party. We asked for a transfer of power to the Soviets. Under the banner of our party, the majority in the most important Soviets grouped around this banner. Consequently we could no longer "demand" the transfer of power to the hands of the Soviets; for, being a controlling party in the Soviets, it was

our duty to "take" this power. We did not doubt that the Second Congress of Soviets would give us the majority. Our enemies did not doubt it either. For that reason they opposed, with all their might, the convocation of the Congress. Therefore, in the session of the Soviets Section of the Democratic Council, it was attempted, by every means, to prevent the calling of the Second Congress of Soviets, and failing in this—to delay it. The Mensheviks and Social-Revolutionaries assigned as their motive for their resistance to the calling of the Congress, that the Congress might serve the Bolsheviks in their attempt to seize the power. We, on our part, insisted on a speedy convocation, without in the least concealing the fact that, in our opinion, the Congress would be necessary for the precise purpose of anatching the power from the hands of the Kerensky Government. Finally, on the occasion of the vote of the section of the Democratic Council, Dan succeeded in delaying the convocation of the Second Congress from the 15 to the 24 of October. In this way the realist politician of the Mensheviks succeeded in cheating history out of ten days. At all the meetings of workers and soldiers in Petrograd, we treated the question in the following manner: The Second Congress of Soviets will meet on October 25; the Petrograd proletariat and garrison will ask, first of all, that the Congress put the question of power on the order of the day, and will resolve that, from that day on, the power shall be placed in the hands of the Congress of Soviets. In case the Kerensky Government should attempt to dissolve the Congress, then—numberless motions ran to this effect—the Petrograd garrison would say the decisive word.

Tireless propaganda was carried on. In fixing the Congress for October 25, and in putting on the order of the day, as a capital and essential question, the realization (not the discussion but the realization) of the transfer of power to the hands of the Soviets, we practically fixed October 25 as the day of the Revolution and did it openly before the eyes of "society" and its "government". Closely connected with the preparation of the Congress was the question of the calling of an important part of the Petrograd garrison. Kerensky feared the soldiers, and with reason. He proposed to Cheremissoff, who was then in command of the Army of the North, to send to the front those regiments whose allegiance was doubted. As is proved by the correspondence of October 25, Cheremissoff evaded this demand, for he considered the Petrograd garrison to be "worked up by propaganda", and consequently not fit to be used for an imperialistic war. But, under the pressure of Kerensky, who permitted himself to be guided by purely political motives, Cheremissoff issued the order as demanded.

As soon as the General Staff had given to the Executive Committee of the Soviets at Petrograd the order to displace a portion of the troops, we saw clearly, we the delegates of the proletarian opposition, that, in its further development, this fear was going to attain a capital importance. Restlessly expecting the revolution that was fixed for

October 25, Kerensky tried to disarm revolutionary Petrograd. There was nothing for us to do but to oppose him in this matter, not only with the workers, but also with the whole garrison. First of all it was decided to create, in the form of a revolutionary military committee, an organ that was to investigate the military motives put forward as an explanation for the transfer of the Petrograd garrison. Thus, side by side with the political representative of the garrison, the soldiers' section of the Soviets caused the creation of a revolutionary general staff.

The Mensheviks and Social-Revolutionaries understood immediately that the machinery for armed revolution was being created, and said so openly in the session of the Soviets. Although they had voted against the formation of a revolutionary military committee, the Mensheviks now advocated it—that they might play, in the revolution, the part of notary or scribe. After having first succeeded in prolonging their political existence by ten days, they now assured themselves of the privilege of registering their own political death, as spectators.

The Congress was then fixed for October 25. The party which was assured of a majority assigned to the Congress the task of seizing the power. The garrison, which had refused to leave Petrograd, was mobilized for the protection of the future Soviet. The revolutionary military committee, created in opposition to the General Staff, was transformed into a revolutionary general staff of the Petrograd Soviets. All this was done openly, in the eyes of all Petrograd, of the Kerensky Government, of all the world. It is an act unique of its kind.

During this time, the armed revolution was openly discussed in the party and in the press. The discussion often digressed considerably from the course of events. No connection was drawn between the revolution and the Congress and the transfer of the garrison, and the uprising was considered a plot engineered by conspirators. In reality the armed uprising was not only "recognized" by us, but it was prepared for an advanced date, and even, according to the resolution, was prepared at least for Petrograd by the spirit of the garrison, and its position with regard to the Congress of the Soviets.

Several comrades remained skeptical toward the idea that the revolution should be fixed "by calendar". They considered it safer to carry it out strictly in a conspiracy manner, by exploiting the great advantage which accrues from a sudden coup. In fact, in anticipation of a revolution, Kerensky might cause reinforcements to be brought up by October 25, might undertake the cleaning-up of the garrison, etc.

But the point was that the question of shifting a portion of the garrison became the chief point of the revolution that was being prepared for October 25. The Kerensky plan to change the effectives of the Petrograd regiments was considered in advance as a continuation of the Kornilov adventure. Furthermore, the "legalized" revolt hypno-

tized the enemy. In not having the order to transfer the troops to the front carried out he largely increased the confidence of the soldiers in themselves and still more assured the success of the revolution. After the revolution of October 25, the Mensheviki, and chiefly Martov, often spoke of the seizure of power by a handful of conspirators behind the back of the Soviets and the working class. It is difficult to imagine a more malevolent misrepresentation of the spirit of an event. When, in the session of the Soviet sections of the Democratic Council, the majority fixed the Congress for October 25, the Mensheviki said: "You are fixing the date for the revolution." When we refused, by a crushing majority furnished by the Petrograd Soviets, to remove the regiments from Petrograd, the Mensheviki said: "That is the beginning of armed uprising." When out of the midst of the Petrograd Soviet a military Revolutionary Committee was created, the Mensheviki declared: "That is an instrument for armed insurrection." And when, on the fixed day, thanks to this instrument, appointed in advance, the revolution that had been predicted really took place, the same Mensheviki complained: "A handful of conspirators has made a revolution behind the back of the working class." In reality the worst of which we could be accused is of having prepared, "behind the back" of the Menshevik onlookers, certain technical details in the military revolutionary committee.

There is no doubt that the attempt of a military conspiracy, made independently of the Second Congress of Soviets, would have brought about in this period only a confusion of the progress of events, and would perhaps have broken the revolution in spots. The garrison, to which belonged also regiments not politically organized, considered the seizure of power by the party by means of a conspiracy as something foreign to the garrison, and certain regiments would have taken it frankly as a hostile act, while the refusal to leave Petrograd and the duty to protect the Congress of Soviets to which the power in the country was to belong, became for these same regiments an absolutely natural, clear and necessary thing. The comrades who considered as a utopia the fixing in advance of the

date of the revolution, simply underestimated our power and the strength of our political influence at Petrograd as compared with that of Kerensky.

The openly constituted revolutionary military committee sent its Commissars to all detachments of the Petrograd garrisons and thus became master of the situation in the full sense of the word. We had before our eyes the political chart of the garrison. At any moment it was possible for us to undertake the necessary groupings of effectives and to secure the strategic points in Petrograd. We had still only to eliminate frictions and to avoid a possible reaction on the part of the more backward troops, particularly the cavalry regiments. We succeeded beautifully in this. In the meetings which took place in the barracks of the various regiments our watchword: "Don't leave Petrograd before the session of the Soviet and make sure by armed force of the transfer of political power to the hands of the Soviet" met with almost unanimous acceptance. In the conservative Semionov regiment, to whom the latest tid-bit was related, the approaching diplomatic trip of Skobelev to Paris, in order to influence Lloyd George and Clemenceau, the machinations of the Skobelevs and Gotzes not only produced no enthusiasm but even suffered a complete defeat. The majority voted our motion. At the Modern Circus, where the meeting of camion chauffeurs, who were considered supporters of Kerensky, took place, our motion was passed with an overwhelming majority. General Paradelov spoke in a conciliatory and courteous manner. But his evasive motions were defeated.

The enemy received the final blow in the heart of Petrograd in the Fortress of Peter and Paul. In view of the sentiments of the garrison of the fortress, which had taken part to the last man in our meeting in the court of the fortress, the vice-commandant proposed, most amiably "a conference to remove the misunderstanding." And as a matter of fact, a few days later the Kerensky Government, the greatest misunderstanding of the Russian Revolution, was removed.

History turned a page and took up the chapter of the Soviets.

Military Review

By LT.-COL. B. ROUSTAM BEK

IN 1905, when the Russian empire was ablaze with the revolutionary struggle which was the first serious effort of the Russian workers and peasants to overthrow the hated regime, the decisive part in that struggle was taken by the army. It must be noted that at that time the Russian armies in Manchuria, after a series of reverses brought upon them by Japan, represented the solid figure of about one million bayonets concentrated on the Hsi-ping-kai positions. This army was completed mostly by the reservists of advanced years, and only 100,000 young, well-trained recruits were taken from the

standing-army corps which still remained unmoved in different parts of the empire. Not one regiment of the Life Guards was sent to the battle zone; they were retained by the government in Petrograd and Warsaw in case of emergency for purely internal services. It is well-known that they fully deserved the confidence of the Russian rulers.

We must admit that in 1905 the revolutionary masses of the Russian people were inexperienced and poorly organized, and entirely intrusted the leadership of the revolutionary movement to the so-called intelligentsia who belonged almost entire-

ly to the bourgeois or semi-bourgeois class. There were but few among the leaders who conscientiously realized the seriousness of the coming fight which had to be waged to the utmost to keep the revolution from ending in terrible disaster. The important question that in order to overthrow the existing government and seize the power, the revolutionists had to have at least a part of the army on their side, was entirely overlooked.

It is true that some revolutionary organization existed in the rank and file of the Russian army, but this movement was in its infancy, and was absolutely lost in the reactionary atmosphere which ruled in the Russian military organization. We must not overlook the fact that for centuries the Russian officers and men were educated according to a monstrous system of lies which succeeded in attaining its height of demoralization in the imperial army. Therefore, it was not a difficult task at all for the Russian rulers to set part of the workers and peasants in uniform against the rest of the people, to make them lay hands on their own fathers and brothers, and often kill the people of their own villages.

In those days there were not many men like those the Bolsheviki gave to Russia, whose language these misfortunate fratricides could understand; and even had such revolutionary propagandists been present they would scarcely have been successful, because the atmosphere for a general uprising had not yet been created in Russia. The Japanese were not permitted by America and England to bring upon the Russian army a defeat similar to the one on the sea. The government of Russia realized the disastrous consequences for the Romanov dynasty in case such a debacle took place in Manchuria and perhaps even in Siberia, and hastened to sign a peace treaty with Japan thereby delaying the coming revolution. By every means the Government of the Tsar, in spite of the political confusion throughout the country, tried not to lose its control over the army and navy,—and it succeeded in this. Though shattered to a certain extent, even in the period of the general strike, when the whole industrial life of the country was at a standstill, and the ways of communication, together with the post and telegraph service were paralyzed, the Central Government of Russia remained in full control of the army and navy. At the first order of the Tsar, without hesitation, the Russian troops moved against the revolutionary population. It is remarkable how quickly the punitive detachments were organized, and with what lightning speed they were sent out into all parts of Russia, into Siberia, the Caucasus, and the Baltic provinces, stifling our workers and peasants in their blood.

Led by such monsters as Generals Orlov, Meller-Zakomelsky, Rennenkampf, Minn, Dubassov, Alikhanov and many other outcasts of the Russian people, aided by the officers who had sold their honor and conscience to the crown, these abominable expeditions inspired horror and hate in the Russian population, and henceforth no compromise with a band of executioners of the upper class

could be expected, nor could any pity be shown them by the oppressed Russian people at the moment when the hour of justice would come . . . It came in November, 1917 . . .

Though the Russian army during the Revolution of 1905 remained the blind weapon of imperialistic reaction a certain revolutionary movement was already noticeable among the members of the Russian naval and military organizations. The mutiny, for instance, on the "Potemkin", "Pamiati Azova", and other battleships, the uprisings in several regiments in Central Russia, in the Caucasus, and the military revolt of the Garrison of Vladivostok prove it; but all this was of a purely local character started on the initiative of the men, and on very rare occasions with some support from the officers. Only Lieutenant Schmidt personally led a real revolutionary campaign on board the famous battleship "Potemkin", but he was not supported and finally was captured and executed.

After the Russo-Japanese War the revolutionary spirit of the Russian people began to develop with great rapidity, and it became clear that only through war would the revolution in Russia be successful. If we look back in history we shall see that every war brought certain great changes to the defeated nation. For instance, after the disastrous Crimean War radical reforms took place in the Russian Empire. A republic in France was established after the defeat of the French army in 1871, and at last Russia, the most despotic of all the autocracies in the world, after Tzushima and Mukden obtained a sort of Parliament, a ridiculous one, but still a step forward.

There is no doubt that the European war, which practically annihilated the original standing-army of the Russian crown, and automatically created instead an armed people, had to deprive the absolutist government of its main means of defense, thus offering the revolution an opportunity to triumph. And this has happened in Russia earlier than in other states involved in the Great War because her army and population suffered more than any of the respective countries which, in their turn, will not be able to escape the fate of Russia.

I had the privilege of observing the revolutionary movement in the Manchurian army in 1905. This army, if it had been near to Russia after the famous provocative manifesto of October 17, without any hesitation it would have energetically supported the revolution. Its spirit was sufficiently revolutionary, and there were present some energetic and determined leaders even among the officers. Very little is known about the events which took place in the Far East after the ratification of the treaty of Portsmouth and especially during the period of the general strike in Russia.

Manchuria was absolutely isolated from the rest of the world, but more than a million Russian soldiers separated by thousands of miles from their native land anxiously watched events in the country where they had left their nearest and dearest. In all the regiments of the Manchurian army as soon as the manifesto of October 17 became known

to the men, revolutionary committees were established in each company, squadron and sotnias. The meetings took place everywhere and in spite of the drastic measures of the commanding element, it was impossible to stop this movement. Those superiors who tried by means of iron discipline and punitive measures to arrest the growing danger were dismissed by the soldier committees, and even arrested and replaced by officers who inspired confidence in the men.

There was no possibility for the local military authorities to organize a punitive campaign in the Manchurian army. General Batianov, the chief of the 4th Army, tried to send some troops with machine guns against the mutineers, but nobody would obey him, and at last when he, together with some troopers ordered his train to start, threatening to kill the engineers, the locomotive ran away alone, leaving the general's train stranded. General Kuropatkin, the chief of the First Army, kept strict neutrality and waited, while the Field Marshall, General Linevich, to the astonishment of all his staff, showed a revolutionary inclination. The poor old man, as a devoted servant of the Tsar, had taken the manifesto of October 17 as a real document in which the sincere will of his monarch was expressed. By the order of General Linevich any drastic measures against the railway strike committee who were practically the only rulers in Manchuria, were strictly forbidden. He did not oppose the meetings of the soldiers, and as much as he could protected the officers who expressed their "revolutionary" tendencies. "A manifesto of the Tsar is a law," repeated this old soldier, "and whoever is against it, is the enemy of the Tsar, and my own enemy." Nobody could contradict the decision of the commander-in-chief and the revolutionary movement rapidly progressed among the officers and men.

The most reactionary general in Manchuria in those days was the Chief of the Main Rear of the Manchurian Army, Lieutenant-General Nadarov. This officer had great power not only over the troops in his district, but also over the whole civilian population. His headquarters were in Kharbin, thickly populated with more than a million souls. He certainly would not have hesitated to shed as much blood as he pleased had not Linevich obstinately repeated his final decision.

Meanwhile, the plan of moving a great part of the Manchurian army on foot to Siberia was being discussed by the officers and men. It was projected to reinforce the Siberian local garrison and to proclaim Siberia as an independent republic. The failure of the Vladivostok uprising in November, 1905, did not discourage the Manchurian revolutionists, but the Cadets who were at the head of the Manchurian railway strike committee, Mr. Ossendovsky, the President, Mr. Lepeshinsky and Novakovsky, categorically refused to support such a project. At last on December 2, 1905, a great meeting of the revolutionary officers took place in the barracks of the Staff of the Rear of the Army. More than 2,000 officers attended this meeting, and

a resolution was passed that the army was ready to support any party which held the power at the moment. A deputation of officers was sent to the Railway Strike Committee. Mr. Ossendovsky received the deputies and after consulting with his colleagues brought the answer that the Russian revolution had to be carried out without the support of the military forces and that the army must be kept out of politics.

Such an answer from the revolutionary authorities greatly discouraged the military element in Manchuria, but, nevertheless, the order among the men continued. There was not one mutiny, nor was there one open rebellion. The men were ready to follow those of their leaders whom they had selected among their superiors and only awaited an order to start. But the order did not come. Already in November, 1905, a large party of prisoners of war from Japan reached Manchuria. These men were held in Kharbin, from where they had to proceed to Russia as soon as normal railway traffic would be restored. With the arrival of this element the revolutionary movement in the zone of the Manchurian army became of a considerably acute character.

It must be noted that there were about 71,000 prisoners in Japan, two-thirds of whom returned with militant revolutionary ideas, thanks to wonderfully organized propaganda work by certain revolutionary organizations of Europe and especially of America.

On the initiative of Dr. Isaac Hourwich of New York, after the fall of Port Arthur, when a considerable number of prisoners arrived in Japan, Dr. Nicholas Russell (Sudzilovsky), a Russian political emigré and the former Senator of the Hawaiian Republic of the United States, was sent to Kobe where he established his headquarters and began to publish in the Russian language a magazine under the title of "Japan and Russia". His first experiences when he tried to approach the officers and men in the different depots were a complete failure. Especially in the officer concentration camp "Hokkaido" in Matsuyama (Sikoko), the met fierce opposition from the Russian officers. Several boxes of books which he brought to the Russian prisoners were torn up by the latter in the court-yard of the depot, to the great astonishment of the Japanese.

The situation became so hopeless that Dr. Russell was ready to drop his work entirely, and retire to Honolulu. By chance, however, he met a Russian officer, Boris Taguyev,* who expressed his sympathy for his cause and volunteered to be the intermediary between Dr. Russell and the men. In a considerably short time Lieut. Taguyev succeeded in organizing a group of his colleagues who began a very fruitful work among the men in numerous depots, and later transferred their influence also to other cities of Japan where Russian prisoners were being held. Finally, the circle of revolutionary officers attained considerable importance

* Boris Taguyev Roustam Bek.

and not less than 23,000 men were regularly supplied with all kinds of literature which, thanks to the efforts of Dr. Hourwich and his assistant, Dr. Shupack of Philadelphia, as well as others in Paris, Berlin, and Geneva, reached Japan in abundance. The Russian revolutionary organization in Japan, in 1905, prepared for Russia thousands of propagandists because each of its members, according to the rule of the organization, had to organize a revolutionary autonomous group for propaganda purposes in the place to which he would return after his military services terminated.

It can be imagined what happened in Manchuria when these people arrived there with a tremendous amount of literature which, due to the temporary

freedom in consequence of the Manifesto of October 17, was not restricted.

It must be remembered that the Japanese authorities did not interfere in the activity of the Russian revolutionists among the prisoners of war, and didn't notice the complaints made by the reactionary element.

In January, 1906, when reaction triumphed in Russia, Field Marshall Linevich was suddenly dismissed and replaced by General Grodekov. General Rennenkampf's punitive expedition started its sanguinary march through Siberia and the White Terror began in earnest . . .

But there is no terror in the world which can kill the idea . . . It remained alive, it has grown stronger and stronger, and is now victorious.

Resources of Potash in Soviet Russia

By DR. ALFONS GOLDSCHMIDT

IF THE reconciliation of industry and agriculture, of city and country, is to be achieved, industry must not only deliver its products to agriculture, but agriculture must be able to satisfy the city also, to satisfy not only itself, but also the city. This is one of the main conditions of the conciliation. Without intensifying, without fructifying the Russian farm, no conciliation of city and country, of industry and agriculture, will be possible. This is self-evident.

The soil cannot travel, cannot be transplanted. But the product of the soil can be transplanted, can be shifted into the country, can be transported over the country. The wealth of the soil, synonymous with an awakening of the soil, may be shifted. The teaching of wealth, the fructifying example may travel. If the fructifying example does travel, agriculture is traveling. It is transformed, it becomes a collective agriculture. The scattered agriculture, the primitive and cut up form of agriculture, ceases. Large scale agriculture begins. The centralization of the soil begins; the new agricultural geography begins, the new cultivation, the new form of administration is adapted more than before to the needs of the people, particularly to the needs of the city. The regulation becomes an entirely different one. Thus the awakening of the wealth of the land does not only mean collectivism in agriculture, but also a better distribution of the agricultural goods to the whole people. This is no longer a problem of political education, a problem of dictatorship; it is rather a technical and chemical problem, while political socialism is a means of solving the technical and chemical problem, a means of liberating the proletariat, a means of eliminating classes, which would be stupid if it would not make use of all technical possibilities. The agricultural theses of the Communist Party of Russia prove that the Bolsheviks have grasped this problem. They seek not only to transform agriculture in an administrative-

technical sense; they also carry on, very purposefully, a very energetic policy of cultivation. Their program demands: the mobilization of all agricultural forces, a comprehensive and planful supply with agricultural implements and machines, with seed and grain in good state, and artificial fertilizer, cattle breeding, implements of the soil, preparing inventory, establishment of model farms, spread of agricultural knowledge, etc. It must be admitted that this *realpolitik*, economic policy is not a mere building of air castles, but building on a solid foundation, a consideration of local needs, of farm needs, peasant needs. Not a village terror, but, with the aid of the village Soviets, of the agricultural loan institutes a systematic development of Russian agriculture. It is only a beginning, but it is a beginning. It will continue, Russian agriculture will become the richest agriculture in the world. Unlimited fields of grain, of beets, potatoes, tobacco, cotton, flax, will be the possession of Russia. No one can doubt that. And these unlimited resources will become all the more unlimited, the more the centralizing, systematizing, local displacement of agricultural wealth continues.

One of the chief means in this shift is fertilizer, and one of the chief fertilizers is potash. I have in my hands a very full account of all the potash resources but I can give in this book only the main points. Perhaps I shall devote a separate publication to the matter about potash as I already have one on the subject of electricity.

The war cut Russia off from its imports of potash from Germany. In 1914 Russia obtained somewhat more than 1,000,000 poods of potash (potash salts, potash supplies of all kinds, from foreign countries, particularly from Germany). Owing to the war, this supply of fertilizer was cut off. Agriculture and the industries that make use of potash were hard put to it. To this day Russia has not received any more of this potash, aside from what it has produced itself, and there was not

much of that. Russia sought to supply its Allies with potash, but only in very small quantities. The estimates of the total consumption of this potash vary.

Potash is needed in Russia by the glass industry, the soap industry, the leather industry, the pharmaceutical industry, and a number of other industries.

Agriculture requires enormous quantities of potash salts. If the total amount used should be increased only ten-fold in the next few years, the demand would amount to at least 10,000,000 poods. Together with the industrial need of potash, the amount required would be at least 13,000,000 poods.

The isolation of Russia from its potash supply, produced by the way, as was the case in other countries, a very great search for home resources of potash. But during the war this search was practically without result, for even though isolated deposits were found, they were not energetically exploited.

During the war Germany maintained its potash monopoly, although all over the world a zealous search for potash had been undertaken. England discovered such deposits in India and New Zealand, but they were insignificant and their exploitation not profitable. America sought to obtain potash salts from all sorts of minerals. In Spain also a few deposits were found, not to mention Peru, Abyssinia. But all these deposits were lilliputian in size compared with the German deposits.

The hunger for potash found its expression at Versailles, when the peace conditions bound Germany to deliver potash.

For a long time in Russia a fertilizer containing potash has been derived from the ashes of sun flowers, weeds, rye stubble, oat stubble, buckwheat stubble. In the Kuban, in the northern Caucasus, in the Province of Saratov, in the Provinces of Perm, Kazan, Samara, Penza, Tambov, Simbirsk, potash was obtained—much is still obtained from wood, from plants, from roots. Also from the remnants of the sugar beet industry, of the distilling industry, from vermuth. But all this was not sufficient and is not sufficient. The obtaining of potash from the sun flowers furthermore destroys the fruitfulness of the soil. It is an extremely damaging form of exhaustion of the soil.

At present Russia is poorer in fertilizer than ever before and it is high time that the production of these materials should be again taken up, organized, accelerated, and agriculture thus made as independent as possible of foreign fertilizers. For foreign countries also, particularly in western Europe, are lacking fertilizers, for reasons that need not be explained. The Supreme Council of National Economy tried to get the peasants to collect wood ashes. But the Council was not successful in making them believe that the wood ashes would have a fertilizing value and the attempt failed. The blockade of Russia made it impossible to obtain potash by evaporating sea water, at least to regulate such an industry in a satisfactory manner. It

had been planned, under the stimulation of the success of France and America (exploitations at the mouth of the Rhone and in San Francisco) to obtain potash from sea water. Everything was attempted, but the thing was practically useless, for only small quantities were thus obtained. At once laboratory tests were made for obtaining potash from various minerals. But all such attempts have been on a very small scale.

There are in Russia hundreds of similar possibilities for obtaining potash, possibilities of obtaining nitrates, but these are not directly tangible situations, and what we need is things that can be of immediate use.

Nevertheless Russia will within a reasonable period have enormous quantities of potash. For such quantities are at hand. They are ready to be utilized. They lie at a slight depth, they need only to be seized and taken out.

That portion of Russia that was once covered by the sea in the so-called Permian period, has a sublayer of salt, of potash. It is an enormous region in the east and northeastern part of Russia. Already for a long time common salt has been obtained in these regions, sporadically, without any system. For instance, in the Province of Vologda, particularly, however, in the vicinity of Solikamsk and in the Province of Perm.

In these places 20,000,000 poods of common salt have been taken out and are taken out every year, and cooked, a proof of enormous quantities of salts and potashes available. These potash salts were formerly thrown away, as at Stassfurt, thrown into the river Kama. They lie over the rock salt deposited at a depth of about 800 feet. In the Provinces of Perm, Viatka, North Dvina and South Urals I heard speak of a depth of 250 feet.

In their need for salt, Russia has thus far been looking for common salt and ignoring potashes. But now the latter are receiving attention and a great opening up of the entire region all the way from Cherdin and Solikamsk to the Caspian Sea, in other words, over a distance of more than 1,500 versts the presence of potash salts has been ascertained. In addition there are such deposits in the Province of Vologda, Samara (in the neighborhood of Novo-Ussensk) and in other regions also. Many potash deposits are so easily reached that it is really only necessary to scrape the surface.

There are a number of deserted mines which are still usable and which it is now planned to exploit. Kurakov calculates the annual production of the Solikomsk region at 2 to 4 million poods of potash. I was told they were good salts, containing as much as 98 per cent of K_2CO_3 .

The advance of Kolchak had disturbed the attempts to prospect and carry on mining. Now, however, it was possible to go about the task of getting these enormous quantities of potash from the Russian soil undisturbed. They will be taken out, if not today then tomorrow.

Already during the war, America showed a desire to exploit these Russian resources. An Ameri-

can company was willing to pay \$4,000,000 for the exploitation of the Solikamsk region.

Russia needs foreign aid in winning its potassium treasures. We must not be petty. We must not be guided by shabby considerations of profit. We must perform a work of socialist solidarity. The potash must be gotten out of the Russian soil. Russia, Russian agriculture, must be drenched in potash. Russia's treasures will be our treasures too. We have the engineers, potash miners, the potash chemists. Send to Russia as many as you can spare of them; you will not regret it.

Do not think of world power competition. Be far-sighted, help in the task of opening up Europe's sources of nutrition. You will then be doing a real work in the fraternity of nations. You will be helping to feed Europe, hungering Europe, decrepit Europe, limping, anemic, spineless Europe, made bloodless by the war.

But Russian agriculture will be raised on wings of potash. The peasant will obtain this rich food

for his plants direct from the potash mines, the village Soviets will distribute it according to a plan. There will be first a small concentric intensive exploitation around the mouths of the pits. This exploitation will draw larger concentric circles, taking in more and more area. The potash, together with the artificial nitrates, together with artificial irrigation, with electric current, down to the smallest motors will bring about a collectivization of agriculture almost automatic. The time devoted to agricultural labor will be reduced, fruitfulness of the soil will nevertheless be increased. We shall have a favorable apparatus. Then, when this new regulation of affairs, after the success of this example, moving from place to place, the selfishness of the peasants will also disappear, their adherence to the soil, and to the doctrine of private property. There will be a collectivistic attachment to the soil, a new feeling of property, a feeling of collective ownership, a Communistic feeling of ownership. This can and must be realized.

Three of Wrangel's Supporters

By MOSES KATZ

Two Former Socialists—One Inciting Pogroms,
The Other Persecuting the Jews—A Jewish Sup-
porter of General Wrangel.

THE ferocity of the Russian counter-revolutionaries is indicated in the following, taken from the last number of the Paris *Svobodnaya Mysl*:

"Some time ago, throughout Crimea proclamations signed by 'Russian Priests' were posted, calling upon the Christian population to wipe out, root and all, exterminate, all the Jews, because all Jews were Bolsheviks, enemies of Christianity, and destroyers of 'Holy Russia'. These posters remained on the walls a long time, and petitions to Wrangel from the Jewish communities, and even from Jews who were holding office under his government, were ineffectual. At last Wrangel's ambassador in Paris, Maklakov, also forwarded a request that the proclamations be removed, as they created an unfavorable impression abroad, and might interfere with Wrangel's prospective Paris loan. Only then were the proclamations removed."

But that is not all. The most terrible feature only appears further:

"After the proclamations were removed, the Russian priests began to read and interpret them to their congregations at every holy service. When the Sebastopol Jewish community again protested to Wrangel, he explained that he could do nothing, because he did not dare to interfere in the affairs of the Russian Church. He advised them to send their petitions to the Archbishop of Crimea, 'Father' Bulgakov. But when they communicated their protest to Bulgakov he simply replied—'How can I forbid the reading of the proclamations in the churches, when it was I who composed them and ordered the priests to read and explain them to pious Christians?'"

But who is Bulgakov? Do you think, perhaps, that he is some terrible Czarist priest, a member of the former "Union of Russian People"? No. "Father" Bulgakov is none other than he who was once famous as Professor Bulgakov, an economist and a philosopher, who, not so long ago played a great part in the Russian radical and liberal movements. Up to the year 1904 he was one of the group who, together with the former Social-Democrat, Struve (for a time one of Wrangel's foreign ministers), declared war on Marxism in the name of idealistic philosophy. Up to the year 1913 he was a well-known writer and leader of the bourgeois-liberal party, the "cadets". In 1914 he became a priest, "from conviction". Now he is an Archbishop in Wrangel's former Crimean government, and writes appeals to exterminate all Jews—also from conviction . . .

This terrible transformation can be appreciated only by those who know what role Bulgakov played not so long ago, not ten years back in all, in the history of the idealistic striving of the Russian intelligentsia.

And at the same time one finds a Jew also, a Zionist, in fact, D. Pasmanick, (in Petrograd they once changed his name to Paskudnick) who writes in Burtsev's *Obshcheye Dyelo*:

"Polish events have dealt a severe blow to Bolshevism, but it is after all not a fatal blow. Only an All-Russian force, well-organized and wisely directed could deal such a blow. This task fell to the lot of General Wrangel.

"When Wrangel first appeared on the scene and the editors of *Obshcheye Dyelo* came out boldly and absolutely for Wrangel, our newspaper was alone. Everybody, even those who shared our views, approached with a little terror the question of sup-

porting Wrangel; they looked about them on all sides, and barely countenanced even the thought that one could support him 'only just so far as his guarantees would warrant.' We took another course. Because we saw no other way to save Russia and because we believed in the wisdom of the people upon whom fell the great responsibility for the fate of Russia . . ."

D. Pasmanick at that time believed in Wrangel's wisdom and still believes in it now, despite Bulgakov's appeal . . .

And this is what we find in another Russian newspaper published in Paris:

"The former Social-Democratic depute in the Second Russian Duma, Gregory Alexinsky (who at the time of the world war and the Russian revolution was already so disgraced that he was not even admitted to the meetings of the recent congress of the Second International) has issued an album of photographs of murdered and mangled victims, as evidence of 'Bolshevik atrocities'. The photographs show ears and noses cut off, mangled heads, hands and feet devoured by dogs . . . Alexinsky explained that these were all photographs of victims of the Bolsheviks, and that he tried to have them printed as such in the French journal, *L'Illustration*. But even the editor of this chauvinist journal refused to publish them, declaring that he would gladly do so if Alexinsky furnished him with the least proof that they were really Bolshevik atrocities. Now Alexinsky himself (at whose expense?) has published these photographs with an explanation that they disclosed facts which the Socialist committees that recently visited Russia want to conceal.

"And what happens? Those who have seen the album declare positively that they are Jewish victims of the pogroms perpetrated by Petlura's followers and the Poles. (This fact has, incidentally, been already mentioned in *Forward*.) Alexinsky could not have been ignorant of it, and yet . . .

So deep is the abyss into which the "former people" of old Russia have now fallen! Alexinsky, Kuprin, Burtsev, Pasmanick, Savinkov, and Antsiferov are not the only ones there.

But let us look further into the abyss.

Not everybody suffocates there. Several still manage to live a "grand life". *Svobodnaya Mysl* comments upon this with sorrow:

"Not only French society, but even the French Government is beginning to show more and more its displeasure at the disgraceful conduct of many Russians who succeeded in fleeing from *Sovdepiya* (so the "former people" call Soviet Russia) with a sum of money, and who are living there a life which robs the Russians of the sympathy which they need so much in a foreign country, and often they only disgrace the Russian name.

"Who haunts the Paris night restaurants? Who swim in seas of champagne? Who flood all the most expensive restaurants? Who excite the people with their expensive clothes, and by smashing glassware and mirrors?

"Go into any night restaurant at all, you will be told how these fine guests break the glassware and mirrors.

"Go into any card club, you will see who play for the largest stakes and lose hundreds and thousands in one night with a light heart—they are mostly Russians.

"French society is being given a strange impression: are these then the Russians whom the Bolsheviks have robbed, who seek abroad a refuge from the Bolshevik terror?"

And at the same time we hear stories of the most terrible want:

The Berlin newspaper, *Russki Emigrant*, writes:

"The situation of Russian refugees is becoming constantly worse. A year ago the governments and society and private organizations still helped the Russian emigrants a little; if in the Balkan countries they still exchange Russian money at preferred rates, and in France they give a little support—this charity has now ceased altogether. The Russian 'story' is being dragged out too long, the foreign governments are hesitating more and more in their search for a key to the situation, and appear to be less interested in the condition of the Russian emigrants, who have found among them a temporary refuge."

And the result is this:

In Constantinople there were registered 2,655 Russian women who are openly prostitutes. And thousands sell themselves unofficially. Among them are wives of former generals, officers, bankers, manufacturers, and others who "saved themselves from terror"—from Soviet Russia.

In Czecho-Slovakia many former Russian generals and princes have organized themselves into a "cabaret theatre" which travels about and gives performances. And their director is . . . the former president of the last Russian Duma, Rodzianko.

In Poland groups of former Russian officers organized themselves into artels to dig peat (a kind of fuel) from the swamps. For ten hours' work they were given two meals a day and sleeping quarters. When the Bolsheviks were at the Polish frontiers, the Polish Government released from the camps the Russian officers of General Bredan's army, who were held there, and proposed to them that they enter the Polish army or Balakhovich's army. But the officers had had such a pleasant life in the Polish camps, where the Polish soldiers used to maltreat them day in and day out, that they thanked them and fled to other lands. In Japan the former Russian officers die of hunger. The same in China. The same in Germany. The same in Egypt. Only in Serbia the Serbian Government supports them with a little charity, and in Paris many of them live grandly on the loan of 100 million francs which the French bankers made to General Wrangel on his notes.

The few Russian capitalists who are in Paris are also not unprosperous. They sell—theirself, their hopes, and Russia. The Crimean newspapers complain that they have sold to French capitalists

the last few Russian trade ships which were still in the Crimea. The Russian newspapers in Paris report that a group of French bankers have bought from the Russian sugar manufacturers who are in Paris the great sugar refineries of Babushkin, Count Bobrinski, Prince Radziwill, Count Branitski, Prince Dolgorukov, and Duke Mecklenburg-Schwerinianski, which are in the Ukraine. This is indeed to count unhatched chickens and buy the skin of a bear which has not yet been captured.

But the "Russians" abroad have their greatest trouble with . . . the right of domicile. At last they also are being given a taste of the "Jewish" medicine. They are wanted nowhere, they are always being asked to depart. Warsaw ordered all Russians to leave within a period of 24 hours. The same in Riga. And in Czecho-Slovakia. In Italy they are not admitted, in Egypt they are held as "guests of the British Government" in a "concentration camp" in the desert, where Turkish prisoners were formerly confined. The well-known Russian publicist, Alexander Yablonsky, who is also there, complains:

"Why must I sit here while Trotsky can spend his time at a nice writing table in a warm room. Where is the justice of it?" . . . The *Russian citizens* in Batum (in the Caucasus) who want to go to Crimea must get a visé from . . . the French consul, and the trouble is that he does not give any visés . . ."

The Paris *Svobodnaya Mysl* printed an interesting little cartoon which expresses well the position of the Russian refugees.

Between four frontier posts which are encircled with a rope sits a stout Russian bourgeois on a full valise. He cannot depart. Near each post stands a soldier with a rifle: a Frenchman, a Britisher, an Italian, and a German or a Pole. And on every post is written: "No visés given out." The poor fellow sits between the frontiers and does not know where to go . . .

And in the Berlin *Russian Emigrant* a certain *Leri* writes a lament entitled "Emigrant Life".

As a flock that is scattered,
Mournfully we hang our heads,
Sadly we wander about Belgrade,
And gather together on Lemnos Island.

Life drags on without hope, without faith,
We live our days in a dark hole,
Worn out already are hopes and clothes,
And empty—both heart and purse . . .

Officers, teachers, physicians,
Wear out the door-steps of offices,
Force themselves into committees,
And curse their days and years.

Seeking positions, something to earn,
Either for self or wife and sister,
But foreign lands care not for strangers,
And mock their tears . . .

Gradually nerves become hard,
The bitter insult gnaws at the heart,
The dried crust sticks in the throat,
They curse their days and years.

Oh, you to blame for Russia's sorrow,
You devil who make festivals,
Show me a single nook,
Where no Russian refugee suffers.

He groans in Rome and in Warsaw,
He laments on mountain and sea,
Where he hungers, even when some stranger
Gives him cold alms.

How many tears of shame have been shed
By our wife in friendly Warsaw,
How many tears now weeps Lisa,
When she sells herself in Stamboul.

And the frontier, the passport, the visé?
Ah, Europe, how harsh you are to us Russians? . . .

Peace! Heap ashes upon your heads,
And among indifferent people
In Lemnos, in Berlin, in Egypt,
Pray for holy Russia.

Ah, beloved, arise, lift up thy head,
Arise, see what has befallen us!
The day will yet come . . . We shall with song
One day return to the homeland.

And meanwhile, in Berlin, or in Warsaw,
Let us suffer, brothers, a little more! . . .

Thus is exile now borne by the Russian counter-revolutionaries abroad. That is how they now sing on foreign shores their "By the Waters of Babylon", hoping that the day will come when they can avenge themselves for their suffering. What a "revenge" they plan one can see from an editorial notice in Burtsev's *Obshcheye Dielo*:

"The government of A. B. Kolchak, which was a very cultured one, a government of Slavic good nature, did not understand the meaning of civil war; civil war has as its aim the annihilation of the moral and military leaders of the opposing parties. For that reason ruthlessness towards the enemy and discipline in one's own ranks are the necessary conditions for prosecution of a civil war.

"Truly, civil war is terrible, but in order to continue (?) the terror one must make use of forces which cannot be employed in peace times. No merciful feelings can be shown towards those who have declared a ruthless war against the very foundations of society. One must defend oneself . . ."

And if Burtsev is so bloodthirsty, what can one expect of Wrangel and of the other counter-revolutionaries who were always hangmen and perpetrators of pogroms? . . .

Soviet Russia

will continue publication; we make this statement in answer to several inquiries on the subject. Continue to send us lists of your friends who might appreciate sample copies. Subscription remittances should be made payable to L. C. Martens.

"SOVIET RUSSIA"

110 W. 40th St. Room 304 New York, N. Y.

Russian Frightfulness

By GEORGE BERNARD SHAW

[On January 29, 1920, George Bernard Shaw delivered a lecture at Kingsway Hall, in London, which was announced and later printed under the title "Socialism and the Labor Party." We are presenting to our readers only so much of Mr. Shaw's lecture, taken from the printed version, as deals with Soviet Russia and the attitude of Great Britain to that country. Much matter concerning the British Labor Party and other institutions in England has therefore had to be omitted.]

THE Russians seem to very thoroughly appreciate the practical lessons of history that we learned from the early experiences of the robber class. The Russian soldier did a very eccentric thing. He went on fighting for a long time; he was made very uncomfortable; then he had a curious idea, he suddenly stopped fighting, went home, and seized the land of the country. That from the point of view of the robber class in other countries was the first great atrocity. It may have been an atrocity but it was a jolly practical atrocity, and when they began to organize, they started on the idea which I suggested, that they were going to organize the industry of the people for the benefit of the people, that they were going to extirpate idlers, and democracy stood in the way. There is only one really interesting statesman in Europe at the present time and his name is Nicholas Lenin. Nicholas Lenin had a tremendous controversy on the subject of democracy with a German Social-Democrat, Karl Kautsky. Kautsky said all the usual things which Socialists have been saying, which I have said all my life, the thing must rest on the will of the people. You have no right to introduce Socialism until you get a vote, until you get majorities throughout all the constituencies in favor of Socialism. I have always said that my reason at bottom has been this, that I knew perfectly well as long as I waited for that I would never be asked to do anything but talk. I have talked all my life and I have managed to get beyond the age of sixty without ever having been called on to do anything really dangerous or important. Accordingly, I intend to go on talking in that way, but Lenin did not see that. Lenin entirely agreed with Mr. Winston Churchill on the subject and with the robber class. Lenin said, these things are not done by the great mass of the people making a vote, they are done by an energetic minority which has got a conviction and is determined to go on carrying out that conviction until it is stopped. That is precisely what our upper class did, what they are doing, and have always done. It is the practical thing to do. There is no use in waiting until the mass of the people throughout the country, who know a little about football and very much less about politics, whose business is not politics and you cannot move them in the matter at all, there is no use in waiting to get the majority of votes from them with all the powers of the press and newspapers bemusing and bewildering and bedevilling them with all sorts of nonsense. *We Socialists when we are a little comfortable are perfectly willing to wait, but the peo-*

ple who really want to have something done, like Lenin, do not wait. When Lenin saw a Constituent Assembly muddling about doing nothing he did not wait but went ahead and like our governing class there was no nonsense about democracy; he organized the thing in such a shape that it would work. He got his combination of Soviets, a certain method of indirect election which was not at all what we call a democratic method of election because it was very indirect, it was doubly and triply indirect, but susceptible of being managed in such a way that Lenin got working with him the sort of men he wanted to agree with him, which is precisely how our governing classes work elections in this country, and there was no nonsense about toleration at all. He believed in Socialism, in organizing the proletariat. Those were his ideals and he put it down as a minimum of social morality: *We are not going to have any more idling or unproductiveness; we do not allow liberty of opinion with regard to that; if you have any doubts about that we regard you as a dishonest person and we shoot you.* They shot him; he has several bullets in his body; that will show he was educating them practically. But he realized when it came to the point that as between the people who believe in a great system of what is practically the robbery of the poor, and the people who believe in another system, an intelligent minority, they have simply to fight it out with what forces they have at their command. Of course, the very first thing he had to institute was what Mr. Lloyd George has held up in the House of Commons as his blackest atrocity, and as was felt in the House of Commons really to be his blackest atrocity, and it is felt I think by every respectable man to be his blackest atrocity, he introduced compulsory labor. He actually said every man must work or he will starve. He had not much food to give the people who did work, thanks to the fact that we are trying to starve them out; you do not get much to eat in Russia, but at any rate what there was going he gave. Only if people would not work they did not get any tickets, and they got on as best they could, they lived on their own fat. That was the great atrocity. He was after all carrying out compulsory labor for the benefit of the system of society. He was carrying out the ideas of the upper classes in this country who are also in favor of compulsory labor. Only they find the threat of starvation is sufficient to do the compulsion in this country, except on themselves. Lenin was logical; he brought in a method of compulsory labor from which nobody could get utterly exempt. We have a system of compulsory labor

in this country which applies to everybody except people with a considerable amount of property. They can escape from it because they cannot be starved out. Under Lenin's system you do get starved out.

Lenin did something else which is perhaps the most remarkable thing. Supposing the Bolshevik Red Army captures you; what is it that happens to you? You are told beforehand if you are a European you are fighting Bolsheviks because you know they are monsters and committing atrocities. You are told if the Bolsheviks capture you, they will put you slowly to death over a period of twenty-one days by cutting off the tips of your fingers and nose and ears, and by horrible scientific tortures slowly kill you, therefore you fight pretty hard—if you believe it. Supposing you are taken prisoner, in spite of your heroic struggle, if you are an Englishman you naturally do struggle, if not to the death, still very close to it. But supposing you are overwhelmed by numbers, say one Englishman by 200 Bolsheviks, what happens to you? You are brought into a military depot and the first thing that happens to you is they give you a meal, and when you are in a tolerably good humor a man comes in with a lot of literature; he says, "Are you an Englishman?" You say, "I am an Englishman"—proudly. He immediately produces a bundle of Bolshevik literature in English, and you are set to read that literature. You are not given anything else to do. Of course, if they would let you do anything else, being an Englishman you would do it rather than read—play football, for instance—but they throw you back on your own mental and intellectual resources to such an extent that you begin to read their literature. Then you find out the truth about what they are actually doing. They send you about three times a week to the theatre and let you go about pretty freely and see what is going on. They give you these things to read just like the upper classes in our church schools; they stick their ideas into your mind.

I am emphasizing this thing they have taken from our governing classes. They recognize the fact that you must get at people's minds. What they are doing to the mind of the adult person they are doing to the children of Russia. The children of Russia are now taught to believe from the very beginning that it is dishonest in the last degree for a person not to be a productive worker and not to pay his way in society. I must not carry the parallel any further. I think this is a very good loose end to leave off. I think it is a very good place to stop and begin thinking about it. As I say I do not see in the Labor Party as it at present exists the Party which will act solidly and practically and thoroughly and radically and unitedly like the Party represented by Mr. Winston Churchill, which I have impolitely called the robber class, and like the Bolsheviks. I see in the Labor Party the most extraordinary heterogeneous mass of people, full of opinions of different kinds. I see there are Methodists and atheists; jingoes and conscientious objectors; there are Protectionists and Free Trad-

ers; I see the most amazing mass of people of all sorts and kinds immensely equipped for any kind of discussion, for the most violent electioneering, and for no action whatever.

We have got to simplify the matter. If we believe in the principles which I have sketched out, being the principles that I myself believe in, this belief in the obligation of every man to leave the world in his debt, or at least to pay his way, then that must be made to be a religion; it has got to be the basis of the whole religion in the country. I am tired of seeing Labor and Socialism rolling the stone up the hill with frightful labor only to have it rolled down again. Here you have seen movement after movement, the movement of the Utilitarians, the movement of the Free Traders under Cobden and Bright; the Christian Socialists under Kingsley; the Marxian Socialists, you have seen the Labor Party by an immense amount of labor, by talking on platforms, as I am doing now, get one generation of men educated into ideas about Free Trade or Socialism or what you like. What does that matter to the upper classes? Those men die out and meanwhile the children are coming into the schools where they are taught from the very beginning the creed of the robber class. The stone is always rolling back. It is because we do not go to work in the practical way of Mr. Winston Churchill and Nicholas Lenin. I take off my hat to both gentlemen. It appears to me until we get to work in their ways it will be all talk, talk, talk, and nothing will come of it.

PROHIBITION OF CURRENCY IMPORTATION

The following instructions regarding the prohibition against the carrying of foreign currency into the territory of the Russian Socialist Federal Soviet Republic have been received by the Representative in the United States:

Russian Socialist Federal Soviet Republic
People's Commissariat for Foreign Trade
Financial Accounting Department

December 15, 1920.

Circular

To the Representative of the People's
Commissariat for Foreign Affairs,
Comrade Martens, New York.

No. 2539/Moscow.

We bring to your knowledge herewith that an order has been issued to all customs offices of the R.S.F.S.R. to the effect that all foreign currency must be taken away from persons entering Russia, payment for it to be made here, at the center, according to the value of the foreign currency in rubles as set by the Acting People's Commissar for Finances, in view of which we ask you to advise all persons leaving for Russia of this order as well as to propose to the latter to deliver all foreign currency in their possession to you for transfer to Russia, in accordance with the instructions received by you relative to foreign drafts through the medium of accredited Representatives of the People's Commissariat for Foreign Trade.

Acting People's Commissar for Foreign Trade,
(Signed) LEJAVA.

SOVIET RUSSIA

Official Organ of the

RUSSIAN SOVIET GOVERNMENT BUREAU
110 West 40th Street New York, N. Y.

This weekly will print articles by members of the Russian Soviet Government Bureau as well as by friends and supporters of Soviet Russia. Full responsibility is assumed by the Bureau only for unsigned articles. Manuscripts are not solicited; if sent in, their return is not promised.

THE index to SOVIET RUSSIA is ready. It has been received from the printer. It will be sent free of charge to all names on the subscription list. Others wishing to receive it should request it by mail, enclosing a two-cent stamp for postage. The complete bound volume for July-December, 1920 (Volume III), will be ready by February First.

“SOVIET RUSSIA” is probably making its last appearance this week as the Official Organ of the Russian Soviet Government Bureau. With the departure, probably on January 22, of Mr. L. Martens, Representative in America of the Russian Socialist Federal Soviet Republic, together with his staff, for Soviet Russia, the Bureau and with it the mechanism that published this paper ceases to exist. But SOVIET RUSSIA will continue its weekly appearances. It will go on printing the articles of foremost Soviet statesmen, as heretofore, and the three instalments of Leon Trotsky’s “Problems of Organization of Labor” (taken from his inimitable answer to Kautsky’s book *Terrorismus und Kommunismus*) may bridge the transition from government to private ownership. For it is very probable that the next issue of SOVIET RUSSIA will come out no longer as the Bureau’s Official Organ, but as the weekly publication of an American publisher, whose name, as well as the prospective new material to appear in the paper, will then be announced. The editorial policy of the paper will not change, nor will the character of the contents.

THE “Russian Information Bureau”, after its organ *Struggling Russia* had progressively prolonged the intervals between its appearances until a confession of dissolution had to be made, has resuscitated it in the form of a *Weekly Bulletin* of which real weekly appearances are promised. A friend sends us a copy of a letter issued on December 31 by the “Russian Information Bureau”, announcing, among other things, excellent reprints of declarations by former Russian princes and social-traitors, and making, finally, the following tempting offer:

“If you desire to have your name placed on our mailing list for the receipt of our Bulletin regularly, kindly fill out the enclosed blank and send it to us, if possible, without

delay. The Bulletin will be sent to you complimentary, without any charge.”

And then, we may add, you will still need information about Soviet Russia. For all that is in the *Bulletin* is of counter-revolutionary character. But you will have to pay for SOVIET RUSSIA, for our weekly will not have the resources of money that enable the “Russian Information Bureau” to give away its *Bulletin* free of charge. These sources flowed abundantly in the early days of *Struggling Russia*, but then dried up for a period. They have thawed again with the warmth of heart of some kindly counter-revolutionist, and largess to the public that reads free literature is the result.

PROFESSOR Joseph French Johnson, Dean of the School of Commerce of New York University, in an interview that was printed in a recent Sunday edition of the *New York World*, expresses the opinion that the failure on the part of the United States Government to explain to the people of the country why trade is not being carried on with Russia is the result of a mistaken policy. Professor Johnson thinks that if this trade should appear to be dangerous to the United States, the reasons for so believing should be frankly stated. Yet, Professor Johnson does not himself seem opposed to the trade. To quote his own words:

“I, for instance, am an economist. I have specialized in the study of finance and trade and should be in a better position than the average citizen to form an opinion on the matter of trade with Russia. Still, I could not enter any movement for or against such a proposition. I do not know what the facts of the situation are. The stories that come from Russia are so conflicting that readers usually believe what they wish to believe and line up accordingly. But business cannot be carried on that way, and any department manager who would pursue such tactics in any business organization would lose his job.

“I presume, however, that Mr. Gary and Mr. Schwab have the facts on file. Such men make it a business to get accurate data, though they do not always consider it their business to keep the public informed. But these facts, whatever they are, could be known by American business as a whole if American business as a whole had any agency devoted to such service.

“It is possible that we cannot trade with Russia. It is possible that the authorities with whom we would now be compelled to deal could not give us a clear title to the things which they presume to sell us in return for the shoes and machinery which they want to buy. It is possible that we would have to recognize the Soviet Government before we could effect any commercial deals, and it is possible that such recognition would result in such a strengthening of Bolshevism and such a weakening of our own industrial system as to more than offset the advantages which the opening up of such a market would bring. But while all these things are possible, we do not know that they are actually so.

“Personally, I don’t see anything to be afraid of,” Dean Johnson added, “because I have much more faith in capitalism than many capitalists have. I believe that capitalism is the strongest, most efficient and most nearly perfect system of production and distribution which the world has yet discovered. In open competition with it I believe that Bolshevism would break down. But if it should turn out that Bolshevism is such a superior system that capitalism cannot hold its own with it, then we want Bolshevism. The best is none too good for America.

“The great trouble as I see it just now is that we are not giving capitalism a chance. War conditions brought

us to an untenably high price level from which it was evident we would some day have to descend. But we have no machinery with which to make the descent, and we are beginning already to feel the bruises of the fall."

Whatever may be the outcome in the American situation which Dean Johnson then proceeds very gloomily to depict, it would be regrettable if the possibility of trade with Russia should not be considered as one of the eligible remedies.

* * *

IN A letter written on January 8 to Mr. Alton B. Parker, President of the National Civic Federation, Mr. Norman H. Davis, Acting Secretary of State, discusses the American policy toward Russia, in the matter of passports, relief work, aid to military intervention, and postal communications. We understand the National Civic Federation has replied to Mr. Davis' letter, approving some portions and condemning others, but we have not yet seen a complete copy of the Federation's reply. We shall for the present take up only the portion of Mr. Davis' letter that concerns itself with relief work in Russia, and point out what organizations have really tried to do real relief work in Russia, and what organizations have made much feebler attempts to undertake such work.

Mr. Davis seems to have the impression that all the relief organizations, or the great majority of them, are convinced of the impossibility of doing "just", "impartial" relief work in Soviet Russia, without "interference" from the Soviet Government.

Representatives of the large relief organizations, with the knowledge and approval of the Department of State, have visited the central Soviet authorities in Moscow, in the hope of establishing a *modus vivendi* for such work, but with two exceptions have been met by rebuffs. In this matter the experience of this government has been identical with that of European countries, both those which were associated with us in the war and the northern neutrals. The only relief work which the Soviet will tolerate is the direct gift of supplies to the Soviet Government, to be distributed by them as their own largess. Quite aside from the question of whether this would be politically expedient, it is the opinion of almost all of those experienced in such work that it would be impossible to raise funds from private subscription on this basis.

The two exceptions to this have been, first, the Jewish Joint Distribution Committee, which, contrary to the opinion of their colleagues, have felt that it was possible to extend relief in Soviet Russia on the conditions drawn up by the Soviet authorities, and, second, the American Friends Service Committee (Quakers), which has been operating almost continuously in Russia on a small scale under British management.

It is unfortunate, for the reputations of the other bodies as philanthropic organizations, that they should appear as so much more fastidious in selecting the conditions under which they will distribute relief than are the Jewish Joint Distribution Committee and the American Friends Service Committee. No doubt the American Red Cross would like to have Russia by the throat and dole out its pittance to a humble and starving population, under its own modest officialdom, as it does in Vienna and the other ruined centers of the defeated and "associated" countries. But Soviet Russia fortunately can afford to reject aid that is conditioned upon a practical surrender of proletarian sover-

eignty. Soviet Russia has not been penetrated by the enemy as far as Moscow, and cannot yet be forced to admit counter-revolutionary relief organizations to distribute charity on its boulevards, under foreign and unfriendly auspices, to Russian men, women and children, as foreign propaganda.

Two organizations at least are ready to do what they can to give real relief to the people of Soviet Russia, and admit that the conditions under which the Soviet Government will permit them to do so are reasonable conditions. Furthermore, one of these organizations, the American Friends Service Committee, appears never to have relinquished its work in Soviet Russia, even after all other such organizations, including the American Red Cross, had been ordered out of the country, the order coming, by the way, from the United States, and not from the Soviet Government. No doubt the American Red Cross would like to distribute relief in Soviet Russia in such manner as to strengthen the morale of the expropriated counter-revolutionary classes, and to buy away the support of the underfed and less class-conscious proletariat from the Soviet Government; needless to say the latter will never permit them to operate under these circumstances.

Mr. Davis seems to suggest that the failure of some organizations to conduct relief work in Soviet Russia is due to the weakness and instability of the government of that country. We should be inclined to differ here: it seems to us that Soviet Russia is strong enough to conduct what forms of food distribution it considers proper, and that the failure to permit Soviet Russia to supervise relief is rather the suspicion that the Soviet Government is strong enough to conduct it in its own way, and might deal very effectively with any side-shows that might be set up outside the main tent.

We may have occasion to revert later to other sections of Mr. Davis' letter. For the present we shall conclude by asking him how he reconciles with his statement that the American Friends Service Committee and the Jewish Joint Relief Committee are conducting relief in Soviet Russia his other remark:

"The difficulties which have stood in the way of any accomplishments in this matter have been raised, not by this government but by the Soviets, who cannot find in their theory of Communism any excuse for private philanthropy."

* * *

NEWs recently came from Switzerland that the government of that country was trying to make arrangements under which it would be possible for Swiss merchants to obtain markets for their goods without the costly operations of exchange, with the present unfavorable and fluctuating rates. It is very probable that the circles which recognize the necessity of eliminating cash payments or exchange operations under the present poor conditions will widen, thus emphasizing more and more the sensibleness of the Soviet economy in Russia, which is gradually abolishing money altogether. See also the similar remarks of Dr. G. Vissering, a Dutch economist, in *SOVIET RUSSIA*, Vol. II, page 184.

Problems of Organization of Labor

By LEON TROTSKY

(*Second Instalment—Mobilization of Labor*)

THE carrying out of obligatory labor is inconceivable without an application of the methods of the militarization of labor in greater or less measure. As soon as we express this view, however, we at once encounter the most dreadful superstitions and the most heart-rending cry of dismay on the part of the opposition.

In order to grasp what the militarization of labor means in a labor state, and what are its methods, we must make clear to ourselves the task of the militarization of the army itself, which, as all must still recall, by no means possessed the necessary "military" qualities in its first period.

In the course of these two years we have mobilized for our Red Army only slightly fewer soldiers than would equal the membership of our trade unions. But the members of the unions are workers, while the workers constitute only 15 per cent of the army, the rest being peasant masses. And yet there cannot be the slightest doubt for us that the true architect and "militarizer" of the Red Army is precisely the advance worker who is placed in the foreground by the party or trade organization. Whenever the situation at the fronts became difficult, whenever the newly mobilized peasant masses failed to show the proper firmness, we turned to the Central Committee of the Communist Party on the one hand and to the Presidium of the Central Council of Trade Unions of Russia on the other hand. From these two reservoirs we attained advanced workers for the fronts and they erected the Red Army after their image,—trained, steeled, militarized the peasant masses. This fact must at present be borne in mind with great clearness, because it throws the necessary light on the whole situation of militarization in the Workers' and Peasants' state. The militarization of labor in the bourgeois countries of the west was made a slogan as well as in Russia under the Czarism, and was actually carried out in certain branches of industry. But our militarization differs both in goal and in methods from these attempts precisely as the conscious proletariat organized for its own liberation differs from the conscious bourgeoisie organized for purposes of exploitation.

From the half-conscious, half-malicious confusion of the historical forms of proletarian socialistic militarization with bourgeois militarization, arises the majority of the prejudices, protests, misstatements, and wails in this farce. Upon such a confusion of notions is based the entire attitude of the Mensheviks, our Russian Kautskians, as expressed in their declaration of principles, submitted to the present trade union congress.

The Mensheviks did not oppose the militarization of labor, but obligatory labor in general. They reject these methods as "compulsory" methods. They preach that labor duty is equivalent to di-

minished productivity of labor, and that militarization is a purposeless waste of labor power.

"Compulsory labor is always very little productive" is taken literally from the Menshevik resolution. This statement takes us to the very kernel of the matter. For as we see, the point is not whether it be reasonable or not to declare this factory or that to be in a condition of war; whether it be advisable to assign to the Military Revolutionary Tribunal the right to punish demoralized workers who steal materials and instruments so valuable to us or sabotage the work. No, the Mensheviks formulate the problem much more profoundly. They maintain that compulsory labor is always unproductive; they thus attempt to deprive our entire economic system in the present transition period of its bases. For there cannot be any such thing as discussing the question of a transition from bourgeois anarchy to socialist economy without a revolutionary dictatorship and without compulsory forms of economic organization.

In the first clause of the resolution of the Mensheviks, mention is made of the point that we are living in a period of transition from capitalist production to socialist production. What does this mean, and above all, where did they get this idea? Since when have Kautskians recognized this? They accused us—and it was the main point of issue between us—of social Utopianism; they maintained—and it was the essential kernel of their doctrine, that there was no possibility of a transition to Socialism in our epoch that our revolution is a bourgeois revolution and that we Communists are only destroying the capitalist economy, that we are not advancing the country but retarding it. This was the fundamental difference of opinion, the most irreconcilable profound opposition from which all others arose. Now the Mensheviks say to us en passant, in the introduction of their resolution, as if it were a statement requiring no proof, that we are engaged in a process of transition from capitalism to Socialism. And this utterly unexpected admission which resembles a complete ideological capitulation, is made all the more readily and easily since—as the whole resolution indicates—it proposes absolutely no revolutionary duties for the Mensheviks. They remain entirely in the meshes of the bourgeois ideology. Recognizing that we are situated at a turning point to Socialism, the Mensheviks nevertheless attacked with all the greater bitterness the methods without which it is impossible to carry out the transition to Socialism, under these severe and trying circumstances of the present day.

Compulsory labor—they tell us—is always unproductive. We ask: What do they mean by compulsory labor; i.e. to what form of labor is it opposed? Obviously to free labor. What do they

mean in this case by free labor? This conception was formulated by the advance ideologists of the bourgeoisie in their struggle against unfree labor, i.e. the serf labor of the peasants, and against the normalized, regulated labor of the guild craftsmen. Free labor means labor that could be purchased "freely" in the market. This freedom was really a juristic fiction to conceal the underlying free wage slavery. There is no other form of free labor in history. Let the numerically inconsiderable representatives of the Mensheviki in this Congress explain to us what they mean by free, noncompulsory labor, if not the market for labor power.

History knew slave labor. History knew the regulated labor of the medieval guilds. In all the world today wage labor prevails which is depicted by the yellow journalists of all lands as the pinnacle of freedom as opposed to the Soviet "slavery". But we oppose the capitalist slavery, with a socially ordered labor on the basis of an economic plan that is binding for the whole people and therefore compulsory for every worker in the country. No other method is possible in a transition to Socialism. The element of the material, psychological compulsion, may be more or less powerful—that will depend on many circumstances: on the degree of wealth or impoverishment of the country, on its traditions of the past, on the stage of its civilization, on the transportation and administration conditions, etc.—but the application and therefore also the compulsion is an inevitable demand in order to bridle the bourgeois anarchy, in order to socialize the means of production and to labor and in order to reconstruct economy on the basis of a unified plan.

For the liberal liberty in the last analysis is synonymous with the market. Whether the capitalist can purchase the labor power at an exploitable price or not—that is his sole criterion for freedom of labor. This criterion is wrong, not only with regard to the future, but also with regard to the past.

It would be absurd to pretend that in the days of serfdom all work was done only under the club of physical compulsion, as if the overseer with his whip had always been standing behind the back of each and every peasant. The medieval economic forms required very definite conditions of production and created definite forms of life to which the plain man adapted himself and which he recognized at certain times as just or at least as inevitable. Whenever, under the influence of alterations in his material conditions, he would take a hostile position, the state with all its physical forces would fall upon him and thus illustrate the compulsory character of the labor organization. The basis of the militarization of labor is expressed in the forms of national compulsion without which the substituting of a socialist economy for a capitalist economy will always be an empty sound. Why do we speak of a *militarization*? Of course this is only an analogy. But it is a very pregnant analogy. No other social organization, with the exception of the army, has ever considered itself justified to

subordinate citizens to such an extent, to envelop them on all sides by the application of its will as the state of the proletarian dictatorship is doing and considers itself justified in doing. Only the army, precisely because it disposes of the life and death of nations, states, ruling classes in its own way—had the right to demand from each and every one a complete subordination to its tasks, aims, provisions, orders. And it attained this condition the more efficiently, the more the tasks of military organization coincided with the needs of social evolution.

The question "to be or not to be" for Soviet Russia, is at present being decided on the labor front. Our economic organization of production, and together with them our trade union organizations, have the right to ask of their members all the self-denial, the discipline, and zeal which has hitherto been asked only by the army.

On the other hand, the relation of the capitalist to the worker, is by no means based only on "free" contract, but contains elements of state regulation and of physical compulsion.

The competition of capitalist with capitalist, bestowed upon the fiction of free labor a certain very incomplete reality, but this competition now reduced by syndicates and trusts to a minimum has been finally eliminated by us, by our abolition of private property in the instruments of production. The transition to Socialism—which the Mensheviki recognize in words—means the transition from a rudimentary distribution of labor power (by the play of purchase and sale, by motion of market and labor wages) to a planful distribution of workers through the economic organs of the district, of the province, of the entire country. Such a planful distribution presupposes the subordination of those to be distributed to the economic plan of the state. This is the essence of labor duty, which unquestionably is contained as a fundamental element in the program of the socialist organization of labor.

If a planful economy is inconceivable without labor duty, the latter cannot possibly be carried out without an elimination of the fiction of free labor, without replacing it by the principle of obligation, which is supplemented by actual compulsion.

That free labor is more productive than compulsory labor is true, to be sure, for the period of transition from feudal society to bourgeois society. But you must be a liberal or (in our day) a Kautskian, to attempt to make this truth immortal and to apply it to the epoch of transition from bourgeois society to socialist society. If it be true, as the resolution of the Mensheviki maintains, that compulsory labor is always and under all circumstances unproductive, our entire system is doomed to destruction. For there is no other way to Socialism except that of an absolute full control over the economic forces and instruments of the country, of a centralized distribution of labor power, in accordance with a nation-wide plan. The Workers' State considers itself justified in assigning each worker to the place

where his work is necessary. And not a single serious Socialist will attempt to deny the Workers' State the right to lay a heavy hand upon the worker who refuses to fulfill his labor task. But the very trouble with the road that the Mensheviki would take to "Socialism" is that it is a milky way without a grain monopoly, without an elimination of the market, without a revolutionary dictatorship, and without a militarization of labor.

Without labor duty, without the right of giving commands demanding obedience, the trade unions will be turned into an empty form without content, for the Socialist State we are building does not need the trade unions in its struggle for better labor conditions—that being the task of the entire socialist and national organization, but in order to organize the working class for purposes of production, to train, to discipline, to distribute, to group, to attach the individual groups and workers for different purposes to their posts—in a word to attach the workers imperatively to the frame of the single economic plan, hand in hand with the state. Under such conditions to defend the "freedom" of labor is equivalent to defending a fruitless and helpless and planless groping for better conditions, a systemless, chaotic transfer from one factory to another, and all that in a hungry land, in which the transportation and provision system is terribly disorganized. What could be the outcome of the absurd attempt to combine a bourgeois labor freedom with the proletarian Socialism of the means of production, unless it be a complete collapse of the working class with a resulting economic anarchy?

Therefore, comrades, the militarization of labor in the fundamental sense that I have proposed, is not an invention of individual statesmen or our Commissar of War, but an inevitable method for organization and disciplining labor power in the transition period from capitalism to Socialism. And if the compulsory distribution of labor power, its shorter or longer assignment to individual branches of production or industries, its regulation in accordance with a nation-wide economic plan—if all these compulsory forms everywhere and always (as the resolution of the Mensheviki says) lead to diminishing of the productivity of labor—then let us bury Socialism. For Socialism cannot be based on a decreasing productivity of labor. And if our new organization of labor is to lead to a decrease in its productivity, the Socialist society which we are building will inevitably descend thereby to its final ruin, however much we may resist and whatever may be the remedies our ingenuity may devise against such a consummation.

That is why I said at the outset that the Menshevik argument against this militarization led us to the central question of labor duty and its influence on the productivity of labor. Is it true that compulsory labor is always unproductive? Our answer must be that this is simply a most lamentable and empty liberal prejudice. The whole question is by whom, against whom and for what purpose the compulsion is exercised—by what state,

by what class, under what circumstances, by what methods? Even the feudal serf labor was under certain circumstances a progress and led to an intensification of productivity of labor. This productivity rose enormously under capitalism, i.e. in the epoch of free purchase and sale of labor power on the market. But when free labor together with capitalism entered into the stage of imperialism, it exploded itself absolutely in the imperialistic war. The entire world economy is in an epoch of bloody anarchy, tremendous convulsions, impoverishments, degeneration, decay of the popular masses. Can we under such circumstances speak of a productivity of free labor, where the fruits of this labor are being destroyed ten times as fast as they are being produced. The imperialistic war and all that followed in its wake have shown the impossibility of a continuance of society on the basis of free labor or does someone perhaps possess the secret of accomplishing the divorce of free labor from the insanity of imperialism, of pushing back the social development for half a century or even a full century? If it should turn out that the planful and consequent compulsory organization of labor which is to succeed imperialism leads to a decline of the economic life, this would mean the destruction of our entire civilization, a recession of mankind to barbarism and savagery.

Fortunately, not only for Soviet Russia but also for all the rest of humanity, the philosophy of the low productivity of compulsory labor "under any and all circumstances" is only a belated variant of certain timeworn liberal melodies. The productivity of labor is the resultant of the entire complex of social conditions and will neither be cured nor determined by the juristic formula of labor.

The entire history of humanity is the history of the organization and education of collective man for work, for the attaining of a higher productivity. Man—as I have already permitted myself to point out is lazy—i.e. he is intensively inclined to attain the greatest possible quantity of products with the least possible exertion of effort. If he did not have this ambition, there could not be any economic development. The growth of civilization is measured by the productivity of human labor, and each new form of social relations must bear the test of this criterion.

"Free", i.e. freely purchased wage labor by no means began its existence clothed in the complete armor of productivity. It did not attain a high productivity until rather late, as a result of a rather long application of the methods of labor organization and labor compulsion. This training involved the most varied ways and means, changing furthermore from one epoch to another. At first the bourgeoisie drove the peasant with clubs out of his villages onto the highways, after first having deprived him of his land and when he refused to work in the factories they branded his forehead with red hot irons, hanged him, sent him to the galleys, and at last succeeded in adapting to the work bench of the factory the tramp that had been driven out of his native fields. In this stage "free"

labor, as we can readily see differs very little from compulsory labor, both with regard to material conditions as well as to the legal situation.

In the various epochs the bourgeoisie has united the red hot iron of repression in varying degrees with the method of mental suggestion, particularly through the sermons of the priests. Already in the sixteenth century it reformed the old Catholic religion, which was defended by the feudal order, and established for itself a new religion in the guise of the reformation, in which freedom of the spirit appeared together with free trade and free labor. It found new priests, who became the spiritual agents, the pious tabulators of the bourgeoisie. Schools, press, Council, Chamber, Parliament, were adapted by the bourgeoisie to the purpose of mentally influencing the working class. The various forms of wage labor—the daily wage, lump payment, piece work, collective agreement—all these are only varying means in the hands of the bourgeoisie for training the proletariat to work. We must add the following forms of encouragement to work and of spurring on the instinct of ambition. And finally, the bourgeoisie succeeded in making use even of the trade unions, i.e. the organizations of the working class itself, and particularly in England, devoting them in the most exclusive manner to the task of disciplining the workers. It tamed the leaders and through their intermediation inoculated the workers with the belief that peaceful organic labor, and unimpeachable fulfillment of duty, and a strict observance of the laws of the bourgeois state are a necessity. The climax of all this work is formed by the Taylor system, in which elements of the scientific organization of the process of production are united with the most concentrated forms of sweating.

From the above it must be clear that the productivity of labor freely hired is not something fixed, and finally, presented by history on a platter. No, it is the outcome of a long and stubborn policy of elements of oppression, education, organization and encouragement. Step by step the bourgeoisie has succeeded in drawing from the workers increasing quantities of commodities and one of its most powerful means of doing this has been its proclamation that free contract is the only free, normal, healthy, productive and wholesome form of labor.

A legal form of labor assuring *per se* a productivity of labor, has not existed in history and cannot possibly exist. The legal envelope of labor will correspond to the circumstances and conceptions of the epochs in question. The productivity of labor develops on the basis of the increase in technical powers, by labor education, by gradual adaptation of the workers to the altering means of production, and to the new forms of social relations.

The creation of a socialist society means the organization of the workers on new foundations, their adaptation to these foundations, their education to new forms of labor, with the one goal remaining unaltered,—increasing productivity of labor. The working class under the leadership of its vanguard

must educate itself anew on the foundations of Socialism. Anyone who does not understand that has not even learned the alphabet of the socialist system.

What means are at our disposal for the reeducation of the workers? We have incomparably more far-reaching means than the bourgeoisie had, and furthermore they are honest, straight, open means, infected neither with hypocrisy nor deception. The bourgeoisie was obliged to practice deception by designating its labor as free labor, in spite of the fact that this form of labor is not only one that is produced by social compulsion and even much resembles slavery, for it is a labor on the part of the majority in the interests of the minority. But we organized a labor in the interests of the workers themselves and therefore we can have no motives whatever to conceal or to mask the social compulsion underlying this labor organization. We need no fictions from the mouths of priests or liberals or Kautskians. We tell the masses frankly and plainly that they can only save their socialist country by hard work, by unconditional discipline, by punctual obedience on the part of each toiler; only thus can we raise it and bring about a flourishing condition of its life.

Our most important method is that of influencing ideas, is propaganda not by deed alone. Labor duty has a compulsory character, but this does not by any means imply that it is a violation of the working class. If labor duty should encounter the resistance of the majority, it would be destroyed and with it the Soviet system. The militarization of labor proceeding against the resistance of the workers, would be an Arakcheyev system. But a militarization of labor by the will of the workers themselves, this is a socialistic dictatorship. The fact that labor duty and the militarization of labor do not do violence to the will of the workers as was the case with "free" labor is evidenced by the flourishing of the voluntary performance of labor in the shape of labor Saturdays, a phenomenon unexampled in history. There never before has been such a practice anywhere. Through their voluntary, unselfish labor, once or more often in a week, the workers eloquently reveal not only their readiness to assume the burden of "compulsory" labor, but also their effort to give to the state a certain additional amount of labor besides that required. The Saturdayings are not only a splendid manifestation of Communist solidarity, but also the most unmistakable pledge for the successful execution of labor duty. This truly Communist tendency must be illuminated, extended and deepened with the aid of propaganda.

The chief spiritual weapon of the bourgeoisie is religion; with us it is a straight presentation of the actual state of affairs to the masses; a spread of scientific and technical knowledge, the initiating of the masses in the nation-wide economy on the basis of which all labor power must be applied, that is at the disposal of the Soviet Government.

During the preceding epoch the chief contention of our agitation was that of political economy: the

capitalistic order of society was a riddle and we have solved this riddle in the eyes of the masses through the simple mechanism of the Soviet Government which attracts all the workers to a participation in all the fields of administration. Political economy will now be relegated more and more as time progresses, to a merely historical importance. The foreground will now be occupied by the sciences that investigate nature and the means of making nature subservient to man.

The trade unions must organize the scientific-technical work of enlightenment with the broadest possible compass, so that each worker may receive stimulation in his own work for a theoretical intellectual labor and so that this latter may again lead him back to his work, affect it, make it more productive. The public press must take its cue from the economic tasks of the country, not only in the sense that is now the case, i.e. not only in the sense of a general agitation in favor of increasing labor exertion, but also in the sense of discussing and evaluating the great economic tasks and proposals, ways and means for solving them, and chiefly—checking, testing, estimating, the results of this labor. Day by day the newspapers must follow the production of the most important industries and other enterprises, must register accomplishments and failures, praise some and censure others.

Russian capitalism, which was a belated, dependent and therefore parasitic form of capitalism has had the opportunity of training the working masses in a technical manner, and disciplining them for production to the same extent as did the capitalism of Europe. This task now devolves fully upon the trade union organizations of the proletariat; a good engineer, a good machinist, a good locksmith, must become just as famous and well-known in the Soviet Republic, as were formerly the prominent agitators, the revolutionary fighters and latterly the most courageous and able commanders and commissars. The technical leaders, great and small, must occupy the center of public attention. The poor workers must be forced to be ashamed of the fact that they do poor work.

Wages for labor have remained in existence in our country and will probably continue to remain. In the long run their importance will consist more and more in the necessity of providing all the members of society with everything that they need; and precisely in this manner will it cease to be wages for labor. But at this moment we are not rich enough to do this. Our chief task consists in elevating the quantity of commodities produced and all other tasks are subordinated to this. In our present difficult period wages for labor are for us not a means of securing the existence of the individual worker, but a means for recording that which the individual worker accomplishes through his work for the Republic of the Workers.

Therefore wages for labor, both in the form of money and in that of commodities, must be made to coincide as far as possible with the productivity of the individual labor. Under capitalism, piece work and agreements for pay, application of the

Taylor methods, etc., had the object of increasing the exploitation of the workers by squeezing out a surplus profit. In socialist production, pay for piece work, premiums, have the object of increasing the social production and with it also the general well-being. Thus the workers who contribute more to the general well-being than others will have the right to a greater share of the social product than idlers, wastrels, and disorganizers.

Finally: if the Workers' State rewards some, it cannot do otherwise than punish others, namely those who openly violate the solidarity of labor, obstruct the general efficiency, inflict serious damage upon the socialistic restoration of the country. Reprisals in the interest of an attainment of economic aims are a necessary tool of the socialistic dictatorship. All the measures enumerated, not to mention a number of others, are to make sure that zeal in the field of production is to increase. Otherwise we shall never rise above an extremely insufficient level of mediocrity. This zeal is based upon an instinct of life—the struggle for existence—which under the bourgeois order assumes the character of competition. This emulation will not disappear even in a fully developed socialistic society, but, with the increasing supply of the necessary means of life, this emulation will assume a more and more unselfish, more and more ideal character. It will be expressed in the effort to perform for one's village, one's district, city, or for society as a whole as great as possible services, and to receive as one's reward the celebration, gratitude, and sympathies of others, or finally even one's own personal satisfaction in the performance of good work. But in the difficult transition period, in view of the extreme lack of material things and the still altogether insufficient development of the feeling of social solidarity, this emulation must be more or less connected with the effort of providing oneself with the products necessary for personal consumption.

That is the number of means, comrades, that are at the disposal of the labor state for the raising of labor productivity. There is no ready made solution to this question, as we may see. You will not find it written down in a book. In fact there cannot be any such book. We only begin now to set down this book with the sweat and blood of the workers. We say: men and women workers, you have entered upon the road of regulated labor. Only by this road will you erect a socialistic order. You are facing the task that no one will solve for you: the task of raising the productivity of labor on a new social basis. If you do not solve this question, you will go down. If you solve it, you will advance humanity.

(To be concluded in our next issue)

The Russian Soviet Government Bureau does not object to the reprinting in other periodicals of articles taken from SOVIET RUSSIA. It asks, however, that in return for the privilege of reprinting, editors extend the courtesy of sending a marked copy to SOVIET RUSSIA of each of their issues containing a reprinted article.

Patchwork and Petticoats

By JOHN S. CLARKE

"It is the fate of woman
Long to be patient and silent, to wait like a ghost that
is speechless,
Till some questioning voice dissolves the spell of its
silence,
Hence is the inner life of so many suffering women
Sunless and silent and deep, like subterranean rivers
Running through caverns of darkness, unheard, unseen
and unfruitful,
Chafing their channels of stone with endless and profit-
less murmurs."

—Longfellow.

Returning to the hotel one evening we met one of its lady officials accompanying four or five conspicuously well-dressed visitors. We knew they were visitors by the comparative completeness of their garb, for in Russia everybody wears anything that will hide their mother-nakedness, irrespective of whether it fits them or not, or whether it "becomes" them or not. Rags, oddments, and misfits are at present extremely fashionable in the large towns and cities. If by any chance a person is even immaculately attired no one takes the slightest notice of it. He or she has been lucky enough to get hold of something in the way of clothing that is new enough to *last the longer*—that is all.

The chief function of clothes is to protect the body, and whatever does this in any part of the world, or has done so in past epochs, is fulfilling and has fulfilled the supreme purpose of its manufacture. Paleolithic man wore the skins of wild beasts—modern ladies and gentlemen do exactly the same, but more cruelty is involved in procuring the skins now than there was in Paleolithic days. Civilization is infinitely more cruel than savagery.

The secondary purpose of clothing is to adorn, and so far as modern civilization has cultivated the taste for ornamental attire, feminine fashion has been largely dictated by sexual selection. Viewed from the standpoint of mere utility the Russians are *well clad*, and the maudlin pity showered upon them by fastidious dudes and animated female fashion plates, who have condescended to take a fleeting glimpse of them, is quite gratuitous. From the secondary or esthetic point of view the plight of the Russian people is indeed lamentable—to the male and female "knut" spectator, but fortunately the assiduity with which the majority of Russia's city dwellers apply themselves to the realities of life leaves them neither time nor inclination to sit and bemoan the temporary absence of its external trappings. They are clean—cleanliness of body is a positive obsession with them—and with the limited amount of makeshift but adequate clothing at their command they succeed in presenting a neat, if not superlatively attractive, exterior to the world. Certainly the desire to "look nice" is a highly laudable one in anyone, and the Russians are no different to others in this respect, but clothing has ceased to be an indication of "caste" in Russia, so no one is seriously perturbed at the necessity of having to appear in public wearing whatever he can get hold of it. All these tales about the

people staring bulging-eyed at a pair of boots and reverently fingering a cloth garment are so much romantic moonshine. The only people we saw minus boots were a few Polish war prisoners who had marched the boots from off their feet. These poor ragged, unkempt, and dejected creatures hobbled painfully along the cobbled streets to the prisons—some with pieces of rag tied around their bruised feet, some with naked bleeding feet—looking the very embodiment of war's most hellish misery. The tragedy of it all is that the Bolsheviki, under present conditions, cannot provide them with comforts for they lack these comforts themselves.

The tearful lament over cropping of hair on the part of pretty maidens and bourgeois women who cannot obtain hats ("creations") is another example of western ignorance and sickening sentimentality. Cropped hair has been fashionable with Russian women since Nihilist days in the sixties and seventies of last century, and the majority of Russian women (not bourgeoisie) have never at any time worn any other kind of headgear than the kind they at present wear—a kerchief tied around the hair and knotted. They, in their wisdom, prefer it too.

To return to our party. It was the French delegation returning home after making its peace with the Soviet Government. Its leaders were Marcel Cachin, editor of *L'Humanité*, and Frossard. We stood with them and chatted, through the interpreter, with Cachin, who told me he was a regular and appreciative reader of the "Worker". He is strikingly like Robert Blatchford in size and feature, and apparently as erratic, but infinitely more honest and sincere than that person. His attitude towards the Bolsheviki had been more or less unfriendly, although he had never relaxed in his whole-hearted support of the Revolution, but his visit to Russia, the sights he had witnessed, and the verbal castigations he had received were all conducive to a more rational frame of mind, and poor Cachin wept and repented. Frossard I did not speak to and know nothing about.

We bade them an revoir with mutual good wishes for the World Revolution, and turned the street just in time to watch an inspiring march of a Red regiment—of women.

They moved with the perfect precision of a battalion of pre-war Cameron Highlanders, their short blue skirts swaying with the rhythmical swing of the kilt, their shoulders back and heads defiantly erect. Every rifle was bayoneted, and from the tip of each bayonet a tiny scarlet pennon flew. A khaki "glengarry", perfectly-fitting neat khaki tunic with waist belt, which permitted the lappets to fall gracefully over the hips, and hose and boots completed the uniform. The usual military equipment—cross belts, haversack, and sheath for the side-arm, were in their customary places. Most of the soldiers were young women, and uncommonly

handsome women too, and the perfect ease, dignity, and grace with which they marched created an impression never to be erased from memory. What a marvelous part *woman* has played in recent Russian history. Since the early days of the Nihilist movement, which vindicated the equality of the sexes, the women revolutionists has been ever to the fore. For decades she worked away, hidden, at dangerous outpost work, which in many cases could not be trusted to men. She organized secret printing plants, manufactured bombs, planned and carried through successfully political assassinations and the executions of traitors, carried propaganda to the army, fought with heroism at the barricades, and continued to fight in prison and at Siberia. Russia is, and has been, the mother and nurse of heroes of undying fame and glory, but she has been not one whit less so the builder of heroines. Mistaken ideas, false tactics, wrongful methods—what you will—can never dim the glory which hallows the names of Vera Zassulich, Sophie Perovskaya, "Babushka"-Breshkovskaya, Marie Zebrikov, Vera Figner, Sophie Bardina, Marie Spiridonova, Zinaida Konopliannikova and Alexandra Kollon— which was laid by the Bolsheviks of Russia in 1917, say. The World Revolution, the corner-stone of will owe a large measure of its success to militant and dauntless womanhood. It was the strike of women textile workers on the Vyborg side of Petrograd which gave the stimulus to the uprising of 1917. By pouring into the city, just as the French proletarian women did with the *Ca ira* on their lips, when they returned in triumph from their memorable march to Versailles over one hundred years ago, they gave the signal for the great proletarian revolt which culminated in the Social Revolution. Incidents of the past flashed through my mind as the musical beat of the drum gave the measure to the marching feet of the Petersburg Amazons. Here, thought I, is the acme of the triumph of rebellious womanhood. Militarism was forgotten. The dirge of woman's martyrdom of subjection to the unqualified demands of the man fled before the mighty epic of woman erect, proudly defiantly free, equal, and armed with the fighting instruments of the male. The killing weapons at her shoulder—and rightly so; too long has she fought without them. But killing is not woman's work! So says her oppressor, man, but he did not hesitate to use her for such a purpose during Tsarism. The women's "Death Battalions" existed in the Tsar's army, though they failed miserably—as miserably as the men soldier did—on the firing line. They had nothing to fight for unless it was the false sanctity surrounding the name of a little criminal lunatic. The women today are different—they fight because they want to, not for fighting's sake, but because they know who the greatest sufferers will be should Tyranny return to power. They are just different to any women who have trod the planet since womanhood was free under the Communism of the gens. Soviet Russia has been the first to exalt her, for Communism is returning, and with it must return the finer recognition of the wondrous potenti-

alities which have been denied activity and expression in woman, the property, slave, and plaything of man. Like the women of old, the women of Soviet Russia occupy important offices of state; they "sit on high councils"; they legislate under the Dictatorship of the Proletariat—and fight on battlefields.

These women are volunteers; not one of them is conscripted unless she is a member of the Communist Party, then military duties are obligatory for her as for her men comrades. During the call for volunteers they swarmed in great numbers for mobilization, and fought in the trenches as bravely and fiercely as the men.

They are employed in countless ways; in the hospitals, libraries of the army, schools, on garrison duty and field post-office work. One result of the mobilization and militarization of women has been the elevation of the morality of men. Part of their duty at the front has been to inspire, not only courage, but good discipline, neatness, self-respect, and general fitness in the ranks. The moral effect of these fighting women has been tremendous, for one must always remember the *motive*. In ordinary capitalist wars a soldier is *encouraged* to take advantage of any license permitted him, because it is necessary to humor these weaknesses of the flesh which war's excitement and an enforced celibacy engender.* He is encouraged to do so because he is fighting the battles of his own economic enslavers, and were the light of manhood and knowledge to penetrate his dull and besotted brain, it might prove disadvantageous to his "superiors". Hence the establishment of brothels in occupied areas, the enviable immunity from supervision of the prostitute class in garrison towns, and the blinking on the part of the authorities at wholesale rape committed upon women by their "heroes".

In Soviet Russia the very opposite is the case. The soldier is not merely told that he is fighting for small nations, for the honor of "scraps of paper", etc.—*he knows that he is fighting for the Revolution, for his own liberty, for his hearth and home, for the future emancipation of the world's workers, men and women.* It is an uncomfortable and dangerous task he is engaged in, but his freedom from tyranny and economic servitude is *really* dependent on his courage, his patience, and his endurance, and because he is fighting for himself

* The staff of the 256th Brigade of French Army of Occupation issued instructions, which were published in *L'Humanite*, August last year, for the control of a German brothel. Some idea of the bestiality into which mothers unwittingly pushed their sons, girls their sweethearts, and wives their husbands during the great war may be gathered from this document. There were "only two women" in the brothel, and they had to serve the civil population first, or, as the instructions read, "regular German and Belgian clients must be attended to first." The resources of the town "did not permit any increase of the personnel" so cards were allotted to the soldiers. Here is the specific paragraph:

"In order to prevent disorder and in order not to exact from these women work beyond their strength, the following measures will be taken: These measures include the division of the time of the women amongst the men of the various battalions. In every battalion there will be on each allotted day twenty tickets—five to each company. Men wishing to visit the establishments will apply to their sergeant-major."

Readers might refer to "The Queen's Daughters in India" by Katherine Bushnell, wherein is quoted the frantic appeals for more brothels by the late Christian Lord Roberts, F.M., for proof that the British Government is as rotten as the French.

and his comrades he needs neither alcoholic drink to give him courage nor sexual indulgence to ease the monotony of his life. There is, accordingly, little expenditure of effort needed here to bring a soldier to the realization of the moral obligations placed upon him, and what little is needed is imparted almost unconsciously by the splendid women, whose very presence with him in defending the Revolution carries conviction of the sacredness of the cause.

When the White Guards threatened Petersburg, Odessa, Samara, and other large cities, the women inhabitants were given the opportunity of defending their homes. Mobilized first for auxiliary service, they went to the factories as the women in Britain did during the war. Many, however, left the workshops and volunteered for service under arms. They were equipped and drilled, trained to the use of firearms, and stood ready to defend the city to the last drop of blood. Now the "Voevobuch" or General Military Training numbers hundreds upon hundreds of proletarian women. I visited the district school at Petersburg on my second visit, and watched their evolutions. I saw one woman spin a service rifle, holding it in the centre, with the

strength of a man and the skill of a juggler. I watched another hit the bull's-eye four times in succession, firing with an automatic pistol at twenty-five yards. I watched them at gymnastic exercises and military drill, and heard some of them sing in deliciously sweet and delicate tones.

There is a special training school for women officers—the first woman to pass through left for the front in the autumn of 1919; she had previously been a factory hand in Petersburg. The very thought of a return to Tsarism, a return to the old tyranny, economic and domestic, which life so oppressive for the women of Russia, would be sufficient to bring thousands of women warriors flocking to the army to resist it. That is why the woman soldier fights with such unbounded enthusiasm today. She also is defending her newly acquired liberty—not waging a war to protect the profits and extend the power of exploitation of the capitalist class. Their behavior on the field of battle has been magnificent. They have displayed every virtue, courage, cheerfulness, indifference to pain and discomfort, and military ardor possessed by their men comrades.

British Denial of Russian Sovereignty

By LINCOLN COLCORD

THE latest monkey wrench in the wheels of trade with Russia has been thrown by the British Courts, in the judgment recently handed down by Justice Roche. To quote the case from a public statement issued by the All-White Russian-American Chamber of Commerce—the italics are mine:

"The facts were that timber belonging to a Russian firm was confiscated in 1918 by the Soviet Government. In August, this year, Krassin, the Soviet commercial agent in London, disposed of this timber by contract to an English firm. When part of the timber arrived in England the original owners laid claim to it, and now, by Justice Roche's judgment, the claim is sustained and the claimants declared to be the rightful owners.

"The practical effect of this judgment is to invalidate all such contracts made by the Soviet representative or in his behalf, if it can be proved that the goods in question have been seized by the Soviet Government from their rightful owners, or even if *the produce from the soil from which the real owners have been expropriated is exported as Soviet property*. The main point at issue in the case was that since the British Government had never recognized the Soviet Government no decree by the latter expropriating private property could be considered valid in England."

Here we have a plain case of the new international brigandage that has become openly current since the war; a case so flagrant, irresponsible and naive that it can only be supported by an opinion which refuses to take cognizance of the most ele-

mentary logic—that is, by the desire and determination of thieves.

The question actually at issue is not property, but rather sovereignty. British Courts are arrogating to themselves the establishment of fundamental law and the interpretation of that law *for Russia*. That is, they are assuming both a legislative and a judicial function for Russia, on the strength of the fact that the British Government refuses to recognize the Government of Russia. It is an interesting revelation, also, of the strength of capitalist internationalism, that this decision in the British courts runs contrary to British interests; for the institution of property must be maintained at any selfish cost.

It is easily to be noted, of course, how broad and inclusive this legal decision in England may become, as a weapon of the international thugs who require loot and exploitation, but who quaintly enough, in the best manner of diplomatic hypocrisy, always like to have a piece of paper and a few sounding phrases to cover the steal. I have italicized a clause which is self-revealing. The moment British courts refuse to validate the expropriation of land in Russia, that moment the case for every commodity, from toothpicks to diamonds and platinum, is thrown wide open.

But are the British courts, are the British and American governments, or is the Russian-American Chamber of Commerce, willing to accept the whole logic of this remarkable and fantastic decision? Applying nothing but straightforward common

sense to the cause, these facts stand out beyond denial:

1. If the British courts deny the sovereignty of the Russian people, and assume legislative and judicial functions for Russia, then the Russian courts and the Russian Government are entirely justified in denying the sovereignty of the English people.

2. If the British courts, basing their action on the refusal of the British Government to recognize the Soviet Government, decree that no denial of property rights shall be valid in Russia, then the Soviet Government is equally justified in applying its conception of property rights to the situation in England.

3. What becomes, then, of the hypocritical demand on the part of capitalist governments that the Soviet Government refrain from propaganda for Communism in their countries? While the courts and Government of Great Britain refuse to recognize Russian sovereignty, why should the Russian Government respect British sovereignty?

Denial of Russian sovereignty is, of course, nothing new; the whole Russian policy of Great Britain, France and America for the past three years has been based on this position. The whole enterprise of intervention in Russia has been calculated only to overturn the government which Russia supported and to set up a government in opposition to the will of the Russian people.

Yet, after all, this has taken place in the field of capitalist diplomacy, in the realm of the imperialist foreign offices, where one has learned to expect neither truth nor honor. Never before have we been treated to a public prostitution of the legal processes on the score of Russian policy, whereby the courts of one country assume the legislative function for another country and propose to deny the sovereignty of that country. It is an interesting case, and may become even more interesting if pushed to the limit.

Indeed, the old conceptions of justice and democracy, of what it is that constitutes sovereignty, of what it is that constitutes a government, of what the legislative function is in contra-distinction to the judicial function, of where the power rests and of how it shall be used: all these have been badly shattered by the experience of the war and by the vigorous pressure of new ideas that comes with increasing force out of the great awakening of Russia. The governments are creaking and wobbling, not at all from the impact of physical power, but solely through their own infirmity and confusion. When they no longer recognize their own correct functions, when they perform acts which if turned against themselves would destroy their very foundations, then they reveal how weak and sick and desperate they are.

They will not fall by force of arms. They will fall by the passage of time and the inexorable force of inability. But of this they themselves cannot form an accurate conception. They only know how to dread and to prepare against the force of arms.

JOHN REED

By G. F. NYE

"John Reed dead of typhus in Russia."

Like cold, smooth stones the words fall, numbing
my heart.

Dully I ponder—

Can they be true?

Why, his words are yet warm.

His name brings the throb of life most intense to
my blood.

The flame at which he lit his torch burns brighter
and brighter.

The storm on which he rode, strong-winged and
free, sweeps on.

Yes, he is dead.

All these weeks he has lain, sickening, decaying,
Silent in stupor or babbling unmeaning and hideous
things.

Now he is only a clod of corruption returning to
earth,

A ripe fruit of pestilence for those who have planted
and watered the tree.

He is dead of typhus in Russia.

Oh, John Reed, if your spirit still lives and can
speak

As it spoke through the lips now blackened and
fallen,

Let it tell to the High Gods—if they be and can
hear—

Of that plague-stricken Russia,

Hunger gnawing within, the wolf-packs of Europe
upon her—

Wolves in sheeps' clothing, but their foul fangs
white-gleaming.

Tell all the dark story of intrigue and poison and
torture—

You know how to tell it.

Oh, before you forget it,

Before your magic has faded and scattered,

Tell it all to the High Gods—

They must listen to you!

RUSSIAN SOVIET GOVERNMENT BUREAU

January 12, 1921.

We have received today a cable from Mr. George Chicherin, Commissar for Foreign Affairs at Moscow, emphatically denying the rumors recently appearing in the press regarding alleged "mobilizations" of the Soviet Russian army. Mr. Chicherin reiterates the desire of the Soviet Government for peace and an opportunity to devote all its energies to constructive work. Referring to the inspired despatches emanating from anti-Soviet sources concerning alleged military plans of the Moscow Government, Mr. Chicherin cables as follows:

"Emphatically deny rumors in the American press alleging Russian mobilization against Poland, Rumania or any other country. We want peace and a chance to work.

"(Signed) CHICHERIN,
"Commissar for Foreign Affairs."

The Trade Negotiations at London

RUSSIAN AND ENGLISH DRAFTS OF PROPOSED TRADE AGREEMENTS

[In our issue of January 1 we reprinted from the "Manchester Guardian Weekly" of October 8, 1920, the text of a draft trade agreement between the British Government and the Russian Soviet Government proposed during the early course of the negotiations at London. At that time we did not have the official text either of that proposed agreement or of the subsequent drafts. We have now received from the Russian Trade Delegation in London the official text of the British draft trade agreement handed to Mr. Krassin on November 29, together with the counter-proposal submitted by the Russian Soviet Government on December 13. We publish these two documents in full below. Recent press dispatches report that Mr. Krassin is returning to Moscow with an agreement submitted by the British for the approval of the Soviet Government. We have not yet received the text of this latest draft. While it is possible that neither of these texts may even approximate the form that will finally be signed, both will be found interesting by students of international affairs for the light they throw on the evolution of this document that will have such a great significance in the history of the relations between Soviet Russia and other countries.]

THE BRITISH DRAFT

(Submitted by the British Government to the Russian Soviet Government Trade Delegation at London on November 29, 1920.)

Draft Trade Agreement Between His Britannic Majesty's Government and the Russian Soviet Government

WHEREAS, it is desirable in the interests of both of Russia and of the United Kingdom that peaceful trade and commerce should be resumed forthwith between these countries, AND WHEREAS, for this purpose it is necessary pending the conclusion of a formal treaty between the governments of these countries by which their economic and political relations shall be regulated in the future that a preliminary agreement should be arrived at between the Government of the United Kingdom and the Russian Soviet Government.

The aforesaid parties have accordingly entered into the present agreement for the resumption of trade and commerce between the countries, which agreement shall not be deemed to affect the view which either party may hold as to the legal status of the other.

The present agreement shall remain in force, subject to the provisions of Article 7, so long as the conditions contained in the agreement and those hereinafter set forth are observed on both sides, namely:

- (a) That each party refrains from hostile action or undertakings against the other and from conducting outside of their own borders any propaganda direct or indirect against the institutions of the other party and more particularly that the Soviet Government desists and refrains from undertaking or assisting any hostile action or propaganda in the United Kingdom or any part of the British Empire against the institutions of the British Empire and from any attempt by military, diplomatic, or any other form of action or propaganda to encourage any of the people of Asia in any form of hostile action against British interests or the British Empire especially in the regions of the Caucasus and Asia Minor, Persia, Afghanistan, and India, and also restrains Russian citizens from any such action or propaganda.

- (b) That all British subjects in Russia are permitted to return home, and that all Russian citizens in Great Britain or other parts of the British Empire who desire to return to Russia are similarly permitted to do so.

In the event of the infringement by either party of any of the conditions contained in the agreement or of either of the stipulations set forth above, the other party shall have the right immediately to terminate the agreement; and the parties mutually undertake that in the event of such termination they will afford all necessary facilities for the withdrawal and egress from their territories of the nationals of the other party and for the withdrawal of their moveable property.

1. Both parties agree to remove forthwith all obstacles, hitherto placed in the way of the resumption of trade between the United Kingdom and Russia in any commodities

(other than arms and war material) which may be legally exported from or imported into their respective territories to or from any foreign country, and not to exercise any discrimination against such trade as compared with that carried on with any other foreign country.

Nothing in this provision shall be construed as overriding the provisions of any international convention which is binding on either party, by which the trade in any particular article is regulated.

2. British and Russian merchant ships, their masters, crews and cargoes, shall in ports of Russia and of the United Kingdom respectively, receive in all respects the treatment, privileges, facilities, immunities and protection which are usually accorded by the established practice of commercial nations to foreign merchant ships, their masters, crews and cargoes, visiting their ports.

PROVIDED that nothing in this article shall impair the right of either party to take such precautions as are authorized by their respective laws, with regard to the admission of aliens into their territories.

3. Each party may nominate such members of its nationals as may be agreed from time to time as being reasonably necessary to enable proper effect to be given to this agreement, having regard to the conditions under which trade is carried on in its territories, and the other party shall permit such persons to enter its territories and to sojourn and carry on trade there provided that either party may restrict the admittance to or sojourn in its territories to any individual who is *persona non grata* to itself, or who does not comply with this agreement, or with the conditions precedent thereto.

Persons admitted in pursuance of this article into the territories of either party shall, while sojourning therein for purposes of trade, be exempted from all compulsory service whatsoever, whether civil, naval, military, or other and from any contributions, whether pecuniary or in kind, imposed as an equivalent for personal service and shall have right of egress.

Persons admitted into Russia under this agreement shall be permitted freely to import commodities destined solely for their household uses or consumption.

4. Either party may appoint one or more official agents to reside and exercise their functions in the territories of the other, who shall enjoy all the rights and immunities set forth in the preceding article, and also immunity from arrest, provided that either party may refuse to admit any individual as an official agent who is *persona non grata* to itself, or may require the other party to withdraw him should it find it necessary to do so on grounds of public interest or security. Such agents shall have access to the authorities of the country in which they sojourn for the purpose of facilitating the carrying out of this agreement and of protecting the interests of their nationals.

Official agents shall be at liberty to communicate freely with their own government by telegraph, and wireless telegraphy in cypher and to receive and despatch couriers with sealed bags subject to a limitation of three kilogrammes per week, which shall be exempt from examination.

The Official Agents shall be the competent authorities to visa the passports of persons seeking admission in pursuance of the preceding article, into the territories of the parties.

5. Each party undertakes to ensure generally that persons admitted into its territories under the two preceding articles shall enjoy all protection, rights and facilities which are necessary to enable them to carry on trade.

They shall be at liberty to communicate freely by post, telegraph and wireless telegraphy and to use telegraph codes, under the conditions and subject to the regulations laid down in the International Telegraph Convention of St. Petersburg 1875 (Lisbon Revision of 1908).

Each party undertakes to account for and to pay all balances due to the other in respect to terminal and transit telegrams and in respect of transit letter mails, in accordance with the provisions of the International Telegraph Convention and Regulations and of the Convention and Regulations of the Universal Postal Union respectively.

6. Passports, documents of identity, powers of attorney and similar documents issued or certified by the competent authorities in either country for the purpose of enabling trade to be carried on in pursuance of this agreement, shall be treated in the other country as if they were issued or certified by the authorities of a recognized foreign government.

7. Either party shall at any time be entitled to give notice of its intention to terminate the provisions of articles 1 to 6 and on the expiration of three months from the date of such notice these articles shall terminate accordingly.

The parties mutually undertake that in the event of the termination of these articles, under the provisions of this article, they will afford all necessary facilities for the completion of winding-up of any transactions entered into thereunder and for the withdrawal and egress from their territory of the nationals of the other party and for the withdrawal of their moveable property.

8. It is agreed that all claims of either party or of its nation against the other party in respect of property or rights or in respect of obligations incurred by the existing or former government of either country shall be equitably dealt with in the treaty referred to in the preamble.

In the meantime and without prejudice to the above stipulation the Russian Soviet Government declares that it recognizes its liability to pay compensation to British subjects in respect of goods which have been supplied or services which have been rendered to it or to any former government of Russia, for which payment has not been made, and also for goods which have been supplied or services which have been rendered to Russian citizens for which payment has not been made, where the failure to pay is attributable to the Russian Revolution or to any act of the Soviet Government. The detailed mode of discharging this liability shall be regulated by the treaty referred to in the preamble.

The British Government makes a corresponding declaration.

It is clearly understood that the above declarations in no way imply that the claims referred to therein will have preferential treatment in the final treaty as compared with any other classes of claims which are to be dealt with in that treaty.

9. In consideration of the declaration in the preceding article the British Government hereby declares that they will not initiate any steps with a view to attach or to take possession of any gold securities or commodities, not being articles identifiable as the property of the British Government, which may be exported from Russia in payment for imports or as securities for such payments.

10. The Russian Soviet Government undertakes to make no claim to dispose in any way of the funds of the late Imperial and Provisional Russian Governments in London. The British Government gives a corresponding undertaking as regards British Government funds in Petrograd. This article is not to prejudice the inclusion in the formal treaty referred to in the preamble of any provisions dealing with the subject matter of this article.

THE RUSSIAN DRAFT

(Submitted by the Russian Soviet Government Trade Delegation to the British Government at London on December 13, 1920.)

Draft Trade Agreement Between the Government of the Russian Socialist Federative Soviet Republic and His Britannic Majesty's Government

WHEREAS it is desirable in the interests both of Russia and of the United Kingdom that peaceful trade and commerce should be resumed forthwith between these countries, AND WHEREAS for this purpose it is necessary, pending the conclusion of a formal general Peace Treaty between the governments of these countries, by which their economic and political relations shall be regulated in the future, that a preliminary agreement should be arrived at between the Russian Soviet Government and the Government of the United Kingdom.

The aforesaid parties have accordingly entered into the present agreement for the resumption of trade and commerce between the countries, which agreement shall not be deemed to affect the view which either party may hold as to the political status of the other. This agreement is subject to the fulfilment of the conditions specified in the British Note of June 30, 1920, and accepted in the telegram from the Russian Soviet Government dated July 7, 1920, with regard to the mutual cessation of hostilities and propaganda directed against the institutions or interests of the other party, the repatriation of prisoners, the recognition in principle of the liability of the Russian Soviet Government to pay compensation to private citizens who have supplied goods or services to Russia for which they have not been paid. All questions which may hereafter arise as to interpretation or otherwise in connection with the said cessation of hostilities, propaganda or repatriation of prisoners, as aforesaid, shall be referred to a special conference to be called by the said two governments immediately after the signing of this agreement.

In the event of the infringement by either party of any of the essential conditions contained in the agreement, or of either of the stipulations above referred to, the other party shall have the right immediately to terminate the agreement without further notice, i.e. from the date of the receipt of the said notice no new transactions or contracts shall be permissible, but in such event the parties mutually undertake that they will afford all necessary facilities for the winding up, in accordance with the provisions of this agreement, hereinafter contained, of any transactions entered into thereunder, prior to the receipt of such notice, and for the withdrawal and egress from territories of the nationals of the other party and for the withdrawal of their moveable property.

Clause 1. Both parties agree to remove and not to reimpose or maintain any form of blockade against each other and to remove forthwith all obstacles hitherto placed in the way of the resumption of trade between Russia and the United Kingdom in any commodities which may be legally exported from or imported into their respective territories to or from any other foreign country, and not to exercise any discrimination against such trade, including banking, credit and financial operations, as compared with that carried on with any other foreign country, but subject to the special legislation of the respective countries. It is understood that nothing in this article shall prevent either party from regulating the trade in arms and ammunition under any general provisions of its law which apply to the import or export of arms and ammunition from or to foreign countries.

Nothing in this article shall be construed as over-riding the provisions of any general international convention which is binding upon either party, by which the trade in any particular article is regulated, on humanitarian grounds, including the prevention of diseases of animals and plants.

Clause 2. Russian and British merchant ships, their masters, crews, and cargoes, shall, in ports of Russia and of the United Kingdom respectively, receive in all respects the treatment, privileges, facilities, immunities and protection which are usually accorded by the established practice of commercial nations to foreign merchant ships, their masters, crews, and cargoes, visiting their ports, including

the facilities usually accorded in respect of coal and water, pilotage, berthing, dry docks, cranes, repairs, warehouses, and generally all services, appliances and premises connected with merchant shipping.

Provided that nothing in this article shall impair the right of either party to take such precautions as are authorized by their respective laws with regard to the admission of aliens into their territory.

The British Government will forthwith remove all mines which may have been laid by the British Fleet on sea passages to ports and shores of the Russian Republic and will also give the Russian Government all possible assistance in respect to the clearing up of all mines or minefields laid by other countries in the said sea passages.

Clause 3. Each party may nominate such numbers of its nationals as may be agreed from time to time as being reasonably necessary to enable proper effect to be given to this agreement, having regard to the conditions under which trade is carried on in its territories, and the other party shall permit such persons to enter its territories, and to sojourn and carry on trade there, provided that either party may restrict the admittance of any such persons into any specified areas, and may refuse admittance to or sojourn in its territories to any individual who is *persona non grata* to itself, or who does not comply with this agreement, or with the conditions precedent thereto.

Persons admitted in pursuance of this article into the territories of either party shall, while sojourning therein for purposes of trade, be exempted from all compulsory service whatsoever, whether civil, naval, military or other, and from any contributions, whether pecuniary or in kind, imposed as an equivalent of personal service and shall have right of egress.

Persons admitted into Russia under this agreement shall be permitted freely to import commodities destined solely for their household use or consumption to an amount not exceeding their actual needs.

Clause 4. Either party may appoint one or more official plenipotentiary agents to reside and exercise their functions in the territories of the other, who shall enjoy all rights and immunities set forth in the preceding article, and also such privileges as are granted to Public Ministers, by the Diplomatic Privileges Act of 1703 including immunity from arrest and search provided that either party may refuse to admit any individual as an official plenipotentiary agent who is *persona non grata* to itself, or may require the other party to withdraw him should it find it necessary to do so on grounds of public interest or security, in which case the respective governments must produce in writing detailed reasons for such request. Such agents shall have access to the authorities of the country in which they sojourn, in accordance with the rules and customs existing for relations between representatives of foreign governments and the government or officials of the respective countries, for the purpose of facilitating the carrying out of this agreement and of protecting the interests of their nationals.

Official plenipotentiary agents will be exempt in the respective countries from government and local government taxation.

Official plenipotentiary agents shall be at liberty to communicate freely with their own government and with other representatives of their governments in other countries by post, telegraph, and wireless telegraphy, in code or cypher and to receive and dispatch couriers with sealed bags subject to a limitation of three kilogrammes per courier, which shall be exempt from examination. Telegrams and radios of official plenipotentiary agents have the right of priority before any other private telegraphic and wireless messages.

The official plenipotentiary agents shall be the competent authorities to visa passports of persons seeking admittance in pursuance of the preceding article into the territories of the other party.

Clause 5. Each party undertakes to ensure generally that persons admitted into its territories under the two preceding articles shall enjoy all the protection, rights and facilities which are necessary to enable them to carry

on trade, but subject to the special legislation of the respective country.

They shall be at liberty to communicate freely by post, telegraph and wireless telegraphy, and to use telegraph codes under the conditions and subject to the regulation laid down in the International Telegraph Convention of St. Petersburg 1875 (Lisbon Revision of 1908).

Each party undertakes to account for and to pay all balances due to the other in respect of terminal and transit telegrams and in respect of transit letter mails, in accordance with the provisions of the International Telegraph Convention and Regulations and of the Convention and Regulations of the Universal Postal Union respectively.

The above balances when due will be paid in the currency of either party at the option of the receiving party.

Clause 6. Both contracting parties agree simultaneously with the conclusion of the present Trade Agreement, to renew unhindered exchange of private postal and telegraphic correspondence between both countries as well as dispatch and acceptance of wireless messages, parcels by post and passenger traffic, in accordance with the rules and regulations which were in existence up to 1914.

Clause 7. Passports, documents of identity, powers of attorney and similar documents issued or certified by competent authorities in either country for the purpose of enabling trade to be carried on in pursuance of this agreement, or otherwise, shall be treated in the other country as if they were issued or certified by the authorities of a recognized Foreign Government.

Clause 8. Either party shall at any time be entitled to give notice of its intention to terminate the provisions of this agreement, and on the expiration of twelve months from the service of such notice this agreement shall terminate accordingly. During the currency of the said notice, all these provisions shall continue in force and no obstacle shall be placed in the way of the initiation of new transactions thereunder provided that such transactions are to be completed within the said twelve months.

The parties mutually undertake that in the event of the termination of the agreement under the provisions of this article they will afford all necessary facilities for the winding up of any transactions entered into under this agreement and for the completion of any transactions which may have been entered into before the notice of the termination shall have been given under this article, and for the withdrawal and egress from their territory of the nationals of the other party and for the withdrawal of their movable property, legally acquired after the conclusion of this agreement. And each party agrees not to apply to the property, goods, funds and ships of the nationals of the other any legislation or orders in reprobation of the trade contemplated under this agreement.

Clause 9. The British Government declares that it will not initiate or take or encourage any steps with a view to attaching or taking possession of any gold, funds, securities or commodities, which may be exported from Russia in payment for imports or security for such payment, or of any movable or immovable property which may belong to the Russian Soviet Government, within the boundaries of the United Kingdom or on the ground of any claim against Russian citizens or against the Russian Soviet Government or against former governments of Russia.

The British Government agrees within one month from the date of the signing of the Trade Agreement to introduce in Parliament a special moratorium bill which shall provide for the postponement till this question has been regulated by the future peace conference, of any legal action in England to recover any claims of the British Government or of private persons or company of British nationality against the Russian State or Russian nationals as well as of the issuing of writs or attachments of property or goods arising out of the above-mentioned legal actions. In the case of the passing of such a bill through Parliament the Russian Government undertakes to pass a similar law with respect to any claims which may be lodged in Russia against the British Government or British nationals.

Clause 10. The Russian Soviet Government undertakes to make no claim to dispose in any way of the funds of

the late Imperial or Provisional Russian Governments in London. The British Government gives a corresponding undertaking as regards British Government funds in Petrograd. This article is not to prejudice the inclusion in the General Peace Treaty referred to in the preamble of any provision dealing with the subject matter of this article. Both parties undertake not to transfer to any other claimants the above-mentioned funds, or any other property. They also undertake to take effective steps to protect such funds and property pending the conclusion of the said General Peace Treaty.

Clause 11. The British Government declares that it will not pass any special legislation or make an order specially applicable to Russia and not applicable to other countries against the importation into Great Britain, storing there, analysing, refining, melting, disposing of and mortgaging of precious metals, whether specie (other than British or Allied) or bullion or manufactures and that they will not under any existing or future powers, requisition any such metals so imported.

Clause 12. The British Government, with a view to assisting trade between Russia and Great Britain, further declares that, as regards Russian gold, (whether bullion or specie) imported into Great Britain by Russia, in its dealings under the powers and provisions of this agreement the said British Government will grant to the official plenipotentiary agents of the Russian Government in Great

Britain or to the person or persons or bank nominated by them a General License giving them liberty from time to time to export the same from Great Britain; but the British Government shall always have the option to be declared within seven days from an intimation from the said official plenipotentiary agents of their intention to export any of the said gold to purchase the same at the price for the time being obtainable for gold in the open market in any other countries.

Clause 13. Both contracting parties agree with reference to the goods exported from the date of this agreement from Russia to Great Britain and from Great Britain to Russia, not to use the rights to buy or to requisition such goods at fixed prices. If, in case of the goods imported from one country into another, agreement as to payment at which these goods can be requisitioned could not be arrived at, then the country from which these goods were imported has the right of immediate export of such goods from the other country and without payment for such export licenses or any tax whatever; both contracting parties agree to issue such export licenses without any hindrance whatever at the first request of the official plenipotentiary of the other country.

Clause 14. This agreement is drawn up and signed in the Russian and English languages, both texts being considered authentic for all purposes.

Latvia in Ruins

By O. PREEDIN

“LATVIA, area 64,299 square kilometers with 2,552,000 inhabitants in 1914.” This you may read on the maps of the new state, and these data are repeated time and time again by Latvian nationalists in their efforts to persuade the Great Powers to recognize their state, chiefly on the ground that it is a large country with a large population. We pointed out long ago in SOVIET RUSSIA that these figures, based on 1914 statistics, are much exaggerated as a statement of the present conditions. We are now able to present definite data on the subject. The 1920 figures are at hand. As compared with the 2,552,000 in 1914, Latvia now counts only 1,503,196 inhabitants.

Latvia presents to the observer a strip of land that has lost by war and invasion, by revolution and counter-revolution, about 40 per cent of its population. Many privations and much misery have been brought about in the wake of this loss. Let us not for the present take up the question of the causes for these results, the manner in which the imperialistic forces reached out to annex this territory which they considered “a gateway to Russia”, aiming to hold it firmly in their hands, and finally squeezing out almost half of its population. We shall try simply to record the resulting condition. The 1920 figures, supplemented by special investigations made by various agencies of the present Latvian Government provide us with very much rich material on the subject.

The official journal of the Ministries of Finance, Trade, Industry, Agriculture, of the present government, *Ekonomists*, from which these statistics are taken, permits us to glance more in detail at the present condition of the remaining half of the population of Latvia.

We learn that more than 87,000 people of Latvia are at present citizens of other countries. Even 8,332 Letts, now domiciled in Latvia, have declined to affirm their allegiance to the new state. They make up only a portion of the six per cent of Latvia's population which has foreign allegiance. The number of Letts who are citizens of the country is given as 1,138,333. This includes all the so-called Letgallians, about 400,000, whose language, customs, and traditions afford a favorable basis for increasing conflicts on nationalistic lines, both with the Letts as well as eventually with other nationalities. Not more than half, therefore, of the present population of Latvia may be considered as Letts. The number of German citizens of Latvia is 45,725, or only about one-third their number before the war.

From the above we may judge to what extent the creation of Latvia as a state may be considered as a result of a separatist national tendency. None of the new states was erected more as a result of the attempts of the Great Powers to expand than was the case with Latvia. This little country, which began as a creation of German imperialism, and which ended as an outpost of imperialistic England and the other Allies, attained its present form through the interaction of foreign influences. Latvia is not a natural birth. It was born as a result of extraneous forces. It is an abortive offspring.

No less than its birth, the “independent” existence of Latvia is a great tragedy in world history. Before the war, Latvia was one of the most highly developed industrial provinces of Russia. At present the city of Riga, its great factory center, has not the 85,000 workers it had before the war, but only 4,268, and all of Latvia has 10,650 workers

instead of the 130,000 who were engaged in industrial occupations before the war. Does that not look like a complete destruction of the country? To be sure a new state was produced, but it is a state that has no production.

In the October 1 issue of *Ekonomists* (page 437) we read: "It is estimated by specialists that we shall have about 120,000 unemployed during the coming winter." For Latvia this number of unemployed is equivalent to 10,000,000 in the United States.

On another page of the same journal (442) we read of the growth of other classes of the Latvian population, of the "traders", for instance, i.e., speculators: "at present there are about 5,000 traders in Riga to 4,000 before the war, when the population was three times what it is now." The complete picture then is as follows: industry destroyed entirely; unemployment growing; speculation flourishing in cities without population. Only one process is rapidly going on in the Latvian cities—and a long drawn out process—that of death. How about the villages? Latvia is considered to be an agricultural state. Its future is prognosticated by the Lettish nationalists on the assumption that the soil will be productive. The prosperous Latvian idyll is that of a well-fed peasant reposing in the shade of a leafy oak tree by the door of his big farmhouse surrounded by rich fields. All the political parties in Latvia share this idyllic view of the future of their state—a paradise of "independent" peasants. Even the Social-Democratic Workers' Party altered its previous agrarian platform in order to bring it into full harmony with this peasant idyll.

All the spokesmen of Latvia, standing on the debris of a once flourishing industry, and profiting by the labor of only one-twelfth of the former number of industrial workers, observing that the productivity of their labor had decreased from 30 to 50 per cent, could think of only one source of economic wealth for the state, namely peasant labor. The farms, it was hoped, would create products to be exchanged with foreign countries for the necessary manufactured goods. The farm products were to furnish the firm basis for reestablishing the financial system of the new state, for stabilizing the exchange rate of the Lettish ruble in foreign countries, etc. All hopes were placed in the farm products.

The harvest came, and then it was expected that long lines of peasant carts would move along the roads to the cities and to the seaports to be exported. But—as we read in the first paragraphs of the leading article of the above cited official journal: "Not only did we fail to obtain a sufficient quantity of bread last year, but we are now well aware that we shall not have enough this year either. And the shortage this year will be a *great* one." The italics are those of the official organ.

Instead of the goddess of abundance, hunger and rags appeared on all the highways.

How did this happen? Whence this terrible disillusionment? The hopes placed in the Latvian

peasantry were entirely unfounded. Already before the war the peasantry of the present Latvian state could not supply enough food for that country alone. About 10,000,000 more poods of grain were annually imported from other parts of Russia than were exported to other parts of Russia. And the rural population then was about 1,700,000 in Latvia, as compared with 1,065,000 at present. The urban population has not decreased in the same degree in Latvia as yet. Before the war there were more than three peasants to every city dweller; at present there are only 2½.

The worst symptom, however, is the enormous decrease in the area of cultivated land, amounting to from 50 to 70 per cent.

The able statesmen of present-day Latvia try to explain this by stating that much of the live stock has been destroyed and many farms have been deserted. To be sure this is true in some cases, but it cannot explain everything. To be sure the absolute number of horses, cows, and other live-stock has decreased, but the village holding of each peasant, owing to the more rapid rate of decrease of the rural population itself, includes more live stock now than was the case before the war.

The main reasons for the entirely disproportionate decrease in farm products are as follows: The Latvian Government is trying to accomplish the economic reconstruction on the basis of individual or private ownership, which presupposes that goods will be bartered for goods. But the government and the city population have nothing other to offer to the peasants for their products than worthless paper money. Having no other source of income the government must impose very heavy taxes on the farms. These taxes the government very cleverly imposes chiefly on the *area of cultivated land*. Last year the peasants had to pay in land taxes alone from 195 to 324 pounds of grain on every acre under cultivation. But the peasant, as a capitalistic agriculture entrepreneur, is a very practical man. He knows what pays; it certainly would not pay "to cultivate as much land as possible" if he must pay so heavily.

The Government of Latvia may correct its fiscal policy, but it cannot escape starvation and the economic destruction of the country. The economic life of Latvia is closely bound up with that of Russia, and cut off from Russia, Latvia must die.

It may interest readers of Soviet Russia to go through the following statistics of the population of Latvia, which indicate the races of the population of the country as shown by the 1920 figures:

| | Citizens of Latvia | Citizens of Other Countries |
|----------------------|-----------------------|--------------------------------|
| Germans | 45,725 | 12,200 |
| Great Russians | 71,793 | 11,167 |
| White Russians | 53,773 | 4,932 |
| Hebrewa | 60,844 | 17,857 |
| Poles | 31,012 | 11,064 |
| Lithuanians | 7,401 | 16,258 |
| Estonians | 3,633 | 2,467 |
| All Others | 1,922 | 1,852 |
| Nationality Unknown | 1,657 | 974 |
| Letts | 1,138,333 | 8,332 |

SOVIET RUSSIA

WILL CONTINUE PUBLICATION

Its pages will contain essentially the same material as heretofore. There will be articles by prominent Commissars of the Soviet Government, by other authorities in educational economic, esthetic, military, hygienic, and other fields.

As a symbol of the continuity in the policy of the paper under its new private ownership, the reader will note the fact that the article by Leon Trotsky, Commissar for War, which began last week, will also appear in its last instalment in the first issue [namely the next] that is to appear under the new management.

Everyone should purchase the weekly even after the departure of the Russian Soviet Government Bureau. The first number to appear under the new arrangement will contain, among other things, a brilliant article from the pen of Karl Radek, entitled "Bertrand Russell's Sentimental Journey", which deals very effectively with the delicate liberalism of the well known English pacifist-mathematician. The regular military article of Lt.-Col. B. Roustam Bek will also appear in our columns. Books will continue to be reviewed by the same reviewers, editorials will continue from the same pens as heretofore. In every way the paper will be the same. But it will not be the official organ of the Russian Soviet Government Bureau, as the Bureau will cease to exist for the present, with the departure of Mr. Martens and his staff, and arrangements are now under way for transferring the ownership of the paper to private hands. Definite announcement of the change will be made in the next issue of SOVIET RUSSIA.

Bertrand Russell's Sentimental Journey

By KARL RADEK

[This article appears long after the publication of Mr. Russell's articles last summer, but it is such a brilliant and conclusive performance that we cannot refrain from reprinting it for our readers.]

MANY of our English guests have published articles and books about their impressions of their journey to the wild Muscovite country. As was to be expected, the Left English delegates expressed themselves with great sympathy for our struggle and for our work, whilst those of the Right helped with their reports the international counter-revolution in its fight against Soviet Russia. This is as it should be; we have not expected anything else.

When Mr. Tom Shaw, a well-known English opportunist, asked the representatives of the Soviet Government, with the air of an innocent baby, how they could even presume that such a man of noble birth as the Right Honorable Winston Leonard Spencer Churchill, the grandchild of the seventh Duke of Marlborough, and the son of Lord Randolph Churchill, could be capable of telling falsehoods; when he put these questions, it was evident for every one that Mr. Shaw, who has no claim to noble birth, being a flunkey of the British capitalists of common birth, would tell as many lies against Soviet Russia as would be required by the English bourgeoisie. It was, therefore, no surprise to us when Mr. Tom Shaw delivered himself of a thundering speech at the conference of the Yellow International against the Soviet Government, the alleged oppressors of the workers.

When Dr. Heilen Guest, the Secretary of the English delegation, published in the *Times* that most reactionary of all newspapers, a series of "revelations" against Soviet Russia, he thereby confirmed, in the eyes of the English workers, the

fact of which we had been warned at the time permission was given him to enter Russia, viz. that Dr. Guest was visiting Russia as the informer of the British Government. We have been, however, obliged to admit common spies who have not had the brazenfacedness to reveal themselves as such, in order to be able to welcome honest Labor representatives to Russia. These "revelations" represent no danger whatever to the Soviet Government, because every honest English worker who reads the daily attacks made upon Labor by the *Times* and all the Northcliffe press, knows the value of Dr. Heilen Guest's "revelations", which are worth no more than the sovereigns received by Mr. Guest for his lying. It is sufficient to compare Dr. Heilen Guest's articles with those of Paul Dukes, the confirmed English spy, published in the same "honest" paper, for every British worker to perceive how monotonously similar are all the reports of these venal spies.

Mrs. Ethel Snowden, the one time pacifist lady, and representative of the working women's movement, have thought to captivate us by her sentimental movements, but it goes without saying that for one single moment admitted that this bourgeois class goose was capable of understanding the situation of the Russian proletariat. As "gallant" people we pretended to believe in the sincerity of her excellent expressions of admiration when watching a military parade near the theater and when she told us that she quite accepted such militarism in the name of the Workers' State. We knew that the proletarian revolution would be too much

for the delicate nerves of Mrs. Snowden, and that upon her return to England she would weep bitter tears on the manly breast of Mr. Philip Snowden, who would say to her: "But why did you go to that savage country; did I not tell you that it was not a country for British ladies to promenade in? You had better go for a rest to Belgium or the North of France and do some sightseeing amidst the ruins of the war."

It is not worth the trouble to write about the articles, books and speeches of these Shaws, Guests, Snowdens, but it is worth while dwelling on the articles written by Bertrand Russell in the leading liberal weekly *The Nation*. Bertrand Russell is a prominent philosopher, mathematician, and a very honest man. For his pacifist convictions he was thrown into prison and, therefore, in his case his writings are not a case of hunting after personal lucre. His articles are very valuable because they demonstrate all the narrow-mindedness of the best minds among the representatives of the bourgeoisie, and their sheer incapability of grappling with the problems history has placed before mankind.

Mr. Russell describes Soviet Russia and admits that the government put no obstacles either in his way or in the way of his comrades in their objective study of the situation in Russia. What had he seen in Russia? He speaks very well of the Communists. He says: "They spare neither themselves nor others; they work sixteen hours a day and forget even their holidays; in spite of their power they lead a modest life, pursue no personal aims and fight only for the ordering of a new life." And he comes to the conclusion that the Russian Communists recall the English Puritans of the time of Cromwell. But, says he, "life in modern Russia as well as in Puritan England in many respects goes against human instinct. If the Bolsheviks will fall it will be on account of the same causes that brought about the fall of English Puritanism, because a moment will come when the people will feel that the joy of life is more valuable than all that Puritanism offers." Mr. Russell is indeed an "altruist"; he has proved it by his life. But Mr. Russell has not denied himself a comfortable house, the quiet study of a scientist; he has not denied himself week-ends, the theater and all the other things that even the dying capitalist order offers a man enjoying an income of hundreds of pounds per month.

There is, therefore, nothing surprising in the fact that he thinks a revolution in which such things as a telephone, a morsel of white bread, a tin of condensed milk, or, oh horror! a motor car, are luxuries, is no good, and that Mr. Bertrand Russell could not stand such a revolution even if all the conditions of life at the "Delovoi Dvor" Hotel, and all the other comforts were added on top of it. That is why Mr. Bertrand Russell has not troubled to ask himself the question: What would have been the comfort which the Russian workers would have received at the hands of Kolchak, Yudenich, Denikin, and Wrangel, in the event of their

having proved victorious with the help of British imperialism.

Mr. Russell considers the Communists as the young aristocracy of the New Russia, full of vigor and vitality, and he says that Soviet Russia reminds him a good deal of Plato's State. Seeing that Plato has not been hitherto considered an opprobrious epithet, there is nothing left us but to thank Russell even for this mercy. However, Russell's concrete views on the situation in Russia are summed up in the following sentences: "When a Russian Communist speaks of the dictatorship, he uses this word in its literal sense but, when he speaks of the proletariat, he uses it in a Pickwickian sense. He thinks of the class-conscious part of the workers, i.e. the Communist Party. He includes in this idea people who by their origin have nothing in common with the proletariat, such as Lenin and Chicherin, whose ideas are, however, correct. He excludes real workers who are not followers of such views and whom he calls lackeys of the bourgeoisie."

These are the horrors that Bertrand Russell saw in Russia. However, in order to help him to understand what he saw in Russia, we shall remind him of familiar British episodes. He, Mr. Russell himself, is of highly aristocratic origin; he belongs to the bourgeois class. However, when during the war he, being a pacifist, acted in opposition to the interests of the English bourgeoisie, the latter, considering his views incorrect, regarded him not as a member of their class, but as an enemy, and threw him into prison. At the same time the bourgeoisie raised Henderson, an ordinary workman, who, however, defended their interests, to the rank of Cabinet Minister. Or, let us take a more glaring example. Ernest Jones, one of the leaders of the Chartist movement in England, was of an aristocratic family. His godfather was the King of Hanover, who took care of his education. Jones grew up at the English court, but when, in his forty-sixth year, he took part in the revolutionary movement of the British workers, he was thrown into prison, where he lay for two years under such deplorable conditions that many of his comrades died. And now what do we see, what was this unheard of thing that Mr. Russell saw in Russia? That only those who fight in the interest of the proletariat are considered proletarian fighters. This is beyond Mr. Russell's understanding. It is, however, characteristic of all classes engaged in combat. They consider as their own only those who fight in their interests and not those who belong to them by accident of birth.

Mr. Russell maintains that he is opposed to Communism for the same reasons that made him a pacifist. Civil war, like every other war, brings unheard of misery, whilst its advantages are problematic. Civilization perishes in such fights. (We see how highly Mr. Russell values the civilization the outcome of which was four years of bloody imperialist war). A strong government must be created in order to win, and every strong government leads to certain abuses. Mr. Russell has be-

fore him two tendencies in the creation of a strong power. On the one hand, there is the British capitalist government, which with its allies, plunged the world into an international slaughter, and now, after the end of the great war, is continuing its work of destruction: small wonder he is not enamored of Lloyd George and less of Churchill. On the other hand, there is the government of Soviet Russia which is straining all its nerves to pull the masses out of the bog of misery created by capitalism. It is a power that makes heroic efforts to recreate the basis of human life. Fighting against the whole world of capitalism, it cannot content itself with partisan warfare. It must create a Red Army, an enormous machinery for providing food, and centralize all the conditions of economic life. To this Mr. Russell says: "This is not good, it creates privileges; the Commissars, however modest they may be, have at their disposal motor cars, telephones, and go to the theatre. Is this freedom, is it equality?"

What is Mr. Russell to do between these two bad governments that have concentrated power in their hands? Having returned from his sentimental journey, having taken a good bath, he sits down by the fireside. How good the firesides are in England! He, although not a Commissar, does not suffer from any lack of coal, while the poor of London shiver in the cold. And now Mr. Russell, in his slippers and gown, sits down to read the papers, from which he learns that during his absence the agony of Europe has been proceeding at a pace of which even Mr. Gibbs, in the *Daily Chronicle*, the organ of Lloyd George, speaks quite openly. Thus, in Mr. Russell's breast there is gathering a feeling of discontent. How could a sensible, good-natured, well-to-do man feel otherwise at the sight of the distress of others? And Mr. Russell de-

clares in *The Nation*: "If I cannot preach the Social Revolution, neither can I at the same time get away from the conviction that the governments of the leading capitalist countries are doing all in their power to bring about such a revolution."

How wicked are the capitalist governments and how nice is Mr. Bertrand Russell! It may happen that he will yet again be thrown into prison; we can only express the hope that, owing to his good family connections, his lot will not be too severe. We wish him well, what sense is there in his senseless sacrifices! Of what use are they!

While in Moscow, Bertrand Russell remarked that he would rather go to prison than deny himself a joke. We are inclined to think that his philosophy, his pacifism, and even his socialism are merely a form in which the sensitive son of the English aristocracy may be jesting about the coarse expressions of its policy, about the crude forms of its robbery. Couldn't it do the thing "more nicely", so that Mr. Russell, enjoying the privileges of his position may not feel the pangs of conscience, said pangs of conscience being so unpleasant?

Attractive indeed is the capitalist world, if, in the face of the greatest catastrophe of an entire historical epoch, it could not produce a philosophy greater than that of Mr. Russell. His philosophy reminds us of one of Aesop's fables which deals with such a non-philosophical creature as the ass, who, standing between two cereals, kept philosophizing as to which was to be preferred, and, not being able to make up his mind, died of hunger. We apologize to Mr. Russell for thus comparing his position to that of so unphilosophical an animal, but we apologize at the same time to the useful grey toiler for comparing him with such a parasitic creature as this petty-middleclass philosopher.

Military Review

By LT.-COL. B. ROUSTAM BEK

ON THE eve of the approaching departure for Soviet Russia, I feel that I must say some words about the Red Cossacks of the Russian Soviet Republic.

There are only Red Cossacks left in Russia! There are now only bitter reminiscences in the Workers' and Peasants' Republic of the reactionary Cossacks, who became famous for their "nagaikas" (knouts) and their terrible atrocities, to the whole world. These monsters, with their bloodthirsty "atamans" (chiefs), and their officers, either perished during the civil war or have sought refuge somewhere in Constantinople, in the various Balkan states, in France, in England, in China and Japan, in short, they are dispersed all over the globe, living on with feeble hopes of once more regaining their former position.

The Cossacks always represented by themselves a quite separate population in Russia attached to the late empire by a long process of historical evo-

lution, and gradually they became a blind weapon of the autocratic Russian government.

The cradle of the Cossack warrior is the *Zaporozhie* or *Zaporoshskaya Sich*, the district lying on the banks of the River Dnieper, where it is narrowed by the rapids and divided into a number of small rocky islands.

In the fifteenth century, when the whole of the south of Russia, abandoned by its princes and harassed by the Mongolian nomads and Turks, resembled a desert of ashes, thousands upon thousands of inhabitants, having lost their homes, were seeking asylum as well as thirsting for revenge. Men became fearless and accustomed to look straight into the face of danger and death. Common danger united men along the impregnable rapids of the *Zaporozhie*, and that was the beginning of the first Cossack community.

From all the corners of Russia young as well as old people streamed to this place. Men of pro-

fession, honest as well as merely self-seeking, began to look on the *Zaporozhie* as a harbor of refuge, where freedom and equality reigned. After a time they became so numerous that when the Sultan of Turkey, the greatest enemy of Russia, whose hordes were cruahed by the Cossacks, asked a prisoner of war, "How many are there of you?" he received the reply, "There are as many of us as there are small hills in the vast steppes of Russia. There is a Cossack behind every hill."

The birth of the Cossack race is really an inexplicable event in history. It was like fire struck out of the flint of Russian sorrow. It was a pledge of Russian strength, of the greatness of Russia's future, as well as its safeguard, then menaced by barbarian autocrats. The ruling princes in the south of Russia flattered the free, independent Cossacks, trying to win them over to their side, and persuaded them to organize their *okolitsi* and *kurni* communities into regiments and military districts under the *atamans* and *hetmans*.*

The Cossack force was really a military republic, a nation in arms, with the freest constitution the world has ever seen. It was not exactly an army. Nobody entering the *Zaporozhie* could imagine that he was among warriors, so fully occupied were they with their peaceful pursuits. There was no trade the Cossack did not practice. Spirit-distilling, brewing, smithwork, wheelwright's work, armorer, powder-maker, and all other trades that were practiced in those days were familiar to them; while merry-making and enjoyment found as many devotees among them as the "sword, horse and rifle" of their motto.

One thing only was strictly forbidden to those in the *Zaporozhie*. No woman was allowed to cross its limits. Of course, in time this restriction weakened and vanished altogether with the development of the civilization of the Cossacks themselves. In the days of the Hetmanship of Sobessky, the Cossacks were an invaluable cavalry for Poland, and had the latter respected their religious faith and their love of freedom and self-government, the Cossacks would never have joined Russia as they did under Peter the Great.

It may be imagined how priceless was such a cavalry as that of the Cossacks. Eight days after the alarm for mobilization they could concentrate their forces, fully armed, receiving as pay only one gold coin per man. When war was over, and all the Cossacks returned with rich booty to the *Sich*, the warriors again became peaceful citizens, and resumed their work in the fields, fishing, or their other trades, and became once more the so-called free Cossacks—communists—because there was no private property in those days; in the *Sich* all belonged to the *voisko* (army).

All the men were registered and known to their *atamans*, and were obliged at the first sound of the alarm to join the colors.

In addition to these, there were the voluntary

Cossacks, as they were called, mostly Mohammedans, who were exceedingly numerous.

War was usually planned by the Cossack *atamans* assembled in council, and had to be approved by the majority of the population.

Immediately after the declaration of war by the Hetman, the *essauls* (captains), in full war kit, mounted their horses and spread the news of war through the villages, calling out: "Brewers and drunkards, enough now of brewing beer and lying on your down pillows. Go and earn knightly fame and honor. Husbandmen and herdsmen, who are enjoying yourselves outside the *Sich*, enough of your following the plough with boots besmudged by the soil. Go and earn Cossack's fame!" And at this call the whole of the *Zaporozhie* was transformed into the biggest military factory in the then-known world.

Besides these warlike qualities the Cossacks were artists, poets, and musicians. Music and song, which are a living force among the Russian troops, especially in the Red Army, were introduced by the Cossacks. Gallant and fierce in the field, the Cossacks could shed tears when listening to a touching song.

Even when under the yoke of the autocratic rulers of Russia, the Cossack regiments always sang in their songs the deeds of their revolutionary leaders. The place of honor in these songs was always that of the great revolutionist, Stenka Razin. Even the severest restrictions could not prevent these songs. The Free Siberian Cossack Yermak, the conqueror of Siberia, and even the famous self-styled Tsar Peter Federovich, i.e., the Cossack Pugachev was celebrated in the poems and songs by the Orenburg and Ural Cossacks. After the successful campaign against Charles XII of Sweden, Peter the Great, Tsar of Russia, fearing the growing power of the Cossacks, by a very skilful ruse transferred a great portion of the *Zaporozhian* Cossacks or the *Ukrainian* Cossacks to the Don District, thus laying the foundation for the Don Cossack *voisko*. The Empress Catherine II entirely put an end to the existence of the Cossacks in Ukraine, introducing there the serfdom of the peasants, and that portion of these Cossacks who remained with the Poles perished there entirely, under the oppression of the Jesuits. The Russian rulers gradually won over to their side the Cossacks of the Don, by granting to them some special privileges, including a sort of autonomy, which gradually lost its importance when several of the *atamans* of the Cossacks were approached by the Tsars, and after being knighted were invested with very large estates in various parts of the empire. This brought it about that such *atamans* or prominent Cossacks became very rich, and finally attained a great influence in their region, and by means of bribery altered the laws as they liked. The nineteenth century found the Cossacks under the absolute control of the Tsars, their regiments directly under the War Office, which, to be certain of its actual control, appointed a considerable percentage of the *atamans* and the commanding officers of the Cossack regi-

* *Ataman*, a district chief; *hetman*, a commander of a whole Cossack force.

ments, leaving no person of Cossack origin. At last the Chief Ataman of the Cossacks as a rule became heir to the throne.

Thus a bourgeoisie was artificially created in the Cossack *voisko*. These unpleasant "reforms", even in the early days of the existence of the Cossacks of the Don, under Russian rule, made many of them emigrate, a part to Turkey, a part to the Caucasus, and farther to the east and northeast, thus creating the Ural, Orenburg, and Semirechensky Cossacks, who found themselves comfortable far away from the centers of the autocratic oppression of the Russian Tsars. The Siberian Cossacks, though under Russian control, and formed by the famous Yermak, "the bandit of the Volga", enjoyed their freedom longer than the others, thanks to the distance between Siberia and Russia.

No country in the world has such a frontier guard as Russia. From the Don to the Pacific, the Cossacks were settled, supplying the Russian Government with a most brilliant cavalry, to protect the gigantic frontier of Russia in Europe and Asia, and to protect the throne from internal danger.

Practically the Cossacks cost but little to the imperial Russian Government. The Empire endowed them with certain special privileges, and they were bound in return to give military service at a certain age and under certain special conditions. The Cossacks constitute ten separate *voiskos* and some independent regiments.

The *voiskos* are: Don, Kuban-Terek, Astrakhan, Ural, Orenburg, Semiryechensk, Siberian, Transbaikal, Amur, and Ussuri. Besides these, there were in Russia six regular squadrons of Daghestan Cossacks, three squadrons of Kuban Circassians, eight *sotnias** of Terek Cossacks, three *sotnias* of Kara Cossacks, two infantry *sotnias* and one mounted *sotnia* of Batum, and, during the Great War in Transcaspia, several *sotnias* were formed from the Turkomans.

In some Caucasian regions close to the northeastern shores of the Black Sea, as well as in the region of Kuban and Terek, in the Caucasus, there are tribes of Cossacks, some of whom have never been horsemen. They wear the Circassian uniform, and for centuries have always been the best hunters in Russia. They are called *plastuni*; but I have never found the word in an English or American dictionary or in the military literature in those languages.

Now that Denikin and Wrangel are among their British friends, they can say much about these *plastuni*, who played a great part in the failure of their foolish scheme to crown themselves in the Kremlin. A *plastun* has no rival either as a shot or in his ability to approach the object of his attack noiselessly and unnoticed. His capacity in this direction is so wonderful that even when you practically know where he is hiding, you cannot find him. This is all due to the fact that from childhood the *plastuni* are accustomed to rambling in the woods and on the mountains, armed only with

a big knife, and very often meeting wild beasts and fighting them at close quarters.

To catch a sitting bird with the hand is an easy thing for a *plastun*. His eye is as sharp as the eye of a homing pigeon—the farthest-sighted bird in nature—his ear is so sensitive that there is a saying among the Cossacks: "When a *plastun* is listening he can hear the grass growing."

In this respect the *plastuni* have no rivals and their reconnoissance is necessarily better and more complete than any reconnoitering of the best air service in the world.

The British and French, together with Denikin and Wrangel, had an opportunity to learn the ability of the Bolshevik *plastuni*, who gave them much trouble.

The history of the Cossacks in the Red Army begins with the second half of 1917, when the class struggle began in all the Cossack regions. The best elements of the working Cossack population suddenly joined the workers and peasants of Russia, and declared war on the Cossack bourgeoisie. It was a terrible and sanguinary struggle. The rich elements of the *voiskos* were numerous, well-equipped and perfectly led by experienced officers, of high military standing and innate bravery. The revolutionary Cossacks had to organize themselves and to form military units sufficiently armed and equipped in order to face their kinsmen who had gone over to Denikin and Kolchak.

It was on the 7th and 10th of January, 1918, when, at the stanitsa of Kamenskaya and in Tsaritain, assemblies of the Red Cossacks took place. The resolution of this assembly which was sent to the Government of General Kaledin, was nothing else than an ultimatum. The Red Cossacks ordered the reactionary government first to submit to the Cossack Revolutionary Committee, and, secondly, to stop the formation of the "White" volunteers, to disarm them, and to exile them from the Don District.

It was ordered also that all the arms and ammunition taken from the White Detachments were to be delivered to the Commissar of the Revolutionary Committee, who was the only one entitled to issue the permits to leave the town of Novocherkassk. Third, the latter must be occupied by the Red Cossack regiments. Fourth, the members of the *krug*, the Council of the *Voisko*, must be dismissed. Fifth, the police which the Government of Kaledin had placed in the industrial districts must be recalled; and, sixth, to inform all the inhabitants of all the *stanitsas** of the Don Region that all administration henceforth is in the hands of the Military Revolutionary Committee.

This resolution became effective through an order signed by the President of the Committee of the Cossacks, Ermin.

In reply to this ultimatum, Kaledin started an offensive and captured the Stanitsa of Kamenskaya. The revolutionary Cossacks understood that without the support of Soviet Russia they would

* A *Sotnia*: 125 horses (from cro=100).

* Cossack settlements.

be powerless to fight the reactionary general, and they sent Comrade Antonov to Moscow for help.

It was agreed that the Red Army should be moved to the Don Region, and as soon as the foe should be defeated, the Soviet troops should retire, but, in exchange for this help, the Soviet Government requested a full recognition of the Soviets as a supreme authority over the Don Cossacks.

Finally, the Don Cossack Republic became a federative state of Soviet Russia.

A counter-offensive of the united forces of the Red Army, together with two newly formed Don Cossack regiments, under the command of the Cossack Lt.-Colonel Golubev, began with Novochoerkassk as its objective. The counter-revolutionary detachments under the command of General Chernozov were defeated, and Chernozov killed, but this victory did not encourage Golubev, who betrayed the cause and later went over to the "Whites".

Soon after this campaign, General Kaledin shot himself and a certain confusion was produced amongst the Cossacks, due to the various treacherous acts of their opportunist leaders.

But Comrade Antonov did not lose heart, and continued his advance on Rostov, where General Kornilov's forces were in full concentration. At the stanitsas of Matveyevo and Kurgan a decisive battle took place, where an entire battalion of the Kornilov infantry was cut down by the Red Cossacks. The uprising of the workers in Taganrog supported the military operations of the revolutionary forces, who continued to press the retiring enemy. Heavy rains and bad roads prevented the Reds from using their cavalry and artillery in field strength, and only the 5th Cavalry Division and the 5th Artillery Brigade took part in that pursuit. A series of brilliant victories of the Red Army was crowned by the capture of Novochoerkassk, while all members of the White Don Cossack *Voisko* Council were captured with Ataman Nazarov at their head. And finally, after a most stubborn resistance by the Kornilov army, it was forced to retire to the Kalmuk steppes.

Kornilov certainly would have been cut off and his forces would have been completely annihilated, had the order of Comrade Antonov been carried out by the 112th Stavropol Regiment, to attack the enemy from Bataisk, but unfortunately this regiment, in the early period of the revolution, was not sufficiently disciplined, and returned to Stavropol of its own choice, thus providing a way for Kornilov to escape.

The Commissar and all the commanding element of this treacherous regiment were declared traitors to the Revolution.

Thus ended the first in any way important campaign in which the Red Army and Red Cossacks cooperated against the counter-revolution.

The growing reactionary feeling among the Cossacks of the Don forced the Revolutionary Government to form a new organization, in order to increase the revolutionary spirit in the Don region. A "Fraternal Union of the Cossacks and Sailors" was formed, and this improved the entire situa-

tion. The Russian sailors, a most revolutionary element, encouraged their Cossack comrades, who had become downhearted, thanks to the lack of arms and ammunition. A period of the most fierce fighting for arms began throughout the region. Often sons disarmed their fathers, and brothers fought their own brothers, in order to take, each from the other, a rifle or a sword. It was the most dramatic period of revolution the world has ever witnessed.

Gradually the Red Cossack regiments became stronger and stronger; their number increased with extraordinary rapidity, and in the middle of 1918 the first considerable Cossack units appeared on the eastern front, formed by the Orenburg Cossacks.

The former Tsarist officers of the Orenburg Cossack *voisko*, the brothers Kashirin, formed the so-called Red Kashirin Division, and for several months they raided in the Orenburg steppes, absolutely cut off from the main body of the Red Army. In view of the most difficult conditions, this division accomplished one of its raids of one thousand versta, which might be compared with the famous raid of Blucher, and at last joined the Red Army.

The third Red Army perfectly knew what the Kashirin division had done during the three years of civil war, and it was considered the best fighting body of that glorious army.

As the official report says, the Orenburg Cossack *voisko* gave to the Red Army endless numbers of the most brilliant fighters, and played a great part in defeating Kolchak on the Orenburg-Aktube front.

The Siberian Red Cossacks distinguished themselves first in fighting Kolchak, when the remaining part of the Red Siberian Cossack regiments broke through from the rear, through the Kolchak lines, and joined the advancing 5th Red Army, thus inflicting a serious blow on the forces of the usurper.

The Cossacks of Semirichye played a very important part in the revolution. From the very beginning they supported the Soviets, and in August, 1919, they became so strong, thanks to the reinforcements received from the Orenburg Cossacks, that they were able to defeat the Ataman Dutov, and the bandit Semionov's allied bands. The defeat caused the entire debacle which both reactionary Cossack leaders suffered, one after the other.

The Kuban Red Cossacks, from the first days of the Civil War, joined the eleventh Red Army in masses, and finally three-quarters of the cavalry of that army was made up of these Cossacks, who desperately fought the bands of Denikin, and entirely annihilated the famous "officers' corps", the only hope of the Denikin staff.

The heroic Red Taman Army, which so marvelously cleared the Caucasian shores of the Black Sea of the Wrangel invasion, was largely recruited by the Don and Kuban Cossacks, amongst whom many were *plastuni*. The Taman Army was decorated by the proletarians of Moscow with the Order of the Red Banner, for the capture of Tsaritsin, and this glorious army was also betrayed by one of its supreme commanders, Sorokin, and was obliged to cut its way in the Armavir direction, through the army of the enemy, constantly fighting

without cartridges for two months. Bayonets were the only arms of these incomparable heroes.

And the deeds of this army are a real glory of Red Cossackdom of the Soviet Republic. The names of Comrade Blinov and of many other leaders will be inscribed by the Russian Revolution with red letters in its history.

Besides the great deeds of the Red Cossack *voiskos*, we can note on almost every front the most remarkable activity of the smaller Cossack units. For instance, the regiments named after Stenka Razin, and after Emelian Pugachev, cut off from the Red Army by the enemy, did not surrender but wandered far in the rear of the enemy forces for about three months, succeeding in effecting their return to the Red Army, losing in battle more than half of their men. In the winter of 1918, Comrade Dumenko organized the regular Red Cavalry on the Don front, and in the middle of January, 1919, he penetrates in the rear of the Whites in the Tsaritsin region. Here he defeats 23 of the enemy's regiments and accomplishes a raid of 400 versts in one month. Four regiments of the Whites are captured by this Red cavalry leader, and 50 big guns, hundreds of machine guns, and an armored train, together with a number of armored motor-cars, are among his trophies. In the region of Kelentskaya and of Borisoglebsk, this same Cossack, Dumenko, defeats several cavalry divisions, pushes them to Kholer, and in the middle of December, forces the Don and captures Boguchar and thence moves his cavalry on Novocherkassk. Having defeated the enemy at the station of Chertkovo, at Millerovskaya, and Kamenskaya, toward the end of December he approaches the important railway junction of Likhaya-Zapovednaya, where, after two months of fierce battles, he defeats the famous Mamontov, takes 5,000 prisoners, and, on January 7, 1920, Dumenko's cavalry, after having covered 350 versts, occupies Novocherkassk, capturing 167 big guns, 8 tanks, 500 machine-guns, 8 aeroplanes, 60 Ford

tractors, 60 motor-cars, and 7 echelons of food-stuffs.

After this success of the Red Cavalry, the great creator of the Red Army, Trotsky, issued the famous order: "To horse, all proletarians."

To Comrade Budenny is entrusted the task of forming a cavalry corps. The brilliant career of this Cossack, who is now at the head of the regular cavalry, begins in the Voronezh region. Into this region he pushes the again rising Mamontov, thus attracting the attention of General Shkuro, who hurries up towards Orel in order to reach Moscow. By means of a most skillful manoeuvre, Comrade Budenny moves his cavalry on Taganrog, and, after making his way to Kursk-Kupiansk, being reinforced by the Red infantry, inflicts several decisive defeats upon the enemy, who tries to occupy the Donets industrial region. Fifteen hundred men of the division of General Markov are cut down, to the last man, by the Budenny cavalry; 1,200 are taken prisoner with 67 officers and enormous booty. Thence, Budenny moves his cavalry on Taganrog, and, after having captured this town, he directs his march on Rostov and Nakhitchevan, where the defeated Mamontov still tries to reorganize the remainder of his forces. In the night of January 8, 1920, both these towns are in the hands of Budenny's men. Eleven thousand prisoners, 7 tanks, 33 big guns, 170 machine-guns, etc., are the booty of the Reds.

The further glorious raids of this cavalry genius are still fresh in the memory of the readers of SOVIET RUSSIA. The Polish Campaign and the Wrangel débacle are closely connected with Budenny's name, which puts in the shade all the great cavalry leaders of the world, including Blucher, Murat, and Lee. All of them seem mere infants to me in comparison with the cavalry captains of these humble Red Cossacks of the great and glorious Red Army.

The Red Cossacks are the guardians of the Russian Revolution and, with such a guard to protect it, there is no force in the world which can crush it.

Problems of Organization of Labor

By LEON TROTSKY

(Continued)

The Labor Armies

We approach the question of the utilization of the army for labor tasks, which has attained a tremendous importance in principle in our country, by the empirical path, and by no means as a result of theoretical considerations. In some of the boundary regions of Russia the situation had taken such shape that considerable military forces were relieved for an indefinite period from military work. To throw them to other, more active fronts, especially in winter, was difficult in consequence of the disorganization of railroad transportation. This was for instance the situation of the Third Army, which was stationed in the province of the Urals

and the neighboring districts. The leading workers of this army, who understood that it was not possible for us to demobilize the army as yet, themselves suggested that they be assigned to a condition of labor. They sent to the Central Organization a more or less detailed plan of a Code for the Labor Army.

This task was new to us and not easy. Will the Red Army men work? Will their work be sufficiently productive? Will it pay? There were doubts as to this even among ourselves. It is superfluous to say that the Mensheviks were sounding their trumpets in the opposite direction. The same Abramovich at the Congress of Soviets of National

Economy—I believe in January or early in February, i.e. when everything was still in the stage of a mere plan—prophecied that we would inevitably suffer shipwreck, as the whole business was a stupidity, an Arakcheyev* Utopia, etc. We looked upon the matter differently, to be sure, the difficulties were great, but they did not differ in principle from all the other difficulties of the Soviet system.

We studied the existing organism of the Third Army. Only a few military detachments still remained in this army; altogether one division of marksmen and one division of cavalry—15 regiments in all—as well as special troops. The remaining sections had already been assigned earlier to other armies and other fronts. But the apparatus of the army administration was as yet intact, and we considered it probable that we would have to send out this body in spring down the Volga to the Caucasian front to face Denikin, if he had not been definitely disposed of by that time. Altogether there remained in the Third Army in its administration, institutions, sections, hospitals, 110,000 Red Army men. In all this mass, consisting predominantly of peasants, there were about 16,000 Communists and members of the sympathizing organizations—many of them workers from the Urals. By its composition and structure the Third Army was a peasant mass, welded together under the leadership of advanced workers into a military organization. In the Army a considerable number of military specialists were at work, who discharged important military functions and stood under the general political control of the Communists. If we regard the Third Army from this general standpoint, it is a reproduction in miniature of all of Soviet Russia. If we take the Red Army as a whole or the organization of the Soviet power in the district, in the province, or in the entire republic, including its economic organs, we shall behold everywhere the same plan of organization, millions of peasants, initiated into new forms of political, economic, and social life, by the organized workers, who occupy the positions of leadership in all fields of the Soviet system. Specialists of the bourgeois school are engaged for offices requiring special training; they are given the necessary independence, but the control over their work remains in the hands of the working class as embodied in its Communist Party. The carrying out of the labor duty is again not otherwise conceivable for us than by mobilizing particularly the peasant labor forces under the leadership of the advanced workers. There were not and therefore could not be any objections in principle to the use of the Army for labor purposes. In other words, objections to the principle of labor armies on the part of the above Mensheviks themselves were at bottom objections to “compulsory” labor in general, not to labor duty and to Soviet methods

of economic construction as a whole. We pushed aside these objections without difficulty.

Of course the military apparatus as such was not intended for the conduct of a labor process. But it was not our intention to use it thus: the supervision was to remain in the hands of the corresponding economic organs. The army furnished the necessary labor power in the form of organized compact units which were utilized as a mass for carrying out the simple, uniform tasks, such as removing the snow from the roads, preparing wood, construction work, organization of transportation by railroad cars, etc., etc. We now already have gathered considerable experience in the field of the utilization of the army for labor and are in a position to estimate the situation with more data than mere expectations and suppositions. What are the results of these experiences? The Mensheviks have hastened to judge them. Again the same Abramovich declared at the Congress of Mine Workers that we were bankrupt, that the labor armies were parasitic bodies, with 100 supervisors to very ten workers. Is this true? No. This is frivolous and malicious criticism from people who stand aloof, who do not know the facts, who merely gathered debris and offal, and who always and everywhere do nothing but either record or predict our bankruptcy. As a matter of fact the labor armies have not only not failed, but have on the contrary been very successful, have proved their ability to live; they are developing and solidifying themselves more and more. Bankruptcy has been suffered only by the prophets who predicted that nothing would come of the whole business, that no one would work, that the Red Army men would not go to the labor front but simply desert for their homes.

These objections were inspired by petit-bourgeois skepticism, lack of confidence in the masses, mistrust of our superior organization initiative. But did we not hear essentially the same objections when we undertook the far-reaching mobilization for military purposes?

Then also a general desertion was predicted, which would be inevitable after the imperialistic war. To be sure there were desertions, but experience showed that it had by no means the general character that had been anticipated; the army was not destroyed by these desertions: the mobilization of millions was assured as a whole by a spiritual and organizational connection, by volunteering on the part of the Communists, and by state compulsion; this made easy the numerous formations and putting through of the most difficult tasks of battle. And in the long run the army came out victorious. On the basis of our experiences in the war we expected the same results from our labor tasks. And we have not been mistaken. The Red Army men by no means dispersed during the transition from the state of war to the state of labor, as was predicted by the skeptics. Thanks to the well organized agitation this transition was even accomplished by a great moral exaltation. To be sure, a portion of the soldiers did try to leave the

* A notorious reactionary statesman under Alexander I, in the beginning of the 19th century who planned to organize military labor colonies.

army, but this is always the case when a great body of troops is thrown from one front to another or shifted from the rear to the front, or exposed to any great shock, and potential desertion becomes transformed into actual desertion. But here at once the political sections, the press, the organs for combating desertion, etc., assumed their duties, and at present the percentage of desertion in labor armies is by no means higher than in our fighting armies.

The statement that the armies, by reason of their inner structure, could yield only a small percentage of workers, is only partly correct. As for the Third Army, I have already mentioned that it had retained its complete administrative apparatus in spite of the fact that the number of military sections had much decreased. As long as we left intact the staff of the army and its administrative bodies—for military and not for economic reasons—the percentage of workers yielded by the army was indeed quite small. Of the total number of 110,000 Red Army men, 21 per cent were engaged in administrative and economic duties; daily duties, guard duty, etc., were done in the great majority of army institutions and camps by about 16 per cent. The number of sick (chiefly typhus), together with the medical and sanitary staff amounted to about 13 per cent; various reasons (transfers, furloughs, absence without leave) caused about 25 per cent to be absent. The number therefore remaining for labor amounted to only 23 per cent—which was the maximum to be gotten out of this army at that time for labor purposes. As a matter of fact not more than about 14 per cent actually worked during the first period; they were partly from the two divisions, marksmen and cavalry, still remaining in the army. But hardly had it become clear that Denikin had been defeated and that we should not need to send the Third Army down the Volga in the spring in order to help the troops on the Caucasian front, than we immediately went about the task of dissolving the awkward apparatus, and adapting the army institutions to the tasks of labor. Although this task is by no means complete, it has already had very important results. At the present moment (March, 1920), the Third Army yields about 38 per cent of workers from all its number. Military bodies of the Ural military district, which are working by the side of the Red Army, already yield 49 per cent of workers. This result is not so bad, when we compare it with the attendance of workers in the factories, in many of which until very recently, and in some even now, the failure to report for work for both justified and unjustified reasons attained as high a percentage as 50 or more.* We must also remember that the workers are very often under the home care of adult members of their family, while the Red Army men must take care of themselves.

If we consider the nineteen year old men mobilized by us in the Urals with the aid of the military

* This percentage has since decreased considerably (June, 1920).

apparatus, partly for furnishing wood, we find that of all their number more than 30 thousand, or more than 75 per cent, reported for work. This is already an immense progress. It shows us that it is possible for us to introduce alterations in the construction of the labor armies, when applying the military apparatus to mobilization and formation, alterations involving an immense increase in the percentage of those taking direct part in the physical process of production.

And finally, we may already judge, on the basis of experience, the productivity of the work of the soldiers. At first the productivity of their labor in the most important branches of work was extremely small in spite of the great moral exaltation, and a reading of the first reports of the labor army might have produced a very depressing effect. Thus, the preparation of a single cord of wood required at first from 13 to 15 labor days, while the normal requirement, to be sure, very rarely attained at present, is three such days. We must also note that experienced men in this field can in a single day get ready a cord of wood with one day's labor (one cord per day per man). But what was the real figure? The military bodies were far removed from the places where the wood was to be cut. Often the men had to walk six or eight versts each day, thus using up a considerable portion of the labor day. Axes and saws were not at hand at the place of work. Many Red Army men, coming from the steppes, did not know the forests, had never cut down and sawed up trees. The provincial and district transportation committees did not learn at a single stroke to make use of the military units, to direct them to the necessary places, and to create the necessary conditions of work for them. It is not surprising that the result was an extremely low productivity of work. But after the most flagrant defects of organization had been removed, many distinctly better results were obtained, thus—the latest data show that a cord of wood takes four and one-half days on an average to prepare, throughout the First Labor Army, which is no longer very far from the norm that has been set up. But most encouraging is the circumstance that the productivity of the work is systematically rising, the better its organization.

And what can be attained in this matter is shown by the short but extremely valuable experience of the Moscow Engineers Regiment. The chief military administration, conducting this experiment, began by fixing the normal production requirements, three labor days to a cord of wood. This norm soon turned out to be somewhat excessive. In January a cord of wood required two and one-half labor days. In February 2.1. In March 1.5. A very high productivity indeed. This result was obtained by a mental influence, by a registration of the individual labor of each person, by awakening the spirit of emulation in labor, distributing premiums to the workers for high average production, or, to use the language of the trade unions, by a flexible scale, adapted to the individual variations of labor productivity. This experiment—almost a

laboratory experiment clearly outlines the paths on which we must now continue to advance.

A number of labor armies are already at work in our country—the First Labor Army, the Petrograd Labor Army, the Caucasian Labor Army, the South Volga Army, the Reserve Army. The latter, as is well-known, contributed considerably to increasing the exploitability of the Kazan-Yekaterinburg railroad. And wherever the attempt to make use of army sections for labor tasks was made in anything like a rational manner, the results have shown that this method is absolutely correct and capable of realization.

We have refuted the preconception that a military organization must be inevitably parasitic, under any and all circumstances. The Soviet Army reflects in itself the tendencies of the Soviet social order. We must not think in the petrified terms of the preceding epoch: "militarism", "military organization", "unproductiveness of compulsory labor", but we must think without preconceptions. We must approach the phenomena of the new epoch with eyes open and remain mindful of the fact that Saturday exists for man and not vice versa, that all forms of organization, including the military organization, are merely tools in the hands of the working class in power, which has the right as well as the liberty to adapt, alter, remodel these tools, until the required goal has been attained.

Unified Economic Plan

The extensive application of labor duty as well as the measures for a militarization of labor, may play a decisive role only in case they are applied on the basis of a unified economic plan, embracing the entire country and all the branches of industrial activity. This plan must be calculated for a term of years, to cover if possible an entire epoch. It will naturally be divided into various periods or series representing the inevitable stages in the economic reconstruction of the country. We must begin with the simplest and at the same time the most fundamental tasks.

First of all, the outright possibility of life—even though under the most difficult circumstances—must be secured to the working class and thus the industrial centers maintained, the cities saved. This is the point of departure. If we are not to see the cities dissolve into villages, industry yield place to agriculture, the whole country reduced to rural conditions, we must keep our transportation system operating at least on a minimum scale, and must assure the supply of grain for the cities, fuel and raw materials for industry, fodder for cattle. Otherwise we cannot make a single step in advance. The first portion of the plan therefore is: improvement of transport, or at least prevention of its further decline, and obtaining of the most necessary supplies of foodstuffs, raw material, and fuels. The entire following period will be completely occupied with a concentration of exertion of labor power on the solution of these fundamental tasks, and thus in turn the necessary conditions will be attained for all further work. This task was particularly

set down for our labor armies. Whether the first period, as well as those that follow, is to embrace months or years, it would at present be idle to prophecy,—the matter depends on many circumstances, running all the way from the international situation to the degree of solidarity and pertinacity on the part of the working class. The second period is one of machine construction for transportation, of winning raw materials and foodstuffs. The locomotive occupies the foreground in this period.

At present the locomotive repairs are being carried on in too primitive a manner and are requiring altogether too much energy and material. Repairs of rolling stock must be replaced by a mass production of reserve parts. Now that the whole railway system and all the industries are in the hands of a single owner, namely the labor state, we must set up for the whole country uniform types of locomotives and cars, standardize the parts, mobilize all the necessary industries in a mass production of reserve parts, and reduce repairs to the simple substitution of new parts for those depreciated, and thus secure assembling of new locomotives from reserve parts, on a mass scale. Now that the sources of fuel and raw material are again available for us, we shall have to concentrate our exclusive attention on the construction of locomotives.

The third period is that of machine construction for the purpose of producing commodities for nation-wide consumption. 3

The last period, which will be based upon the achievements of the three preceding periods, will permit a transition to a large scale production of objects of personal use. 4

This plan is of great importance, not only as a general guiding line in the practical work of our economic organs, but also as an outline for the propaganda among the working masses in regard to our economic tasks. Our labor mobilizations will not adapt themselves to the real situation, will not take root, conscious, inspired and capable of life. We must give to the masses the complete truth as to our situation and our prospects for the future, must tell them frankly that our economic plan even with a maximum of exertion will yield but little, since our chief work during the immediate future must consist in preparing the conditions for the means of production. Only after we have secured the possibility of a restoration of means of transportation and production, at least to a minimum extent, shall we be able to proceed to a production of articles of consumption. The workers will thus obtain as an immediate tangible result of their work such objects as are of personal utility, only in the last and fourth stage of the economic plan, and only then will a serious amelioration of life be realized. The masses will still be obliged to bear the burden of labor and of privations for a long time and they must grasp the prospective inner logic of this economic plan in order to be capable of bearing it on their shoulders until the goal is reached. We must not conceive the succession of the above noted four eco-

conomic periods in too absolute a manner. Of course it is not our object completely to stop our textile industry: we are prevented from doing that if only for military reasons. But in order that our attention and energies may not be entirely dissipated under the pressure of the needs and distress, everywhere of shocking proportions, it is necessary to distinguish between the most important points and those of less and subsidiary importance, on the basis of our general economic plan. We need not point out that we do not in any way intend a sealed "national" communism. The abolition of the blockade, and of course the European revolution, would necessarily produce very essential alterations in our economic life, abbreviate the stages of its evolution, and draw them closer together. But we do not know when these events will take place. And we must act so as to be able to maintain ourselves and solidify our position even under the most unfavorable, i.e., the most slow developments of the European and world revolution. In the case of an actual resumption of trade relations with the capitalist states, we shall permit ourselves again to be guided by the above outlined economic plan. We shall give a portion of our raw materials in exchange for locomotives or other necessary machines, but not under any circumstances in exchange for clothing, for footgear, and delicacies; we are now looking not for articles of consumption, but for means of transport and production.

We should be shortsighted skeptics, or petty shopkeepers of the philistine variety if we should imagine that the restoration of economy will be a gradual transition from the present complete economic disorganization to the state that preceded this disorganization, i.e., that we must rise again by the same stages that led us down, and only after a certain very long period again restore our Socialist economy to the condition before the imperialistic war. Such a conception would be not only not encouraging, but even absolutely wrong. The disorganization which has destroyed countless values in its course, has destroyed also much red tape, much dead routine, much that was moldy and senseless in our economy, and thus paved the way for a reconstruction in accordance with the technological factors now at the disposal of world economy. [If Russian capitalism developed not from step to step, but by jumping a series of steps, and went so far as to awaken, in the primeval steppes, industries on an American scale, this heroic method is all the more accessible to the Socialist economy. If we have overcome our wretched impoverishment, have accumulated some stocks of raw materials and foodstuffs, have improved our transportation, we may skip an entire series of intermediary steps, making use of the circumstance that we are not fettered by chains of private property and are therefore unable to subordinate all our enterprises and all our economic elements to a nation-wide unified plan.]

Thus, for instance, we may doubtless proceed to an application of electricity in all the main branches of industry and personal utility, without

again passing through the "Century of Steam". The program of electrification has been outlined for us in advance in a series of successive stages, corresponding to the principal successive steps of the general economic plan.

The new war may delay the realization of our economic plan. Our energy and perseverance may and must accelerate the process of economic reconstruction, but whatever may be the speed with which events will continue to develop, it is clear that a single economic plan must lie at the base of all our labor mobilizations, labor militarizations, labor Saturdays, as well as all the other forms of voluntary Communist labor, and the immediately following period will demand of us a full concentration of all our energy on the first, most rudimentary tasks: foodstuffs, fuel, raw materials, transportations. No scattering of attention, no splitting up of forces, no inactivity; this is the sole path of rescue. (*To be continued in our next issue*)

NORWEGIAN EXPEDITION TO VILNA

It now seems probable that Norwegian soldiers, and also those of the other Scandinavian countries, will not be required to go to Vilna as a police guard. At least the pretext under which they were to be sent has vanished. For there is not going to be any plebiscite at Vilna to determine the national adherence of that city and therefore there will be no need for policing the place during the plebiscite. But if it is necessary to draw the Scandinavian countries into the counter-revolutionary war, no doubt some other reason will be found for sending 300 Scandinavian soldiers to Vilna or to some other place to be designated later. The latest news we have concerning the Vilna expedition is that by December 9 a number of men had been found ready to enlist for the purpose, and that Captain Spork, a son of General Spork, had been appointed to lead the detachment. Latest advices, of December 10, indicate that it is not Captain Spork, however, who is to lead the expedition, but an army officer of even higher standing, a Lt.-Colonel. His name is C. Gulbrandsen.

AN ARMENIAN SOVIET OFFICIAL

Moscow, December 6.—Lenin has received a telegraphic greeting from the revolutionary government of the Armenian Soviet Republic.

The first information concerning the revolution in northern Armenia was received toward the end of November. On December 1, the Azerbaijan Soviet Republic voluntarily ceded the disputed provinces of Zangezour, Nakhichevan, and Karabakh to the Armenian Soviet Republic. The Armenian revolutionary government has received greetings from the Turkish Government, which were transmitted by the Commandant of the Front, Karabekir, and the Turkish representative, Kazim Bey. At the head of the new government stands the old Armenian revolutionist, Kassian. Lenin sent reciprocal greetings to Erivan, the capital of Soviet Armenia.

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION

110 West 40th Street

New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

WILL Soviet Russia again be forced to meet attacks on the part of the Great Powers or the former border-provinces next Spring? This is the question that all friends of Soviet Russia are repeatedly asking themselves. Will it still be possible for any government to consider it safe to antagonize its peoples still further by undertaking to overthrow, or aid in overthrowing, a form of government that has met with such approval from the Russian masses that other masses, all over the world, feel indisposed to question its right to continued existence? There is only one government that still seems ready to oppose Soviet Russia unreservedly—to be willing to be set down as a definite military opponent of that country, as able and eager to send men, munitions, and money to the aid of any individual or state that will undertake a new drive on Soviet Russia, and that Government is the Government of the Republic of France. Whether or not it was France that President Wilson had in mind when he instructed Mr. Norman H. Davis, Acting Secretary of State, to send a telegram to M. Paul Hymans, President of the Assembly of the League of Nations, advising all the great nations to assure Soviet Russia they would not invade her territory, we do not know, but it does seem from a reading of Mr. Davis' letter that the President is one of those who believe an attack against Soviet Russia to be still possible, and indeed, that certain powers must now be meditating such an attack.

President Wilson advises the abandonment of any such designs, for, in Mr. Davis' words, while "he regards the Bolsheviki as a violent and tyrannical minority, by no means representing the real desires and purposes of the Russian people," he had, however, "never believed that the problems raised by this coup d'état could be solved by military action from the outside. He now hopes that the recent tragical events on the Polish front and in the Crimea have convinced all the world that armed invasion is not the way to bring peace to the people of Russia."

Under the definite impression that armed attack from within will accomplish no change in Soviet Russia, and that any impression in that country to the effect that the border-states are being bribed into a position of hostility to Central Russia can have only the effect of strengthening the hold of

the Soviet Government on the affections and services of the popular masses of Russia, President Wilson asks that Soviet Russia be permitted to work out her own salvation and that definite assurances be given her that there will be no interference by outside powers, and, above all, no aid to the border-states in any possible counter-revolutionary enterprises to be begun by them.

Now that the Great Powers have all ceased direct attacks on Soviet Russia, decency could not be violated by a statement that such attacks have ceased. And there can be objection to an added statement by the same powers that they will not aid any border-state in further attacks on Soviet Russia, for there is little likelihood that any of the border-states would now consent to having itself again sacrificed in such a hopeless and even disastrous enterprise. Aside from this, Soviet Russia will listen to all assurances, believing all that are unquestionable, and none other.

* * *

PRESIDENT WILSON'S declaration, through Mr. Davis, was written in a connection that is in itself interesting. It appears that the above letter of Mr. Davis, written January 18, and published in last Sunday's newspapers (January 23), came as an answer to a suggestion from Prime Minister Lloyd George that the President instruct the American High Commissioner at Constantinople to take up with the Allied High Commissioners at that city the question of Armenia, which, in Mr. Lloyd George's words, "is reported to be under the control of Soviet Russia."

Judging by Mr. Davis' remarks on this subject in the course of his letter, and by previous remarks in the same sense by Ex-Ambassador Morgenthau, the President's feeling that it would be unwise to consider Armenia as a separate problem, and that the entire question of border-states should be taken up as a single matter, seems to be due to a conviction that not only Armenia, but all the other border-states as well, are in a fashion "under the control of Soviet Russia." For all of them now look to Moscow for salvation, and not to Paris, Versailles, London, or Berlin. All of them have concluded either treaties of peace with Soviet Russia, or at least preliminaries of peace that are quite binding on their conduct until full peace is realized. All of them know that there is money to be earned in the service of France, but that permanent reconstruction can be worked for only through an understanding with Soviet Russia. In our issue for last week we printed an article entitled "Latvia in Ruins", which significantly illustrated the lot of the small nation that seeks to tear itself away from its natural moorings and to base its economic life on relations with far-off imperialistic nations instead of relations with neighborly proletarians. A very parallel description would apply with equal force to Lithuania, Esthonia,* Poland, Finland, Armenia, Georgia, Azerbaijan, etc. All were ruined

* See Dr. Goldschmidt's article, SOVIET RUSSIA, Vol. III, No. 14.

by Allied intervention; all have sought refuge in an understanding with Soviet Russia. It does seem necessary to consider the whole problem of the border-states with reference to Soviet Russia, as Mr. Morgenthau discovered some time ago. Whether the intention be to wrench them all away from Soviet Russia at once, or really to permit them and their great neighbor to work out their own fate and their own mutual relations, there is no sense or prospect in a detached consideration of the case of each border state.

* * *

THE biggest border-state that has passed successfully through the stages of victim to Allied policy and seeker for Soviet Russian friendship is Poland. The governing class of Poland has no friendship for either the government or the people of Soviet Russia. They would a thousand times rather take their support from the imperialists of the West than from the proletarians of the East. But the people of Poland must be considered; the Polish people have indicated in unmistakable terms on what side lie their hopes and sympathies. And Prince Lubomirski, Polish Minister to the United States, who is surely no friend of the Proletarian Dictatorship, is clearly speaking for his government when he makes the statement attributed to him in the *New York Times* of January 23:

"Russia and Poland are at peace today, and Poland expects that Soviet Russia will live up to the preliminary peace signed at the Riga Conference and the final draft of the treaty which will probably be signed before the middle of February. Rumors of war are baseless."

Prince Lubomirski is then quoted in the *Times* as having said a number of additional things, but the important point is that Poland expects to follow up her Preliminary Treaty of Peace with Soviet Russia by concluding a full Treaty of Peace, as have all the other border-states, and then the ring of small nations who are tired of being tools for France and other powers, and who have seen a better friend in Moscow, will be complete. To be sure, all have sought Moscow's friendship for their own reasons, but it barely needs to be pointed out that no reasons of their own have succeeded in driving them into the arms of France, or of any of France's allies.

* * *

BUT how about Germany? Reports are still stubbornly current, and have not yet been killed by President Wilson's letter, that a new attack is to be launched against Soviet Russia in the Spring, and the name of General Ludendorff, at first but loosely associated with the rumors of this plan, is now beginning to serve as its firm name and label. Interviewed by a representative of *The Chicago Tribune*, General Ludendorff is quoted (*The New York Times*, January 24) as follows:

MUNICH, January 23.—"In the not distant war between Russia and Poland, Russia will overrun the latter country, and when Warsaw is captured all Europe will be endangered and the whole world will realize that the danger of Bolshevism is increased, not diminished."

Connected with the name of General Ludendorff in this matter is that of Arnold Rechberg, a German "who drew up a plan for a European League to fight Bolshevism in the field." And, as the correspondent adds:

"Rechberg told me that the war program to block the Bolsheviki was written largely at the request of Americans, but he could not mention names."

It is unfortunate that this scheme should be aired at a moment when it would appear to be in the flattest kind of contradiction with the proposal put forward by President Wilson in Secretary Davis' letter. General Ludendorff expressed regret that the memorandum of the proposed coalition against Soviet Russia should have been published before it had received the sanction of his "British and American backers".

If the denunciations of Ludendorff by Allied leaders had only been seriously meant, how much better it would now be for them. Is it possible that they are going to forgive this desperate man, in order that he may be able to plunge his country into an adventure more criminal than that for which it is now receiving such cruel punishment at their hands? They are birds of a feather if they work together in this mad effort to secure the services of what remains of German militarism in a last desperate attack on Soviet Russia. And their effort will have the effect of accelerating that which they profess so much to fear: the setting up of a proletarian dictatorship in Germany, and a complete alliance between the new proletarian republic and that of Russia.

* * *

NEW difficulties now beset the progress of "democracy". The League of Nations Council is about to meet, and one of the "small nations" that must be dealt with is Lithuania. Lithuania is after a fashion a member of the League of Nations, but not exactly a member in good standing, for the reason that the Trustees of that great Club are not quite certain of Lithuania's solvency. Let not the gentle reader suppose that this is grim proletarian humor: that we are thus darkly predicting a swallowing up of Lithuania by Soviet Russia. No, the fears as to Lithuania's permanence come from the uncertainty of the League members as to whether they should transform each individual border-state into a little focus of reaction, or—and some states prefer this—throw them all into the jaws of a reborn, readjusted and refinanced Tsarist centralism. The papers tell us that Lithuania, although only an associate member, has filed with the League a copy of a treaty recently concluded with Soviet Russia, and that this is causing worries for the League statesmen. For Soviet Russia does not exist, you know, in polite circles, and what shall be done with a member who associates with her?

Will Great Britain also have to file a copy of the Trade Agreement with Soviet Russia, and will the League apply Article XVIII very severely in this case too?

MESSAGES OF FAREWELL

I

Statement by Mr. L. C. A. K. Martens, Representative of the Russian Socialist Federal Soviet Republic

January 22, 1921.

In taking leave of the United States I wish to say a word of grateful appreciation for the great personal kindness and courtesy which I have received from many Americans in all vocations throughout the country. It has been a source of constant encouragement to me to find everywhere men and women who have not allowed hysterical fears or prejudice to move them from their sympathy with the cause which I have represented.

My departure has come as the logical and inevitable consequence of the policy of the American Government towards Soviet Russia. So long as that policy was not declared, so long as I could not secure from any responsible official of the American Government any frank expression of that policy, my government was justified in keeping me here to strive for the establishment of normal political and economic relations between the United States and Soviet Russia. The order for my deportation, however, arrived at after long deliberation and signed by a member of the Cabinet, was an unequivocal declaration of policy. The policy thus declared was that which has actually guided the conduct of the American Government in the past two years; namely, an absolute refusal to recognize even the de facto existence of the Soviet Government, and a refusal to permit the resumption of trade between Russia and America. The decision of the Secretary of Labor was directed not against myself but specifically against the Government which I represent. The decision said, in effect, that the American Government would not permit any representative of the Soviet Government to approach America for the purpose of establishing political relations. This was the answer to the several communications which I addressed to the Department of State immediately after my appointment as the Representative of the Soviet Government in this country and to which the Department of State did not see fit to reply. My mission here would have been terminated much earlier if the Department of State had been willing to take the responsibility which was finally assumed by the Department of Labor. This, however, is a curious matter of American official procedure, which I do not pretend to understand.

My Government accepted this declaration of the policy of the American Government toward Russia and instructed me to close my Bureau and to withdraw from the United States without delay.

I have no knowledge of the future plans of the American Government nor can I tell in what direction this policy of ignoring the existence of the established Government of the largest country in Europe will lead. I know that the Soviet Government is more firmly established, beyond fear of danger of foreign or internal assault, than it was on the day when I first approached the American

Government on its behalf. I know further that the industrial and economic conditions of the world, not excepting America, are such that the resumption of normal economic relations with Russia has become an imperative necessity upon all nations. I cannot say how the American Government will solve the problem involved in these circumstances. I can only say that when the American people are prepared to approach this problem the Government of the Russian workers and peasants will be ready to meet them in a reasonable and friendly spirit.

II

To the Editor of SOVIET RUSSIA:

I am glad that it has been found possible to continue the publication of SOVIET RUSSIA under private auspices. Experience has shown that we were amply justified in our belief that there was a special field in America for the publication of a magazine devoted exclusively to the presentation of accurate information about Soviet Russia. The enthusiastic response of thousands of readers and subscribers throughout the country has demonstrated the widespread demand for such a publication.

SOVIET RUSSIA will be needed now more than ever before. With the closing of the Russian Soviet Government Bureau, the American people will no longer have any direct contact with official representatives of the Soviet Republic. The ordinary channels of communication, as always, will be subject to a hostile censorship and propaganda. The campaign of falsehood and misrepresentation will continue; and there will be no one here to speak officially in defense of the Workers' and Peasants' Republic. If SOVIET RUSSIA can continue as heretofore to devote itself exclusively to the presentation of facts about Russia, it will serve a most important function and will, I am sure, meet with an increasingly enthusiastic response. I am confident that all our friends will find they need SOVIET RUSSIA more than ever before and will eagerly lend their support to insure its continued publication.

With fraternal greetings to all workers on the staff of SOVIET RUSSIA,

L. MARTENS,
*Representative of the Russian Socialist
Federal Soviet Republic.*

January 20, 1921.

Volume Three

of SOVIET RUSSIA will be offered for sale and delivery. Orders should be sent immediately, accompanied by remittance of amount, five dollars. The volume is durably bound in cloth, stamped in gold, with title page and index. It is the largest volume of SOVIET RUSSIA thus far issued; there are 652 pages of text and illustrations, including many maps and facsimiles, in addition to sixteen full pages of half-tone plates on calendared paper.

Protection of Mother, Baby and Child in Russia

By N. SEMASHKO

BEFORE the November Revolution, Russia was the classical country of child mortality. One-fourth of all newborn babies died even before they reached their first year. Every year about two millions of babies were buried in Russia. Child mortality was especially great in the villages among the peasant population.

There were two fundamental causes which contributed to this extraordinary mortality of babies. In the cities, it was the terrific exploitation of the labor of mothers and of pregnant women. It happened frequently, that women went on with their work till the very last day of their pregnancy, and sometimes it even happened that women were delivered of their children within the walls of the factory. Thus children have been crippled even while in their mothers' wombs. When the child was born, the mother could not nurse it; she had to leave it at home and feed it with substitutes for food.

In the villages, to these main causes—poverty and exploitation—was added the frightful ignorance of the peasant women, who have no idea of the most elementary rules of hygienic nursing.

The Republic of the toilers first of all concerned itself with the protection of the labor of pregnant and nursing women. A decree was issued to the effect that women cannot be allowed to work eight weeks before and eight weeks after confinement. During all this time the mother receives her regular wages and her full food-ration. Pregnant women receive, besides, better food and a number of privileges in daily life. When the child is born, the mother receives linen and warm clothes for the baby. Nursing mothers are relieved from work several times during the day. Special products, as milk, eggs, sugar, etc., are given for children on their special children's food-cards.

The greatest attention was given by the Soviet Government to the work of creating a sufficient number of establishments for the protection of mother and child: Great model "Homes of Mother and Child", confinement homes, milk dispensaries, nurseries, children's homes, etc. There are at present thousands of such institutions all over Russia, in the cities, at factories and even in many villages. We have already passed through the period when it was necessary to explain to the population the use of these establishments. At present, we are unable to keep up with the constantly growing demand for such institutions, because of the shortage of medicines, food products for the nourishment of children, and various necessary appliances.

Children of a more advanced age have also been an object of constant care on the part of the Soviet Government. Children's homes exist not only in the cities but even in many villages. Children's colonies have been established in many of the best residences of the landlords. During the past summer, about 50,000 children lived in the colonies

in the vicinity of Moscow alone. In the schools, the pupils receive hot breakfasts. It is quite touching to see how the population of the cities, frequently suffering from hunger and feeding on substitutes, is giving away the last food supplies for the children. Hired labor of children up to the age of 14 years is prohibited altogether. For children of the age of 14-16 years, the working day is limited to four hours. No child labor is allowed in harmful productions. The trade unions paying special attention to the protection of the labor of women and young persons. Their interests are considered also in the carrying out of labor duties.

For weak and sick children there are special establishments, so-called "Forest Schools", which are situated in healthy forest localities. At present there are 33 such schools. Besides, there are 34 sanatorium-schools and sanatorium-colonies for children inclined to consumption, and 37 sanatoria for consumptive children.

Further, children under the age of 18 years, who have committed some offence, are not considered as criminals. On the contrary, we look upon them as victims of capitalist society, who require proper education and cure. Such child offenders are not liable to the general courts, but there are special committees consisting of physicians and pedagogues, to decide whether they are to be placed in institutions of the Public Health Commissariat or of the Commissariat of Public Education. The Public Health Department has 134 such institutions for mentally and physically defective children. There are also 41 schools for deaf and dumb, and 15 schools for blind children.

The difficult conditions, in which the Republic was put by the war and blockade had their destructive effects upon the organizations for the children. But the toiling population of the suffering Republic gave away its last piece of bread and the last yard of cloth for the children, because the toilers of the Soviet Republic are conscious that the children represent our better future, that upon their health depends the success of our Socialist construction work. And as soon as the pressure which is exerted upon us by our numerous enemies, is made somewhat easier by the efforts of our Red Army, and as soon as our economic and food situation is somewhat improved, the first to feel the benefits of these improvements will be our children, our hope and future.

MAX BARTHEL

the author of the short article on the following page, is a writer well known in working class circles in Germany. He visited Russia recently, and while in Petrograd renewed an old acquaintance with Maxim Gorky. We hope soon to be able to present our readers with further articles from Mr. Barthel's pen.

“Subbotnik”

By MAX BARTHEL

THE first Communist Saturday in Moscow was a parade rather than real work. On that occasion we walked from our hotel and went across the city to the Kazan Station, carrying small red flags. These were the delegates of the second world congress who intended to show Moscow, by this beautiful gesture, that Jacques Sadoul of France and Pak Dunshan of Korea, as well as Tom Quelch of England and Willy Munzenberg of Germany, considered themselves to be in the same rank as the humblest laborer, and were doing voluntary work for the rebuilding of the Communist state. The people were looking wonderingly at us, because many of the comrades were well-dressed Communists with white collars and shined shoes. The people of Moscow were also astonished to hear the international songs which we were singing, such as the “Carmagnole”, the “Red Flag” the “Arbeitsmänner” and “Avanti Popolo”. Our leader did not know the way to the place where we were to work and finally we arrived at the locomotive repair shop at the railroad station. We scattered into groups and it was very amusing to see Pak Dunshan of Korea with turned-up sleeves and high collar working in the foundry together with former army captain, Sadoul.

The next time we gathered in the Kremlin, that splendid pile of masonry, with the golden churches, the Asiatic towers, the castles and administrative buildings. Being foreigners we of course arrived punctually at the gathering place: i.e., we were two hours too early, and the comrades of the organization of the Moscow Communist youth told us about their work and their successes in the Near and Far East while we were sitting in the armory among the cannons, waiting for the comrades. Finally, they arrived at about six o'clock: they were the pupils of the Red Officers' school in the Kremlin and Communists of the Moscow district, together about six hundred men. The Central Committee of the Communist Youth of Russia was there in full strength. In fine parade, headed by a band of music playing revolutionary songs, with red flags adorned with gold embroideries waving at the head and in the midst of the parade, we marched through the gateway of the Kremlin across the Red Square to the Moskva River. We marched into the poor, gloomy suburbs, where there were no magnificent churches.

On the bank of the Moskva River there were wooden ships, stout boats with big piles of timber. We rushed to work. There was silent emulation as to who would be stronger and carry more. The music band was playing. We were in a bath of perspiration, but we were merry and laughed during our work. After fifty minutes we were given the signal to stop. We lay sprawling on the gentle

slope of the river bank, voluptuously tired, and smoked and joked. Ten minutes later we were again merrily dragging the lumber. Three hours passed in this way. To the right, on the bridge, there were many people who stared at us. We had nothing but contempt for the mere onlooker. At ten o'clock in the evening—it was getting dark already—we gathered again, and every one of us got a pound of bread which he ate full of delight. In the darkness we marched home, chewing bread, singing and happy. On the Moskva there were some boats whose lights were reflected in the water. Some workers lighted little rockets to honor the home-going Communists.

The third Communist Saturday took place on a Sunday in November because Saturday evening had been too dark for working. We went with the comrades of the Commissariat of War; alongside of a simple Red Army soldier Kamenev, the Communist and Commander-in-Chief, marched. We went again to the station. Our group entered an engine-house and with powerful ropes fifty of us pulled the locomotives into the open. Among them were “two of Trotsky's locomotives”, as the foreman said with concealed pride. We cleaned up this engine house, gathered the iron and put the shelves in order. This time there were neither red flags nor music. But after the work was over, every one of us received a pound of bread, which according to the decision of our inner circle, we put aside for the children. As to the three pieces of candy, we ate them ourselves, because one has got to have something sweet.

Next Week's

Soviet Russia

will contain a great amount of interesting and important material. Among other things there are:

PIERRE PASCAL: *Three Days in Moscow*. The distinguished Frenchman describes his experiences in Soviet Russia's capital.

LEON TROTSKY: *Labor Armies in Soviet Russia*. The conclusion of the article now running in Soviet Russia.

DR. ALFONS GOLDSCHMIDT: *The Dictatorship of Organization in Soviet Russia*. An account of the inevitability of centralization in the evolution of industry since November, 1917.

SOVIET RUSSIA

New York, N. Y.

* Russian name for Communist Saturdays on which voluntary and unpaid work is being done by Communists.

Preliminary Results of the Census of 1920

By ISAAC A. HOURWICH

According to a cablegram received by the New York *Jewish Daily Forward* from its European correspondent, the results of the enumeration of the population of Soviet Russia in 1920 show that its total population was, in round numbers, 136,000,000, of whom there were 64,000,000 males and 72,000,000 females, that is 47 per cent males and 53 per cent females. According to the census of 1897 the distribution of the population by sex was 49.7 per cent males to 50.3 per cent females. The present disproportion shows clearly the ravages of the war.

Accurate comparisons of the preliminary figures published by the Soviet Government with those of the census of 1897 are at the present writing impossible, because of the changes of the boundary lines of Russia. A summary of the results of approximate calculations is presented in the table next following:

Population of Soviet Russia, 1920, Compared With the Population of the Same Area in the Census of 1897

| | 1920 | | 1897 | | Increase 1897-1920 | |
|---------------------------------------|----------|----------|----------|----------|--------------------|----------|
| | Millions | Per cent | Millions | Per cent | Millions | Per cent |
| Incorporated cities and towns | 22 | 16.2 | 12 | 12.4 | 10 | 83.3 |
| In all other settlements | 114 | 83.8 | 82 | 87.6 | 32 | 39.0 |
| Total | 136 | 100.0 | 94 | 100.0 | 42 | 44.7 |

Of the total population 22,000,000, that is 16.2 per cent, reside in incorporated cities and towns, and 83.8 per cent in unincorporated villages and rural territory. It must be borne in mind that the latter class is by no means identical with a rural population. According to the census of 1897, there were in Russia 6,376 unincorporated urban settlements with a population ranging from 2,000 to 40,000 inhabitants each. The urban population of Russia, including that of those unincorporated urban settlements, in 1897 reached 32 per cent of the total population of the Empire.

According to the preceding table the population of incorporated cities and towns, during the twenty-three years since the first census, increased by 10,000,000, that is by 83.3 per cent, and this despite the backward movement from the large centers to the rural districts since the revolution. Assuming the ratio of the population of unincorporated urban settlements in 1920 to have been the same as in 1897,—most likely it must have increased like that of the rest of the urban population,—we may conservatively estimate the total urban population of present-day Russia at 34.5 per cent of the total population of the Republic.

A fair index of the educational advance of Soviet Russia is furnished by the fact that 210,000 new schools have been established by the Soviet Government.

The following comparative summary of the number of students in universities and technical high schools and colleges in 1920 and 1897 shows the progress of higher education in Russia. The total number of students in universities at the census of 1920 was 120,000 and the total number of students in technical high schools and colleges 200,000. The figures for the preceding census (1897) were 104,000 and 134,000 respectively. These figures, however, comprised the area of the Russian Empire, exclusive of the Grand Duchy of Finland. The population of the present area of Soviet Russia has been estimated in the preceding table for the census of 1897 at 94,000,000, which represents 75 per cent of the population of the Empire enumerated at that census. In the comparative table next following the number of students in 1897 in the present area of Soviet Russia has accordingly been reduced to 75 per cent of the census figures.

Comparative Statement of the Number of Students of Universities and Technical Schools, 1897 and 1920

| | 1920 | 1897 | Increase Per cent |
|--------------------------------------------------|---------|---------|-------------------|
| In Universities | 120,000 | 76,000 | 58 |
| In Technical High Schools and Colleges | 200,000 | 100,000 | 100 |

The increase of the population in the present area of Soviet Russia between the census of 1897 and 1920 was 44.7 per cent. The increase of the number of university students was 58 per cent, and the increase of the number of students of technical high schools and colleges 100 per cent. These figures show that, notwithstanding civil war and revolution, the attendance at the universities favorably compares with that during the rule of the Tsar, while the attendance at technical high-schools and colleges has doubled.

GREETINGS TO RUSSIAN PRISONERS

Moscow, January 2, 1921.—The All-Russian Soviet Congress, which has ended its work at the moment of decisive victory over the counter-revolution, and of the beginning of a time of economic development, sends its fraternal greetings to all comrades who are suffering as prisoners in foreign lands. We will make use of every measure to improve your situation, and to hasten the hour of your liberation from the capitalistic yoke and your return home. The Congress is convinced that this hour is coming soon and that the prisoners will soon resume their place in the ranks of those who are building the Communist Society. The Congress makes it the duty of the Central Executive of the Soviets to decide quickly on the measures which are available for the transport of the prisoners and to notify the officials concerned.

Industrial Situation in Soviet Russia

Locomotives and Freight Cars

In spite of the difficult conditions under which repairs are carried on, the shortage of spare parts, and the absence of all that usually helps to increase the productivity of labor, the repair of wagons and locomotives progresses successfully, and the program laid down for the past three months has been more than fulfilled.

In July 248 locomotives were repaired over and above the standard laid down, in August 233, and in September 258.

In the month of September the total number of locomotives repaired was 970.

First place is taken by the Murman railway, which gave a surplus of 170 per cent over and above the standard; the second place by the Vladikavkaz Railway, which gave a surplus of 143.3 per cent; the third place, by the Omsk Railway, which gave 132 per cent. These are followed by the South-Eastern Railway with 100 per cent, the Donets with 66.6 per cent, the Moscow-Kiev-Voronezh with 55.6 per cent, the Riga-Orel with 60 per cent, the Transbaikal with 60 per cent, the Tomsk with 57.1 per cent, the Tashkent with 50 per cent, and so on.

The increase of output on the various lines may be seen from the following figures:

The Vladikavkaz Railway is steadily increasing its output of repairs and gave in July an increase of 58 locomotives, in August it gave 60, in September 73 locomotives. On the Transbaikal Railway the same months gave the following figures: 9, 9, 16. The Kiev-Voronezh Railway gave respectively 37, 41 and 45. The South-Eastern Railway gave 49, 53, 70.

As far as freight cars are concerned their output for the month of August gave an increase over that of July of 874; the number over and above the standard output in accordance with order No. 1,175 was 3,584, i.e., 54.7 per cent.

The number of freight cars repaired in August amounted to 10,889, while Order No. 1,157 fixed the obligatory number at 7,035.

The railways holding first place in the repair of carriages are as follows: the Northwest Line with an increase over and above the standard of 236.3 per cent; the Volga-Bugulma 174.1 per cent; the Vladikavkaz 157 per cent, the South-Eastern 148.8 per cent; the Moscow-Kursk 127.2 per cent; the Murmansk 100.5 per cent, the Riga-Orel 94.2 per cent; the Moscow-Kiev-Voronezh 87.9 per cent, the Perm 72.7 per cent, the Omsk 63.7 per cent. These are followed by the Donets Line which gave an increase of 62.1 per cent, the Northern with 49.3 per cent; the South-West with 43.3 per cent.

For the month of September we have figures for the output of repairs only for 27 lines. The total number of these amounts to 8,036 wagons as against 4,685 according to program.

The first place in point of output for the month

of September is taken by the Perm Line, which gave an increase over and above the standard of 231.6 per cent; the second place by the Riga-Orel Line with 184.2 per cent; the third place by the Tomsk Line with 131.5 per cent. These are followed by the North-West Line with 110.7 per cent, the South-Eastern Line with 110 Per cent, the Moscow-Kiev-Voronezh with 108.8 per cent, and so on.

State of Industry in Petrograd

The Petrograd Council of Public Economy has worked out a summary of the data as to the situation of industry in Petrograd during the first half-year of 1920, and its prospects in the near future.

According to these data the Petrograd factories have been supplied with sufficient materials though not quite to the degree laid down in the program of production. They have also been supplied with semi-manufactures (spare parts). These supplies, however, will soon cease.

The tobacco industry was best supplied with labor-power. There were more workers than were needed, according to the program of production, viz., 105 per cent. In the cotton industry the percentage of labor available as against demand was as high as 100 per cent. The metal industry was supplied with 90 per cent of the labor demanded. The pastry trade had 87 per cent, the paper trade 81 per cent, the leather industry 76 per cent, the thread industry 84 per cent, soap production 75 per cent, the sewing industry, 70 per cent, the chemical industry 76 per cent, the printing trade 55 per cent.

The highest percentage of utilization of the technical means in the factories was in the rope and string industry, 100 per cent of the program. In the cotton industry it was 77 per cent, in the metal industry 55 per cent, in the shoe industry 67 per cent, in the wood work industry 45 per cent, in the paper industry 41 per cent.

With fuel the pastry trade was supplied best, 100 per cent of the program. Then follows: the sewing industry 94 per cent, soap production 90 per cent, food production 80 per cent, the shoe industry 77 per cent, the leather goods industry 45 per cent, the cotton industry 64 per cent, the chemical industry 63 per cent, the leather industry 52 per cent, the printing trade 60 per cent, the paper industry 57 per cent, the mineral industry 50 per cent, the woodwork industry 50 per cent.

As characteristic of the productivity of some of the most important works it is stated that the Putilov works were supposed to complete 15 locomotives, and actually completed 18, i.e., they accomplished 116 per cent of the program of production. The same works also completed 492 wagons instead of the 316 which they were supposed to complete. The Oktha Works were supposed to complete 33 steamships and to repair four steamship engines. All this was carried out. The Atlas Works were

supposed to smelt 19,800 poods, they turned out 12,570 poods. Arthur Koppel was supposed to turn out 25 peat machines, this was done. The Sengally Works were supposed to smelt 4,000 poods of cast iron, they smelted 3,996 poods. The Ladoga had to turn out 15,000 tea pots, which were duly forthcoming. The leather industry was expected to turn out 42,200 large and 210,000 small pieces of leather; the output was: 28,628 large and 118,000 small pieces. It was supposed to turn out 346,000 pairs of civilians' shoes, the output was 229,000 pairs.

In the paper industry the factory "Doobrovka" was expected to produce 78 thousand poods of paper; it produced 60 thousand poods of paper and 53 thousand poods of wood pulp. The Goodayev factory produced 83 thousand poods of paper instead of 78 thousand. It was hoped that the chemical industry would give 800 kilograms of saccharin; it gave 335 kilograms. The soap production gave 50,000 poods of soap instead of 74,000 poods. The output of cotton was 14,250 poods instead of 7,200 poods according to the program.

The percentage of the program of production carried out in other industries is expressed by the following figures: the rope industry 104 per cent, the hardware industry 100 per cent, the leather ware industry 98 per cent, the food industry 70 per cent, the leather industry 66 per cent for big pieces and 59 per cent for small pieces, the harness manufacture 63 per cent, printing 60 per cent, thread production 57 per cent, tobacco 83 per cent, cotton 50 per cent, minerals 50 per cent, soap, 65 per cent, etc.

These data show how the program of production for the past half year was carried out. As far as the program for the second half year is concerned, it provides for the complete repair of 58 locomotives, 2,100 wagons, and 114 ships, an output of 1,000,000 poods of shovels, saws, etc., 282,000 poods of copper pipe and leaf, 145,000 poods of rope, 300,000 bricks, 12,000 poods of stovepipes, etc.

The factories of Petrograd are supplied with 60 per cent of raw materials necessary for this production. Measures are being taken to complete the supply. In the metal industry there is a lack of iron, instrumental steel, pipes, etc. The Izhora works are expected to turn out 50 thousand chimney-pipes, and about 80 thousand poods of spring steel. In the Putilov works it is proposed to start work in the iron-tire shops, which have a supply of about 30,000 poods of incomplete wheel-rims.

LIES ABOUT RUSSIA

Moscow, January 2, 1921.—The provoking lies about mutinies and risings in Moscow which are once again being set in circulation are absolute nonsense and utter falsehood. Everything is quiet here and not the slightest excitement is to be seen. Everybody's attention is fully taken up with the economic reconstruction.

TEXTILE COMBINE

YEKATERINBURG, November 18, 1920.—The provincial committee for textiles comprises two flax mills, two cloth mills, five felt-works, ten artels making felt, three rope factories, two stocking-knitting mills, one artel of down-workers—800 persons in all. The textile committee organized a factory for felt boots employing 2,000 hands and a rope factory employing 460 men, producing monthly 15,000 poods of all kinds of rope. Fuel has been obtained for six months for the cloth factories, for three months for the felt factory, and all other works will have fuel for one year.

FROM THE ECONOMIC FRONT

Moscow, January 2, 1921.—The Donets Basin delivered 30 million poods of coal in November against 25 and a half million in October.

Moscow, January 2, 1921.—In the *Ekonomicheskaya Zhizn* Chubar, President of the Ukrainian Industrial Bureau, writes: "The Eighth Soviet Congress has laid down the program of production for the Donets Basin. The highest organized Republic has resolved to use all sources of help to the fullest extent, to exceed the program laid down by the Central Economic Council, and to bring out 600 million poods of coal and 25 million poods of pig iron. At present, to produce 54 million poods monthly, a very small increase in the number of the workers is necessary. The improvement of production which is shown in November gives us certainty that the program will be filled. The food situation in the Donets Basin is now beginning to be satisfactory. In order to obtain the required amount of pig iron, 5 or 6 blast furnaces, will be set up in the first three months of this year.

COMMUNIST SATURDAYS

During November, 1920, 97,222 people, of whom 26,000 were Communists and 7,000 independents, took part in the Communist Saturdays in Moscow.

RUSSIA: SHRINE

By RALPH GORDON

Because from thy pure bosom brightest spring
The pure and sacred fires, and fairest shine
In all the ways of earth; because thou hast
Amassed the Sons of Light, the young of heart,
The fair and young of soul; because thine eyes
With crystal knowledge glow of that divine
Simplicity and youth, which we too strive for,—
Here where the aged shades have builded all
Their strongholds of gray mist;—because in thee
Death finds the infant, smiling, of its victim's
Grief; because our souls in thee find sanctitude;—
Thee do we make our shrine, whose light doth glow
E'en through the hollow of our fearful night,
To bring us comfort of the light of thee.

January, 1921.

Social Maintenance in Soviet Russia

By A. VINOKUROV, *People's Commissar for Social Welfare*

BEFORE the November Revolution, the social maintenance of the workers in Russia was in a very pitiable state. The insurance of workers, which had been introduced during the Tsarist regime in 1912, embraced only a very small part of the workingmen (20 per cent), mostly in the big factories. The greater part of the payments was put upon the workers themselves. Salesmen, servants, transport workers, and agricultural laborers were deprived of the right to social maintenance.

Assistance was given only in cases of accidents or of illness. But the workers were not insured against old age, invalidity, or unemployment. The extent of the assistance was from one-fourth to two-thirds of the earnings.

The so-called "care for the poor" was not in a better condition in the period before the November Revolution. During the Tsarist period the organization of help for the poorer part of the population was in the hands of the charity organizations of the ex-empress Mary Fedorovna, of the Humane Society, etc. But they did not satisfy even a hundredth part of the needs of many millions of the poor.

After the November Revolution, the Workers' and Peasants' Government faced an immense task in the field of social maintenance. It was necessary to introduce perfect social maintenance for the workers, and to raise to a proper level the maintenance of soldiers and their families. It was necessary to break the whole system of the old "care" and to introduce the maintenance of invalids and the poor on Socialistic principles.

Social maintenance was declared to be not a charity, not a gift, but the right of every laborer, of every worker, or of officials who cannot work or are in need. A vigorous campaign was begun against the laziness and parasitism which were maintained by the old system. The right to social maintenance was recognized only for those who have lost their ability to work and have no other means of existence. Every healthy person is obliged to work. Every one who has private means has no right to social maintenance. Instead of the system of beggary and charity, a rational social assistance was introduced. Those who have been wounded are healed and taught some useful trade so that they are not a burden to the state. The sick get assistance in the hospitals, sanatoria, etc. Helpless invalids receive shelter in invalid's homes. Orphaned children are taken care of in nurseries, children's homes, and in homes for the protection of childhood. Those who have lost their ability to work and are deprived of any other means of existence receive pensions, etc.

The Workers' and Peasants' Government has developed a great activity in the field of social maintenance along these lines.

1. *The Social Maintenance of Workers and Their Families*

The Soviet Government has issued a decree on the social maintenance of the workers. According to this decree, all workers and officials have the right to receive assistance in case of illness, disability, or unemployment, during pregnancy and confinement, and pensions in case of invalidity (on account of illness, old age, or disability). According to the project of the code of laws on social maintenance, free social insurance at the expense of the state embraces also poor peasants, artisans and handicraftsmen. In case of illness and disablement, and for women in case of confinement, they receive medical treatment by ambulatory treatment at home, or at hospitals and sanatoria. Assistance is given up to the amount of earnings. Nursing mothers receive additional assistance for themselves and for their babies; workingwomen are freed from work for eight weeks before and after confinement. Women who are occupied with office and mental work are freed from work for six weeks before and after confinement.

During unemployment, assistance is given to the amount of the minimum scale of wages.

Pensions are given according to the degree of disability. For complete disability which necessitates constant care—to the amount of one and one-half times the average scale of wages (in Moscow this amounts to 4,050 rubles a month). For complete disability which, however, does not necessitate constant care, the amount of the pension is equal to the average wage-scale. For partial disability the amount of the pension is equal to from one-half to three-quarters of the average scale.

Persons who have lost their ability to work and who have lived on the means of their family, receive, in case of the death of the provider of the family, a pension of 60 per cent of the average scale for one disabled member of the family, 75 per cent for two and 100 per cent for three or more disabled members of the family.

2. *The Maintenance of Soldiers, of the Old and of the Red Army*

The Tsarist Government and the opportunist government of Kerensky gave high pensions to officers and generals, but only beggarly pittances to invalided soldiers and their families. The pension of a complete invalid amounted to 216 rubles a year, and the family of a dead soldier received only 48 rubles a year. The Soviet Government, immediately after the November Revolution, raised this pension to 1,125 rubles a year, and raising it by degrees, made the pension equal to that of the workers, by October, 1919. In the same manner, the pension to families of dead soldiers, of the old, and of the Red Army, was made equal to the pen-

sions to the families of the toilers after the death of their provider.

Besides the insurance of the Red Army men in case of disability and the insurance of their families in case of death, the Workers' and Peasants' Government is paying great attention to the maintenance of the families of persons serving in the ranks of the Red Army.

The families of Red Army men receive pecuniary assistance, and the additional "Red Star" food ration; they are exempted from paying rent; they receive agricultural assistance with seeds, inventory and labor, they are called to compulsory labor only in exceptional cases, etc.

3. Insurance in Cases of Elemental Distresses

Besides the above forms of social maintenance the Soviet Government has developed on a wide scale the insurance of those who have suffered during the civil war (from the White Guards, or from the counter-revolution) and from elemental distresses (fires, etc.). The insurance embraces the toilers of the cities and the villages. The assistance consists of extra help as to shelter, food, clothing, footwear, etc. Assistance and pensions are given to the disabled and to the families which have lost their providers. Besides, those who have suffered from elemental and social distresses are assisted in the reconstruction of the ruined households.

4. Establishments for Invalids

Besides pensions, there are a series of establishments for invalids in Soviet Russia. After the invalids have been healed, those of them who are still able to do work are sent to the organs of Registration and Distribution of Labor Power, where they are given work which they are able to do. Those who have lost all ability to work at their old trades are sent to workshops and schools distributed all over Russia. There are schools for carpentry, shoemaking, plumbing, basket-making, courses for accounting, bookkeeping, etc. For complete invalids there are special homes. These homes do not at all resemble the old houses for invalids. Here the disabled who are kept to their beds receive the opportunity to do work. Such are assigned to tasks of which they are capable, homes with artistic shops for drawing, sawing, carving, etc. The number of homes for invalids in Russia amounts to 2,000, and the number of invalids in these homes is about 150,000.

The Workers' and Peasants' Government is spending enormous sums on social maintenance. Thus, in 1920, about 50 billions of rubles were assigned to the needs of social maintenance. Of these, 10½ billions are for pensions to workers and their families, 4½ billions for pecuniary assistance to Red Army men, old-army men and their families, 18 billions for pecuniary assistance to the families of Red Army men, 1½ billions for the assistance of victims of elemental and social distresses, and 6 billions for other kinds of social maintenance (homes and colonies for invalids, workshops and schools of professional training, establishments for

the victims of elemental and social distresses, occasional assistance in kind, for those in need, etc.)

There is no other country in the world which carries out social maintenance on such a scale and spends for this purpose such sums as does Soviet Russia. Only a government of the workers and peasants, which has overthrown the regime of the landlords and capitalists, and has at heart the interests of the toiling masses, could accomplish this without regard to the greatness of the expense. Moscow, October 16, 1920.

THE "SHOCK" FACTORIES IN RUSSIA

(The "shock" factories are meant to play on the industrial front the same role as that played by shock battalions on the war front.)

The figures for the three months of July, August, and September, 1920, as to the rate at which the program set before 14 "shock" factories in Central Russia was carried out, shows steady improvement in every branch, month by month. This may be seen from the following table:

Rate of Progress For:

| Work Done | July | August | September |
|--------------------------|------|--------|-----------|
| Engines (new) | .0 | 33.3 | 33.5 |
| Engines (repaired) ... | 65.0 | 80.0 | 85.0 |
| Carriages (new) | 96.9 | 100.0 | 125.0 |
| Snow-ploughs | 0 | 5.3 | 36.8 |
| Carriages (repaired) .. | 43.7 | 57.4 | 93.9 |
| Fishplates | 40.4 | 50.2 | 65.0 |
| Chimneys | 37.5 | 36.9 | 55.2 |
| Copper parts | — | — | 34.6 |
| Engines (parts) | 27.9 | 45.5 | 62.8 |
| Parts of carriages..... | 37.6 | 43.0 | 67.6 |
| Iron and steel..... | 47.6 | 67.9 | 73.3 |
| Bolts, screws, nuts..... | 32.7 | 41.8 | 42.2 |

As to the "shock" factories of the South, figures are available only in regard to seven of them. These figures are as follows:

The Half-Yearly

| Work Done | Program | July | August | September |
|----------------------------------------|-----------|---------|---------|--------------------|
| Engines (new) ... | 60 | 5 | 4 | 7 |
| Engines (repaired) . | 115 | 8 | 9 | 9 |
| Carriages (new) .. | 60 | 29 | — | 15 |
| Castings (engines) . | 198,000 | 22,458 | 2,105 | 29,768 |
| Castings (carriages) | 108,000 | 7,599 | 5,625 | 29,768 |
| Forgings (eng. and) | 48,000 | 2,643 | 3,390 | 4,451 and 3,506 p. |
| Fishplates | 410,000 | 6,452 | — | 14,369 |
| Chimneys | 290,000 | 9,671 | 13,547 | 19,958 |
| Bolts, screw-nuts, nails, rivets | 252,040 | 8,547 | 7,652 | 6,279 |
| Cast iron | 2,565,000 | 144,119 | 160,770 | 49,400 |
| Iron and steel..... | 2,565,000 | 144,119 | 160,770 | 77,407 |

In Addition to the Program

| | | |
|---------------------|-------------------------|----------|
| Water pipes | no information received | 6,446 |
| Instruments | " " " | 3,506 p. |
| Carriages repaired. | " " " | 20 |

CONGRESS OF ORIENTAL WOMEN

Moscow, January 2, 1921.—Very shortly a non-party congress of Oriental women will take place in Moscow. The order of business is as follows: The Political Situation; the Soviets and the Women of the East; The Legal Position of Women in the East, Past and Present; The Tasks of Mother and Child Welfare in the Orient.

Wireless and Other News

RECALL OF KRASSIN

Moscow, January 2, 1921.—In connection with Krassin's recall to Moscow the Russian press places emphasis upon the new demands which were suddenly made by Great Britain. It is unanimously stated that Russia now as before will insist upon the July agreement, and that it is ready to carry it out in its entirety. But further it cannot go.

TREATY BETWEEN SOVIET RUSSIA AND SOVIET UKRAINE

Moscow, January 2, 1921.—The newspapers published the text of the treaty between the two Soviet Republics of Russia and Ukraine, which was concluded December 28. Acting upon the principle of self-determination, each party, Russia represented by Lenin and Chicherin, Ukraine represented by Rakovsky, recognized the independence and sovereignty of the other. Both republics enter into a military and economic alliance. Ukraine is released from all the consequences of its former membership in the Russian empire and all measures of foreign policy will be based upon the community of interest of worker and peasant.

LITVINOV SOVIET AMBASSADOR IN ESTHONIA

Moscow, January 2, 1921.—By the nomination of Litvinov as Soviet representative in Esthonia a significant reorganization in the diplomatic service takes place. The post in Esthonia is of the greatest importance, as Esthonia is Russia's main gateway to Europe and connects it with very important political, financial, and commercial circles abroad. It is important that someone should be in Esthonia who can speak with authority on foreign policy, and is in the position to carry on negotiations with large financial and commercial groups.

SOVIET RUSSIA'S FOREIGN TRADE

Moscow, January 2, 1921.—In Yamburg 13 carloads of clothes and 52 cases of spare parts for freight cars have arrived from Sweden, which are destined for Soviet Russia.

CONSTANTINOPLE, January 2, 1921.—The representative of the Russian cooperatives, Kuznetsov, has arrived in Constantinople. He has the official mission to establish commercial relations with Turkey.

THE LETTISH-RUSSIAN SITUATION

Moscow, January 2, 1921.—Hanetski, the Russian representative for Latvia, has arrived in Moscow. In the course of an interview with the representative of *Rosta*, he states: "Under the influence of the Entente the attitude of the Lettish Government to Soviet Russia was very friendly during my whole stay in Riga. The Lettish Government repeatedly broke our peace treaty. Among other things, the Lettish Government supported many White Guard organizations, kept back Russian citizens as hostages, delayed the return of the prisoners of war,

and gave doubtful answers to our questions. We informed the Lettish Government that the recall of our embassy in Riga was already being discussed. This communication made a great impression upon the Riga Government, and our relations improved noticeably. As the result of the economic breakdown of Latvia, she must have a greater amount of dependence upon us. On this account a change in the policy of the Lettish Government has taken place, and we have no doubt that in a short time active commerce between Soviet Russia and Latvia will be resumed.

NEW RUSSIAN CENTRAL EXECUTIVE COMMITTEE

Moscow, January 2, 1921.—The first meeting of the newly elected executive committee of the Soviet took place in the Kremlin, December 31. The following presidium was elected: Chairman, M. Kalinin; Secretary, J. N. Enukidsky; Members: Petrovsky, Saludsky, Kamenev, Sinedovich, Litvinov, Stalin, Vladimirsky, Kutuzov, Rykov, and Tomsky.

LENIN ON AGRICULTURAL DEVELOPMENT

Moscow, January 2, 1921.—In the closing meeting of the Communist fraction, Lenin delivered a speech, in which he said: "For the development of agriculture we require an extraordinary labor effort; without honest efforts we cannot achieve it, and therefore we cannot abstain from regarding special successful efforts and single individuals. Individuals will be rewarded in the first place with articles which are useful for agriculture. As for any means of production, these can only be possessed collectively and can not be used as rewards for personal effort.

POLAND'S EXPENSE FOR COUNTER-REVOLUTIONARIES

WARSAW, January 3, 1921.—The Russian Executive Committee publishes a budget from which it is learned how much was spent by the Polish Army Command between the first of July and the 20th of September for counter-revolutionary adventures. Balakhovich cost 71 million marks, Paramikin, 43 million marks; and the Red Cross, 43 million marks.

A NEW FORM OF PROPAGANDA

Pravda writes: "In one of the Moscow districts a mock trial was held over the Russian Communist Party for having carried through the November Revolution. The prosecutor was the Second International, the prisoner's council, the Third International, the witnesses for the defense, the worker, the Red soldier and Time, witnesses for the prosecution, Lloyd George, the big landholder, the speculator and the comfortable Russian bourgeois. Amongst the independents this event created great interest. It ended with the unanimous acquittal of the prisoner by the public.

Correspondence with Mr. W. B. Vanderlip

Previous to his departure from the United States, the representative of the Russian Soviet Republic made public the following correspondence with Mr. Washington B. Kanderlip:

TITLE TRUST COMPANY
Los Angeles, California

January 3, 1921.

Mr. L. C. A. K. Martens,
Representative of the Russian
Socialist Federal Soviet Republic,
110 W. 40th Street, New York City.
My dear Mr. Martens:

I have heard the news of your approaching departure from the United States with much regret. I understand thoroughly, however, the motives which caused the Commissariat for Foreign Affairs to instruct you not to appeal against the decision of the Secretary of Labor, but to liquidate the affairs of your Bureau and return at once to Moscow. In view of the decision of the Secretary of Labor, which was directed against your Government and not against yourself, there was nothing for the Soviet Government to do but to cease temporarily their efforts to reach friendly economic relations with the United States.

I know from my own experience in conversation with high officials of your Government how sincerely they desire to arrive at friendly commercial intercourse with the American people. I am sure also that they do not misunderstand the real feelings and desires of America in this respect. The Soviet Government counts upon the resumption of relations with the United States at an early date. I believe their expectations are justified. I look to see within a very few months the complete restoration of normal trade relations between Russia and America. The present policy of hostility and non-intercourse is based wholly upon ignorance and hysteria, brought about by a most malicious and untruthful propaganda, and in no wise represents the sound judgment of the American people. We have long traditions of friendship with Russia, and those traditions, interrupted for the first time by the present mistaken policy, will soon be resumed to the benefit and satisfaction of the peoples of both countries.

I wish you a pleasant journey and a speedy and safe return. Your Government was wise in recalling you at this time. The American Government, I am confident, in the near future will show equal wisdom in requesting your return to this country.

Yours very truly,
(Signed) WASHINGTON B. VANDERLIP.

RUSSIAN SOCIALIST FEDERAL SOVIET REPUBLIC
Bureau of the Representative in the United States
110 West 40th Street
New York City

January 8, 1920.

Mr. Washington B. Vanderlip,
Title Trust Company,
Los Angeles, California.
My dear Mr. Vanderlip:

Thank you for your friendly letter of January 3. You are quite right in believing that the Soviet Government remains confident of the early resumption of normal commercial relations between the United States and Soviet Russia. In instructing me to liquidate the affairs of my mission and return to Moscow at this time, the Commissariat for Foreign Affairs have merely expressed their careful decision that it is useless to make further effort to restore commercial relations between the two countries so long as the present policy of the American Government, as expressed in the decision of the Secretary of Labor, remains unchanged. We do not believe it will remain unchanged for long. America needs Russia as much as Russia needs America. The return to normal relations is inevitable. We shall be ready to meet the American Government half way upon the first intimation that the present policy of non-intercourse is to be abandoned.

Since I had the pleasure of seeing you here, the press has contained certain inaccurate statements and inferences re-

garding the manner in which my departure might affect the relations established between yourself and the members of your syndicate and the Soviet Government. In reply to all inquiries on this subject, I have stated clearly that the arrangements negotiated by you in Moscow were not affected by the instructions which I have received to cancel all the outstanding contracts negotiated by my bureau. The present circumstances obviously prevent the fulfilling of those contracts. Your arrangements with the authorities at Moscow remain unaffected by these instructions and are a matter for action by those authorities.

The press at times has not clearly distinguished between the matter of the concession in North-Eastern Siberia and Kamchatka and the separate negotiations for the establishment by your syndicate of a fiscal agency for the financing of purchases made on behalf of the Soviet Government in this country. These two matters, of course, were wholly separate and unrelated. It is plain enough to any one that a fiscal agency of the nature contemplated—which has to do only with the financing of purchases and not with the actual purchasing—must depend, not only upon the resumption of normal trade relations, but also upon the presence in this country of a properly accredited purchasing bureau authorized to let contracts and to inspect and pass upon the goods purchased. That was the function of the Russian Soviet Government Bureau, and with the liquidation of the Bureau no other agency remains which can fulfill the same function. That is the only respect in which my recall affects your plans. But that is only to say, what any one must understand, that normal trade between Russia and the United States cannot be resumed until the normal and necessary facilities for trade are restored. I know that you understand this situation thoroughly, and I have only desired here to correct any misapprehensions which may have arisen from certain inaccurate statements which have appeared in the press.

In conclusion, let me express again my appreciation of the energetic interest which you have shown in the problem of restoring friendly relations between the Russian and American peoples and of the businesslike manner in which you have approached that problem. We have no doubt of the ultimate outcome.

Yours very sincerely,
(Signed) L. MARTENS,
Representative in the United States of the
Russian Socialist Federal Soviet Republic.

A NEW LEARNED SOCIETY

Pravda writes: "The society of men of letters which was organized at the suggestion of Bukharin and which named itself 'Revolution and Theory', contains the following sections: Natural Science and Revolution, State and Revolution, Sociology and Revolution. Addresses upon the following subjects have already been arranged: Lessons on the State, Kolchak and Counter-Revolutionary Constitutions in Soviet Russia, Liberty and Necessity in Soviet Russia."

ZINOVIEV ON TRADE UNIONS

Moscow, January 2, 1921.—During the discussion on the role of the Trade Unions in production, which took place in Moscow, Zinoviev stated: "The Trade Unions are the backbone of the dictatorship of the proletariat. They are the school of communism. It must be grasped that 7,000 organized trade unionists have the task of influencing the peasants and drawing themselves together and for this we need a true unity amongst the millions—strong Trade Unions."

Statement of Medical Supplies Shipped to Soviet Russia on Account of the Soviet Russia Medical Relief Committee

Soviet Russia to Continue

The closing of the Russian Soviet Government Bureau, and the departure of the Bureau's staff, will cause no interruption in the regular publication of this magazine. It will appear weekly, as heretofore, publication being continued under private auspices, and under the editorship of Dr. Jacob Wittmer Hartmann. SOVIET RUSSIA will devote itself exclusively to the presentation of accurate information regarding the activities of the Workers' and Peasants' Republic in Russia.

The hearty support of every reader is needed in order that the new management may carry forward successfully the work of publishing the only magazine presenting FACTS about Russia. Your subscription, and those of your friends, sent NOW, will help. Please send us also lists of names of other friends who might subscribe if they received sample copies. We count on your support.

SOVIET RUSSIA, price 10 cents at all news stands

Subscription Price: \$5 per year; \$2.50 per half year; \$1 for 3 months (Make checks payable to Kenneth Durant, Publisher)

Mines and Miners in Soviet Russia

[The three short articles to which we have assigned the above general title are of official Soviet Russian origin and contain recent and reliable data on the efficiency of the mining industry in Russia's richest mining regions, as well as on the degree to which it has been possible to look after the physical welfare of the miners themselves.]

The Donets Basin--The Heart of Russia

In *Ekonomicheskaya Zhizn*, No. 265, of November 25, Comrade Lomov writes:

"The key to the reconstruction of our industry is the Donets coal, our black diamond.

"In times of peace, European Russia consumed 7,400,000,000 poods of all kinds of fuel a year. (The different kinds of fuel, according to their faculties of heat generation, are given in terms of the average Donets coal.) Of this amount the Donets Basin furnished 1,500,000,000 poods. Remembering that the Russian industry and transport consumed 3,000,000,000 poods of mineral fuel a year, we see that about one-half of the whole fuel consumption of industry and transport was procured at the Donets Basin.

"During the first nine months of the current year 190,000,000 poods of coal were procured in the Donets. Judging from the previous months, we may put the amount of coal which will be procured during the last three months of the year at not more than 75,000,000 poods, which gives a total of 265,000,000 poods of coal for the year 1920. This is only 18 per cent of the normal output of the Donets Basin.

"The Donets lives through a serious prolonged crisis. The naked and hungry miner is physically unable to give more coal. The situation was complicated by the military assaults of Makhno forces, by the bandit movement and by the offensive of Wrangel. In those districts in which these causes manifested themselves most,—such as the coal dis-

trict proper,—the crisis became very hard and prolonged. This might be shown by the following table:

Monthly and Average Daily Productivity of a Collier in 1920:

| Number of Work Days | Months | Soft Coal in Poods | | Anthracite Coal in Poods | |
|------------------------|--------------|-----------------------|-------|-----------------------------|-------|
| | | Monthly | Daily | Monthly | Daily |
| 25 | March | 1,625 | 65 | 1,337 | 50.5 |
| 16 | April | 921 | 57.5 | 748 | 46.7 |
| 22 | May | 1,243 | 56 | 1,225 | 55.7 |
| 26 | June | 1,541 | 59 | 1,654 | 63.6 |
| 26 | July | 1,445 | 55.6 | 1,663 | 64 |
| 22 | August | 1,365 | 62 | 1,485 | 67.4 |
| 24 | Sept. | 1,311 | 54.1 | 1,751 | 73 |
| 25 | October | 1,253 | 50.1 | 1,630 | 65.2 |

"In the anthracite districts which are better supplied, and which are situated at a distance from the region of the Makhno assaults, we notice a definite healthy tendency, while in the coal districts a further decrease of the productivity of the colliers is observed.

"Our immediate task is to improve the food and technical supply of the Donets Basin. But this is not sufficient. The organs of the coal industry and the whole apparatus which is managing the Donets Basin should receive a considerably greater importance in the life of Ukraine and the whole republic. The apparatus managing the coal industry of the Donets Basin should absorb hundreds of the best workers and engineers of Russia and firmly and unhesitatingly carry out the dictatorship of the coal economy of the Donets Basin. There in that richest country of black diamonds, everything must be made to serve the coal industry. In the first place, all the different administrative institutions and economic centers of the Donets must be brought to-

gether into one center. This one center must be created with a view to the interests of the coal economy, and simultaneously, the whole structure of the Donets Basin must be subordinated to this principle in every respect.

"The Kingdom of the Black Diamonds, this country of the richest possibilities, lives through a serious crisis. But the healthy basis of this region has not been shattered. Systematic, obstinate work, and the healthy nourishment of the Donets Basin will make its blood circulate and will make the heart of Russia, our Red Donets, beat more strongly."

Food Supplies in the Donets Basin

Comrade Khalatov, in the *Ekonomicheskaya Zhizn*, writes as follows:

The providing of the miners with food is the essential condition for increasing the productivity of labor and the supply of coal.

According to the data of the Ukrainian Food Commissariat the number of workers generally in the coal mines, metallurgical works, and other branches in the Don Basin has been steadily growing during 1920. In January-February the Basin had 175,000 workers, in March-April 195,000, in June and July 244,000, in August 265,732, in September 282,531.

Apart from this about 700,000 members of the workers' families in the Don Basin were on the list of supplies.

This continual growth of figures is to be explained on the one hand by the influx of labor and on the other hand by the introduction of men from the Labor Army.

A special "Shock" group has been selected, numbering 88,896 workers (224,687 with members of their families), which is to receive preference in the matter of food supply.

The standard established for the Donets Basin is as follows:

| Kind of Food | Monthly Ration for Worker | Monthly Ration for Member of Family |
|---------------------------|------------------------------|----------------------------------------|
| | lbs. | lbs. |
| Flour (for hewer) | 56¼ | 16¾ |
| Flour (underground) | 42 | 16¾ |
| Flour (pit-head) | 33¾ | 16¾ |
| Grain | 3½ | 3 |
| Oil | 1½ | 1 |
| Meat or fish | 15 | 7½ |
| Sugar | 2½ | 1 |
| Salt | 1 | — |
| Soap | 1½ | ½ |
| Lard | 1½ | ½ |
| Sweetmeats | 1½ | ½ |
| Herring | 2 | 1 |
| Dried vegetables | 2 | 2 |
| Tobacco | 1 | — |
| Matches | 4 boxes | 2 boxes |

The actual percentage of food supplied to the Donets Basin from January 1 to October 1, 1920, may be seen from the following table:

| Name of Food | Jan.-Feb. | March | April | May | June | July | Aug. | Sept. |
|---------------|-----------|-------|-------|-----|------|------|------|-------|
| Flour | 52 | 59 | 27 | 159 | 87 | 70 | 63 | 95 |
| Grain | 19 | 14 | 15 | 13 | 10 | 10 | 9 | 10 |
| Sugar | 23 | 36 | 137 | 71 | 69 | 74 | 193 | 86 |
| Salt | 14 | 240 | 62 | 166 | 208 | 360 | 39 | 159 |
| Tobacco | — | — | 91 | 56 | 109 | 20 | — | 14 |
| Matches | — | 97 | 7 | 17 | 12 | 135 | 68 | 108 |
| Soap | — | — | 34 | 26 | 23 | 20 | — | 69 |

Already in July the Food Commissariat of Soviet Russia had to come to the assistance of the Ukrainian Food Commissariat in the supply of grain.

The Donets Basin is regularly supplied from the Northern Caucasus to the extent of 50 per cent of its requirement in grain.

Immediately after the liberation of the Donets Basin by the Red Army the Food Commissariat was confronted with the question of insuring supply from sources nearest to the Donets Basin. In spite of all the efforts of the Food Commissariat the work of supply up to June was nevertheless very slow. One exception was Melitopol County, where the political attitude is more favorable towards the Soviet Government than anywhere else. In proportion as the apparatus of food supply became solidified in Melitopol County, and thanks to the Labor Army partly in the Berdiansk County, the food supply of the Donets Basin began to undergo a considerable improvement. Wrangel's offensive, however, and his occupation of Melitopol County, immediately placed before the Donets Basin the necessity of procuring supplies from places most unfavorable in the political sense, as a result of which insurmountable obstacles were placed in the way.

In the other parts of Ukraine, with the exception of Kherson and Nikolaev Counties, the work of supply from June to July during the last food supply campaign proceeded very poorly, and up to August inclusively, the figure was not more than three and a half million poods, whereas the needs of the army alone were just below this figure. Serious railway difficulties, which set in with the beginning of Wrangel's and the Polish offensive, made it impossible to transfer to the Donets Basin even those small supplies which lay in the Kherson and Odessa districts. The general situation in Western Ukraine began to improve in August and September, but on the other hand in the East, i.e., the district in closer proximity to the Don, the situation grew worse. The practically incessant military operations in Berdiansk and Alexandrovsk Counties and the flooding of the Mariupol and Taganrog counties by troops made it impossible either to secure a normal supply on a gradually increasing scale or to assure any considerable shipment to the Donets Basin. Only in September did the more responsible agents of the Food Department, specially sent to Melitopol County, succeed, with the active support of the Revolutionary War Council of the 13th Army, in procuring from here and from Taganrog County 300,000 poods which were shipped to the Donets Basin; the further course of military events, however, made us give up all hope in Mariupol County.

The military operations and the political situation made it impossible to regulate also the supply of meat and lard in the outlying provinces of the Donets Basin. Not more than 20 per cent of these products was supplied.

From the reports of the regional representatives and the regional committees it became evident that it was not advisable to divide the local workers in the matter of food supply, into "shock" groups, and others. Communal feeding was suggested, to which hitherto little attention had been paid on account

of shortage of foodstuffs, faulty organization, and other obstacles.

The representatives' committee for investigating the Donets Basin formed a chief committee for supply, which carefully investigated the supply question in the localities. In agreement with the Ukrainian Food Department the supply committee established a new standard of supply for the workers of the Donets Basin which is coordinated, on the one hand with the standard of the miners of the Moscow coal basin and the Ural, and on the other hand with the actual possibility of realization.

These standards are as follows:

| | Hewers | Underground Workers | Pit-head Workers | Members of Family |
|-------------------|---------|---------------------|------------------|-------------------|
| Flour | 60 | 45 | 36 | 23½ |
| Grain | 4 | 4 | 4 | 4 |
| Fats | 1 | 1 | ½ | ½ |
| Meat or fish..... | 7½ | 7½ | 4 | 4 |
| Salt | 1 | 1 | 1 | ½ |
| Sugar | 2 | 2 | 1 | 1½ |
| Soap | ¼ | ¼ | ¼ | ¼ |
| Tobacco | ¼ | ¼ | ¼ | — |
| Vegetables | 20 | 20 | 20 | 20 |
| Tea | ¼ | ¼ | ¼ | ¼ |
| Matches | 3 boxes | 3 boxes | 3 boxes | 3 boxes |

To insure the supply of the above products to the workers of the Donets Basin the Food Commissariat of Soviet Russia has temporarily, until the regulation of the food work in the Ukraine, undertaken the supply of a number of products, such as grain, meat, and fats, with which three articles Soviet Russia is supporting the Donets Basin.

The practice of the past has laid it down that the formation of a food reserve, which should continually be supplemented and which should afford the possibility of regulating the supply during transport difficulties, is the most fundamental condition for combating all irregularities in the supply of primary food products. The representatives' committee has recognized the need of such a reserve and the food departments of both republics are responsible for the organization of it; the necessity was also established of forming a two-months reserve so as to assure a regular and full supply in the future. A special food reserve is also being formed for the premium-pay system. All coal and metal enterprises have been placed in the "shock" category, being the first to receive provisions, and all subdivision into "shock" and non-shock categories within such enterprises is prohibited. All these measures will not yield the desired results unless all Soviet organs will do all they can to realize all the measures laid down by the representatives' committee. The railwaymen must put forth all their efforts in the work of forwarding the goods required by the Donets Basin. The immediate task, in which the Commissariat for Ways and Communications can lend a hand, is to insure the necessary empties and to put the food transports on the same footing as military transport. The military authorities should place their apparatus at the disposal of the food supply organs in the matter of organizing communications, combating banditism which is at present one of the most serious sores in the food supply work in Ukraine. The Commissariat for Finances should immediately supply the necessary money for this food supply work in Ukraine. The trade unions and party

organs should give their best men to the food supply work for and in the Donets Basin.

The Mining Industry in the Urals

Information received on the operation of the mining industry in the Urals during the last half year shows a considerable improvement in the industrial life of that region. It is necessary to note that the program for the mining industry was worked out only in May.

The output of coal in poods was as follows:

| Districts | Proposed Output | Actual Output for Six Months | Per Cent of the Program Attained |
|--------------------|-------------------|------------------------------|----------------------------------|
| Kizelovsk | 12,500,000 | 7,669,942 | 61.3 |
| Cheliabinsk | 20,000,000 | 14,682,831 | 73.41 |
| Bogoslovsk | 5,000,000 | 4,029,232 | 80.5 |
| Yegorshinsk | 2,500,000 | 1,416,973 | 56.67 |
| Post Verdinsk..... | — | 88,846 | — |
| Total | 40,000,000 | 27,887,308 | 69.7 |

The output of iron in poods was:

| | | | |
|------------------------|-------------------|------------------|--------------|
| Bogoslovsk-Kushimsk .. | 4,035,000 | 731,431 | 18.12 |
| Visokogorsk | 3,380,500 | 1,700,623 | 50.3 |
| Yekaterinburg | 7,401,400 | 1,006,426 | 13.6 |
| South Ural | 16,700,000 | 497,176 | 2.36 |
| Total | 25,341,900 | 3,936,646 | 15.53 |

The output of manganese ore (in poods):

| | | | |
|-------------------|---------|---------|------|
| Visokogorsk | 162,000 | 154,000 | 95.0 |
|-------------------|---------|---------|------|

The output of chromium ore (in poods):

| | | | |
|---------------------|---------|--------|-------|
| Visokogorsk | 121,500 | 51,485 | 42.37 |
| Yekaterinburg | 97,500 | 6,150 | 6.30 |

The output of salts (in poods):

| | | | |
|------------|-----------|-----------|-------|
| Perm | 4,688,000 | 2,615,357 | 55.78 |
|------------|-----------|-----------|-------|

The program provided for 50 poods, 15½ pounds of gold to be mined, but the output was only 5 poods, 12½ pounds. The quantity of platinum was 5 poods, 26¼ pounds, instead of the proposed 49 poods, 26½ pounds. This is owing to a shortage of workmen and technical means. The work in the gold and platinum mining industry is done for the most part with primitive methods.

Next Week's

Soviet Russia

will contain three unusually interesting articles on education. Two of these, written especially for SOVIET RUSSIA by WILLIAM McLAINE, an English journalist recently in Russia, describe "The Karl Marx University at Moscow" and "My Visit to a School Near Moscow."

The third article is an announcement of the organization and operation of the Workers' University at Moscow.

TROTSKY ANSWERS KARL KAUTSKY: A new article by Leon Trotsky, refuting Kautsky's attacks on Soviet Russia.

THE NEAR EASTERN SITUATION: Official and unofficial data on the relations of Soviet Russia with Armenia, Georgia, and Persia.

The Military Situation on November 30, 1920

By LEON TROTSKY

[Owing to the departure of our regular military critic for Russia, we are at present unable to print his weekly review, which we hope soon to continue, however. Our readers will welcome the following general statement by the Commissar of War.]

TODAY we have no longer any fronts, and what we have to speak about now is not the military situation at present, but what it was some time ago.

After the defeat of Denikin there remained the Wrangel front. This front originated in the remains of Denikin's army, which we were unable to destroy owing to the weariness of our troops. Wrangel established himself in the Crimea, and the equilibrium was maintained until the war with Poland. After the formation of the Polish front, Wrangel broke from the Crimea, seized a part of the coast, and spread to the east, nearly to Taganrog. Our troops described a fairly correct semicircle with a radius of 120—125 versts. Wrangel occupied the central position and struck out at various radii. His position was advantageous in so far as he maintained his forces in a central position. At one time there was the danger that Wrangel would unite with Poland; another danger was that he would penetrate to the Caucasus, unite with Georgia and Armenia, and receive support from England and France. All this induced us to concentrate great forces against Wrangel. It was imperative to deliver a blow in the nearest direction, and for this it was necessary to secure a foothold on the left bank of the Dnieper. This was the sector near Kachovka, which we considered as the base from which to deliver the blow. Here we concentrated our chief infantry and the First Cavalry Army.

Wrangel tried to break us up. He had the advantage of his central position and an excellent reconnoitering force. He had communications everywhere. Prince Tumanov wrote that they had learned scouting from the Germans during the imperialistic war. Wrangel was therefore sure of his aim, and his operations against us were directed by means of consecutive attacks on various parts of our front. When we held desperately on to the Kachovka *place-d'armes* Wrangel attacked in the east and threatened the Don Basin. The southern command understood its task well and acted in complete unison with the head command. Wrangel's base was the Crimea, and whenever he attacked in the east or the west, we strove to cut him off from his base. Apart from that, we tried to avoid disseminating our forces. And our efforts were crowned with success.

The infantry played the chief role in the decisive battles at the Kachovka *place-d'armes*, but, as always, it needed the support of the cavalry, the more so as our infantry mainly consists of politically uneducated peasants; on the other hand, the cavalry is a more enlightened element, it leads the way and is of great importance. At the gates of the Crimea our troops had to fight under the most incredibly difficult conditions. Krivoshein* in Constantinople said that our men fought heroically. He

also said that we developed a furious artillery fire. The latter is not quite correct; we practically had no artillery at all. We could not bring up our heavy artillery owing to the state of the roads; whereas, Wrangel had ample artillery. The commander of the 30th Division deliberated about marching forward with the infantry alone, under the scant support of the light artillery. On the receipt, however, of the telegram stating that the 51st Division had reached the Crimea, the 30th Division crossed the left bank of the Dnieper and thus decided the issue of the whole campaign. We won only by dint of heroism and self-sacrifice. The booty is not yet registered completely; so far, we have 52,000 prisoners, 277 cannons, a great number of machine-guns, 7 armored trains, 100 locomotives, 32 automobiles, 34 ships and 7 armored cars.

When Wrangel was practically liquidated, Petlura came upon the scene. If Wrangel was the legitimate heir of Denikin, Petlura was the bastard of Poland, put up by her against us. He had charge of 15,000 bayonets and 9,000 horses. Against Wrangel we had a great preponderance of forces, practically twice as much; against Petlura we had less; our settlement in the Crimea, however, had a great moral influence. A great battle took place on the 10th; on the 15th Petlura's divisions were routed; the remnants of his army retired to the Polish frontier and were disarmed by the Poles. We captured great trophies. After the defeat of Wrangel and Petlura, Balakhovich's bands do not stand the slightest chance of success.

We have no fighting front now; the communiques speak about the guarding of works, railways, etc. However comfortable it may be to confess that there is no more war, we have no right to soothe ourselves with the hope that the respite will be for long. We are not going to violate the peace, but we do not know with whom we may be forced to fight next. Experience, successes, and errors, have taught us to be cautious.

The international revolution has not come as soon as we desired it; still, it may be either a matter of decades or of weeks. It is difficult to say when the world revolution will come. Therefore we must not say that nobody else will want to fight against us. There is a base, Batum. Eighteen months ago negotiations were being carried on concerning the lease of Batum. In the event of Batum going over to England, Georgia will become the *place-d'armes* for the remnants of Wrangel's army, and we will thus have a new ulcer in the Caucasus. Most decidedly averse to war, we should nevertheless be on our guard. Batum itself is not so important as is a new front in the Caucasus. Our diplomacy stated it was the intention of England to occupy

* A minister under the Tsar who later became minister in Wrangel's "democratic" government.

Batum. Curzon in his turn asked whether we desired to occupy it. What is the meaning of this reply? The world bourgeoisie has been astonished at the swift defeat of Wrangel, but after the shock they have found a new cause for agitation in our alleged attempt upon Georgia. In this respect things in the Caucasus are not favorable. The Greece of Venizelos was the instrument of the Entente against Turkey; now Venizelos' party has lost at the elections, and the Germanophile party has come to the fore, an event which is to our advantage, for it is opposed to the Entente, though perhaps timidly and irresolutely. Under present circumstances, England and France cannot depend on Turkey, but they can promise her Baku, i.e., settle their accounts at our expense. It is thus clear that we are going to meet with some danger in the Caucasus. We can by a slight effort prepare this front and secure our safety in respect to Baku and Batum.

We are passing to the economic line of action and must preserve the army; but we must do this without damaging it; the demobilization must be confined to the staffs, the base, and the organs of supply, of which we had so many. Divisions were hastily organized for the battle. We should now bring them into proper shape. We can reduce the

total number of the army by two-fifths, but preserve the number of bayonets and raise the quality of the army. Officer courses must be organized, which would be able to give us thousands of new commanders. If we carry out all these measures, by next summer we shall have a better army than now. The respite will not weaken, but will increase the work in the army. We had in our army many specialists and non-proletarian elements. We have not always given them careful attention, but both have come over to our side and have fought side by side with the Communists. Generally speaking the organization of the army is sound and in the course of a few months respite, we can take it under the control of the party organization.

The half of the party members that is in the army must learn to understand the other part that is at the base, and there is no doubt that they will unite.

Attention should be given to the Don Basin: the best men should be despatched to regulate there the work of supply and of industry. It is necessary to establish the closest contact with the trade unions; the best men should be placed in the economic apparatus, and their work should be valued in proportion to the good they bring the workingmen.

Locomotive Tires Bought in Germany

WE HAVE received from Professor George Lomonossov the text of a contract for locomotive tires placed by the Soviet Government with the German firm of Henschel & Sohn. Professor Lomonossov is the Representative Plenipotentiary of the Soviet Government for purchases of rolling stock abroad, with headquarters at Stockholm.

In transmitting this contract, Professor Lomonossov writes:

"This agreement was made without any bank guarantee, merely on the strength of the word of the Soviet Government. Seven such agreements are already in operation and the German deliveries are on an average six weeks ahead of the contracted period."

We publish herewith the full text of the agreement:

CONTRACT

Between the Russian Soviet Government, Moscow, represented by Professor Lomonossov, Plenipotentiary for this purpose, domiciled in Stockholm (Hotel Continental), hereinafter to be referred to under the abbreviated title of the "purchaser",

as the party of the first part,

and the firm of Henschel & Sohn, Henrichshütte Section, Hattingen on Ruhr, hereinafter to be referred to as the "seller",

as the party of the second part,

the following contract has been concluded under this date:

Subject of the Contract

§1. The purchaser orders and the seller undertakes to produce and deliver 22,000 tires for wheels of locomotives, railroad cars, and tenders, of Siemens Martin steel, in accordance with the following table, of a total weight of about 6,500 (six thousand five hundred) tons. The wheel

tires are to be properly rolled and shall be delivered complete up to lathe-work, unfinished. The manufacture of the tires is to take place in the works of the seller.

| Serial Number | Cross Section | Internal Diameter Unfinished Condition | Number of pieces | Serial Designation as Provided in §3 of this Contract |
|---------------|---------------|----------------------------------------|------------------|-------------------------------------------------------|
| 1 | X | 890 | 15,000 | B ^{ac} . |
| 2 | XI | 1,010 | 160 | Q ^x |
| 3 | XI | 1,080 | 350 | U ^x |
| 4 | XI | 1,122 | 60 | P |
| 5 | XI | 1,258 | 50 | T |
| 6 | XIII | 1,010 | 410 | Q ^x |
| 7 | XIII | 1,014 | 300 | U |
| 8 | XIII | 1,080 | 700 | U ^x |
| 9 | XIII | 1,122 | 200 | P |
| 10 | XIII | 1,172 | 100 | B |
| 11 | XIII | 1,214 | 550 | I ^x |
| 12 | XIII | 1,258 | 140 | T |
| 13 | XV | 870 | 4,000 | T ^{ox} |
| | | | 22,000 | |

Drawings

§2. The tires provided for in Paragraph 1 of this contract are to be manufactured, in accordance with the table contained in Paragraph 1, from the cross-section drawings X, XI, XIII, XV, annexed to this contract, and constituting an integral portion of the contract. The manufacture is to follow the full lines of the cross section drawings, allowing for errors commonly provided for in rolling.

Technical Conditions

§3. The tires are to be delivered under the conditions

imposed by the Prussian State Railway Administration, as printed in

| | |
|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| "Special Conditions for the Delivery of Axles, Wheel Bodies (spokes, hub, wheel-disks) Tires, Station Master Car Wheels | } For locomotives, tenders, and cars. |
|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|

C. V. Edition of May, 1910,"

wherever such conditions may appropriately apply.

The following additional provision is made for stamping (Designations in Par. 4):

Between the smelting number and the impression of the receiver's stamp, the corresponding serial designations tabulated in Paragraph 1 shall be stamped in Russian letters.

Par. 6 (acceptances); Par. 7 (painting and packing), Par. 8 (guarantees), Par. 9 (contractual fines), as well as the table of weights of the Prussian State Railway Administration, are not included.

Inspection and Testing in Germany

§4. The inspection, testing, and final acceptance of the tires is to be carried out, at the times of their manufacture and completion, by the Representative of a German receiving firm, to be selected by the purchaser, and under the supervision of the latter. For the purpose of carrying out this supervision, the purchaser is empowered to appoint an engineering specialist, to be present in the works of the seller as a responsible representative. The seller is obliged to afford the above-mentioned specialist of the German receiving firm and the representative of the purchaser a complete opportunity for a testing and supervision corresponding to the technical conditions imposed, as well as to furnish the necessary materials and auxiliaries for this purpose without cost. All tests are to be recorded in protocols in the Russian and German languages, in four copies, of which one copy is to remain with the seller and three copies are to be handed to the purchaser. The protocols shall be signed by the German receiving officer and the representatives of the manufacturing works, and be certified by the signature of the responsible representative of the purchaser, without which signatures the protocols shall not be valid.

Should the test yield unsatisfactory results, the seller is obliged to replace at his own cost the parcels of tires, against which objections have been raised, with new tires completely satisfying the conditions imposed, or, with the consent of the purchaser, to undertake the necessary alterations in such tires. But such substitution may not in any way delay the final delivery of the tires.

All acceptances shall in principle follow the practices observed in Prussian acceptances.

Guarantee

§5. The seller guarantees the tires for a period of one year after their final acceptance at the works, to the extent that he binds himself to take back each specimen that may become unfit for use during the guarantee period, in consequence of errors unquestionably arising from unmistakable defects in material or execution, f.o.b., Railroad Station, Hattingen on Ruhr, and replace such specimens with new ones, satisfying the original requirements of the order, f.o.b. Railroad Station, Hattingen on Ruhr.

Price of the Tires

§6. The purchaser binds himself to pay to the seller for these tires the price of per thousand kilograms. This price is understood to be f.o.b., Baltic port, or boundary station on the German-Polish boundary, as the purchaser shall designate, in ten-ton cargoes, including the technical cost of acceptance, but excluding the personal cost of the receiving officer.

Method of Payment

§7. A. The purchaser pays on the signing of this contract, as a first payment, the sum of, and binds himself to pay, not later than December 1, 1920, a further sum of as a second payment. The purchaser further binds himself to pay on the first of each of the following months, beginning January 1, 1921 monthly as further instalments of payment, until

a complete instalment of 25 (twenty-five) per cent has been reached for all the tires ordered.

B. A sum covering 75 (seventy-five) per cent of the value of each delivery shall be paid to the seller by the purchaser as soon as goods have been forwarded.

The payment of all sums shall take place in Swedish crowns, to the order of the seller, the German Reichsmark being rated at the course of

All these payments shall take place without any deduction by the bank appointed by the purchaser, and those mentioned under B shall take place on presentation of the bills of lading or of a certificate of readiness to forward, signed by the receiving officer and by the purchaser's representative, to said bank (see Par. 9, of this contract). The payment shall be considered accomplished on the receipt by the seller of the notice of credit from the said bank.

Times of Delivery

§8. The seller undertakes the obligation, two months after receiving the second payment of mentioned in Par. 7, to prepare 500 (five hundred) tons of wheel tires for forwarding from his works, and, each succeeding month, similarly to prepare 500 (five hundred) tons more.

The purchaser shall have the right to determine what tires are to be rolled each month, but it will be necessary for him to provide, by giving sufficient notice to the seller, that there shall be no difficulty in the schedule of rolling.

Belated delivery shall not be considered a ground for dissolution of this contract or for the filing of claims for damages on the part of the purchaser, unless it can be proved that a malicious guilt of the seller is involved. In the latter case the purchaser shall be entitled, after giving written warning and after having assigned in writing an appropriate period of grace, to withdraw from the contract, to demand from the seller a return of the payments already made, with the addition of interest at ten per cent, and to order the tires elsewhere, assigning to the debit of the seller any possible addition in the price.

Any obstruction to the fulfillment of this contract by a new order accepted by the seller after the signing of this contract shall not be considered as a cause that entitles the seller to invoke the customary protection of a *force majeure* clause, as provided in Par. 9.

Interference of Superior Powers

§9. The fulfillment of this contract, particularly the observance of the times of delivery shall be conditioned on the fact that no incidents shall intervene which may obstruct the regular progress of operations in the works of the seller, and may retard the timely completion or forwarding, respectively, of the tires. Cases of superior power, such as mobilization, war, revolution, uprisings, traffic disturbances, pestilences, conflagrations, and others of like nature, strikes and lock-outs, breakdowns of important portions of the works, defects in the casting of a large number of tires, acute coal famine, shall postpone the delivery periods agreed upon, and namely, for the time during which these factors of superior power may have persisted. The seller is under obligation to inform the purchaser in writing of the interposition of such events, within not more than two days after the seller has become aware of such conditions. The seller shall be further bound to inform the purchaser in writing of the termination of any condition or event obstructing or limiting the production, within not more than two days after the conclusion of such condition.

Should the forwarding be delayed through no fault of the seller, the seller shall take pains to store the tires to the best of his ability. The storing, however, shall take place at the cost and risk of the purchaser. The contract shall then be considered as fulfilled by the seller as to each lot of tires, two months after the issue of a declaration of readiness to forward (see Par. 7).

Adjustment of Disputes

§10. In all technical questions connected with the execution of this contract, the seller submits to the decision of the Representative of the Russian Government, appointed

for this purpose. These decisions shall be handed to the seller in writing without delay.

In all other eventual disputes arising from this contract between the seller and the purchaser, the Provincial Court,* Berlin, Part One, shall have jurisdiction.

Should any decision of the Representative of the Russian Government on technical matters involve financial disadvantage for the seller, on the subject of which he cannot arrive at any agreement with the purchaser within three months after receiving the instruction, such dispute also shall be under the jurisdiction exclusively of the Landgericht, Berlin I.

Copies of the Contract

§11. The present contract shall be drawn up in two copies, in the German language, of which one copy shall remain with the purchaser, and the second copy with the seller. One month after the signing of this contract, the seller shall deliver to the purchaser fifty printed copies of the contract, in the Russian and German languages, omitting all price quotations.

Stamp taxes eventually to be imposed upon this contract in Russia shall be borne by the purchaser; stamp taxes eventually to be imposed in Germany shall be borne by the seller.

Domicile of the Parties to the Contract

§12. In the execution of this contract the seller is to

be considered as domiciled at Hattingen on Ruhr, and the purchaser as domiciled in the Office of the firm of Briake & Prohl, Berlin, W9, Potsdamerstrasse 10-11; all letters and documents delivered to either address, or sent by registered mail, or by messenger for receipt, shall be considered as having been handed personally to the party in question. *Stockholm, October 20, 1920.*

The Dictatorship of Organization in Soviet Russia

By DR. ALFONS GOLDSCHMIDT

[Our readers are by this time well acquainted with the style and method of Dr. Goldschmidt, but we must warn them that in this article he makes use of a philosophical distinction that is new at least to the editor of SOVIET RUSSIA. It is his application of the term "mechanical" to acts of will, and of the term "organic" to the processes of evolution, to which we refer. Otherwise the reader will have no difficulty with the article.]

WHAT is the dictatorship of the proletariat? Is it an arbitrary brutality, is it an inorganic eruption, is it mere presumptuousness? It is not an arbitrary brutality, not an inorganic eruption, not a presumptuousness. To be sure, it is not democracy in the quantitative sense. If it were democracy in the quantitative sense it would not be a dictatorship.

Why does Marx demand a dictatorship of the proletariat? If this dictatorship is to have any meaning at all, any meaning in the Marxist sense, he must have demanded it for evolutionary reasons. We must distinguish clearly between economic evolution and political evolution, between organic and mechanical evolution. The main point with Marx is economic evolution; political evolution is a secondary matter. When the economic development demands a transformation, insists on a transformation, the dictatorship of the proletariat can no longer hesitate, it must come. This is the sense of Marx's entire system. Whether a few hundred thousand people more or less have understood this necessity of transformation is not altogether a matter of indifference, but it is certainly a matter of secondary importance when faced with the force of evolution. If those who are called upon to facilitate the pressure of evolution, fail to recognize and make use of the proper moments of transforma-

tion, in other words, fail to erect the dictatorship of the proletariat at such a moment, they have then failed in the execution of their mission. In other words, they have acted as enemies in the course of evolution, they have acted as counter-revolutionists. The counter-revolutionary action in this case means prolonging and exacerbating the economic crisis. The transition to quantitative democracy, which then to be sure will mean also a qualitative democracy, will take place during the dictatorship of the proletariat unless it has been already accomplished earlier. For this democracy is precisely the elimination of classes, which cannot possibly be realized at the very moment of seizing power. Anyone setting up such an assertion would be truly childish. It is impossible to force the economic development into the brains of all. Evolution does not concern itself with brains; it assumes catastrophic forms regardless of whether the millions have already acquired the consciousness of transformation. Therefore the dictatorship of the proletariat, like any dictatorship, will at first be a minority dictatorship. If we should wait until evolution has set aside the necessity of dictatorship, we should be surrendering all criticism and would be denying all mechanical influence on evolution in favor of a blind automatism. No sensible man will believe that this transformation can be accomplished automatically; Marx did not believe it either; for in his most precise sentences on expropriation he de-

* Landgericht, Berlin I.

mands the transfer of power. But a seizure of power is not an automatic falling into power. It is actually seizure—a plain dictatorial act.

The point simply is to feel the course of evolution and this is not a matter of statistical calculation. It is a matter of feeling. It is in a way a matter of intuition, and it is entirely of secondary importance whether the development has already attained the degree of maturity outlined by theory, or not. For the dictatorship of the proletariat, the critical treatment of the problem, the seizure of power and the retention of power, mean an accelerated maturing of the process. This is shown in all clearness by the course of the Russian Revolution.

We have seen: the Russian economy had become an economy of catastrophe before the Bolsheviki seized the power. What does this mean? It means that economy is crying out aloud, is demanding eagerly that the crisis be overcome, or that the administration be changed. It means an elementary urge for a continuation and radicalization of the organization created by private capital, which private capital is no longer able to manipulate. The organization needed new masters, masters who would abolish dilettantism in organization, abolish the opposition between organization and content, in other words, carry out ruthlessly the expropriation of the means of production, in the interest of salvaging the national economy. We have seen private property, corroding and disintegrating more and more, yield place to the organization that had been created by force of its own inabilities and failings. It no longer felt at home under this organization; this organization was opposed to its nature. The organization had to come, even under the stage of private economy, because private economy could no longer adjust the crises which were the result of its own operations, in such a way as to solve the problem of risks in a stable sense. The war was the final crisis, the severest crisis, and the war economy was nothing more than an attenuation, a transfer of the forms that had already been created for individual branches of economy, to the totality in the economic life. It now transpired that private economy was not in a position to conduct the national economy, since private economy existed on a basis of income, and as the income possibilities, the capitalist income possibilities, contradicted the principles of national economy.

It was necessary for a power to be created swiftly which would expand the beginnings of the nationwide economic organization in a radical manner, simultaneously eliminating its opponent, private economy. The war economy organization was the expression of the financial crisis in a yet sharper, more general form, than were even the trusts, syndicates, cartels, etc. There also had already been an attempt to adjust the risk, to restrict its fluctuations, to secure the income-like steadiness of financial profit by means of monopolization. The war exploited financial economy with ruthless intensiveness, so that finance had to seek refuge in other more comprehensive organizations. But it

did not make use of these organizations for purposes of production. It rather abused them for purposes of finance, and thus continued progressively shapening the financial crisis. The more extensive the war economy organizations became, the more extensively were they abused. They were the milch cow for finance. The financial burden of production thus became a mightier one, while production itself receded more and more. The opposition between finance and production became so catastrophic, the inability of financial economy to adapt its organization to purposes of production became so manifest that something had unquestionably to be done. The course of a planful economy was already to be recognized in capitalistic organizations. It now became swifter in its acceleration; finance, becoming more and more a burden, increased its efforts to attach itself to the general plan. The organization had to shake off the financial economy. This is the point, the economic point of the November Revolution, of the Soviet Russian Revolution, and this also will be the point of the European Soviet revolution. It matters nothing whether the quantitative populations desire the seizure of power or not. If it shall transpire that financial economy no longer can control the organization, or even, as is now the case in Germany, desires to relinquish its organization without diminishing its own importance, without lessening its own weight, nothing will remain but to erect a power for a planful execution, for a planful extension, for a planful salvaging of the organization.

But in this way the dictatorship of the proletariat reveals itself, aside from other essential peculiarities, as a dictatorship of organization. Organization demands that it be rescued and expanded, and there is no power that can afford to resist this demand. Organization cannot in the interest of economy permit itself to be turned out and disorganized, to be further vitiated, and economy cannot tolerate being shoved out of the organization.

And this is the secret of the Soviet Russian power. Why could this power not be eliminated by the quantitative persons who oppose the dictatorship, allegedly for reasons of democracy? It could not be eliminated because it was a natural necessity, because it was that organizing will for which economy and the entire endangered organization itself were literally crying out.

Therefore, after many confusing incidents and resistances, the dictatorship was accepted not only by the entire proletariat of Russia, but finally also by the bourgeoisie. The purpose of this book is to show the almost automatic progress of organization, and to make possible a grasp of the seizure of organizing power, on the basis of the preceding disorganization.

From the moment when the first clear decrees of organization of the Soviet Government were published, millions of those who formerly had remained blind to the dangers and necessities saw that here was a demand of evolution being realized. All resistance, or at least the most important resistance was broken. This breaking up of resist-

ance was not so much the act of the terror as the result of necessity. For a great nation, a nation of one hundred and fifty million people, will not tolerate an inorganic power. It will shake it off. There is no power on earth that could maintain such a force if it were inorganic. Just as a people without arms will create arms for itself against an intolerable military dictator, so a people will arm itself against an intolerable economic dictator, who in its eyes has no justification for holding the dictatorship.

You may take what stand you like with regard to the Soviet form of dictatorship, but you cannot deny that the seizure of power itself was a necessity unless the country was to break down.

Once the power was seized the organization had to be carried out. Those in power could no longer withhold themselves from the authority of organization. The dictatorship was therefore not a mechanical process carried out by a few, but a forced situation, a necessary pressure, a corollary to organization.

To be sure we recognize the necessity of organization, even to the point of the severest centralism, as a self-evident thing. We saw how this centralism was prepared even before the seizure of power, how the proletariat penetrated into the centers of the organization of power, how it strove up from below, from the factories, to central organizations. But this Centralism became the nexal point, the stronghold of the dictatorship. We have seen how everywhere in the country economic Soviets were formed, without instructions, simply out of the necessity of the case, simply out of the pressure toward the Centrals.

This dictatorship of organization consequently led to an almost perfect encompassing and conduct of industry.

At first it led to a unification and tightening of organization, to a drawing together of the administrative powers, to a united direction of these powers, to a possibility of supervision, which contrasted sharply with the impossibility of supervision under private economic organization and signified an overcoming of this destructive lack of the possibility of supervision.

By means of the dictatorship of organization it has been possible, owing to the dictatorial consistency of organization, to create that production budget which is the basis and the *sine qua non* of a plentiful Socialist economy. The elimination of disturbing intermediary authorities, of attenuating intermediary authorities, the progressive trustification, the hierarchy of administrative organs in progressive centralization down to the Centers, the centralist evolution of workers control, of the trade unions, of the industrial unions, all this is a dictatorship of organization. But it is a dictatorship of organization demanded by the course of events.

The solution of the problem is this: organization has its own pressure, its own force of gravity. It becomes something inevitable, it expands, contracts, destroys, opens up, because it has a force, a rudimentary force, within it. Or is it possible to think

that a few hundred thousand persons could create this apparatus? The apparatus creates itself because rationing has become inevitable, and rationing in its turn is the means for the control of production and the control of the country.

The main requirement was: expropriation of the means of production. The expropriation of the means of production could and can be realized only by a centralization, by a tightening of the organization, by the creation of a supervising possibility, which will finally reveal even the ultimate stocks, the last resources in labor power.

Thus, for example, the origin of the production budget out of many individual budgets is rather a process of organization than one of mechanism. Rather a process from below than from above. From month to month the production budget became more specific and clear, its manipulation became easier because budgetization so to say, came of itself, because it was no longer necessary to have a mechanical dictatorship, because organization from out of itself developed the powers for perfecting the budget.

Of course even this is not an automatic process. The dictatorship of organization is also a consciously conducted dictatorship, a consciously exploited dictatorship. By means of instructions, by means of disciplining, by intervention of revolutionary elements of production in the factories, in the lower and upper Centrals of the economic administration, by combating sabotage, by stopping the former sources of money, by all this means the dictatorship of organization was conducted and rendered easier. But we must always consider the internal power of organization, which becomes so much more weighty, so much greater, the more the organization advances, until finally the total organization, the perfected nation-wide organization will completely eliminate the dictatorship organization, after the adaptation of all forces to this organization has been completed. To be sure, there is still a long way ahead to that goal. For the remnants of private economy, the remnants of an aversion to organization, still persist. They will as yet not adapt themselves. There still are usurers and speculation in Russia, so that even the Soviet institutions, the economic institutions, are often obliged to compound with the usurers and speculators, so that often circulation of commodities from organization to organization is not achieved. We have seen that the Russian peasantry can by no means be fully organized into a whole, that therefore a money economy is still going on, and that industry also is suffering under the attacks of money economy. We have seen that the ideal of Socialist economy, the traffic in commodities without the use of cash, the production of goods directly for the consumption of the workers, has not yet been attained. But we have also noticed that this dictatorship of reorganization, this absorption by organization, is abolishing the currency system. This process is being accelerated by a system of withdrawal. To this end a chain of small state banks is to be established, in order to accustom the population to exchange of goods

without the use of money. Thus the population, including the peasants, are being drawn into the organization by means of increased government control, through the establishment of workers' and peasants' supervision, through periodical educational meetings of industrial workers and peasants, through a determined campaign of disseminating technical knowledge, and many other means of a like character. In this way the existing framework, the existing outline, will finally be filled in and become a living and functioning system. It is to be remembered, however, that this framework can never again be removed, since it is a result of the dictatorship of organization, and since the dictatorship of organization grows more powerful every day through the continual growth and extension of the organization. In the end the whole population will be supplied by government warehouses, and contraband goods as well as back-door trade will disappear entirely. This time will come. It will come, just as the actual abolition of private banking has come; as it has become possible to centralize the financial organization of the country; as taxes have become superfluous; as the disrupted industries have been reorganized, etc. There are many more ways of bringing the population within the influence of the organization, i.e., of perfecting the system of distribution and allotment of supplies, down to the actual consumption, down to the individual household. Among other means, there is the organization of foreign trade, which really amounts to the government taking over the control of supplies, and which step is already being prepared for in the systematic gathering up of existing foreign exchange and the establishment of foreign credit controlled and directed by the central organization.

Further, it must be borne in mind that sabotage has practically been broken up. The kind of sabotage now in existence is sabotage from sheer necessity rather than an obstreperous sabotage. This fact allows of an entirely different control of labor, of a much more rational apportionment of labor throughout the entire country. Under these conditions the work of education, of dissemination of knowledge, can be made incomparably more effective, and of incalculable value.

When Russia shall be free from the threat of war we shall see what power, what inherent power, what dictatorial power lies in organization. There are people in Russia who regard demobilization as a crisis for the organization. But the power of the organization, the dictatorship of the organization is already apparent in the very fact that demobilization is taking place according to the laws of the existing organization, that the fighting army is being transformed into an industrial army in accordance with existing laws, according to present requirements and necessities. It is possible that the end of the war will bring with it a tendency to relax; but this slackening of energy will, in my estimation, soon be overcome by the dictatorship of the organization. For the people must live, and they can never again live without the existing organization which has been created.

One might quote examples without end. There is, for instance, the control of the fuel supply, which, to a certain degree, is also a solution of the transportation difficulties.

At the beginning of 1918, Russia was cut off from all sources of fuel supply, from Baku, from the Donets Basin, from the Urals. The dictatorship of organization took a hand immediately. It was impossible to build up a Socialist system, to continue the organization without control, without a solution of the fuel problem. That was a question of life and death for organization. Organization itself depended upon the solution of that question. We know this from our own fuel famine during the war. In Russia, however, in Bolshevik Russia, the fuel control was much more powerful, more farsighted, more forcible, than our wartime control.

The work of establishing control, the transfer from coal to wood and peat, to the use of shale fuel, began at once. It might almost be said, that out of sheer necessity of organization new fuel materials were found not far from Petrograd, and on the Volga. They started to rebuild engine boilers and boilers in industrial plants for the use of wood as fuel. A strict control of the use of fuel was established. There were no fuel reserves. The winter of 1918, the entire year 1919, was a period of fuel shortage, of intense suffering from the cold, of industrial and transportation breakdown. But the organization continued its pressure, the economic plan continued its demands, and at last it was possible to accomplish the following: A general committee for fuel supply was formed as a part of the Supreme Council of National Economy, with sub-divisions for naphtha, coal, etc. It was from the very beginning a pretty useful organization. Already it was possible to control consumption to some extent. Drastic decrees were issued, according to which, for instance, every industrial enterprise was compelled to turn over to the railroads 50 per cent of its fuel supply. Necessity demanded this. There ensued a gigantic confusion, the central fuel stations were being deluged with complaints. But a successful fuel control was established. The fuel budget for 1919 to June, 1920, was able to show a reserve of fourteen million cubic fathoms of firewood (one cubic fathom equals 250 poods). This gigantic amount was to be cut. Whoever is acquainted with the lumbering method of Russia in regard to wood clearing knows what this meant. At the end of May, 1920, ten million cubic fathoms had been cut. In this way Russia solved its most pressing problems.

The entire industrial field was divided into three categories: important factories with their own fuel supply; important plants without fuel; and factories of minor consequence which might be closed for the time being.

The plan succeeded. Not everywhere, to be sure, as for instance, in Moscow and in Petrograd, but it was a success on the whole. It would have succeeded in Moscow and in Petrograd as well, if the supply organizations there had not been molested by the counter-revolutionary armies.

This organized plan resulted in combining the fuel problem and the railroad problem under one head. It became necessary to find out how many locomotives and freight cars would be needed for the transportation of fuel, how much and what kind of fuel was needed for the locomotives. The result of this was the cooperation of the Supreme Council of National Economy and the Commissariat for Railways. Thus a higher degree of centralization had been accomplished through the need of organization, through the dictatorship of necessity. The result of this was favorable, necessarily favorable, for systematization had gained thereby to some extent. Today the distribution machinery is already of practical use. It grows better every day. Since the liberation of the Urals and Baku new sources of fuel have already been made available. The railways in Siberia are already beginning to operate on schedule. The Ural trains have already ceased to be the uncertainties they have been up to now. The southern lines are speedily being converted to the use of coal. The coal-burning locomotives ran as far as Moscow in May of this year. The naphtha transportation, the cotton transportation from Turkestan, the transportation of supplies has already become less difficult than theretofore. Fuel branches, branches of the Moscow Central Committee are being established throughout the country, at Kharkov, Yekaterinburg, Siberia, etc. Already the locomotives of the Volga trains are burning naphtha.

All of this is still difficult, frail, defective and peace-meal. But the dictatorship of organization is already demonstrating its power for bringing order into chaos, its positive power. It demands order. It has begun, and must continue. Everything must be brought under its influence. It is a slow process, I know it very well. There will be difficulties, disappointments, and helplessness. There will be many emergency measures. But organization is the first step in saving the production of the country, the first step in the building up of production, of the new, great Socialist production; in spite of all obstacles, in spite of misery, hunger and cold, in spite of the daily losses through undernourishment. Organization means production.

THE GRAIN DELIVERIES

During the first ten days of November, the delivery of grain was going on with the same intensity as during the preceding period of the current food campaign.

The following table shows the grain deliveries in the various provinces.

In this table are shown: (1) The figures of the levy; (2) the total amount of the deliveries up to November 11, since the beginning of the campaign, and the storing during the ten days of November (the latter is given in brackets following the figures of the total amount); (3) The percentage of the levy, which was carried out up to November 11. We preserve also the division of the

provinces into "shock" provinces, ordinary producing and consuming.

1. "Shock" Provinces . (Levy Over 10,000,000 Poods)

| | The Levy | Delivery up to November 11 | Per Cent of the Levy, car- ried out |
|----------------------------------|-------------|-------------------------------|----------------------------------------------|
| 1. Cheliabinsk | 17,000,000 | 2,086,000 (809,000) | 12.3 |
| 2. Ufa | 16,800,000 | 4,388,000 (1,140,000) | 26.1 |
| 3. Saratov | 14,500,000 | 3,184,000 (919,000) | 22.0 |
| 4. Samara | 14,010,000 | 4,245,000 (1,118,000) | 30.3 |
| 5. Tartar Republic.. | 11,990,000 | 5,721,000 (1,155,000) | 48.1 |
| 6. Tambov | 11,500,000 | 3,206,000 (580,000) | 27.9 |
| 7. Viatka (up to Nov. 6)..... | 10,750,000 | 4,915,000 (698,000) | 45.7 |
| 8. Yekaterinburg ... | 10,700,000 | 3,229,000 (1,698,000) | 32.3 |
| | 106,550,000 | 30,974,000 (8,117,000) | 29.1 |

II. Ordinary Producing Provinces. (Levy less than 10,000,000 Poods)

| | | | |
|---------------------|------------|------------------------|------|
| 1. Simbirsk | 8,500,000 | 3,908,000 (1,391,000) | 46.0 |
| 2. Pskovsk | 7,000,000 | 516,000 (148,000) | 7.4 |
| 3. Voronezh | 6,500,000 | 664,000 (172,000) | 10.2 |
| 4. Kursk | 6,300,000 | 500,000 (106,000) | 9.5 |
| 5. German Comm... | 6,300,000 | 401,000 (99,000) | 6.7 |
| 6. Orel | 5,500,000 | 2,856,000 (824,000) | 51.9 |
| 7. Orenburg | 5,000,000 | 778,000 (156,000) | 15.6 |
| 8. Riazan | 3,900,000 | 741,000 (93,000) | 19.0 |
| 9. Tula | 3,650,000 | 3,410,000 (509,000) | 93.4 |
| 10. Penza | 3,500,000 | 2,674,000 (363,000) | 76.4 |
| 11. Perm | 3,300,000 | 2,289,000 (289,000) | 69.4 |
| 12. Bashkiria | 3,000,000 | 938,000 (202,000) | 31.3 |
| 13. Tshuvash Com... | 1,500,000 | 1,205,000 (216,000) | 80.3 |
| 14. Tsaritsin | 1,500,000 | 66,000 (3,000) | 4.4 |
| 15. Uralsk | — | 549,000 (2,000) | — |
| | 65,150,000 | 21,597,000 (3,182,000) | 33.1 |

| | | | |
|--------------------------------------|-------------|------------------------|------|
| III. The Consuming Province | 22,500,000 | 7,930,000 (1,069,000) | 35.2 |
| IV. Siberia | 110,000,000 | 18,325,000 (1,063,000) | 16.6 |
| V. Caucasus | 120,000,000 | 21,319,000 | 17.8 |

The total for all Russia, except Azerbaijan 424,200,000 100,963,000(16,537,000) 23.8

The significance of the total figure of the delivery may be fully comprehended, if we consider, that two years ago the total amount delivered was 107,000,000 poods, and last year, 207,000,000 poods. Before the middle of November, we stored about as much as in the whole year before the last and about a half of last year. And this was accomplished during two months and a half.

It is most probable that we have already on hand about 130,000,000 to 140,000,000 poods of delivered grain, which amounts to about one-third of the whole levy.

The delivery during the first ten days of November was also satisfactory. It amounted to 16,537,000 poods as against 7,000,000 in the last year. Of these, more than 11,000,000 poods were stored within the limits of old Soviet Russia.

Bound Volumes of Soviet Russia

VOLUME THREE (July to December, 1920, inclusive), durably bound in cloth, stamped in gold, with title page and index, 652 pages of text and illustrations, including many maps and sixteen full pages of half-tone plates, is now ready for delivery. Price five dollars, postpaid.

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION

110 West 40th Street

New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

THE American press was rather harsh on the Rumanians when after the downfall of the Soviet regime in Hungary (August, 1919) their troops entered Budapest, murdering inoffensive civilians, and plundering and pillaging as if they were the hirelings of William the War Lord and not the subjects of his cousin Ferdinand Hohenzollern, the "democratic" ruler of that gallant "Latin" nation that was fighting for "self-determination". A careful investigation of Rumanian history and even philology affords ample proof that those deplorable happenings were in no wise an outgrowth of the predatory appetites shown in every war by the happy winner. They were purely and solely caused by a—linguistic misunderstanding.

It is well known that the territory now inhabited by the Rumanians was in ancient times the Roman province of Dacia. The Dacians disappeared without leaving a trace, and were probably completely absorbed by the Latin-speaking Roman colonists whose antecedents were in many cases similar to those of the first Australian settlers and to those American pioneers who came on the unnamed ships that followed the "Mayflower". During the great migrations, and for many centuries later, Slavic, Turkish and other foreign hordes penetrated the country, leaving as a permanent trace of their sojourn a great part of their dictionary. Slavic words abound in the Rumanian language, besides the original Latin vocabulary, just as French, in other words, Latin words abound in the English language by the side of the original Saxon stock. Now, it is a fact that an adopted word in the course of time takes on a meaning somewhat different from the one it had in the language from which it came. A classical example of this kind is the word *rasboj* (of Slavic origin), which in Rumanian means "war". In the Slavic languages, however, i.e., in the languages of its origin, the word means "highway robbery". The chivalrous commanders of the glorious Rumanian army in the heat of their anti-Bolshevist and anti-Hungarian excitement probably forgot that there is now a difference of usage between the Slavic and the Rumanian meanings of the word *rasboj*. Or were they really so cynical or so—sophisticated—as to think that there is no difference whatsoever?

This Hungarian episode from the heyday of Rumania's national glory has been long forgotten, and the American press is once more bewailing the distress of that outpost of Latin civilization whose gold reserve, kept during the war in Moscow, has been "stolen by the Soviet Government" and whose national security is allegedly "menaced by a concentration of Red Armies on the Dniester."

This "stolen Rumanian gold" is one of the stock arguments put forward by the daily press whenever the question of the resumption of commercial relations with Russia looms up. True, this gold was only "stolen" after Rumania had "seized" a considerable portion of Russian territory, i.e., the rich province of Bessarabia; true, Rumania has now been holding and squeezing this province for more than three years, refusing indignantly even to negotiate on the Bessarabian question, which according to her is already "settled"; true, that by her help to Kaledin, Denikin and other "White" generals she inflicted enormous economic losses on the Russian people, far outweighing the amount of the retained gold—but all these "trifles" are easily and gladly forgotten by the enemies of Soviet Russia, for whom the Bessarabian question no longer exists, as that territory was officially "awarded" to Rumania by the Allies—quite in keeping with the same principles of "democratic self-determination" according to which the Germany of Brest-Litovsk awarded a very important part of the Caucasus to Turkey. But the award of Brest-Litovsk was in force for a very short time only . . .

INCLUDED in a table showing the imports of gold into Great Britain for the calendar year 1920, published in *The New York Times*, January 27, was an item which read, without other explanation, as follows: "Russia . . . 1,965,095 pounds sterling." That was all. Nearly two million pounds sterling of gold imported from Russia into Great Britain in the year 1920. What gold, or from what "Russia", the table does not tell. This is a tantalizing omission. Was this "Bolshevik" gold, tainted and stained with the blood and sweat of the Revolution; or was it Kolchak gold, or Denikin gold, or Wrangel gold, or what? Did the importer have to file an affidavit of innocence and total purity, as is the requirement in this country, when he brought this gold to the mint? We have not the facilities for securing the answers to these questions. But we imagine that there are many American business men who will be interested in pursuing the subject further.

Many such odd little items as this, often enlightening and sometimes merely thought provoking, turn up in other corners of the financial pages and in special reports of various kinds. In the daily "Commerce Reports", for instance, published by the United States Department of Commerce. We were turning over an old stack of these the other day and came across the following, under the heading "Assistance for British Trading with Russia".

"According to cable advices, arrangements are being made by the British Chamber of Commerce at Constantinople to assist British merchants to trade with Russia in cooperation with the British Army organization occupying that region, many of whom were experienced in business." (*Commerce Reports, U. S. Dept., December 11, 1919.*)

We remember the announcement which appeared shortly after the armistice that henceforth British commercial travellers were to be encouraged to embark on every British warship sailing for foreign ports. Some wag remarked at the time that trade, no longer content with "following the flag", would now sail forth under its very folds. The complete picture is presented in the brief note which we have reprinted above. The salesman-officer dashes into battle, sword in one hand and order book in the other, prepared to persuade friend and foe, alike, to sign on the dotted line.

We understand more clearly now a somewhat sententious remark in the recent annual report of the British Overseas Bank, to the effect that "we have taken various steps to prepare ourselves to play our part in any ultimate development of the vast possibilities which Russia contains." England expects, etc.

* * *

THE question of peace or war on the borders of Russia continues to engage the general interest. Out of a mass of flying rumors and plain falsehoods, it is well to gather a few outstanding items of significance.

In his letter to the President of the National Civic Federation, dated January 8, the Acting Secretary of State wrote: "Russia today is in a condition of distress, and there is grave danger on all her frontiers of aggression, either directly by foreign States, or indirectly through the control of these border states." There could not be a more frank statement than this. Certain powers are planning aggression against Soviet Russia. The American Government knows of these plans. This subject was the burden of the note of January 18, in which Mr. Davis transmitted certain views of the President of the United States to the President of the Assembly of the League of Nations. "It is obvious to all," wrote Mr. Davis on behalf of the President, "that these small struggling border states will not attack great Russia unless encouraged by promises of support from the stronger powers." The President therefore asked the great powers to engage "not to take advantage of Russia's stricken condition and not to violate the territorial integrity of Russia, nor to undertake themselves any further invasions of Russia, nor to tolerate such invasions by others." There has been no official response to President Wilson's request that the great powers promise not to attack Soviet Russia. The correspondent of *The New York Times*, however, remarks that this message was received in Paris "perhaps more coldly than any other communication he has ever cabled across the Atlantic."

Responsible officials of at least two of the border

states have recently thought it important to deny rumors of alleged mobilizations of the Russian Soviet Army. Prince Lubomirski, Polish Minister to the United States, emphatically denies any aggressive intentions on the part of Poland against Soviet Russia and, with equal emphasis, declares his belief in the peaceful intentions of Soviet Russia. "Poland intends to keep the peace and will suffer no attacks to be launched against Russia from her territory . . . Nor do we expect the Soviets to attack either this winter or next spring. Why should they? . . . The Soviet leaders are not stupid men" (*New York Times*, January 23). Similarly the former Rumanian Minister to London disclaims any fear of attack from Soviet Russia. "He declared there now were only 45,000 Bolshevik troops along the Dniester, and Rumania, which at present has a large and powerful army, does not fear them." (*New York Times*, January 25.) Out of Soviet Russia, itself, comes the vigorous statement of the Commissar for Foreign Affairs in his recent cablegram to the Representative in the United States: "Emphatically deny rumors in American press alleging Russian mobilization against Poland, Rumania or any other country. We want peace and a chance to work."

According to President Wilson and the Department of State, the danger comes from aggressive plans of foreign powers against Soviet Russia. But the current propaganda is all concerned with alleged mobilizations and hostile plans of the Soviet Government. Polish and Rumanian officials both disclaim belief in any such plans. Chicherin emphatically denies them. Whence, then, come the rumors? Prince Lubomirski attributes them to German military propaganda. General Hoffmann does his best to bear him out. The search, however, may be carried further than that.

On January 4 *The Manchester Guardian* printed a characteristic Reuter dispatch from Paris, telling of reports received there from Bucharest, via Vienna, alleging Soviet mobilizations on the Dniester front. The Reuter correspondent added, however, that inquiries at the Rumanian Legation in Paris failed to obtain any confirmation of this report. On the same day *The Manchester Guardian* published the following dispatch from its correspondent at Reval:

"The Lettish Secret Police at Riga have arrested persons alleged to have been employed by or receiving money from French representatives and engaged in spreading rumors likely to lead to a new war.

"These *agents provocateurs*, besides spreading rumors regarding a Russian concentration against the Letts, went so far as to spread the report that fighting had already begun between Esthonia and Russia on the Pakov front.

"Equally false rumors current in Moscow to the effect that the Esthonians are planning aggression may come from the same source."

Whichever way events may turn, it is well to keep these facts on record and in memory. In the face of them, there can be no doubt where the responsibility lies. It does not lie with the workers and peasants of Russia, who desire only "peace and a chance to work."

Problems of Organization of Labor

By LEON TROTSKY

Last Instalment: Collegiums or Individuals to Run Industry?

The Mensheviks also seek their salvation with another question that appears to them to offer an opportunity to again obtain the confidence of the working class. This is the question of the form of the management of the industrial enterprises, the question of collegium or individual management. We are told that the transfer of industries to individual managers instead of collegiums is a crime against the working class and against the Socialist Revolution. It is remarkable that the chief advocates of the Socialist Revolution against the principles of individual management are the same Mensheviks who up to a short time ago were still of the opinion that even to mention the possibility of a Socialist Revolution was a hoax against history and a crime against the working class.

They say the Socialist Revolution is being sinned against particularly—as was stated at our Party Convention, which came out in favor of an approximation toward individual management—in the lower industrial centers and factories. But it would be the greatest possible mistake to consider this decision as injuring the self-activity of the working class. The stimulus to this activity of the workers cannot be defined or measured by the fact that there are three workers at the head of a certain enterprise or only one, but by much more profound influences and phenomena. The construction of the economic organs, the active cooperation of the trade unions, the construction of all the Soviet organs by Soviet congresses, representing scores of millions of workers: the appointment of the *administered* themselves to the administration or supervision over the administration, these things are the expression of the self-activity of the working class. This activity may from the standpoint of administrative technique be correct or incorrect, but it is not one that is forced upon the proletariat but one dictated by its own judgment and desire. It would therefore be a great error if the question of the rule of the proletariat should be confused with that of the workers' collegiums at the head of the industries. The dictatorship of the proletariat finds its expression in the abolition of private property in the means of production, in the rule of the collective will of the workers over the whole Soviet mechanism, and by no means in the form of administration of the individual economic enterprises.

At this point we must also refute another accusation frequently made against the principle of personal rule. Its opponents declare: "The Soviet militarizers desire here to transplant to the economic field the experiences they have gathered in the military field. In the army the personal rule may be good; in economy it is of no use." This objection is absolutely unwarranted. It is not true that we began in the army with the single command; even to this date we have not completely in-

roduced it. It is also untrue that we only began to advocate the personal form in the administration of economic enterprises, with the appointment of specialists, after we had obtained our military experiences. As a matter of fact, we proceeded in this question from the starting point of the purely Marxian conception of the revolutionary tasks and creative duties of the proletariat after its seizure of power. The necessity of a continuity of previously acquired technical data and habits, the necessity of engaging specialists, of utilizing them exclusively, so that technology may not decline, but advance, all these were grasped and recognized not only since the beginning of the revolution, but even long before November, 1917. I believe that if the civil war had not impoverished our economic organs and deprived them of all the conscious elements possessing initiative and independence, the method of personal administration would no doubt have been introduced in the field of economic administration, earlier and less painfully.

Some comrades consider the apparatus of the economic administration to be first of all a training. This is of course absolutely wrong. The task of the organization of administration is *administration*. Anyone possessing the will and the ability to acquire administrative skill should attend the school, the special school for instructors, should become an assistant, should be observant, gather experience; but he who is appointed as a member of a factory directing board will not enter the school but will enter a responsible administrative-economic position. But even if this problem is to be regarded from the limited and therefore not important standpoint of the "school", I still say that under the personal principle the school will operate best. Even when a good worker is not being replaced by three who are less able, the appointment of a collegium of even three more able ones to a responsible administrative office will deprive them of the possibility of finding out what it is that they personally lack. Each one at a decisive moment will look to the others for support and when the thing goes wrong will shove the blame on to the others.

The fact that this is not a question of principle is best indicated by the opponents of the individual management, who do not demand collegium management for shops, mines, pits. They even declared, full of indignation, that only madmen could demand that a shop be conducted by from three to five persons: there should be but a single supervisor for the mine, and nothing else. And why? If the collegium administration is a "training", why do we not need a training at the lowest degree? Why should collegiums not be introduced into the shops also? If collegium management is not a sacred requirement for the shops, why should it be obligatory for industrial management?

Abramovich has said: As we have few specialists—and, following Kautsky, the Bolsheviks are blamed for this paucity of specialists—we shall replace them by workers' collegiums. This is absurd. No collegium consisting of persons who do not know the work in question can replace a single individual who knows this work. A collegium of jurists cannot replace a switchman. A collegium of patients cannot take the place of the physician. The very idea is a wrong one. Participation in a collegium will not provide an ignoramus with knowledge. It may simply serve to veil the ignorance of the ignoramus. If a person is placed in a responsible position, that person is not only visible to all others, but also to himself, and will clearly recognize what he knows and what he does not know. But there is nothing worse than to put a collegium of uninformed, badly equipped workers into a purely practical office requiring special abilities. The members of the collegium will find themselves in a condition of permanent embarrassment, of mutual dissatisfaction, and by their helplessness, their vagaries and their vacillation, will create confusion in the work. The working class is extremely interested in increasing its administrative ability, i.e., in learning, but this will be attained in the field of industrial administration by having the managers of the industries periodically report on their entire operation, and discuss the economic plan for a whole year, or for the current month, and all the workers who are seriously interested in industrial organization will be registered by the managers of the enterprise or by special commissions in the necessary schools, closely associated with the practical work of the industry itself, and thereupon placed first in less responsible and later in more responsible posts. In this way we shall gain thousands of men and later tens of thousands. The question of a three-man collegium or of a five-man collegium does not interest the working class; it interests only the backward, weaker portion of the workers' bureaucracy of the Soviets, who are less fit for independent work. The advanced, conscientious and firm administrator will, of course, be eager to have the whole industry in his hands and to show to the satisfaction of himself and others that he knows how to run the thing. But a weaker administrator, one who cannot stand firmly on his feet, will gladly find a support in another, for when associated with others his own weakness will pass unobserved. There is a very dangerous element involved in this collegium business—an element of personal responsibility. If the worker is able, but inexperienced, he will need a leader; under his leadership he will learn, and tomorrow we can make him a leader of a small enterprise. In this manner he will advance. Put him into any old collegium, where the strength and weakness of each individual is more or less uncertain, and he will unquestionably lose his feeling of personal responsibility. Our resolution speaks of a systematic approximation to the principle of individual management, of course not by means of a stroke of the pen. A number of variations and combina-

tions are here possible. If the worker should be able to do the job himself we can make him the manager of the enterprise and give him the specialist as an assistant; where the specialist is more in order, we shall make him the head and give him an assistant—perhaps two or three assistants—from the workers themselves. And finally, where the collegium has proved its practical ability by actual fact, we shall retain the collegium. This is the only serious way of looking at the thing; only thus can we arrive at a proper organization of production.

There also is a consideration of social and educational nature that appears to me to be most important in this connection. The leading layers in the working class are scattered very thin among us. These layers, accustomed to working in secret, who led the revolutionary struggle, who have been abroad, who both in prison and in exile have read much and acquired political experience and a wide horizon, are the most valued portion of the working class. Next to them come the young revolutionists who put through our revolution of 1917. They are also a very valuable section of the working class. Wherever you look upon the Soviet system, upon the trade unions, upon party work, upon the fronts of the civil war, always and everywhere these upper layers are the leading element. The most important work of governing on the part of the Soviet power in these two and one-half years has consisted in our conducting our manoeuvres by throwing the advanced layer of workers from one front to another. The less advanced layers of the working class, issuing from the depths of the peasantry, are revolutionary, to be sure, but as yet somewhat poor in initiative.

The disease of our simple Russian is his herd instinct, his lack of personality, i.e., in what our reactionary *narodniki* sang praises for, what Tolstoi characterized in the person of Platon Karatachev; the peasant loses his identity in his parish, he subordinates himself to the soil. It is perfectly clear that Socialist economy cannot be based upon Platon Karatachev, but upon that worker who is rich in initiative, with personal responsibility. This personal initiative must be developed in the worker. The personal principle among the bourgeoisie is selfish individualism, competition. The personal principle among the working class contradicts neither its solidarity nor its fraternal cooperation. Socialist solidarity cannot be built upon a lack of individuality, upon the herd instinct, and it is precisely this lack of individuality that is lurking behind the collegium.

The working class has many powers, talents, abilities. It is necessary that they become manifest, that they express themselves in the process of emulation. The personal principle in the administrative-technological field will contribute to this end. Therefore this principle is a higher and more fruitful one than the collegium principle.

Conclusion of the Report

Comrades, the arguments of the Menshevik speakers, particularly those of Abramovich, present

above all an appearance of absolute detachment from life and its tasks. The observer stands on the shore of a river across which he must swim and discusses the qualities of the water and the strength of the current. What he must do is swim across—that is all he needs to think about! Kautsky balances himself from one leg to the other. "We do not deny," he says, "the necessity of swimming across; but being realists we recognize danger, not only one danger, but several dangers. The current is swift, there are rocks under the water, we are tired out, etc., etc. But if they should tell you that we deny the necessity of swimming across as such, their statement is incorrect—is certainly not correct. Twenty-three years ago we already did not deny the necessity of swimming over."

Upon this the whole construction rests, from start to finish. First, say the Mensheviks, we do not deny the necessity of defence and have never denied it; consequently we do not reject the army. Very well; but where in all the world with the exception of small religious sects are there any people who reject all self-defence "in general?" In your papers you said and wrote: "Down with the civil war!" and that at a time when the White Guards were at our throats. Now, at the same time that you express a belated approval of our victorious defence, you turn your critical glances toward new tasks and continue instructing us. "In general we do not deny labor duty," you say,— "but without legal compulsion." But can you not see that in these words there is a tremendous contradiction? The conception of "duty" as such includes an element of compulsion. A man is *obliged*, i.e., forced, to do something. If he does not do it, it is manifest that he will suffer a compulsion, a punishment. We here come upon the question: What sort of compulsion? Abramovich says: "Economic pressure—yes, but no legal compulsion." A representative of the union of metal workers, Comrade Rubtsov, has excellently indicated the dialectics of such a system. Already under capitalism, i.e., under a period of "free" labor, economic pressure cannot be separated from legal compulsion. How much more is this the case now! In my report I attempted to make clear that the training of the workers, on a new social basis, to new forms of labor, and the attainment of a higher labor productivity, is possible only by simultaneously applying various methods. Economic interest, legal compulsion, the influence of an internally harmonious economic form, punishments, and in addition to all else, spiritual influence, agitation, propaganda, and finally, a general raising of the standard of culture—only by a combination of all these means can a high level of Socialist economy be attained. If even under capitalism economic interest is inevitably connected with legal compulsion, has behind it the physical forces of the state, then in the Soviet state, i.e., in the transition state to Socialism, there cannot be any boundary line at all set up between economic and legal compulsion. In our country, all socially important enterprises are in the hands of the state. If we say to the lathe-

worker, "Ivanov, you are under obligation to work at present in the Sormovo Works, if you refuse, you will get no food rations," what would you call this: economic pressure or legal compulsion?

You cannot enter another industry, for all the industries are in the hands of the *state*, which does not permit such a change. Economic pressure therefore shades into the pressure of national compulsion.

Abramovich apparently wants us to use as a regulator of the distribution of labor power only a raise of wages, premiums, etc., in order to attract the necessary workers to the most important industries. This evidently is his entire idea. But if the question is to be treated in this manner, every serious worker in the trade union movement will understand that we are dealing with pure Utopias. We cannot hope for any free influx of labor power from the market, for to secure this the state would have to have at its disposal great resources of food-stuffs, dwellings, transportation, i.e., precisely the very conditions whose creation is the task of the immediate future.

Without being able to throw the masses of labor power from one place to another in a planful national scheme, and in accordance with the demands of the economic organs, we shall accomplish nothing. Here the pressure of necessity strikes us with all its economic weight. I have read to you a telegram from Yekaterinburg, concerning the course of the work in the First Labor Army. The telegram says that more than 4,000 skilled workers have passed through the Urals Committee for labor duty. Where did they come from? Partly from the former Third Army. They were not allowed to remain at home but sent to their destination. From the army they were handed over to the Committee for Labor Duty, which divided them into categories and sent them to the industries. From the liberal standpoint this is a "violation of personal liberty." An overwhelming majority of the workers, however, had no objection to proceeding to the labor front, just as they had formerly gone to the military front, for they understood that higher interests required this transfer. Some went against their will. These we had to force to go.

The state must—this of course is clear—put the best workers into the most favorable conditions of life by means of a system of premiums. But this not only does not preclude, but even presupposes that the state and the trade unions—without which the Soviet State cannot build up its industries—must obtain certain new claims upon the workers. The worker does not simply haggle with the Soviet state;—no, he is under obligations to the state, in every way subordinated to the state, because it is *his* state.

"If you should simply tell us," says Abramovich, "that we are discussing a matter of trade union discipline, there would of course be no reason at hand for breaking lances, but what has militarization to do with this?" To be sure, the matter is to a very large degree a question of discipline in the trade unions, but of discipline on the part of new,

productive trade unions. We live in a Soviet country, in which the working class rules; that is what our Kautskyans do not understand. When the Menshevik Ivanov stated that only rags and tatters of the trade unions remained, in my report, there was a grain of truth in his remark. Of the trade unions as he understands them, i.e., of the trade organizations of trade union type, very little to be sure remains, but the trade union—the productive organ of the working class—still has the most immense tasks under Soviet Russian conditions. What are these? Certainly not tasks of conflict with the state, in the interest of labor, but tasks of construction of Socialist economy, to be executed in cooperation with the state. Such a trade union is an organization new in principle, differing not only from the trade unions but also from the revolutionary labor unions in bourgeois society, precisely as the dominion of the proletariat differs from that of the bourgeoisie. The productive union of the ruling labor class has not the same tasks, the same discipline, as the fighting union of a class in slavery. In our country all workers are obliged to belong to the trade unions; the Mensheviks are opposed to this order. This is quite understandable, since they are actually opposed to the *dictatorship of the proletariat*. The whole question in the long run amounts to that. The Kautskyans are opposed to the dictatorship of the proletariat and therefore to all its consequences. Economic compulsion, as well as political compulsion, are only expressions of the authority of the dictatorship of the working class in closely related fields. Of course Abramovich has pointed out very profoundly that there is to be no compulsion under Socialism, that the principle of compulsion is contradictory to Socialism, that under Socialism, the feeling of duty, the habit of work, the productivity of labor, etc., etc., will operate. This is unquestionably true. But this irrefutable truth must be expanded, for the fact is that under Socialism the compulsory apparatus, the state will also not exist. It will be completely absorbed in the producing and consuming community, and yet the road to Socialism goes by way of an intensification of the state organization, and we are just now passing through this period; as a lamp when it is extinguished blazes up once before dying out, so the state, before it disappears assumes the form of the dictatorship of the proletariat, i.e., of the most ruthless state, which embraces the lives of its citizens on every hand. This little episode, this short hour of history—the dictatorship of the state—Abramovich failed to notice, and both for himself and for the Menshevikism that he represents, he stumbled over it. No organization, excepting the army, has hitherto exercised such severe compulsion over men as has the national organization of the working class in this difficult period of transition. Precisely for this reason do we speak of the militarization of labor. It is the fate of the Mensheviks that they hobble on after the events and recognize those sections of the revolutionary program which have already lost their practical significance. Menshevism today—

with many an if and but—no longer combats the justification of punitive measures against the White Guardists and deserters from the Red Army—owing to its own sad experience with “democracy”. Menshevism is obliged to recognize this necessity. Menshevism has apparently grasped—a day too late for the mails—that when you look eye to eye with counter-revolutionary bands, you cannot content yourself with phrases to the effect that the Red Terror will not be necessary under Socialism. But in the economic field the Mensheviks are still trying to refer us—to our sows, and more particularly to our grandsons. But we are meanwhile faced with the task of reconstructing economy without delay, under the conditions of the wretched heritage of bourgeois society and of the not yet completed civil war.

Menshevism,” as well as Kautskyanism in general, is deeply submerged in democratic banalities and “Socialistic” abstractions.

Again and again it appears that tasks of the transition period, i.e., of the proletarian revolution do not exist for Menshevism. Therefore the general unfitness of its criticisms, its references, plans and recipes. We are not concerned with what will take place in twenty or thirty years from now—of course everything will be much better then—but with how we are going to extricate ourselves out of the disorganization today, how we shall now distribute labor power, how we shall now raise the productivity of labor, how we are to proceed with the four thousand skilled workers whom we took out of the army in the Urals. Shall we simply turn them loose with the words: “Try to find something better, comrades.” No, we could not act that way. We put them into military trains and sent them to the factories and works.

“In what way,” cries Abramovich, “does your Socialism differ from Egyptian slavery? Just in the same manner did the Pharaohs build their pyramids and force the masses to work.” It is an inimitable analogy for a “Socialist”. Again the same little bagatelle is neglected: the class nature of power! Abramovich sees no difference between the Egyptian regime and ours. He has forgotten that in Egypt there were Pharaohs, slave holders, and their slaves. It was not the Egyptian peasants, who decided through their Soviets to build the pyramids; there was a hierarchic caste system as their social order; the workers were forced to labor by the class that was hostile to them. In our country the compulsion is exercised by the workers and peasants in power in the name of the interests of the working masses. That is a little point that Abramovich has overlooked. In the school of Socialism we learn that the entire social evolution is based on classes and on the struggle between classes, and that the whole course of life is determined by what class it is that is in power and what are the tasks for the sake of which it wields its policy. Abramovich does not understand this. Perhaps he knows the Old Testament very well. But Socialism is for him a book with seven seals.

Proceeding along the road of the superficial

liberal analogies, which do not reckon with the class nature of states (Abramovich and the Mensheviks did this repeatedly in the old days) we might confuse the Red with the White Army. In both, mobilization took place; chiefly embracing the peasant masses. In both compulsion was exercised, and in both there are not a few officers who passed through the same school of Tsarism, the same guns, the same cartridges in both camps. What is the difference between them? There is a difference, and the difference finds its expression in the fate of Yudenich, Kolchak, and Denikin. With us, the peasants were mobilized by the workers; under Kolchak they were mobilized by White Guard officers. Our army serried its ranks and solidified itself. The White Army crumbled into dust. There is a little difference between the Soviet regime and the rule of the Pharaohs, and it is not a mere accident that the Petersburg proletariat began their revolution by casting the Pharaohs down from the belfries of Petersburg.*

One of the Menshevik speakers made an effort *en passant* to represent me as an advocate of militarization in general. His indications resulted in the fact that I am advocating nothing more or less than German militarism. I am represented as having said that the German non-commissioned officer is a natural miracle and that everything he does is inimitable. What did I say in reality? Simply this: that militarism, which is the expression of all the features of social evolution in their most complete, most outspoken, and most emphatic form, is viewed from two sides; first from the political or social side—and here the matter depends entirely upon what class is in power, and second from the side of organization as a system of severe distribution of duty, precise mutual relations, unconditioned responsibility, plain obedience. The bourgeois system is an apparatus for bestial subjection of the workers; the Socialist army is a tool for the liberation and defence of the workers. But unconditioned subordination of the part under the whole is a trait which is common to *all* armies. This rude internal rule is inseparable from military organizations. In war every gamble, every lack of conscience, even mere lack of punctuality not unfrequently results in enormous numbers of victims. Therefore the striving of the military organizations to attain the highest possible efficiency, the clearest formulation, precise relations, responsibility. Such "military" qualities are esteemed in all fields. It was in this sense that I said that every class esteems in its service those of its members who, their other qualities being equal, have passed through a military training. The German—let us say for instance—average "kulak"*** who left the barracks as a non-commissioned officer was more valuable and precious for the German monarchy and remains more valuable and precious for Ebert's Republic

* Pharaohs was the nickname of the Tsarist policemen who were placed by Minister of the Interior Protopopov toward the end of February, 1917, on the house tops and belfries of Petrograd.

** "Kulak" (fist) is the Russian expression for the tight-fisted rich peasant who at the same time is the village usurer.—Ed.

than could be the same "kulak" who had not been in the military school. The apparatus of the German railroad was raised to a considerably higher point by appointing non-commissioned officers to administrative offices in the transportation system. In this sense we may certainly learn something from militarism. Comrade Zyperovich, one of our most prominent trade union officials, has borne witness to the fact that the trade union worker who has passed through a military school, who has perhaps occupied the responsible post of a regimental commissar for a year, has been made by no means worse for trade union work by this fact. He returns to the trade union the same proletarian from top to toe, because he has fought for the cause of the proletariat; but he is still more manly, more independent, more determined because he has been stationed at responsible posts. He has had to lead several thousand Red Army men, particularly peasants of very varying degrees of consciousness. He has passed with them through victories and defeats, attacks and retreats. He met with cases of treason on the part of the high command, uprisings of rich peasants, panics, but he stood his ground, held the less conscious men in check, indicated to them their proper direction, fired them with his example, punished traitors and slackers. This experience is a great and valuable experience. And if the former regimental commissar returns to his trade union he will by no means become a bad organizer.

On the question of collegium management, Abramovich's arguments are just as remote from life as on all other questions; they are the arguments of an observer who takes no part, who stands on the shore and keeps aloof.

Abramovich has explained to us that a good collegium is better than a bad individual management, and that a good specialist must be attached to every good collegium. This is all very good, but why do not the Mensheviks place a few hundred such collegiums at our disposal, I believe that the Supreme Council of National Economy will have good use to which to put them. But we who are not observers, but workers, must build of the material that is actually at hand. We have specialists, of whom about one-third are conscientious and intelligent, a second third, half-conscientious and half intelligent, while the last third is good for nothing at all. In the working class there are many talented and unselfish people. Some—only some, I regret to say—already possess the necessary knowledge and experience. Others have character and abilities, without experience or knowledge. Others again are blessed with neither. It is of this material that we must create the management of industries and other institutions, and we can not content ourselves with a commonplace when we discuss this question. Above all, all the workers must be chosen who already have shown by experience that they are capable of managing industries, and they must be given the opportunity to stand on their own feet; these people themselves desire individual managements, because the factory adminis-

trations are not a school for backward persons. A workman who knows his business wants to administer. After he has made decisions and given orders his decisions must be carried out. He may be removed—that is another matter—but so long as he remains the master, the appointed proletarian master, he manages the enterprise absolutely. If he is put into a collegium of weak sisters, who interfere in his administration, no good will result. Such a worker and administrator must have a specialist as his assistant, one or more, according to the enterprise, if no suitable worker is available as administrator, and if there is a conscientious and trained specialist available, we shall put the latter at the head of the enterprise and give him two or three active workers as assistants, so that every decision of the specialist will be known to the assistant, without their having any right to cancel his order. They will carry out the work together with the specialist, step by step, and will learn something, and six months or a year later they will be able to occupy independent posts.

According to his own words, Abramovich filled the post of that hairdresser who was in command of a division of an army. Right enough! But Abramovich did not know that when our Communist Comrades began to lead regiments, divisions, and armies, the reason was in the fact that they had formerly been commissars attached to technical commanders. The responsibility was with the specialist, who knew that whenever he made a mistake, the full responsibility was upon him; he could not say that he was only in a "consulting" capacity, only a "member of a collegium." At present most of the commanding posts in our army, particularly the lower, i.e., politically most important posts, are occupied by workers and advanced peasants. But how did we begin? We put officers into commanding posts and gave them workers as commissars, and the latter learned, learned very successfully, learned to defeat the enemy.

Comrades, we face a hard, perhaps the hardest period. Serious epochs in the life of nations and classes require serious measures. The more we advance, the brighter becomes the prospect, the more free will our citizen feel himself to be, the more imperceptible will become the obligatory authority of the proletarian state. Perhaps then we shall even permit the Mensheviki to issue their paper, if the Mensheviki should desire to continue their existence as long as that. But at present we are living in a period of dictatorship: political as well as economic. And the Mensheviki continue to undermine this dictatorship. If we are struggling at the civil war front, defending the revolution against the enemy, and the Menshevik paper says: "Down with the civil war!" we are bound to put a stop to it. Dictatorship is dictatorship, war is war. And now that we are proceeding to the higher concentration with energy in the field of the economic reconstruction of the country, the Russian Kautskyans, the Mensheviki remain faithful to their counter-revolutionary calling; their voice continues to be heard as expression of doubt,

disintegration, subterranean activity, of mistrust, and dissolution.

Is it not monstrous and ridiculous that at this Congress, in which fifteen hundred workers are assembled, representing the Russian working class, with less than five per cent of Mensheviki, and about ninety per cent of Communists, Abramovich proceeds to tell us: "Do not permit yourself to be misled by methods under which a small number replace the whole people." "Everything must be done by the people," says the representative of the Mensheviki, "there must be no custodians over the working masses. Everything must be done through the working masses, through their self-activity." And he goes on. "A class cannot be convinced by arguments!" Well, consider only this one case: Here is your class! The working class is here before us and with us, and precisely this insignificant little body of Mensheviki is attempting to convince them with its philistine arguments! They evidently want to be custodians of this class. But this class has its own great self-imposed task, and it has given, among other things, evidence of its conscientiousness of this task, by casting you aside, and proceeding forward by its own path!

RUSSIAN BUILDING TRADE UNION

Izvestia writes: "A short time ago the fourth full meeting of the Central Committee of the All-Russian Society of Building Workers took place. According to the secretary's report, the society had 162,000 members in March, and now it consists of 367,000 organized workers and clerks. In the course of the year 16 provincial conferences were held.

The greatest attention has been given to the buffer-states, for the establishment of branches and to attract the masses to active work with the society. The whole work is following the definitive direction of creating a producers' guild. In spite of the preponderance of the peasants in the society, it still holds the Communist platform. Nearly all members of the provincial committees are Communists. As regards connections abroad, the builders' guild was the first to lead the way. In order to maintain connection with foreign organizations, a special bureau was organized. At present this connection is more or less established. We have reports of the activity of the representatives of sister organizations in Czecho-Slovakia, England, and Scandinavia. Connection with the Polish building workers is being established.

Names Wanted

Now that the continued publication of SOVIET RUSSIA is assured, you can help make it a success by sending the names and addresses of friends who are not now subscribers, so that sample copies and requests for their subscriptions may be sent.

The names of magazine dealers who do not sell SOVIET RUSSIA are wanted, too.

Ask your friends to buy the booklets, "Labor Laws of Soviet Russia" and "Marriage Laws of Soviet Russia". Price of each, twenty-five cents, postpaid.

Three Days at Moscow

By PIERRE PASCAL

Moscow, March 31, 1920.

IT IS Wednesday today. By sketching rapidly the way I have spent my time since Saturday, I should like, in this report which is as impersonal and photographic as possible, to share with you my great happiness, my daily revived joy at living in Moscow, the heart of Soviet Russia. *To live*—in the most complete sense of the word—that is at bottom the most correct definition of Soviet Russia.

The capitalist and bourgeois West is in full process of decay—this is an undeniable fact; the newspapers themselves admit it and the death-rattle can be heard even here. A Rumanian journalist, without any political ideas, who was purely concerned with his profession, tells me spontaneously about the scandalous corruption of the now defunct governments of Petlura and Denikin, the vain, absurd, and ferocious nationalism of Poland, bled white, devastated, and dying of the effects of her ambitions, and the unsung ignominy of those French officers who are sickening Warsaw with their scandalous orgies and speculations.

An Austrian physician tells us of the pitiful agony of beautiful, merry Vienna, which now cowers in filth and dies of famine. Comrades coming from abroad are complaining that everywhere they have found nothing but ruins, desolation, irremediable boredom, physical and moral death. And here at Moscow I behold bubbling life, inexhaustible and fruitful creation, the birth of a new world, the infallible rise of young and rich strength. What are, in comparison, the discomforts and privations of the moment! We all know that ours is the right road. Every day a new progress rewards our efforts, every day our ardor is redoubling for this very reason, and our joy, which is not noisy, but profound, is expressed on our faces.

The day before yesterday, in the evening, I had once more the opportunity of feeling the same sentiment of joy, when I assisted at the opening of the Ninth Congress of the Communist Party. It was in the Great Theatre; the atmosphere was triumphant, the hall was glittering, the crowd was immense, and filled the theater with life. And what a crowd! There were no bourgeois, dull and blasé, but workers instead, coming directly from the workshops, with a serious expression on their faces, energetic, thoughtful, overflowing with will-power and intelligence, that intelligence which does not benumb itself with abstractions, but impatiently strives to progress and to action.

Many of the persons present took notes in order to study afterward, with their comrades, the questions that had been discussed. In a word, here were the people of Russia, masters and creators of their own destiny, who had finally become of age, resolved to all sacrifices, to all efforts, to all achievements, resolved to erect, at any price, a real, tan-

gible, unexceptionable monument to the glory of socialism, ready to accomplish any marvel in order to raise Russia to a hitherto unknown level of prosperity. And you may take it for granted that what has sustained and still sustains these people in their immense and superhuman struggle, is their conviction that they are working both for themselves and for their brethren all over the world.

At the Great Theater of Moscow there was gathered the directing advance guard of these people, as represented by their delegates, their tried leaders, the Communists who had come from the old provinces, and later on from Ukraine, the Caucasus, from Archangel, and Siberia. For the first time, after many months of separation, the great family of equals, of the workers of Russia, found themselves united again.

And Lenin, in a statement of this victory, inaugurates this triumphal evening. The Third International, through its President, Zinoviev, through the Swede, Grimlund, and the Norwegian, Friis, are conveying their greetings to the Russian people—that heroic advance guard of the world proletariat.

The assembly, in turn, solemnly greets the victims of the bourgeoisie, the dead of the Red Army, the innumerable victims of their gigantic work. But nobody forgets the fact that the joy of victory would not be allowed to them, if the military triumph of yesterday would not be the condition of a peaceful triumph that is much more difficult, that is still more important and that is the only one that is really substantial. Rykov tells it, Lenin proclaims it, and they both express the unanimous thought of all those present.

If we have conquered our implacable enemies, who were more powerful than we were, we owe it not only to the force of our arms, but also to our ideal that gives us an ever-increasing number of allies in the opposite camp. If we have won peace, we will not use it in the same way as capitalists do, in order to enslave and rob other people, but in order to exploit, to enrich, and to render more fruitful our soil, in the common interest of the workers of the world. If, by heroism, sacrifices, perseverance, if through fearless initiative, joined with a firm centralization, if, in one word, through discipline, we have been successful on the battlefield, then the same method will have to guide us on the economic field.

The Red Army becomes an army of labor, its compact battalions with their chiefs, their organic force, their habits of punctual and rapid execution, are clearing the forests, draining the cities, opening new roads, cleaning the tracks, exploiting the mines together with the miners, repairing the locomotives with the railroad workers, sowing the fields with the peasants. Their special units are constructing bridges, laying out new lines, and building factories. The skilled workers give the benefit of their abilities to the factories and the depots. The teach-

ers help the village soviets in educating the illiterates.

It is organized work that will accomplish this result, at any price and in all spheres of life. At any price, at any price—this is the expression used repeatedly by Lenin; it appears over and over again as a *leitmotiv* in his speech; it is—everybody feels it—the watchword of these thousands of workers. It reflects the will not only of Lenin, of the government, of the Soviets, of the Communist Party, but also of millions and millions of organized workers. Come what may, the economic crisis will be overcome at any price; it will be overcome by Communism, and Russia will for the first time enter a period of a never-heard-of prosperity. Come what may—all means will be good for attaining this end.

The Russian proletariat is great and strong, and timidity is unknown to it. It knows its aim, and in order to attain it, it employs all the appropriate instruments. What does it have to fear from foreign capitalists? In order to accelerate the improvement of its territory, it offers them concessions, mines, forests, constructions of railroads and waterways, electrical installations, commercial exchanges. It is ready to satisfy their reasonable demands provided the working classes will in the end benefit thereby.

What does it have to fear from the engineers, the managers, the business-men, coming from the bourgeoisie, when it is at the same time the owner of the political power, of the soil and of industry?

In order to benefit from their knowledge and the experience of the past, it invites them to direct its factories, its schools, its railroads, its armies. Provided their services will be loyal and profitable, the Russian proletariat assures them the most advantageous living conditions, will consider them as comrades at work, as guides from whom it has to learn.

Far from suffering from this, the dictatorship of the proletariat is on the contrary nearing its crowning triumph because its final aim is the bringing together, the fusion of the classes.

I did not get these ideas exclusively from Lenin's speech at the Ninth Congress. They are the unanimous opinion of all the political or Trades Union congresses that follow one after the other, the opinion of all the workers of Moscow and the provinces; they represent the firm will of the whole of working Russia. They are already in the way of practical accomplishment.

One of our Communist comrades, a French engineer, returned yesterday from the great industrial center Sormovo, ten versts from Nizhni-Novgorod. At present 25,000 workers are assembled there, comprising a division of the Labor Army. The workers have themselves adopted the ten and twelve-hour day. They are accordingly paid, fed, and provided with lodgings. The factory is supplied with fuel and with metals for many months. The neighboring forests and a peat-bog are exploited by it.

A new electrical station is in the course of con-

struction which will also supply the neighboring places with power and light. The direction is assumed by a collegium of four workers which never fails to convoke conferences of engineers and department heads, whenever a serious question arises. Work was never impeded by any disagreement. And it is going on without intermission.

New locomotives are being delivered to the railroads; broken down engines of many sections are being repaired there, as well as the boats of the Volga fleet; a short time ago, when Poland persisted in her aggressive attitude, cannons, armored trains and tanks were still produced there.

In the course of a few weeks the progress has become enormous and striking. Here again it is life itself. Our comrade who was talking with the engineers heard from their own mouths an expression of admiration for the work of the Soviets and the Communists. Themselves carried away by the wave of work, they are filled with a new zeal—perhaps not yet with love for the proletarian Revolution—but at least for the Russian Fatherland. The delegates at the congress pointed out that the same is the case in other factories.

We are facing here a phenomenon that is analogous to the one which was observed in the Red Army; the Russian patriotism of the liberal and bourgeois classes, put at the service of the power of the Soviets, incarnating the whole country, and accepted and utilized by the latter in the interest of the international proletariat.

Let us again change the scene. Let us go from Moscow and Nizhni-Novgorod to Astrakhan. In the course of the three days which I have mentioned, I had the pleasure of seeing again a Russian comrade coming from those parts. He is a worker, a native of the province of Tambov, who under the Tsar had experienced all the hardships of capitalist and governmental oppression. He had acquired his education—and a very good one at that—exclusively by his own efforts. During the Revolution he became a member of the factory committee at Odessa, where he educated his fellow workers; later he became a member of the Executive Committee of the city. While remaining a worker, he takes part in the government of the country. An old Communist himself, he is every inch a man—the man of muscles, the man of brains and the man of action as he is dreamed by Communism. He is returning from a mission that was concerned with the supplying of the region of Astrakhan and the Steppes.

In that region even the bourgeois population is very well disposed toward the Soviet regime, and is energetically clamoring for a complete liberation of the Caspian. The "Whites" never entered that city, but they menaced it from so near that they made themselves thoroughly hated.

The picture is still more striking, if we consider the native population. The Kirghizes, only a short time ago oppressed, robbed, despised, humiliated by the all-powerful officials, have now their own Soviets, and are eagerly using the opportunities for progress and education offered them very liberally.

Communism is their savior—they join it in masses. Here again it is life itself.

Let us again change the place and theater of action. While the proletariat, those millions of former pariahs, are learning, working, organizing, repairing the ruins left by capitalism, in order to build up, by degrees, a Communist society, there are also quiet sanctuaries, comfortable palaces, where scholars, surrounded by the care of the Workers' and Peasants' Government, are concerned with their disinterested investigations.

Last Monday, in the company of Professor Lazarev, I visited the Physical Institute of Moscow. I saw the laboratories, the instruments, the library, the young scholars who are working there. Here again it is life under another aspect. The discoveries that are made here are of interest for the higher spheres of science, X-rays, N-rays, magnetism, the Theory of Ions, atomism, etc. They refer to those border-zones which are still very insufficiently explored and form a connecting link between several branches of science, as for instance between physics and chemistry or biology. And yet the Physical Institute, which is but a part of the Scientific Institute of Moscow, has the full support of the Supreme Council of National Economy, and of

the Commissariat of Public Health. From these institutions it gets the needed instruments and the credits, amounting to tens of millions of rubles. About 150 scholars inhabit this Prytaneum.

What could be less proletarian from the bourgeois point of view? But the Soviet power knows that science is at the same time the guide and the assistant of labor, and with this aim in view it multiplies the scientific centers. It encourages not only public education in all its forms but also science in the narrower meaning of the word.

An astronomic observatory is now being constructed at Nizhni-Novgorod. At present there are going on experiments in wireless telephony for long distances. An expedition of mathematicians, physicists and geologists is studying the magnetic anomalies of Kursk.

I could still quote a great number of similar cases and shall have still to write again about the Scientific Institute of Moscow. But from my visit I, once more, carried away the impression that here, as everywhere in the Communist Republic, there is life—not a life of stagnation, but a life of activity, of fruitful creation that is organized in the interest of a working humanity. And here you have a true definition of Soviet Russia.

“News” from Russia

IN SPITE of industrial and commercial slackness, at least one branch of human endeavor seems not to have suffered much, but continues to flourish as before. It is the American and European industry of “news” from Russia. We rarely have time to read, much less to refute, all the humorous stories coming from the factories in Helsingfors, Copenhagen, Constantinople, and Paris; but last week's crop was so remarkable, so variegated, so—Munchausenesque, that we should commit a sin of omission in depriving our readers of a concise account of this journalistic smoke-screen.

There was a short time ago a report that Gorky, having quarrelled with Lenin over the “persecution” of Russian scholars, was finally banished from his afflicted country and had to seek refuge in one of the democratic countries of Europe. The whole civilized world was impatiently waiting for his “revelations”, which would certainly have destroyed what little moral credit the newspapers had left to the Kremlin “tyranny”. But again it was perfidious Albion that greatly disappointed all lovers of liberty. Instead of receiving him with open arms and enabling him to join the venerable crowd of the Bertrand Russells, the Arthur Joneses *e tutti quanti*—England simply refused to visa his passport. And so Gorky had to keep silence. It was really a pity . . .

But although Gorky remained silent, another great man did not, and was hailed by the press of both hemispheres. It is true, he was not as famous as the author of “The Lower Depths”—he was only a Mr. Schwartz from San Francisco, the credibility of whose gruesome stories was supposed to be con-

firmed by the fact that that gentleman had once been a member of the American Socialist Party. But that assertion was promptly denied by the *New York Call*, and a few days later came a statement of a contributor of the *New Yorker Volks Zeitung*, revealing this unweaver of Russian horrors as an agent of a government far from friendly to Soviet Russia.

Then came a report from Copenhagen, according to which Lenin intends to spend this summer in Finland; we must complement this interesting bit of news with the revelation that simultaneously with this decision of Lenin, the Third International is alleged to have ordered Bela Kun to spend the summer in Hungary and Radek to spend his vacation as a guest of Mr. Pilsudski.

Perhaps this sudden decision of Lenin has something to do with the sensational news coming from Berlin, according to which the venerable Eduard Bernstein, originator of Socialist “Revisionism”, has confirmed the famous revelations of Edgar Sisson, Creel and General Hoffmann. If Lenin is thus finally exposed as having taken German gold, he must also know that, owing to the breakdown of the Russian transport, the news will not reach the Russian people before summer, and has probably decided to wait a few months before fleeing from the rage of the comrades with whom he failed to share the thirty pieces of silver for which he is said to have sold the Russian people.

It seems that even for a time—crushed by the cumbrous weight of these revelations—Lenin was expected to commit suicide, for the papers were full of reports of his mysterious death which—after he

had vainly resorted to this *alias*—was to strike him under the assumed name of Karpoff.

However, the news of Lenin's death turned out to be a little exaggerated, but something very serious must have happened in the capital of the Red Tsar, for Mr. Albert Boni informs us in the *Globe* that Lenin "holds no official position in the Russian Government", deriving all his power exclusively from the fact that he is President of the Central Committee of the Russian Communist Party. This is certainly very interesting news and still more interesting is the headline of Mr. Boni's correspondence, declaring that "Lenin's Absolutism Bars Revolution by Russians." At last we understand why there has as yet been no revolution against the Soviet system. It is *verboten* by Lenin . . .

Some enterprising newspaper man may some day point out that in reality the Postmaster-General of the United States is an official without any authority or power, as his office, like that of the other Cabinet members, is not provided for in the American Constitution. Not dissimilar is the contention that the office of President of the Council of People's Commissars in Soviet Russia is not a recognized executive branch of the Russian State.

It is a pity that Mr. Don Marquis, of the *Evening Sun*, long ago discontinued the publication of his remarkable series about Hermione and her little group of serious thinkers. He would have found much inspiration in the contribution of a young lady (we are not so cruel as to mention her name) who in the "New York Times Book Review and Magazine" of January 23, 1921, gave her impressions of Soviet Azerbaijan. Azerbaijan is economically the most important of the three Caucasian republics, its great national asset being the rich oil wells of Baku; no wonder therefore that, after Persia and Mesopotamia, England should want to add to her "White Man's Burden" this Tartar Republic also. But the workers of Baku did not appreciate this tender solicitude at all, and, after driving off their corrupt government, proclaimed a Soviet republic and established a close union with Russia. According to our Hermione, this is how this revolution was effected: "When Azerbaijan was off her guard, they (the Russian Bolsheviki) came down and took her with an armored train and a handful of soldiers." Isn't it admirable: A republic of five million Tartars, reputed in all the school-books as dreadful and savage fighters—taken by one armored train and a handful of soldiers! Let us suppose the Soviet Government has at its disposal one hundred armored trains; a little arithmetic should enable it to conquer all of Europe—as well as Africa and Asia . . .

Anxious to know how this misfortune could befall Azerbaijan, Hermione tried to get information from a Bolshevik colonel. His answer was: "I can't tell you. I have only been a Bolshevik for about four weeks. I fought faithfully when I was in Denikin's army and after I was taken prisoner and told by the Reds that I was now a Bolshevik, I fought faithfully for the new regime." You see

what an idyllic tea-party affair civil war in Russia is. A Denikin officer is taken prisoner by the Reds and on the spot he is made a colonel in their own army. Denikin and Wrangel, we may presume, proceeded along the same lines.

The villain of the whole affair is of course a Jewish Commissar, about whom "*it was said* that his rooms were richly furnished with requisitioned furniture."

London telegrams are bringing reports of numerous mutinies of Soviet troops along the Latvian, Esthonian and Finnish borders. The same telegrams report also "that a number of secret organizations are systematically preparing for a new rebellion in Finland, with the object of enabling the proletariat to assume power *with the help of troops of Russia*." They are evidently rehearsing mutinies in Soviet Russia, to be prepared for the forthcoming performance announced to take place in Finland.

An editorial of the London Tory daily, *The Morning Post*, attacks the impending conclusion of a British-Russian trade agreement. The newspaper asks what Great Britain's position would be, if "*loyal Russians* should come into their own again." "*Loyal Russians*", it should be remembered, live outside of Russia, as pensioners of governments fighting against Russia, and refuse to return to their country to take part in the work of reconstruction.

A report from Paris has it that Alexander Kerensky has established in Paris a permanent organization to oppose the Soviet Government in Russia. One of the objects of this organization, it is announced, "is to obtain the funds which the Allied Government owed to the Tsarist regime in Russia! This, indeed, is regarded as the principal object." We may say the great Alexander's chances of overthrowing the Soviet regime are no larger or better than his chances of getting those funds.

LONDON "TIMES" AT WORK

TRIESTE, January 8, 1921.—The *Idea Nazionale* recently reproduced a report of *The Times* (London), according to which the Italian ship "Baron Rock" had returned to Constantinople from Sebastopol because the sailors who were touched by the rows of dead men hanging in the principal streets of the city, had forced the captain to quit the place. Two refugees whom they had brought away with them stated that the Bolshevists had hanged 8,000 people on the trees and telegraph poles of the city. *Il Lavoratore della Sera* interviewed the officials of the Lloyd Triestino and were informed that since the war none of their ships had been in Sebastopol. A representative of the *Lavoratore* then went on board the "Baron Rock" which had recently returned from Constantinople and was lying at anchor in the harbor of Trieste. Upon reading the above-mentioned telegram the officers and men of the ship broke into Homeric laughter.

(Perhaps *The Times* will now justify its story.)

CHARLES RECHT APPOINTED ATTORNEY BY MR. MARTENS

Prior to his departure from the United States, Mr. L. A. Martens appointed Mr. Charles Recht, Attorney-at-Law, 110 West 40th Street, New York City, as his personal attorney in his absence. Mr. Martens also authorized Mr. Recht, in event of instructions from the Commissariat for Foreign Affairs, to act as attorney on behalf of the Russian Socialist Federal Soviet Republic. Included in Mr. Recht's instructions is the authorization to act as attorney on behalf of such indigent and meritorious Russians as may apply to him for legal aid.

Mr. Martens' letter of instructions to Mr. Recht reads as follows:

RUSSIAN SOCIALIST FEDERAL SOVIET REPUBLIC
*Bureau of the Representative in the
United States of America*

January 18, 1921.

"Charles Recht, Esq.,
110 West 40th Street,
New York City."

"Dear Comrade Recht:

"In view of my departure, I am desirous of making some arrangements and leaving certain instructions that should be carried out by you during my absence or until other instructions have been received by you from the Commissariat of Foreign Affairs of the Soviet Government.

"1st. You are instructed to act as my personal attorney and to transact for me all such business as may be necessary.

"2nd. You are authorized, in the event that it should become necessary and you should be so instructed by the Commissariat of Foreign Affairs in Moscow, to accept service of papers, and otherwise to act as the attorney representing the Russian Socialist Federal Soviet Republic.

"3rd. You are authorized to act on behalf of and to represent all such cases of indigent and meritorious Russians as may apply to you for relief, in accordance with instructions which you will receive.

"For all these purposes, let this be your sufficient authorization.

(Signed) L. MARTENS,
*Representative in the United States of the
Russian Socialist Federal Soviet Republic."*

GREETINGS FROM MID-OCEAN

The following wireless message was delivered at the business office of SOVIET RUSSIA on Wednesday, January 26:

S.S. STOCKHOLM

SOVIET RUSSIA:

*All well and happy. Weather Beautiful. Hear-
tiest greetings and thanks to all comrades and
friends.*

(Signed) MARTENS.

CONGRESS OF METALLURGISTS

The Scientific Technical Section of the Supreme Council of Public Economy called a congress of metallurgists, which was attended by a great number of noted scientists and practicing engineers. About 100 reports were read at the Congress. One professor made a report of his scientific work before and during the war, which showed that scientific work has not been disturbed by the roar of the cannon.

A noted practicing engineer, who has spent many years in preparing different kinds of steel for shells, presented before the Congress many drawings, schemes, and figures on the electrification of Russia. Different projects and counter projects were considered for the utilization of the Ural, of the Donets, and Kushnetzk basins. A fine spirit prevailed among the members of the Congress. They were conscious of the importance of the task before them—the regeneration of one of the most responsible and most significant branches of our industry. They know how much the Russian metallurgists have accomplished in the past in the field of producing steel and copper, and they are willing to take up the great task which is put before them.

ENGLAND DENIES SEIZURE OF "ANCONA"

Moscow, January 6, 1921.—Last November British ships seized an Italian ship which was carrying merchandise to Novorossisk and took it to Batum. When it attempted to escape, it was pursued and brought back. These facts were denied by the English Government. But the investigations undertaken by our representatives have established that our statement was correct and the denial of the English Government false.

Marriage Laws of Soviet Russia

This 85 page booklet gives the complete text of the first code of laws of the Russian Soviet Republic dealing with:

1. CIVIL STATUS AND DOMESTIC RELATIONS.
2. MARRIAGE AND DIVORCE.
3. FAMILY RIGHTS, PERSONAL AND PROPERTY RIGHTS.
4. GUARDIANSHIP, ETC.

This is the only complete official statement of the Soviet Government laws regarding marriage, divorce, etc., published in America. Copies of this booklet will be sent postpaid upon receipt of price, 25 cents. Address

Education at Moscow

[SOVIET RUSSIA has frequently printed material on educational and welfare matters in Soviet Russia. We are able this week to present to our readers two short articles from the pen of W. McLaine, an English Communist who visited Russia last summer. As a third piece, to accompany Mr. McLaine's articles, we have added an outline of the rules and regulations of the Workers' University, which will be of interest to those readers who wish to know about higher education in Russia.]

The Karl Marx University, Moscow

By W. McLAINE

THIS university was a large school of some kind or another in the old days, and is now the home of a part of the "Labor Faculty" of the Moscow University. The names of the Moscow streets were always so confusing to me that I cannot give its exact location, but that is not an important matter.

The "Labor Faculty" is a new department of the higher educational work, based upon a recognition of the fact that quite a new kind of material is being handled by the teachers, new in the subject-matter and new in the personnel of the students.

It is necessary that many party men and women shall now be trained for administrative parts of all kinds—men and women who have not had the preliminary general training necessary for a university education, and for these, a special preparatory course has been arranged.

The curriculum has been divided into two parts—the economic and the technical. In the first named section, students are trained in price fixing, management of factories, administration, and organization. The persons eligible for admission to this training are factory and office workers, who must be recommended by the factory or office committee. They continue at work, and attend in the evenings. Some additional food is provided for them because of the extra work occasioned by their studies. In the technical section are studies in chemistry, food analysis, dynamics, etc.

Each department—the technical and the economic—has its special and general courses; and the instruction given, enables students to prepare and qualify for higher and research work.

The preparatory course is for two terms, the technical two, and the economic four.

At the wish of the trade unions, special courses are arranged; thus, the metal unions have asked for a course in "standardization of labor" and in "statistical methods", the food workers for instruction in preserving eggs, and the railway workers a special course in railway organization.

The management of the college is in the hands of a committee of twenty-nine students, and twenty-nine tutors, who are all elected, and this committee in turn elects a presidium of three to carry on the work.

There are labor faculties similar to this, but the others differ from this, in that it is nearer to the trade unions. Nominations for studentships are in the hands of the unions and the factory committees, but the others, which are mainly concerned with state administration, have their students nominated by the state and the party. In these latter schools, there are special courses in foreign affairs, home affairs, war problems, etc., and nominations are accepted from the army.

The Moscow University has its labor faculty to which all may enter, no nominations being required. A preparatory course is necessary there also, and before students are admitted to the courses proper, they must pass an examination rather more difficult than the Matriculation Examination of the British Universities.

On the occasion of our visit, we inspected the various class and lecture rooms, and although it was practically the end of June, and therefore not exactly the busy time for schools, there were several classes working. The average attendance was 60 per cent of the students on the roll, and at the university proper, the average was about 85 per cent.

In our conversations with the professors, we were told that the students were as good, if not better, than those they taught in pre-war days. They were younger and more adaptable, attentive and desirous of learning, though of course they had not behind them the educational grounding common to the old type of student.

In the classroom occupied by the class taking Trade Union Statistics, were young men and women all sent by their trade unions, and all engaged in the metal industry. The attendance in this class is 100 per cent. An analysis of the previous education of its members showed that 37 had had an elementary schooling; 15 secondary; 5 at church schools; 3, trade classes; 3, home education; 2, technical training; 1, commercial classes; 1, high school, and 1, not known. All the students in this class are full-time students, and are maintained and paid an allowance.

In a preparatory class, we found 116 factory workers and 37 office workers, receiving instruction to fit them for the advanced studies. Subsequently we spent an hour or so in one of the lecture rooms, and saw a number of lantern slides being shown on the screen descriptive of up-to-date methods of preparing and using peat fuel. Here again the professor in charge, in reply to our questions, expressed his satisfaction at the eagerness of the students to learn, and declared that this, together with their attractiveness, compensated for the lower educational standard when compared with the pupils he had previously taught.

A Visit to a School Near Moscow

June 28, 1920

By W. MCLAINE

The school was at one time a training center for cadets for the army. It is situated in a very pleasant country district in the midst of a farming area. There are a number of buildings that serve as dormitories, dining rooms, schoolrooms, etc. The children attend the Elizabeth Institute in Moscow during the winter and live at this school during the spring and summer months. There are nine pavilions that serve as dormitories, dining-rooms, schoolrooms, etc., and a teacher is in charge of each. When we visited the place, there were about 200 children in residence.

Much of the work done is of a practical character. The children work in the fields, growing potatoes and vegetables generally. They have allotments, and are personally responsible for them. A number of goats and rabbits are kept, and these are attended to by the children also. Parties go

out into the fields and woods, and collect specimens which are brought back and examined and discussed in the evenings. Practical surveying is learned by actual work at measuring up the field surrounding the school and the preparation of plans of the places thus surveyed.

A theater has been fitted up, and the scholars take part in the performances. Just before our visit, some of the older girls had rehearsed a play, and had prepared the scenery and costumes, without anything being known of it until it was announced to be performed.

Drawing, sewing, fitting, German, literature, gymnastics, and singing all find a place in the curriculum. Plays are discussed and read, and the games are organized. For their Swedish drill they lack apparatus because of the blockade. The visitors had the opportunity of visiting the various parts of the school. The buildings were very clean, and the dormitories appeared to be in a good and tidy state. It was interesting to note that the girls' dormitories were gaily decorated with bunches of wild flowers, and on the little lockers at the head of the beds, were arranged picture postcards and other humble treasures. The boys' rooms, by humorous contrast, were examples of Spartan simplicity; there were no flowers, no decorative odds and ends—nothing but perhaps a few books.

We lunched with the children on excellent soup and a dish of kasha,—a kind of meal paste that the writer found quite appetizing. At lunch we had an opportunity of seeing all the children together. We were all assembled in an open air pavilion with sides. The children were of all ages,—from about four to seventeen. They all looked exceedingly healthy and very happy, and in our conversations with them we found them very grateful for the great change that had come in their lives. They asked us if our own town children were fortunate enough to be taken out into the country for the summer months, and when we thought of our city boys and girls playing in the dusty streets we were made painfully aware of the difference.

In our talks with the children we were much impressed with their frank manner and sturdy bearing. The immediate responses to our queries, and the way in which they were given, were evidences of a training quite different to the usual kind. There was no simpering shyness, and yet there was no over-boldness. Some could speak German and French well enough to converse with those of our party who were familiar with these languages.

The teachers told us that the sexes mixed quite freely, and for the older ones there were sex talks. Although it was a mixed school, there had been no sex troubles of any kind.

After lunch the children escorted us around the fields and allotments, and were immensely proud of their work. They brought out the white goats—clean and sleek—for our inspection, and took us to see the rabbit house. This was of special interest. When the school was a training place for the young cadets, it was used as a kind of prison for refractory youths. There was a central passage,

and on each side of it, tiny wooden cells that must have been positively stifling in the hot summer weather. Now, the cells house a good collection of pet bunnies! On one of the cell walls was an inscription evidently written by a one-time sufferer, "The stars will fall, the heavens will open before justice will be done to a poor cadet," and on another, one that made reference to regrets for having illicitly used tobacco.

Some of the children were sons and daughters of the old middle class, and in some cases their parents were known to be active opponents of the present regime. One charming young girl of about sixteen years of age, was the daughter of an officer fighting against Soviet Russia—she told us so herself quite frankly—but it made no difference whatever to the treatment she received. She was not fighting against the people and so she had the same place in the school as any other child.

Most of the children were proletarians and came from the outskirts of Moscow.

One boy interested us very much. He was fifteen years of age, tall and strong-looking, and had been with the Red Army for two years. He had been sent back once or twice but wanted to return again. For our benefit he went to his room and changed into his uniform, and rode round the fields on a horse, like a born cavalryman. A Californian representative who was with us, photographed him and promised to hand us all copies, but unfortunately he later took a snapshot of a group of children, and had neglected to change his slides!

Before we left, the children brought to us great bunches of wild flowers—marguerites and blossoms—and at the end of our day crowded round our autos giving us numberless messages for the children of our respective countries, cheering us vigorously and waving us a joyous farewell.

It was without doubt a happy day for us, and one well spent.

Constitution of the Workers' University

[The following description of an interesting new proletarian institution of learning in Russia is taken from a recent issue of the Spanish weekly "España", of Madrid. We are obliged to use this translation from the Spanish, as we have not obtained the original Russian version.]

ALL those who have been in Soviet Russia have been unanimous in their appreciation of the care, the intelligence, and the efficiency with which the Bolshevik Government deals with the problems of education.

There exists today an institution which has a branch in every city of the Soviet Republic, and from which we may legitimately await the formation of generations more perfect than the oppressed and confused generations of the present: the Free Socialist University. According to the testimony of some travelers, among others, that of the Italian Socialists who have recently returned from Russia, this institution is accomplishing a profound transformation in the proletariat.

We print the program of this institution because it is a document more worthy of study than most of the documents which have been published in reviews, periodicals, and books in great profusion:

I. *The Object and the Tasks of the University*

The Free Socialist University has for its object:

1. To give to the proletariat a Communist conception of the world, based on scientifically exact data.
2. To initiate the proletariat as soon as possible into all the most recent universal scientific discoveries, urging them to find always new scientific methods.
3. To explain to the masses the intimate connection between the so-called exact sciences and practical life.
4. To awaken in the masses, not only a love of learning, but also a love of action.
5. To direct the masses towards creative activity on the basis of science.
6. To create institutions which will be suitable for developing in the citizens an aspiration towards self-culture.

II. *Methods of Attaining these Ends*

Systematic and personal lectures should be organized, to be accompanied by experimental studies in laboratories and observatories, in scientific classrooms and museums, supplemented by scientific excursions.

III. *Students*

Citizens of both sexes, over sixteen years of age, who can read and write, will be permitted to attend the university.

IV. *Division of the Students into Various Groups*

The students will be divided into several groups, as follows:

1. According to the degree of preparation and of mental development.
2. According to a predisposition for one or another branch of science.
3. According to the psychological type of the pupil, this type to be determined by the methods of psychological pedagogy.

V. *Subjects of Instruction*

1. The Universe (Cosmology).
2. Man (Anthropology).
3. Human Society (Social Sciences).

VI. *Methods of Self-Education for the Students*

In view of the fact that the university tends, not so much toward the instruction (pedagogy of the intelligence), as toward the education of the individual (pedagogy of character), the fundamental method of the Socialist University is the self-education of the students. To achieve this result, and in order that the student may develop his own individuality and give to his own life the most useful and productive direction, the university is organizing a course of lectures on the development of the force of the will by means of auto-analysis (a method of systematic self-observation), employing methods of practical pedagogy applied by the students to themselves.

VII. Professors

Every citizen having general information and scientific preparation, capable of thought and of speech, capable of generalizing and of interpreting the phenomena of daily life scientifically.

In order to make the instruction of the professors more homogenous, in order to make a connection between all the subjects of instruction, a chair of Methodology will be created (for the first time in schools of this kind), which will have for its object the unification of the private lectures, regulating them so that they conform to the general scheme of the university, the acquisition of a vast Communist interpretation of the universe.

VIII. Duration of the Course

The length of the course shall be two years. The sessions shall take place in the afternoons, not less than three nor more than five times a week, each lecture to be three hours. Special courses may be arranged after conferences with the students, during the third and even during the first two years of the course.

IX. Auxiliary Organizations

Supplementing the Free Socialist University, libraries, observatories, laboratories, scientific classrooms, museums, an office for excursions, an office for encyclopedic information and relations with all kindred organizations will be organized.

X

The Free Socialist University shall include organizations among the students and the professors, having for an object the arrangement of lectures in the laboratories, and in the libraries, in order that all student organizations which are of an educational character and which are working together

to perfect the proletarian institution shall be grouped together.

XI. Organization of the University

The Free Socialist University shall follow the general direction of the Commissariat of Public Education, its executive organs shall be the members of the presidency of the college, the collegium to be composed of representatives of the professors, of the students, of the office of Public Instruction and the director and the secretary of the university itself.

XII. Administrative Organization

The entire administration of the F. S. U. is under the jurisdiction of the collegium, but the administration itself is to be confined to an administrator elected for this purpose.

The collegium will be composed of a representative of the office of Public Instruction, another representative of the professors, three of the students, the official in charge of the university, and the secretary of the university, in all, seven members.

The direction of the university may be confided solely to one who has proved that he possesses initiative and creative faculties in the domain of science; among those eligible for membership in the collegium shall be those who know thoroughly the program of the university, its objects, and who are working actively to educate and perfect themselves in the spirit of the program and the purposes of the university.

The F. S. U. shall be subsidized by the Commissariat of Public Instruction according to the fluctuations which may occur in the affairs of the university. The stipends shall be fixed by decree of the Commissariat of Public Instruction.

“Marxian” Opponents of Soviet Russia

The Final Chapter of “Terrorismus und Kommunismus—Anti-Kautsky”.

By LEON TROTSKY

[Vienna before 1914 was one of the centers of the pleasure-life of Europe, although it was less an asylum for foreign pleasure-seekers than Paris. Viennese literature was, as a result of the peculiar distracted political life of the Dual Monarchy, devoted more to a pandering to the specific senses than to a serious consideration of principles. Arthur Schnitzler is, characteristically enough, Vienna's greatest novelist, Dr. Freud its most distinguished psychologist, and even the more serious Karl Kraus finds it hard to free himself from the dominant Viennese dilettantism. Leon Trotsky points out below the Viennese nature of the Austrian “Marxians” and of Kautsky himself.]

IN EARLIER days the Austrian-Marxian school (Bauer, Renner, Hilferding, Max Adler, Friedrich Adler) was not infrequently distinguished from the school of Kautsky as concealed opportunism versus genuine Marxism. This turned out to be a complete historical misunderstanding, which misled some people for a longer and others for a shorter time, but finally it became clearly disclosed that Kautsky is the founder and the most thoroughgoing representative of the Austrian falsification of Marxism.

Whereas the actual teaching of Marx is the theoretical formula of action, of aggression, of development of revolutionary energy, of the most complete conduct of the class struggle, the Aus-

trian school was transformed into the Academy of Passivity and of Deviation, and became vulgarly-historical and conservative, i.e., it reduced its task to this: to explaining phenomena and justifying them, instead of directing them to action and overthrow. It (the Austrian School) lowered itself to the role of a servant of the current needs of parliamentary and trade union opportunism; it substituted for dialectics a juggling sophistry, and finally, in spite of its noisy wave of law-abiding revolutionary phrases, it was transformed into the surest support of the capitalist state, and of the throne and altar above it. If the former went to pot it was not the fault of the Austrian-Marxian school.

What distinguishes Austrian Marxism is its ab-

horrence of revolutionary action and fear of such action. The Austrian Marxist is capable of developing a remarkably profound interpretation of the events of yesterday (the past) and a considerable daring courage in prophesying for tomorrow (the future)—but for the present day he never has any big idea, any predisposition for a great action. For him, the present day is lost under the pressure of small opportunistic cares, which are later interpreted as an immutable link between the past and the future.

The Austrian Marxist is inexhaustible when it comes to picking out the causes that obstruct initiative and make revolutionary action difficult. Austrian Marxism is a learned and bombastic theory of passivity and capitulation. It is, of course, no accident that just in Austria—a Babylon torn by unfruitful national controversies, in this state which is a living example of an impossible existence and a precluded development—that the pseudo-Marxian philosophy of the impossibility of a revolutionary action arose and gained strength.

The most prominent Austro-Marxists exhibit, each in his way, a certain "individuality". On certain questions they not infrequently diverged. There were even political differences among them. In general, however, they were in thorough accord.

Karl Renner presents the most perfect artificially cultivated representative of this type and the most in love with himself. He possessed to a high degree the gift of literary imitation or to be plainer, the gift of stylistic deception. His solemn May articles exhibited an excellent stylistic combination of the foremost and most distinguished words. But since words as well as their combinations within certain limits lead an independent life of their own, Renner's articles aroused in the hearts of many workers the revolutionary fire which their composer apparently never knew. The trumpetry of Austro-Viennese culture, the pursuit of the external, of rank, of title, was to a greater degree characteristic of Renner than of his associates. Fundamentally, he always remained an imperial official who knew how to make use of Marxian phraseology to the top of his bent.

The transformation of this writer, who once produced a jubilee article on Karl Marx that was noted for its revolutionary rhetoric, into a comic-opera chancellor who expresses with emotion his esteem and gratitude to Scandinavian monarchs, is one of history's most convincing paradoxes.

Otto Bauer is more learned, more prosaic, more serious and more boring than Renner. One cannot deny his ability to read books, to gather facts and to draw conclusions—as required by the tasks which practical politics, as conducted by other men, set for him. Bauer has no political will. His chief ability consists in worming his way out of the most burning practical questions by means of commonplaces and platitudes. His thinking—his political thinking—always leads a parallel existence to his will—his thought is devoid of courage. His works are never more than learned compilations of a gifted scholar of a university seminar. The

most shameful deeds of Austrian opportunism, the lowest cringing of the German-Austrian social democracy before the powers that be, found in Bauer its profoundest exponent who sometimes protested duly against the form, but who always accepted the essence. If it sometimes happened to Bauer that he exhibited something like temperament or political energy, it was always exclusively in the struggle against the revolutionary wing—in the piling up of reasons and facts as well as citations against revolutionary action. He reached his summit at that time (after 1907) when, still too young to be a deputy, he played the role of Secretary of the Social Democratic Parliamentary Group, and provided it with material, figures, substitutes for action, made out rough drafts, and seemed to himself to be the promoter of great deeds, when in reality he was only the purveyor of surrogates and imitations for the parliamentary opportunists.

Max Adler represents a quite complicated variety of the Austro-Marxian type. He is a lyricist, a philosopher, a mystic—the philosophic lyricist of passivity, just as Renner is its journalist and jurist, Hilferding its political economist, and Bauer its sociologist. Max Adler feels himself a prisoner in the small world of three dimensions, although he placed himself very comfortably in the frame of the Viennese bourgeois Socialism and of the Hapsburg state. The union of petty lawyer-like superficiality and political faintheartedness with unfruitful philosophic effort and cheap imitations of idealism imparted a peculiarly insipid and unsympathetic character to the species represented by Max Adler.

Rudolph Hilferding, like the others, entered the German Social Democracy almost as a rebel. But as a rebel of the Austrian type, i.e., one always ready to capitulate without a fight. Hilferding considered the external variability and inconstancy of Austrian politics, in which he had been raised, as revolutionary initiative, and demanded for several months, to be sure in the most modest terms, a more determined policy from the leaders of the German Social Democracy. But the Austro-Viennese fickleness was soon replaced in him by another quality. He soon surrendered to the mechanical rhythm of Berlin and to the automatic intellectual life of the German Social Democracy. He transferred his intellectual energy to the purely theoretical field where to be sure he contributed nothing of any importance—no single Austro-Marxist has contributed anything of importance in any field—but nevertheless he wrote a serious book in his field. With this book on his back, like a porter with a heavy load, he entered the revolutionary epoch. But even the most learned book cannot take the place of a lack of will, of initiative, of revolutionary instinct, of political determination, without which action is impossible. A physician by education, Hilferding is inclined to moderation and in spite of his training he is the most primitive empiricist in the realm of political questions. For him the principal question of the present day consists in not getting out of the rut set by the day before,

and in finding a learned scientific justification for this conservatism and petty bourgeois decadence.

Friedrich Adler shows less stability of character than any other representative of the Austro-Marxian type. He inherited from his father a political temperament. In the petty frictions of the struggle with the tangle of Austrian conditions, Friedrich Adler allowed his ironical skepticism finally to destroy the revolutionary foundations of his world view. The temperament inherited from his father pushed him into the opposition against the school created by his father. At certain moments Friedrich Adler might have been considered as a downright revolutionary negation of the old school, but in fact he was and had always been its necessary complement. His explosive revolutionism reflected the acute attacks of despair of Austrian opportunism, which, from time to time, recoiled before its own hollowness.

Friedrich Adler is a doubter down to his very marrow, he does not believe in the masses, in their effectiveness for action. While Karl Liebknecht was appearing on the Potsdamer Platz at the moment of the greatest triumphs of German militarism, to summon the oppressed masses to open combat, Friedrich Adler walked into a bourgeois restaurant to assassinate the Austrian Prime Minister. By his isolated shot, Friedrich Adler made the unsuccessful attempt to put an end to his own doubts. After this hysterical excess he collapsed into a condition of even more complete impotence.

The black-yellow* pack of social patriots (Austerlitz, Leuthner, etc.), bespattered the terrorist Adler with all the venom of their cowardly rhetoric. But when the acute period was over and the prodigal son returned to his father's house from prison with the halo of the martyr, he was bound to become doubly and triply precious for Austrian Social Democracy. The golden halo of the terrorist was coined into the ringing gold of demagogy by the experienced counterfeiters of the party. Friedrich Adler became the voucher in the eyes of the masses for the deeds of Austerlitz, and Renner. Fortunately the Austrian workers are finding it harder and harder to differentiate between the sentimental-lyric enervation of Friedrich Adler and the bombastic insipidity of Renner, or the high talmudic unfruitfulness of Max Adler, or the analytical self-complacency of Otto Bauer.

The cowardice of the thinking of the theoreticians of the Austro-Marxian school revealed itself completely when faced with the great tasks of the period of revolution. In his immortal attempt to find a place for the Soviet system in the Ebert-Noske constitution, Hilferding gave expression not only to his own spirit, but also to the spirit of the whole Austro-Marxian school, which attempted, at the beginning of the revolutionary epoch, to place itself just so much to the left of Kautsky as it had been to the right of him up to the Revolution.

From this point of view, Max Adler's opinion of the Soviet system is most instructive.

The Viennese eclectic philosopher recognizes the significance of the Soviet. His courage goes so far as to adopt it. He even goes so far as to proclaim it as an instrument of the social revolution. Max Adler is, it is understood, for the social revolution. Still, not for the stormy, barricading, terroristic, bloody revolution but for a moderate, economical, well-adjusted, legally sanctified kind, approved at philosophic headquarters.

Max Adler does not even shrink from the idea that the Soviet system offends against the "principle" of constitutional division of power (in the Austrian Social Democracy there are not a few fools who regard such a violation as a great defect in the Soviet system!), on the contrary, Max Adler, counsel for the trades-unions and legal adviser of the social revolution, sees even an advantage in the concentration of power which affords a direct expression of the will of the proletariat. Max Adler is in favor of the direct expression of the will of the proletariat, not however of the direct way of seizure of power by means of Soviets. He proposes a surer method. In every city, in every locality and district, the Workers' Soviets must "control" the police and the other officials, and impose the will of the proletariat upon them. But what will be the "constitutional" position of the Soviets in the republic of Seitz, Renner, and their consorts? Our philosopher answers as follows: "The workers' councils in the last analysis will have so much constitutional power as they can manage to get by their activities." (*Arbeiter Zeitung*, No. 179, July 1, 1919.)

The proletarian Soviets are gradually to grow into the political power of the proletariat, as before—according to the theory of reformism—all proletarian organizations were to grow into Socialism—a process which was somewhat upset by unforeseen misunderstandings lasting for four years between the Central European states and the Allies and by all the consequences of these misunderstandings. One was compelled to reject the economical program of growing into Socialism according to schedule and without social revolution. In exchange there was afforded the prospect of an orderly evolution of the Soviets into the social revolution of unarmed uprising and seizure of power.

In order that the Soviets should not fail in the tasks of the precincts and districts, the courageous legal adviser proposes—propaganda of Social Democratic ideas! Political power is to remain as before in the hands of the bourgeoisie and its accomplices. To make up for this, however, the Soviets control the district manager and inspector of the precinct and district. And to console the working class and at the same time to enable them to school their thought and their will, Max Adler will deliver lectures on Sundays on the constitutional position of the Soviets just as he formerly delivered lectures on the constitutional position of the trade unions.

"In this way," promises Max Adler, "the constitutional regulation of the situation of the workers' councils, their weight and their significance all

* An allusion to the colors of the former Austro-Hungarian Empire.

along the line of the national and public life will be assured, and—without a dictatorship of the Soviets—the Soviet system would have achieved an influence that could not be greater even in a Soviet Republic, and at the same time one would not have had to pay for this influence with political storms and economic destructions.” (Ibid.) We see, Max Adler, in addition to all else remains still in agreement with the Austrian tradition: to make a revolution without colliding with the public prosecutor.

The father of the Austrian school, and its highest authority, is Kautsky. Solicitously nursing his reputation as the guardian of Marxian orthodoxy, particularly after the Dresden Convention,* and the First Russian Revolution, Kautsky shook his head from time to time, disapprovingly, over the most compromising blunders of his Austrian school. Following the example of the deceased Victor Adler—Bauer, Renner, Hilferding—all together and each singly—regarded Kautsky as too pedantic, too cumbersome, yet as the very much honored and altogether useful father and teacher of the quietistic church.

Kautsky gave his own school occasion for the most serious misgivings at the time of his revolutionary zenith, at the time of the first Russian Revolution, when he recognized as necessary the seizure of power by the Russian Social Democracy and made an attempt to impart to the German working class the theoretical conclusions from the experiences of the general strike in Russia. The failure of the First Russian Revolution suddenly cut short Kautsky's course of development along the path of radicalism. The more directly the question of mass action was put by the course of events in Germany, the more evasive became Kautsky's attitude to it. He marked time, receded, lost his sureness, and the pedantically scholastic trend of his thought came more and more to the fore. The imperialistic war, which killed all indecision and brought to a head all fundamental questions, exposed Kautsky's entire political bankruptcy. He at once entangled himself hopelessly in so simple a question as that of voting the war credits. All his writings on this subject are variations of one and the same theme: “I and my confusion”. The Russian Revolution definitely put an end to Kautsky. By means of his entire previous development he was put into a hostile position towards the November victories of the proletariat. The latter threw him irrevocably into the camp of the counter-revolution. He lost the last trace of historical acumen. His later writings were transformed more and more into yellow literature for the bourgeois market.

The pamphlet of Kautsky criticized by us possesses externally all the earmarks of a so-called objective scientific work. In investigating the question of the Red Terror, Kautsky proceeds with all the circumstantiality peculiar to him. He begins with a study of the social conditions which prepared the great French Revolution, as well as the

physiological and social causes which have favored the development of cruelty or of humanity in the entire extent of the history of the human race. In his pamphlet devoted to Bolshevism, in which this question is treated in 154 pages, Kautsky tells in detail upon what our most primitive manlike ancestor subsisted, and ventures the conjecture that while he lived mostly on vegetable nourishment, this latter was nevertheless occasionally supplemented by small animals, caterpillars, worms, reptiles, possibly also little unfledged birds (see page 85). In other words, nothing could have led one to believe that from such an extremely respectable ancestor, apparently inclined to vegetarian practices, there could arise such bloodthirsty descendants as the Bolsheviki. Behold how solid is the scientific basis on which Kautsky treats the question!

But in this case, as is not infrequently true of such productions, a malicious political pamphlet is concealed under the academic-scholastic cloak. We are dealing with one of the most lying and unscrupulous of books. Is it not monstrous even to the superficial observer, that Kautsky should pick up the most abominable slander of the Bolsheviki from the well-set table of Havas, Reuter and W. T. B., and thus permit the long ears of the traducer to stick out under the scholar's mortarboard! But these unclean details are only a mosaic on a foundation of solid learned deceptions, directed against the Soviet Republic and the party in control in that country.

Kautsky paints in the darkest colors our cruelty to the bourgeoisie which according to him had shown no inclination to resist.

Kautsky brands our cruelty towards the Social Revolutionaries and Mensheviki; who he declares are varieties of Socialism.

Kautsky depicts the Soviet economy as a chaotic disintegration.

Kautsky pictures those active in the Soviets, as well as the entire Russian working class, as a band of egoists.

With not a single word does he mention a syllable of the conduct of the Russian bourgeoisie which—in the compass of its baseness—is unparalleled in history, of their national treasons: of the surrender of Riga to the Germans for “pedagogic” purposes, of the preparation of a similar surrender of St. Petersburg; of how they turned for help to foreign armies, to the Czecho-Slovak army, to the German, Russian, English, Japanese, French, Arabian, and even negro armies; of all the conspiracies and massacres they arranged with Entente moneys, of how they used the blockade not only for the deadly exhaustion of our children, but also to spread most systematically, unremittingly, constantly, the most unheard of lies and calumnies about us.

He does not mention with a single word the basest prosecutions and violations to which our party was subjected by the government of the Social Revolutionaries and Mensheviki before the November overthrow,—the penal persecution of sev-

* 1903.

eral thousand responsible party comrades, on the ground of accusations of espionage in favor of Hohenzollern Germany, the participation of the Mensheviks and Social Revolutionaries in all conspiracies of the bourgeoisie, their cooperation with Tsarist generals and admirals—Kolchak, Denikin, and Yudenich, the terroristic acts which were consummated by the Social Revolutionaries by order of the Entente, the uprisings instigated by the Social Revolutionaries in our army, paid for with the money of foreign embassies while our army was bleeding to death in the struggle against the monarchist bands of imperialism.

Kautsky does not mention with a single word that we not only repeatedly declared, but also demonstrated by deed, our readiness to insure peace to the country even at the price of concessions and sacrifices, that in spite of all this we are compelled to wage an exhausting war on all fronts in order to maintain the existence of our country, and in order to prevent its conversion into a colony of Anglo-French imperialism.

Kautsky does not speak a word of the fact that the Russian proletariat is compelled to devote its main energies and its best and most precious powers to this heroic struggle in which we defend the future of world Socialism, and to withhold them from its economic and cultural constructive activities.

In his entire pamphlet Kautsky mentions nothing of this—that at first German militarism, with the support of its Scheidemanns and the non-intervention of its Kautskys, later the militarism of the Allies with the support of its Renaudels and the non-intervention of its Longuets, surrounded us with an iron blockade, tore away from us all our ports, cut us off from the world, and with the help of paid White Guards took possession of great provinces rich in raw products and for long periods cut us off from Baku's naphtha, from the Donets coal, from the wheat of the Don and Siberia, and from Turkestan's cotton.

Kautsky does not mention a single word of the fact that under these conditions of unparalleled

difficulty the Russian working class has been carrying on for nearly three years a heroic struggle against its enemies on a front of 8,000 kilometers (5,000 miles), that the Russian working class understood that it had to take up the sword instead of the hammer, and created a mighty army, that it mobilized its exhausted industry for this army, that in spite of the devastation of the country, over which the hangmen of the whole world inflicted blockade and civil war, it is clothing, feeding, arming, providing for, transporting, an army of millions who have learnt to conquer.

On all these matters Kautsky is silent in his book on Russian Communism. And his silence is the most basic, fundamental sort of lie, indeed a passive lie, but a more foul and criminal lie than the active lies of all the swindlers of the international bourgeois press put together.

Slandering the policy of the Communist Party Kautsky nowhere says what it is he wants and what he has to propose. The Bolsheviks were not the only ones to appear on the stage of the Russian Revolution. We beheld and still behold upon this stage—now in power, now in opposition, Social Revolutionaries (not less than five groupings and currents), Mensheviks, Maximalists, Anarchists—absolutely all “gradations within Socialism” (to speak in Kautsky's language), tested their strength and showed what they wanted and what they can do. Of these “shades” there are so many that you could not insert even a knife-edge between the contiguous varieties. The origin of these “shades” is not accidental: they represent, so to say, the different variations of adaptability of the Socialist parties and groups to the conditions of the greatest revolutionary epoch. It appears that a sufficiently complete political keyboard lies before Kautsky to enable him to touch that key which sounds the proper Marxian pitch in the Russian Revolution. But Kautsky is silent. He rejects the Bolshevik melody which offends his ear, but he does not look for another. The solution is simple: *the old fiddler refuses altogether to play on the instrument of revolution.*

Soviet Russian Concessions to Capital

By KARL RADEK

[This article treats the subject of concessions from the standpoint of the general policy of the Soviet Government. The reader will find information concerning resources of one of the states of the Soviet Russian Federated Republic (Karelia) in the current issue of SOVIET RUSSIA. Next week's issue will contain detailed descriptions of the areas intended to be opened up to concessions.]

WHEN the working class of Russia assumed power in November, 1917, neither the bourgeois world nor the Socialist world believed that this power would last two months, not to mention two years. The negotiations of German imperialism with Soviet Russia were only the result of the straits in which Germany found itself as a consequence of the war: German imperialism desired to conclude peace in the East, even with a purely

transitory government, under the well-founded impression that even though the Bolsheviks might disappear, no party and no government in Russia could within a calculable period mobilize the peasants. Soviet Russia however needed peace, not only because it had no army at all, but because it could only reach the stage of reality by obtaining a breathing spell. At the time of the Brest negotiations, Soviet Russia was only a program, existed

only in the declarative decrees of the Council of People's Commissars. Not even Tsarist absolutism had been completely destroyed in its lower organs at that time, nor had feudal landlordism been wiped out. The forms of the Soviet Government in city and country were still an experiment, not an organism. The Soviet Government was faced with the choice of either waging, with the help of the Allies—as a government of the revolutionary partisan party of the Urals, a guerrilla warfare against German imperialism, and to permit Russian capital to carry out its restoration under the protection of German bayonets, or to pass through the Golgotha of Brest and thus to carry out, at the price of a national humiliation, the task of immediately putting down the bourgeoisie and organizing the proletariat.

The fact that the policy of the Soviet Government, based on the conviction that the process of disintegration of world capitalism would not be retarded by the Brest peace, but accelerated, was a proper policy, has been proved not only by its late victories, by the fact that Soviet Russia, between the devil and the deep sea so to speak, was able to collect and organize itself to the extent of forcing from the representatives of victorious Entente imperialism the admission, a year after the collapse of German imperialism, that: "Bolshevism cannot be put down with the sword." The Brest peace, in spite of its predatory character a positive benefit to Soviet Russia, since it ended the great war, was not forced by Soviet Russia out of its own power, nor by the German workers; the peace of Brest was brought about by the pressure of Entente armies in the west. Should the victorious imperialism of the Entente now conclude a still more unfavorable predatory peace, this peace, if it only affords Soviet Russia the possibility of existence, will be a fundamental breach in the capitalistic system of states, for this peace will be a result of the resistance offered by Soviet Russia with its own powers, a result of the aid given Soviet Russia by the world proletariat. But why should Soviet Russia, which cannot be destroyed by the sword, make any compromise peace at all with the Entente? Why should it not wait for the moment when the disintegration of Entente capitalism has progressed at least so far that this capitalism must grant an honest peace to Soviet Russia? The answer to this question is very simple. During the world war, which was being prolonged by the policy of all the states, it was possible to count upon a swift catastrophe of world capitalism, on a reaction of the popular masses in various countries, if once the general slaughter should allow them no other means of escape. At the conclusion of the Brest treaty, the Soviet Government estimated the breathing spell afforded by this peace as a very short one; either the world revolution would soon come and rescue Soviet Russia, or Soviet Russia would go down in the unequal conflict—such was our view at that time. And this conception was in accordance with the situation at that moment.

The collapse of German imperialism, the inabil-

ity of the Allies to put down Soviet Russia by military means, and simultaneously the fact that the world war has since been ended, that the demobilization crisis has been overcome, that the world revolution has not broken up the capitalist world in the form of an explosion, but in the form of a gradual corrosion—this fact completely alters the situation, the conditions, of the foreign policies of the Soviet Government.

On the one hand the Soviet Government cannot reckon on a swift mechanical liberation through a mass movement that would completely overthrow the Clemenceaus, Lloyd Georges, and all they stand for, and on the other hand the Soviet Government may be mathematically certain that the process of capitalistic disintegration will continue and lighten its burdens. But as this is a long process, Soviet Russia cannot escape the question of seeking a *modus vivendi* with those states that are still capitalistic. If tomorrow the proletarian revolution in Germany or France should be victorious, Soviet Russia's position would be much easier, for two proletarian states, organized economically and militarily—can exert a greater pressure on the capitalist world. But they will nevertheless still be interested in concluding peace with the as yet capitalist states, if only for the reason of having an opportunity at last to take up economic reconstruction.

Soviet Russia could not be put down, and we are certain that if the Entente states will not grant Soviet Russia a capitalist peace at this moment, Soviet Russia will continue to hunger and to fight, and they will be obliged to grant our country a better peace later on. To put down a country with Soviet Russia's resources, by means of blockade, will require a period that will exceed the length the imperialistic epoch in the Entente countries has still to run. But it is clear that if Soviet Russia must continue to fight for very long it cannot take up its economic reconstruction. The war makes it necessary to put its weakened productive forces at the service of the manufacture of munitions, to use its best forces for the practice of war, to apply its ruined railways for the transportation of troops. The distress of war obliges the energy of the state to be centralized in the hands of the executive, threatens the Soviet system, and, what is most important, in the long run menaces the complete using up of the best elements of the working class. The Soviet Government has performed a superhuman task in opposing these conditions. Its accomplishments in the field of instruction, in spite of all the distress, impresses even now those bourgeois opponents who are honest (read Goode's report in the *Manchester Guardian*). In two or three years Soviet Russia will dispose of hundreds of thousands of new organizational and cultural talents.

How seriously our leaders regard the dangers of reconstruction, of the *chinovnik* in a new form, is shown with complete clearness by the discussions in the party convention of the Bolsheviki in March, 1919, the minutes of which—constituting a very instructive document—have been recently

published. But war is war. War is a cruel destroyer, and if war can be concluded by making sacrifices, the sacrifices must be made. It is unfortunate, to be sure, that the Russian people should be obliged to grant mining concessions to English, American, and French capitalists, for it could make better use of the metals itself than to apply them for paying tribute. But, so long as Soviet Russia must wage war, it can not only not mine ore, but is even obliged to throw its miners into the jaws of war. If the dilemma were this: economic Socialist reconstruction, or war against world capital, which is restricting the Socialist reconstruction, the only proper decision would be for war. But that is not the state of affairs. The question to be decided is this: Socialist reconstruction within the limits of a provisional compromise, or war without any economic reconstruction at all.

Already in the spring of 1918, the Soviet Government was faced with the question of economic compromise. When the American, Colonel Raymond Robins, on May 14, 1918, left Moscow for Washington, he took with him a concrete proposition of the Soviet Government, containing conditions for economic concessions (this proposition was published in the minutes of the First Congress of Russian Economic Soviets in the speech of Radek on the economic consequences of the Brest peace). Simultaneously, Bronsky, Assistant to the People's Commissar for Trade and Industry, submitted in

the first session with the representatives of the German Government practical proposals for the co-operation of Soviet Russia with German capital. Bruce Lockhart (the English representative) was confidentially informed of a basis for negotiations. We may admit that even in the midst of the world war we had a right to hope that immediate explosions would eliminate the necessity of making such concessions, but in principle we had already then determined on this policy of concessions, and it was a well-founded policy. So long as the proletariat has not been victorious in all the most important states, so long as it is not in a position to make use of all the productive forces of the world for purposes of reconstruction, so long as capitalist states exist side by side with proletarian states, for just so long will the proletarian states be obliged to conclude compromises, for there is under these circumstances neither a pure Socialism, nor a pure capitalism, but, in spite of territorial divisions between these two systems, they will be obliged to grant concessions to each other, on their respective areas. The extent of these concessions to be made to capitalism will depend on the power of the proletarian states, and on the number of such states in existence. No one has the right to deny that such concessions must be made unless he is ready to point out a method by which our opponents may be forced immediately to grant the proletariat in all countries a simultaneous victory.

What is New in the Russian Revolution?

By N. BUKHARIN

OUR Revolution, which closes "mankind's prehistoric period" and begins the first chapter of its real history, is extraordinarily interesting and instructive in its gigantic and altogether new experiments. If one reads Kautsky's well-known pamphlet on the social revolution, much of it now seems mere childish babbling. At that time there was not as yet any empirical material for estimating the concrete forms of the proletarian dictatorship, and all the concrete circumstances of a revolution. It is only this material, however, which prescribed and is prescribing a very specific course of development for the Socialism which is being born of the chaos of the world war, on the foundations of a ruined, exhausted economic life. Only the great men of the past—Marx and Engels—thought of that. But the sorry upstarts, the new "heroes" of the old Internationale, scarcely thought of it at all. And everything in the Russian Revolution is new in this sense. That is why no earnest revolutionist, whether he be now in Germany or in Argentina, can overlook the gigantic laboratory which is Soviet Russia. We shall here examine more closely some of these new features.

Above all the Russian Revolution solved the question of the forms of the dictatorship. It solved the question as to what should constitute the power of the proletarian state. The Soviets, the Soviet

power,—that is the form which was born of our Revolution. In the beginning, one could still think, perhaps, that the Soviets were a specifically Russian product. But the further experiences of Western Europe showed that this was the general form rooted in the fundamental conditions of the war of the working class against the bourgeoisie. And it is for just that reason that all who advocate the dictatorship of the proletariat must support the Soviet power. We have already become so accustomed to the idea that it seems to be something altogether self-evident. But this axiom of proletarian politics was given us by our Revolution.

Our Revolution first showed us the role and the meaning of the proletarian vanguard—the Communist Party—in all its tremendous significance.

No one can completely understand how, after the party had gained its power and its importance increased, no one imagined the exclusive and decisive organizing role that this most important organization of the working class would have to fill. Previously the role of the party was thought of in more or less parliamentary forms, at best it was looked upon as some kind of controlling or regulating organ. And what was the fact? In fact, the party worked everywhere, and *only* because of this can the proletarian dictatorship maintain itself. Transport, factory, bank, barracks, bread supply,

regiment and division, sanitary troops, groups for combating illiteracy, political sections of the army—everything possible, everything to advance, arouse, organize, incite to new life, construct—all this the party does through the Soviets, the trade unions, and a thousand other organizations. It controls centralized administration. It not only rules, but also administers the various forms of life, it becomes in its importance an altogether peculiar organizing and creating power. This, and the necessity for it, were shown by our Revolution.

People had spoken before of the rule of the working class. But only the present experiences show clearly how this rule came into being. And then, besides that already mentioned, we have had important experience in the matter of arousing the proletarian masses to work. The role of the worker in the army; party and trade union mobilization; commissariat divisions and armies; our economic campaigns; the structure of our economic organs; the role of the trade unions; workers' and peasants' inspection; all-party conferences;—all these are innovations which our revolution has created.

The education of a body of labor administrators, a new type of man, that also is one of our triumphs, and perhaps the greatest that we have to show. We have already forgotten the past completely. To us it does not appear peculiar to find at the head of an *Uyezd* (administrative district) or government, a Petrograd metal worker or Moscow textile worker, a hairdresser in command of a division, in the party school a house-painter delivering lectures or an agricultural laborer writing reports on causation and evolution in natural science. We no longer wonder that there should be a large class of persons who have educated themselves during the revolution—"golden-handed" ones who are masters of every trade; who one day command in battle, the next day direct distribution, the next supervise a factory or, weapon in hand, suppress a White Guard uprising. We are not astounded that a former servant girl or a cook should be at the head of a political section in the army or the secretary of a party committee, passing from one activity to another and causing new vital creations to arise everywhere under her hands. One need but compare the present with the past to completely understand and feel the difference. Hunger and cold exist. But on the other hand there are already—and more of them every day—people who terminate this hunger and cold, and lead the land out of suffering.

But it is not sufficient that bodies of new men are being formed out of the ranks of the workers and peasants. The whole psychology, the whole horizon of the masses, their whole manner of thinking, is changing for the better. Among the bourgeois "observers" and those who ape them, it is good fashion to speak of the "passivity of the masses" in the Soviet Republic. But a serious comparison of the present with the past reveals a different picture. The psychology of the masses finds its best expression in their speech. If one should compare the present speech of the village with that before the Revolution he would be astounded. The speech

of today is indeed the literary language. And their vision? Has it not grown with almost miraculous rapidity? And also have not the Russian people—in the broadest sense—ceased to be the "lout" of whom our superwise sophisticated Intellectuals made game? A tremendous, hitherto unprecedented elevation of ideas has taken place.

But the Russian Revolution gave the masses something new in the way of guidance on the new path. Or are perhaps the *Communist Subbotniki* (Saturdays) not a new development of the present? No one would have thought of it before, no one anticipated it, it was a wholly new "discovery" of the revolution, just as was the Soviet power. All forms of collective work, from the volunteer, or Subbotniki to the labor army and labor duty in the form existing among us, are experiences of the greatest significance. We ourselves know little as yet about ourselves. Much we overlook. The writer of these lines knows a case where our fighting army helped the peasants plow the land, improved their tools, built schools and arranged children's festivals, for which the poorly supplied Red Guard sacrificed their last. Thus appears in embryo that mighty humane spirit which is developing with the construction of a new life.

The matter of mass enlightenment is altogether of a different kind than formerly—who indeed would have thought of it in the good old times? Who could have carried on agitation and propaganda to such an extent as we? Who could have conceived such a campaign as ours against illiteracy? Where, when, by whom, in general, was the significance understood of such campaigns, where the cooperation of different elements produces a mass result?

We are still poor, but not helpless. Hour by hour, day by day, new forces are arising. From unbelievable confusion of methods, out of a sea of vulgar selfishness and dross, are appearing more and more the outlines of our future. They cried to us: Down with monopoly, long live free trade! But we did not acknowledge the ruin of our transport and throw ourselves into the hands of the speculators. And provisioning is improving. We were warned that all would perish of cold as a consequence of our methods. But fuel conditions also have improved. This has been accomplished through the arising of new forces to improve conditions. It is the result of the fact that in practice, in the struggle of life, our working class is becoming the great creator, martyr, and champion of the happiness of mankind, of the real history of man in the future.

Bound Volumes of Soviet Russia

VOLUME THREE (July to December, 1920, inclusive), durably bound in cloth, stamped in gold, with title page and index, 652 pages of text and illustrations, including many maps and sixteen full pages of half-tone plates, is now ready for delivery. Price five dollars, postpaid.

SOVIET RUSSIA

110 West 40th Street

New York City

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION
110 West 40th Street New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

THE immediate demand for agricultural machinery in Soviet Russia has been carefully studied by a correspondent of the English *Manchester Guardian*, recently returned from Russia. On the basis of what he terms a "very conservative estimate" by the Commissariat of Agriculture, he finds a yearly need for 850,000 new ploughs, 85,000 reapers, 17,000 threshers, 340,000 drill ploughs, 850,000 winnowing machines and over a million each of scythes and sickles. These figures, however, enormous as they are, represent only the average yearly needs. "When we consider," the *Guardian* correspondent points out, "that after 1915 the import of agricultural machinery practically ceased, while the production of agricultural machinery in Russia, which was restored at the end of 1918, has so far resulted in the supply of only about one-seventh of the total yearly requirements, it becomes obvious that in order to bring the total of these figures up to 1920, we must multiply them by nearly five." (*Manchester Guardian Weekly*, December 24.)

Where will the Soviet Government buy these huge supplies? One would naturally suppose that American manufacturers were best fitted to supply the type and quantity of agricultural machines needed by Russia. Strange to say, however, even before the war the American manufacturers were far outstripped by their English and German competitors in this field. In 1910, out of a total of \$19,500,000 worth of agricultural machinery imported by Russia, the United States supplied only \$5,191,000; and in 1912, when the total imports had increased to \$25,600,000, the share of the United States was still only \$5,826,000. The surprising condition revealed in these figures was dealt with in the last annual report of the Director of the Bureau of Foreign and Domestic Commerce of the Department of Commerce at Washington. Pointing out that "the United States is probably less familiar with Russia than any of its competitors," he recommended that "America endeavor to promote direct commercial intercourse with Russia." That recommendation, however, still awaits action. At the time of the closing of the Russian Soviet Government Bureau, upon the departure of Mr. Martens, the Commercial Department of that Bureau had on file detailed orders and specifications from the Commissariat of Foreign Trade for immediate purchase

of agricultural machinery in the United States amounting to \$50,000,000. Contracts for this machinery could not be placed with the American manufacturers because of the obstacles placed in the way of trade with Russia by the authorities at Washington.

THE decision of Moscow regarding the draft trade agreement carried back from London by Mr. Krassin has not been announced as we go to press. Lacking the text of that draft, which probably differs in several respects from each of the preliminary Russian and English drafts which we published in *SOVIET RUSSIA*, January 22, it is, of course, impossible to forecast the decision. The manner in which this latest draft was handed to Mr. Krassin did not inspire confidence. It was obvious that the English, having dragged out the negotiations for more than twelve months, were anxious to place the burden for any further delay upon Moscow, and were, therefore, suspiciously loud in their protestations that the document was thoroughly satisfactory to the British Government. Suspicion in this respect, moreover, was strengthened by the flood of inspired dispatches from Helsingfors, and other centers of propaganda, which hastened to announce, upon no authority whatsoever, that the agreement would be or had been rejected at Moscow. As against these stories, however, there may be balanced a Central News agency dispatch (*New York Times*, January 21), which announced that the Soviet Government was expected to ratify the agreement without change. Before his departure, Mr. Krassin took pains to correct the impression which the British officials had endeavored to create to the effect that he and they were in perfect agreement and that the draft agreement was thoroughly satisfactory. On the contrary, Mr. Krassin told a correspondent of *The Manchester Guardian*, "the draft which I am conveying to Moscow is, in my opinion, unsatisfactory in many respects." The settlement of the main difficulties, he said, did not lie with Moscow. "The fundamental source of disagreement is the enlargement of the scope and the attempt to particularize the basis of the preliminary agreement of June 30." As to the desire of the British Government to define the territories within which the Russian Government should abstain from anti-British propaganda, Mr. Krassin said: "We are ready to accept this condition, but only on the basis of mutuality and only after a competent commission has defined all the conditions and all the complicated political questions involved." It is not Great Britain alone that requires safeguards against hostile propaganda. Mr. Krassin pointed out some of the possibilities. "Imagine," he said, "British propaganda among Persian workers, urging them not to accept employment in the oil fields of Baku; or propaganda among Turks in Asia Minor to attack Azerbaijan, or any other Soviet Republic. It is not enough merely to say: 'abstain from anti-British or anti-Russian propaganda.' It is necessary to define exactly what this means and what it may involve,

and that can be done only by a competent political conference."

In spite of Sir Robert Horne's announcement that Krassin had heard "the last word of the British Government," a London dispatch to the *New York World* (February 2, 1921) stated that "it is expected here that Krassin will soon return to London from Moscow with counter proposals." The *World's* correspondent gave plausible grounds for his confidence that the British Government was in no such final mood on the matter as it pretended: "Pressed as it is by commercial interests and particularly by organized labor for the reestablishment of commercial relations with Russia, the British Government is expected to make certain modifications in the treaty, rather than cause a breakdown of the negotiations."

THE British Government takes a generous view of those territories from which propaganda "against British interests" must be specifically excluded by the terms of the pending commercial treaty. With a large gesture, Great Britain demands that the Soviet Government restrain Russian citizens from all actions unfriendly to British interests in, among other places, the Caucasus, Asia Minor, Persia and Afghanistan. Whereat even the *London Nation* is moved to remark that "one fails to see why Russia should consent to 'disinterest' herself in Persia, two-thirds of which was a closed Russian sphere before the Revolution."

The sordid plundering of Persia by a conspiracy of British and Russian imperialisms is open history. In 1907 the English and Russian Governments signed an agreement for the partition of Persia. With the customary cant about "non-interference" and "maintenance of sovereignty", the two powers divided the country between them. To Russia was assigned the northern half, including the rich regions of Teheran, Tabriz, and Ispahan; England took a slice to the south; an intervening "neutral" trip of desert and mountains was generously left unappropriated. In the following year the Persian Parliament moved to depose the Shah for repudiating the Constitution. The Russian Minister and the English Chargé d'Affaires promptly notified the Persian Minister of Foreign Affairs that England and Russia would tolerate no mitigation of Persian tyranny. To make things secure a Russian army, with the approval of Sir Edward Grey, marched into Tabriz.

The origin and nature of British "interests" in Persia are the subject of several revealing entries in the recently published diary of Wilfred Blunt, English poet and landowner, formerly a member of the British diplomatic service, who actively interested himself in the fate of the various Eastern peoples fallen under British domination. On November 7, 1910, a friend brought Blunt news of the intended British occupation of Persia. "Major Sykes, our Consul at Meshhed, who is . . . chief adviser on South Persian affairs at the Foreign

Office, . . . told him that the occupation of Southern Persia, on the same lines as the occupation of Egypt, has been decided on." In November of the following year, Blunt records the Russian ultimatum to Persia, demanding complete control of Teheran and the dismissal of Mr. Morgan Shuster, an American who had been working to reorganize Persian finance too successfully to please the Czar. "This," remarks Blunt (November 29, 1911), "means the conquest of Persia, and already Russian troops have marched . . . It is an infamy for which Grey is responsible." The Russian invasion of Persia was openly encouraged by the British Government. On December 15, Blunt notes: "Grey has made another long speech in the House of Commons about his Persian policy, in which he approves all the Russians are doing." British official approval of the Russian conquest did not even balk at the abominable massacres at Tabriz. For these things, Blunt remarks, "Grey invented a formula"—he had "no official knowledge."

Such was the attitude of the British Government towards Persia in the days when it seemed a profitable business to dispose of that unfortunate country in secret bargains with the Czar. Thus Great Britain acquired those precious "interests" in Persia, which today it demands that no Russian, by so much as a whisper, shall endanger. It is, of course, not Bolshevik propaganda that the British Foreign Office fears in Persia—and in other spheres—but the long smoldering resentment of oppressed peoples.

The Persian situation was succinctly described in a recent Reuter dispatch to *The Manchester Guardian* (January 21, 1921), which reported naively: "The Persians have failed to take advantage of the Anglo-Persian Agreement, which was concluded so long ago, and the ratification of which would have enabled Persia to put her house in order." On the same day the *Guardian's* correspondent at Reval also reported: "The Russian agreement with Persia has been signed. Mr. Theodore Rothstein, who is well-known in England, has been appointed Russian diplomatic representative to Persia and will shortly proceed to Teheran."

It is interesting to find the name of Mr. Rothstein in this connection. Rothstein was a friend and adviser of Blunt's on Near Eastern affairs. The latter writes of him: "Rothstein . . . owes his wonderful knowledge of the European situation to the fact that he was the London correspondent of nearly all the Socialist newspapers on the continent. He was by birth a Russian subject, born at Kiev, who had made his studies at the Odessa University, and, having become involved there with the authorities about twenty years ago, had made his escape to Western Europe and had taken up his residence in London. He was on the staff of more than one of our newspapers, but often complained to me that the editors would not listen to him on subjects of European importance." It now appears that the London editors might have profited by listening more attentively to the opinions of Mr. Rothstein.

* *My Diaries*, by Wilfred Scawen Blunt; Martin Secker, London, 1920.

The Ghosts of Golgotha

By JOHN S. CLARKE

"Fear not the tyrants shall rule for ever,
Or the priests of the bloody Faith:
They stand on the brink of that mighty river
Whose waves they have tainted with death.
It is fed from the depths of a thousand dells,
Around them it foams and rages and swells,
And their swords and their scepters I floating see
Like wrecks in the surge of eternity."

—Shelley (Rosalind and Helen).

MOSCOW is as unlike Petersburg as Glasgow is unlike Edinburgh old town, or as Derby is unlike Chester. Petersburg is a city of yesterday; Moscow is hoary with antiquity. Petersburg has broad streets and spacious squares; Moscow has gigantic squares, but narrow streets. Petersburg is a "planned" city; Moscow is a growth of the centuries. Petersburg is European; Moscow is Asiatic. Petersburg rises out of the waves like a damsel smiling at the morning sun, with the dew of health upon her tresses and the bloom of youth upon her cheeks; Moscow stands upon its little river like a patriarch wrapped in thought, stroking his beard with contemplations of the past and forebodings of the future disturbing his equanimity. For here Occident meets Orient, West commingles with East, Antiquity and Modernity blend, and Futurity casts its lights and shadows on the Past and Present.

In Petersburg one cannot think of the remote past. The mind dwells upon Peter, its founder; on shipyards and merchandise; on Catherine and Voltaire; on Alexanders and Nicholases; on aristocrats and proletarians, underground propaganda, nihilists, terrorists, "yellow tickets", fortresses, strikes, riots, and revolutions. Zinoviev called it the "cradle of the revolution". It is more than that; it is the womb wherein was conceived that which shall become the greatest and most splendid race on earth. In Moscow one does not think of these things. One thinks of Djenghis Khan and Tamerlane; of slit-eyed Tartars and Volga hordes; of "Terrible" Ivans and ghastly torture-chambers; of miracles and saints, and "priests of the bloody faith."

Moscow is another Rome in many things. It is a Granada in others. It is a Constantinople, a Jerusalem, a Dublin, and a Glasgow rolled into one. This sounds very incongruous, but Moscow is incongruous. Moscow is almost indescribable. It is seen and heard, but more so is it felt. It is a city of grisly ghosts which weave around the mind cobwebs of a hideous past, and yet it is a city of resurrection where the mind is urged and stimulated. The crescent of Mahomet glitters golden in the sunshine at every corner; the cross of Christ rears heavenward in every street; and the Red Flag of Communism flutters victoriously over a thousand roofs. Is not that an incongruity?

Both of Russia's capitals, however widely they differ, are perfect gems set in a crown of romance, and each evokes those sensations, those charming

emotions, which sensitive spirits delight to feel. There is one old grey city wall in Moscow which slopes down a declivity upon which a tree-embroidered "square" has been built. At the foot of the square stands the "Delavoy Dvor" (our hotel), and the old wall spans the off-street nearby with a lofty arch. The very fiercest fighting of November, 1917, took place at this historic corner. From top to bottom the ancient arch, and most of the adjacent buildings, are pock-marked with bullet holes. Great scars disfigure the stonework upon which machine-gun fire was concentrated, and gaping rents appear in the woodwork. Terrific battles have taken place at this identical spot before—but the missiles of that period were the swift, feather-tipped arrows of the barbarous Mongols. Why, one might ask, should this corner be an age-long sufferer from ruthless warfare? It is what military-minded people would call, I suppose, "a strategical point". Go through the arch and follow the street ahead of you for two hundred yards, then turn up a steep but short incline to the right, and you will land in the *Krasnaya Ploshchad*, or Red Square. One of the most magnificent open spaces in any city in the world, it is completely bordered on the west by the picturesque walls, tall and battlemented, of the Kremlin, with the beautiful Spassky Gate at the southern end and Nicholas Gate at the northern. Along the eastern side of the square are the one-time arcades called *Riadi*, while at one end stands the solid red pile of the Historical Museum and at the other the weird looking Church of St. Basil.

A group of statuary representing Minin, the Nizhni cattle-dealer, urging Pozharski, the prince, to free Russia from the Poles, and surrendering his fortune for this purpose, occupies some space in front of the arcades. It is very fine sculpture, and was executed by Martop, the Russian artist.

Opposite St. Basil's a walled circular structure with gated entrance stands. This is the *Lobnoye Myesto*, where the Tsars of olden time issued their proclamations and made momentous promises. On this walled platform in 1547 Ivan the Terrible tearfully promised to rule mercifully and wisely. Here he led the ass which the High Priest (Patriarch) mounted every Easter, and here he manifested the wisdom and benevolence of his latter years by committing the frightful atrocities that make his name abhorred. In 1565 he commenced his infamous work on this very spot by executing Prince Alexander Gorbati-Shuisky and his seventeen year-old son. On the same day two other princes, a chief officer, and a royal cup-bearer were beheaded, and the Prince Shevirev impaled and left to writhe in agony for twelve hours. Five years later, on July 25, eighteen gibbets were erected, and many instruments of torture were displayed in the square among which was a huge cauldron suspended above a roaring fire. What was toward? You may doubt me, reader, but you cannot well doubt the historian,

Karamzin. Let him describe the doings of that day:

"On seeing these terrific preparations the people of Moscow were convinced that their last hour was come, and that the Tsar was determined at once to make an end of his capital and its inhabitants. Besides themselves with terror, they fled and hid themselves wherever they could, abandoning in their open shops both their merchandise and their money. Soon the place was deserted, and nothing was seen but a troop of *Oprichniks* (Ivan's Guards, literally 'fiends'—J.S.C.) ranged round the gibbets and the burning pile, in profound silence. Suddenly the air resounded with the roll of drums; the Tsar appeared on horseback with his eldest son, the object of his affection. He was accompanied by the boyars, the princes, and by his guard, marching in order, followed by the condemned, to the number of more than three hundred, like spectres in appearance, wounded, torn, bleeding, scarce able to drag themselves along. Arrived at the foot of the gibbets, Ivan looked around him; and being astonished to see no spectators, he ordered his guard to assemble the inhabitants and bring them to the square. Impatient at their delay, he ran himself to summon them, calling the Muscovites to witness the spectacle he had prepared for them, and promising them pardon and safety. The citizens did not dare to disobey; they came out of the cellars, of the hiding-places where they were concealed, and, trembling with fright, hastened to the place of execution, which they filled in a few moments; even the walls and roofs were covered with spectators. Then, with a loud voice, the Tsar said to them: 'People of Moscow, you are going to witness tortures and executions; but I am punishing traitors. Answer me! does my judgment seem to you just?' At these words loud acclamations were raised on all sides: 'Long live the Tsar, our lord and master, and may his enemies perish!' Ivan then ordered eighty persons to be drawn out of the crowd, to whom, as the least guilty, he granted their lives. The secretary of the privy council, unfolding a roll of parchment, then published the names of the victims. After this he made Viskovaty advance, and read his condemnation aloud . . . The executioners threw themselves upon him, gagged him, hung him up by his feet, and hacked him to pieces. Maluta-Skuratov, descending from his horse, was the first to cut an ear from the sufferer.

"The second victim was the treasurer Funikov, the friend of Viskovaty, also accused, upon very slight foundation, of treason. They poured boiling and iced water alternately upon the body of this wretched man, who died in terrific agonies. The rest had their throats cut, were hung, or hewn to bits. The Tsar himself, on horseback, with a tranquil air, ran an old man through with his lance: in the space of four hours more than two hundred men were put to death! Finally, their horrible duties accomplished, the murderers bathed in blood, brandishing their smoking swords, gathered in front of the Tsar, with the cry of joy: 'Hoida! hoida!'^{*} lauding his justice. Ivan, going through the square,

examined the heap of corpses; but, though surfeited of murder, he was not yet surfeited of the despair of his subjects. He desired to see the unhappy wives of Funikov and Viskovaty; he went to their houses, laughed at their tears, and put the first to torture, demanding her treasures. He wanted also to put her daughter, aged fifteen, to the torture, but upon her cries of despair, he changed his mind, and gave her to his son, the Tsarevich Ivan. She was eventually shut up with her mother and the wife of Viskovaty in a convent, where they all three died of grief.

"The inhabitants of Moscow who witnessed this terrible day did not see either Prince Vyazemski or Alexis Basmanov amongst the victims. The first had died under the torture, and as to the end of the second, in spite of the atrocities we have described, it may seem incredible, but contemporaries state that Ivan forced young Feodor Basmanov to kill his father. The tyrant rested for three days, for it was absolutely necessary to bury the corpses, but on the fourth he brought out upon the square new victims, whom he put to death. Maluta-Skuratov, chief of the executioners, hewed the bodies of those who were executed in pieces with an axe, and the bleeding fragments, deprived of burial, remained for eight days exposed to the greediness of the dogs, who fought over them. The wives of the gentlemen executed, to the number of eighty, were drowned in the river."

That was but two days' work in the long reign of one of those pestiferous objects called monarchs, which the earth has been cursed with for at least ten thousand years. No wonder that little structure in the Red Square is named *Lobnoye Myesto*, which means, being interpreted, the "place of skulls", the same as its more famous namesake, Golgotha or Mount Calvary.

That hideous carnage was but one incident in Ivan's bloody career; it happened in 1570. One hundred and forty years later Peter, surnamed the "Great", was Tsar of Russia. He is the hero of the children's schoolbooks. The bluff, genial, simple monarch who "worked in the shipyard" like "an ordinary man", who built Petersburg and married "a commoner". Well, the people hated him so much for his beastly cruel tyranny that all over Russia they revolted against him. Even his own bodyguard, the "Streltsi" rebelled. Did the genial, homely Peter amend? Let us read a passage from Maxwell's "Tsar, Court, and People" (page 143), and remember that this tragedy was enacted, no doubt with a view to effect, at the scene of Ivan's previous public entertainment—in the Red Square, Moscow: "Peter hurried all the way from Holland to superintend the slaughter. Seated on a throne, he witnessed the dying agonies of two thousand Streltsi, and when tired of the rack he compelled his nobles to complete the destruction with the sword. With the wine cup in one hand, a scimitar in the other, he swallowed twenty bumpers and cut off twenty heads in a single hour, and as if proud of the achievement, invited the ambassador to try

^{*} A cry of the Tartars, by which they excite their horses.

his skill. Eighty of the guilty Janissaries were subsequently held up by the hair before the crowd and decapitated by the hand of the infuriated Tsar."

Such is one episode in the life of Peter the "Great". Providence is surely to be praised for making him "great". What might not he have done had he been bereft of this apochryphal quality of "greatness". Such days have happily vanished! Have they? No, reader, they have not vanished; the stage has been transferred elsewhere. The nature of an Ivan or a Peter, with all its attributes of ferocity and torture lust, malignantly animates the bodies and inspires the deeds of King George the Fifth's Black and Tan *Oprichniks* in Ireland at this very moment.

Like Mark Twain's "nobility" in the "Yankee at the Court of King Arthur", Peter had the redeeming feature of fervent piety. When criticized for this particular "severity", as the bourgeois historian describes it, he indignantly replied: "Let malice defame me, my conscience is clear. God is my judge." That he meant it we might be sure from the following fact. In St. Isaac's at Petersburg there is an ikon of the Tikhvin Madonna. In Peter's time an old woman attempted to extract a jewel from it with her teeth under pretence of kissing it. The historian gravely tells us that Peter "ordered her to be burned alive, for, according to his lights, he was a religious and devout man." Perhaps that's why Ivan Ivanovich was wont to shout "God save the Tsar" in days of old, even as Donald Macdonald yells "God save the King" today.

Out of the shadows of antiquity, from the morning of human cupidity and avarice, two sinister figures have crawled with crooked talons through history, leaving a trail of blood and fear most horrible which has not halted yet. The *Monarch* and the *Priest*. The one is symbolical of despotic or oligarchic power, the other typifies the sordid ignorance and fearful superstition of the credulous masses which maintains the power of the first. High in the streets of Moscow, where one may see the pallid, long-haired, degenerate-looking vendors of holy lies and pious impositions shuffle along like spectres from a remoter age, there hangs a woven streamer of scarlet hue with huge white lettering, which defiantly proclaims that "*Religion is the Opium of the People.*"

Though many still cross themselves a score of times daily on passing the church, yet nevertheless the people are rapidly assimilating the knowledge which elevates and enlightens, and learning to reject that which terrorizes and deforms the mind, and just so sure as the last filthy tyrant, whose damnable atrocities were equal to any of Ivan's, though less spectacular, has been placed for ever beyond mischief, so will the last priest soon vanish from the land once contemptuously known as "Holy Russia".

If Peter was a religious and devout specimen of the Tsarist profession, Ivan the Terrible was infinitely more so. He built scores upon scores of churches to the glory of God. One of them, 38

already mentioned, stands beside the "place of skulls" at the foot of the Red Square. A more bizarre and incoherent piece of architecture does not exist in Russia. It is questionable indeed if anything as curious and ugly exists on earth. Ivan had it built in 1534-84 to commemorate the fall of Kazan, an event in Russian history as important as the capture of Granada is in Spanish history, or as Waterloo is in British. Ivan watched its spiky spires and onion-like cupolas arise from a canopied seat on the Kremlin wall. Saint Basil the "Simple",* to whom the building is dedicated was in all probability one of those half-mad hermits who, in medieval times, followed the calling of the early ascetics and still earlier prophets. Fletcher described them in the 16th century as "certain eremites who go stark naked, save for a clout about their middle, with their hair hanging long and wildly about their shoulders, and many of them with a collar and chain about their necks . . . The people liketh them very well, because they are as pasquils to note great men's faults, that no man else dare speak of. Yet it falleth out sometimes that for this rude liberty which they take upon them, after a counterfeited manner, by imitation of prophets, they are made away of in secret as was one or two of them in the late Emperor's time, for being over bold in speaking against the government . . ."

Somewhere under the intricate galleries of the interior, which is decorated in the arabesque style, the bones of Basil were buried, and with him there lies another "simple" called Ivan whose neck-collar and chain are still preserved. Russia has always been afflicted with religious maniacs from the very earliest times unto the present day. There were the "Old Believers", who once numbered seven millions; the *Bozslvestnye*, or "dumb" believers, who never permitted one word to pass their lips after joining up; the sect of the Beatified Redeemer, who spent their lives looking at a picture of Jesus; the *Subbotniki*** (not the kind which Gallacher joined), the "wizards of Novgorod"; the *Skoptsi*, who believed that Christ is still alive but sexless, and whose male members consequently castrated themselves; the *Dukhobors*, besides many others. The most freakish crowd appears to have been the *Khlistovstchina*, or "Flagellators." In his "Russian Empire", Haxthausen describes their meeting in the following words:

"On one day in the year the men, after their mad jumping and stamping, sink down about midnight upon benches, which are placed around, and the women fall under the benches, suddenly all the lights are extinguished, and horrible orgies commence. They call this *svalny grekh*—(promiscuity). My secretary in Moscow, who had opportunities of becoming acquainted with members of the sect, described the *Khlisti* or *Khlistovstchina* as by no means harmless, but an extremely cruel sect. Among

* "One there was whom they called Basil, that would take upon him to reprove the old Emperor for all his cruelty and oppression done towards the people. His body they have translated into a sumptuous church near the Emperor's house in Moscow, and have canonized him for a saint."—Giles Fletcher (written in 1588).

** Seventh-Day Adventists.

other things, he related that on Easter night the *Skoptsi* and *Khlisti* all assemble for a great solemnity, the worship of the Mother of God. A virgin fifteen years of age, whom they have induced to act the part by tempting promises, is bound and placed in a tub of warm water; some old women come and make a large incision in the left breast, then cut it off, and staunch the blood in a wonderfully short time. During the operation a mystical picture of the Holy spirit is put into the victim's hand, in order that she may be absorbed in regarding it. The breast which has been removed is laid upon a plate, and cut into small pieces, which are eaten by all the members of the sect present: the girl in the tub is placed upon an altar which stands near, and the whole congregation dance wildly round it. The jumping grows wilder and wilder: at last all the lights are suddenly extinguished, and the orgies above described commence. My secretary had become acquainted with several of these girls, who were always afterwards regarded as sacred, and said that at the age of nineteen or twenty they looked quite like women of fifty or sixty. They generally died before their thirtieth year; one of them, however, had married and had two children.

In Peter the Great's time many edicts were issued against the "impostors who went naked and thrashed out devils with a knout," and which description seems to fit Saint Basil. Never mind, if the old dear actually shook his fist at the bloody Tsar himself and "told him off", we can well afford to ignore his weaknesses, and love him for his strength.

The quaint church in which his bones repose almost baffles the pen. It is impossible to describe so grotesque a structure. There are smooth-sided, ribbed-sided, and fluted-sided cupolas none of which are identical in size. The flutes are sometimes perpendicular and sometimes spiral, and the sides are made of tiles and bricks which differ from one another again. Some are smooth, some glazed, and some covered with scales. These very scales are variegated, not only in color, but in shape—oval, round and shaped like leaves. There are nine cupolas all painted different colors with the ribs and flutes upon them of a different color still. The towers are four-sided, six-sided and eight-sided, and the whole structure is a rough octagon. The golden crosses rise from crescents,* and these crosses have the usual second cross-bar placed slantingly below the top one. This idea of placing a crooked bar in the middle of the upright arises from a belief the Russians had that Jesus was lame through having one leg shorter than the other. A wall protects the western side.

There are fanciful tales told about the building of St. Basil's, as there are of almost every celebrated building in the world. One of them is that Ivan called the church architect to him, after the work was completed, and asked him if there was

such another church in existence. The man answered no! "Could there be another like it?" queried Ivan. "I alone know how to build such another!" replied the craftsman.

"Then put out his eyes that he may never build its like again elsewhere," order the Tsar.

He was to be blinded, not for having produced a temple to God's glory, which resembles nothing so much as it does a gigantic bunch of carrots, onions, and Scotch thistles, but for having created an edifice which to the infatuated mind of Ivan was "a thing of beauty and a joy for ever." The story is a pure fabrication. The church was erected by one hundred and fifty German craftsmen and artists sent for by the "Terrible", who worked upon Tartar plans, and who have left behind them a monument of grotesque and barbaric artistry to fatigue the brains of people like myself, who nearly succumbed to intellectual delirium-tremens through the intoxication induced by studying it. The total lack of symmetry of the whole building, its weird curves, impossible angles, and multifarious color-designs, is really due to a preposterous architectural conception. Ivan, it appears, wanted eight churches erected in the Red Square, and one stone and seven wooden buildings were actually built. This did not please him, however, so his artists conceived the idea of building one church and "glueing" another eight on to it. St. Basil's is in reality, therefore, nine churches in one. When Napoleon was preparing his artillery for bombardment he ordered "that mosque" to be undermined and blown up because it interfered with the direct line of fire. The Cossacks arrived just in time to save it from destruction. The tower on the right hand of the picture was undergoing repairs during our visit, and the scaffolding poles partly obscured it. Napoleon the vandal would have totally destroyed it; the atheist Bolsheviks are carefully cherishing it and protecting it from the ravages of the weather. It is a historic marvel not to be lost without a pang of regret. When the November Revolution was an accomplished fact in Petersburg, rumors came from Moscow of the Bolshevik insurrection there, and Lunacharsky, believing the Church of St. Basil to have been demolished by the Communists' gun-fire, wept bitter tears and sent in his resignation to the party. Once again, however, rumor was a lying jade, for St. Basil's was practically untouched.

There is one more interesting spot in the Red Square. A long strip of earth, fragrant with glory and hallowed with immortal memories. It lies in the shadow of the Kremlin's hoary walls, and the stunted lindens drop their leaves tenderly upon it. Beneath the sward above, which shrivels in the tropical heat of summer and droops 'neath the snows of winter, the heroic dead who fell in the revolution are sleeping their eternal sleep. It is the "Brotherhood Grave", the holiest spot in Moscow. Beside them the citadel wall, whereon is hung the oriflamme they upheld, now blazoned with the story of their deed; below them the fantastic church of St. Basil's, and beyond them to the north the

* For two hundred years the Tartars were in possession of Moscow, and they fixed the crescents to the churches. When Grand Duke Ivan Vassilevich drove them out of the land he let the crescents remain and fixed the cross on top as a sign of victory. The practice of fixing the cross on the crescent has obtained since then.

Iberian Madonna. Could a more romantic burial ground have been found! John Reed was in Moscow the eve before the funeral. Snow was thick upon the ground. Men were digging the two long trenches, and John peeped down upon them over the piled-up earth. Tomorrow five hundred proletarians were to be laid therein:

"Here in this holy place," said a student, "holiest of all Russia, we shall bury our most holy. Here where are the tombs of the Tsars, our Tsar—the People shall sleep." His arm was in a sling, from a bullet wound gained in the fighting. He looked at it. "You foreigners look down on us Russians because so long we tolerated a medieval monarchy",

said he. "But we saw that the Tsar was not the only tyrant in the world; Capitalism was worse, and in all the countries of the world Capitalism was Emperor."

I stood there one burning summer's day with him whose privilege it was to enshrine in vivid prose the pregnant deeds of those who lay below. We both lifted our hats in silence. John was in happy mood that day. I was depressed. John was big and strong, hearty and boyish. I was ill, peevish, and pale. Life is full of mystery. In that thrice-blessed corner of Russia's sacred city John Reed himself now sleeps in dreamless slumber. It is almost unbelievable.

Eastern Karelia

(*A Link Between Soviet Russia and Scandinavia. Impressions of a Voyage to Bjarmaland.*)

By HAAVARD LANGSETH

[Recent events are again bringing Russian and Scandinavian populations closer together. Already in the ninth century there was active communication between Sweden and Northern Russia. The following article deals with territory concerning which the ancient Swedes knew very little, however, and which they regarded as a land of fable and mystery.]

ALL the information we have in Scandinavia concerning the work of a number of Finnish comrades, with Edvard Gylling at the head, just beyond the Finnish boundary, is a few little items in the newspapers. Most of the Scandinavian comrades are perhaps entirely unacquainted with what the name Eastern Karelia stands for, and what the work out there is driving at. As I very recently visited Comrade Gylling in the capital of his realm, Petrozavodsk, I am very glad to comply with the request to tell something about that country.

The country and the people were already known to us Scandinavians in the Viking period, under the name of *Bjarmaland*. This was the country which Erik Vidfarne passed on his journey to *Gardarike** about the year 600, and this country was the object of Tore Hund's famous pillaging expedition to *Bjarmaland* in the year 1026. The *Bjarmalanders*, which probably meant all the Finnish tribes, were in constant feud with both the Swedes and Norwegians until far into the thirteenth century. Their neighborly relations then expressed themselves in continuous mutual attacks and punitive expeditions, which occasionally degenerated into wars of absolute extermination. Later arose the struggle for land between Sweden and Russia, which lasted for several centuries, until Sweden, at the peace of Stolbova (1617), was obliged to limit its possessions to the boundaries of present-day Finland. This divided the Finns from the Karelians, who are essentially of the same race, and the racial origin of the Karelians was forgotten by Western Europeans, who included them under the designation "Russians". The fact that Finland in 1809 was ceded in its entirety to Russia did not produce any alteration in this condition. But

the Karelians nevertheless have retained to this day their qualities as a Finnish tribe, their language, their customs and manners. The boundaries of present-day Karelia follow the language line, which in the east runs from Lake Ladoga along the Svir River to Lake Onega and thence almost straight over to Soroka on the White Sea. The Karelian language does not differ much from the Finnish, and it was in the Karelian language and in the remote forest regions of Karelia that fragments of the Finnish national epic "*Kalevala*" survived for centuries, until they were collected to form a single whole, in the last century.

Economically and culturally the country is far behind its western neighbor, Finland. This is due to the fact that its Russian rulers did absolutely nothing to develop or to exploit the rich natural resources hidden there.

The aspect of nature is typically Finnish, the chief impression being one of forest, moor, and water. High mountains are found only in the north and west, and the country is pretty well cut up west and north of Lake Onega; but the tract north and east of Lake Ladoga runs pretty uniformly to the Russian plains. Of lakes there are thousands, all the way from very little ones to regular "inland seas", such as Seesjärvi, Vikujärvi, Tuopajärvi, and others. Voluminous rivers flow from these great lakes out into Lakes Ladoga and Onega and the White Sea. The lake plateau is about 100 to 200 meters above sea level, and the rivers therefore form in their courses either cataracts that are miles in length, or precipitous waterfalls. An idea of the country's wealth in water power may be gained from the fact that along the Murman railway, from Petrozavodsk to Murmansk, there are waterfalls with about one million horsepower, all very easy to harness.

* The Old Norse name for the portion of Russia known to them was *Gardarike*.

The climate of course varies in the various parts of this extensive country, but the difference between the mean temperature in the south and north is less than might be expected. This is due to the equalizing influence of the White Sea and the Great Lakes, particularly Ladoga and Onega. Along the coast of the Arctic Ocean, the effect of the Gulf Stream is of decisive importance in determining the climate.

The flora is about that of Central Scandinavia. In the southern districts even wheat may be raised, and a number of cereals thrive rather well as far north as the White Sea. The chief vegetable life is the forests, in the south, pine and deciduous forests; in the north, almost exclusively fir and spruce. The total forest area is about 10,000,000 hectares, or one and one-half times that of Norway. Of the forests, many are really primeval forests, in which you may pass for forty miles without finding a trace of other men, even of hunters or fishermen. Trees of a diameter less than thirty centimeters, four feet above the ground, are never cut down. It is self-evident that there is preserved here a forest capital that should and must be utilized for the welfare both of Karelia and the rest of the world. In the forests there is an unbelievable wealth of game. The king of the forest, the bear, holds his own here, almost absolutely unmolested. The rivers and lakes are rich in fish, man has not yet even taken the fresh-water fish out of the Karelian lakes. Salmon, in the many rivers that descend to the White Sea, are more abundant than anywhere else in northern Europe.

In addition to the forests, the fruitful, workable soil, the water power, the game, and the fish, Karelia has peat-bogs that are miles in width, great deposits of minerals, even veins of coal in some places. These possibilities have been but little investigated, but it may be of interest to point out the wealth in bog iron ore in a single lake, Vikujärvi, where there are 11,000,000 tons of bog iron ore. This will perhaps give a slight idea of the possibilities that a systematic geological survey would reveal.

The Karelian Labor Commune

After the defeat of our Finnish comrades about ten years ago, great bodies of the revolutionists moved over toward Russia, seeking refuge and a livelihood. Many went to Norway and Sweden, many lived as fugitives in Finland. To gather these bands, to afford them economic protection, to organize them anew for continued work for Communism, this was of course a thought that many a Finnish comrade had in mind. But nothing came of these plans until Comrade Edvard Gylling, in the spring of 1920, proposed to the Russian Government to form a colony of the fugitive Finnish comrades in Eastern Karelia. His plan was approved. Karelia was separated and given the name "The Karelian Labor Commune", constituting a partly autonomous area belonging to the Russian Federative Republic, and the Karelian Revolutionary Committee was formed on Midsummer Day, 1920.

The Revolutionary Committee consists of Finnish and Karelian Communists with Gylling as Chairman. The first task taken up was the economic reconstruction of the country, and we may say that the comrades in Karelia were not idle. In addition to keeping the most necessary branches of economic activity in operation and developing and improving them, they undertook an extensive reconstruction and reorganization in a Communist direction. In spite of the great difficulties, in spite of the almost absolute lack of usable talents, at first only a few dozen, now at most a few hundred, in spite of a very moderate degree of understanding and assistance from both the Finnish and the other Scandinavian comrades, they have already accomplished great things. The economic council, which has control of the solution of economic questions, consists of twelve persons with a Presidium of five members. On Gylling's shoulders as Chairman of this Presidium, there rests many burdens. Among the other members are the Karelians Potoyev, Gur'yev, and Nikitin, as well as the Finnish Comrades Mäki, Hapalainen, Mäkinen, and Saksman.

A KARELIAN SOVIET CONGRESS

MOSCOW, January 15.—The Karelian Revolutionary Committee has sent out the following communication: "The first Soviet Congress of the Karelian Workers' Commune will assemble on February 10 in Petrozavodsk. Representatives of the Scandinavian comrades are welcome.

*Karelian Revolutionary Committee,
by GYLLING."*

The Turkish Offensive Against Armenia

An Interview With Comrade Michael Pavlovich

[Comrade Michael Pavlovich, a member of the Presidium of the Council of Propaganda and Action of the Peoples of the East, has arrived in Moscow from Azerbaijan. In an interview given before the revolution in Armenia took place, he made the following statements as to events now in progress in the Caucasus.]

1. The Turkish Offensive; Armenia and Georgia

THE Turkish offensive against Armenia, the occupation of Sarahamish, Ardagan, and Kars by the Kemalist troops, the offensive which is menacing Erivan, the capital of Armenia, and Tiflis, the capital of Georgia, these two bases of the international counter-revolution in the Caucasus, all this is of the greatest international significance. The Turkish offensive manifests the whole strength of the Turkey of Kemal, which the European diplomats had already tried to divide and to disintegrate. It shows the whole silliness of the imperialistic plans of Armenia, which was endeavoring to capture for itself Turkish territories. Even while it was attacked by Greece, France, and England, the Turkey of Kemal manifested so much force, that it was sufficient for the Turkish troops to cross the border of Armenia, and at once the question arose in Erivan and Tiflis of the necessity to fight for the very existence of the two Caucasian states.

It was quite recently that the Armenian and Georgian press organs were maintaining a bitter campaign against Soviet Russia and against the Turkey of Kemal, preparing the mass of the people for the eventuality of an open war against both neighboring states, which would break out at the first opportunity. It was quite recently that the Georgian press, in connection with the visit of the representatives of the Yellow International, Renaudel and Vandervelde, the servants of capital, and of old Kautsky who has lost his senses, poured out an ocean of dirty calumnies against Soviet Russia. It was only yesterday, that Georgia assisted the counter-revolutionary bands of the big landlord and pseudo-*iman*,* Nashludin, and of Denikin's colonel Alikhanov to pass into Red Daghestan, supplying these bands with arms, munitions, horses and officers, and that Armenia sent its provocateurs into Sangesour and Karabakh to organize an uprising of the Armenian peasants, who were deceived by the village bourgeoisie into taking up arms against the Red troops. And today the same press organs have to put forward the question of the very existence of Georgia and Armenia.

The danger which threatens us from the side of Georgia and Armenia would have been very serious, and, even without the encouragement of Renaudel and Huysmans, these states would have attacked us long ago, if it were not for one circumstance. The mass of the people of Georgia and Armenia cherished the greatest sympathy for the idea of Soviet Government. Dozens of representatives of

Armenia and Georgia attended the Congress of the Peoples of the East at Baku and they took an oath, together with the other delegates at the Congress, to defend Soviet Russia against the assaults of World Imperialism. The Armenian and Georgian delegates had to overcome many obstacles in order to attend the Congress. Some of them were afterwards banished from their countries. But notwithstanding the fact that they were well aware of what was awaiting them, they came to the Congress. This is the best proof of the fervent sympathies which are cherished by the toilers of Armenia and Georgia for Soviet Russia and Azerbaijan. Hundreds of thousands of Georgian and Armenian peasants and workers are impatiently awaiting the moment, when the Red troops will come to their assistance and help them to overthrow the bourgeois governments and to introduce the Soviet system. On many occasions I have personally heard the Georgian and Armenian peasants saying: "If the Turks or Tartars come against us, we shall fight them to the last drop of our blood, but the Russian Red Army are our brothers and we shall take up no arms against them."

2. The Failures of the Entente

World reaction suffered serious defeats on both fronts of the Soviet Federation—on the Western and Eastern.

On the Western front, peace was concluded with Poland, and Wrangel was crushed with the quickness of lightning. Soviet Russia gained a new opportunity to gather its forces for the economic and cultural reconstruction of the country. All this was accomplished in spite of the efforts exerted by the French imperialists, who did everything to entice Poland and to assist Wrangel.

On the Eastern front, all the plans of the international counter-revolution were frustrated by the victorious march of the Turkish revolutionary troops against the Armenian *Dashnaks*,* these agents of world imperialism in the Caucasus, and allies of the bandit Venizelos, who has been opposed by the best elements of the Greek people and who, at last, was compelled to retire. The ground is shaking under the feet of the reactionary Government of Armenia and, at the same time, the whole plan of the international counter-revolution, which endeavored to preserve and strengthen Armenia and Georgia as two bourgeois despotisms to play the part of the gendarmes of world imperialism in the Caucasus, has become futile.

Many leading men in Armenia were conscious

* The name of the Armenian Nationalists, usually parading under a Socialist cloak, like the "Socialist" followers of the Polish President Pilsudski.

* "Iman"—Mohammedan religious dignitary.

of the impending disaster even before the final defeat of the Armenian troops had been accomplished. The Armenian newspaper, *Nor Hocks*, wrote:

"The march of the Turkish troops against Armenia is the first act in the tragedy of the struggle between East and West. Turkey has for its ally the Russian Communist Government, which has already manifested the incomparable force of its revolutionary resistance. The leading persons of Armenia should understand, that, in the struggle between East and West, Armenia must be friendly to Russia and Turkey . . ."

Hundreds of representatives of the Communist Party of Armenia appealed in the name of the Armenian toiling masses to the Russian comrades to use their influence and get the Soviet Government to intervene in the Armenian-Turkish massacres, to exert a pressure upon both sides to put an end to the war between Turkey and Armenia and to initiate peace negotiations. And Soviet Russia should do this.

At present, the Entente, which lost its hopes of weakening Russia on its eastern frontier, is trying to negotiate with Kemal Pasha and to entice him against Soviet Russia. But this new plan, even if Kemal can be made to listen to the Entente, will fail just as disgracefully as all the past adventures of England and France.

3. *The Cause of the Armenian Defeats*

Desiring to blacken Soviet Russia in the eyes of the masses, the *Dashnaks* were crying both in their press organs and at meetings, that Soviet Russia is supporting the imperialistic plans of the Kemalists, and that the Bolsheviki, together with the Turks, are preparing a combined assault against Armenia with the object of dividing it between themselves. This was a conscious lie. And this time the ruling classes became the victims of their own lies.

When the Turkish troops rushed into Armenia, and the Government of the *Dashnaks* started to call the mass of the people to arms for the protection of the very existence of the Armenian people, the latter did not answer this call with sufficient enthusiasm. The people of Armenia were panic-stricken. The first condition for a vigorous defense against the enemy is faith in the possibility of such defense, the hope that the blow of the enemy can be repulsed. But the Armenians could have no such faith. The small Armenian nation could not hope to come out victorious in a bloody struggle against Turkey, which it believed was supported by the powerful Soviet Federation, which had crushed so many of its enemies. The bravest became downhearted, and thousands of soldiers threw away their arms and deserted. This was during the first period of the war. The loss of Kars, Ardagan, Alexandropol—this was the first result of the falsehood, by which the *Dashnaks* poisoned the soul of the people and disheartened even the most brave and courageous. But when it became clear, that powerful Soviet Russia had no intention at all to take advantage of the difficult situation of the small Ar-

menian nation, but, on the contrary, had shown its willingness to exert every effort to make an end of needless bloodshed, then the *Dashnaks* were dealt a second and even more menacing blow. After having lost much of the Armenian territory, which was occupied by the Turks, the *Dashnak* Government lost also the last remnants of confidence which it enjoyed with the Armenian people and which was now bestowed upon Soviet Russia. The falsehood of the *Dashnaks* became clear to everybody. The course of the events exposed to the Armenian people the criminal treachery and, at best, the frivolity of the *Dashnaks*, who placed faith in the "sincere" desire of the Entente to preserve the independence of Armenia.

In the same time it became clear that Soviet Russia had no selfish intentions in regard to Armenia, that she desired to live in peace with all her neighbors and that she was a sincere friend of all weak nations.

The *Dashnaks* were powerless and were defeated by the small army of Kemal only as a result of the lies, which they systematically spread against Soviet Russia.

4. *The Turkey of Kemal and Soviet Russia. The Intrigues of the Entente*

The Kemalists, even if they were anxious to change their policy and to throw the Turkish army against Soviet Russia, would be powerless to accomplish this on account of the truth which they themselves were telling the people of Turkey about Soviet Russia, about the honesty and greatness of the People's Commissaries, about the might of the Red Army. During the most critical moments of Anatolian Turkey, when the soldiers of the Turkish revolutionary army had to fight simultaneously against the advancing Greeks, against the French and English, and against the Armenian expeditionary corps, Kemal and his followers were telling their soldiers, who had sometimes become exhausted from suffering and hardships: "Don't be discouraged. Make a stand for one more month. Great Soviet Russia is hurrying to your assistance. She sends us shells, rifles, and machine-guns. She crushed the Polish troops, the army of Wrangel, and she is rapidly approaching the borders of Western Europe. Soon France and England will be exhausted by the war against powerful Soviet Russia to such an extent, that they will be compelled to give up their struggle against us." This kind of propaganda was carried on in Turkey day after day. Soviet Russia was represented as the most faithful friend of all Eastern nations and especially of Moslem Turkey. Much was said and written about the attitude of the Soviet Government toward the Tartars, who were granted independence, toward the Bashkirs, etc.

It would be quite naive to believe that, after having carried on such propaganda, it would be easy to get the Red *Askers** to war against Soviet Russia. And if Kemal and his followers would risk such an adventure it will be sufficient to deal

* Turkish soldiers.

him one or two good blows, and his army will fall to pieces like a house of cards.

It should be borne in mind that the strength of the Turkey of Kemal is based upon two factors: In the first place, its own intrinsic force; and in the second place the power of Soviet Russia. The Turkey of Kemal drew its energy and most of its power from the moral support it was receiving from Soviet Russia. When Turkey loses this support, her power would at once be shattered, and this loss would be replaced neither by the fleets and expeditional detachments of the Entente, nor by its gold.

5. *The Moslem Population of the Caucasus and Soviet Russia*

The fears, which are expressed by some timid persons, that the Turkish Pan-Islamists might get the assistance of the Moslem population of the Caucasus, are quite idle. During the recent assault of the bands of the *Iman* Nashludin upon Red Daghestan, the Moslem partisans rallied in thousands around the banner of Soviet Russia in spite of the fact that Nashludin appealed to the religious sentiments of his co-religionists. During the attack upon Resht, the Moslem partisans were fighting like lions, and it was not they who joined the Persian Cossacks, but the latter who came over to our side.

It is doubtful whether Kemal would try a hostile attack against the Soviet troops. But if such an adventure on his part takes place, we should not hesitate to call the mountain partisans into our ranks, and it is quite sure that they will not side with Kemal, but, on the contrary, the Red *Askers* will join us.

6. *The Soviet Revolution in the Caucasus*

We are on the eve of a Soviet Revolution in the Caucasus. Such a revolution will be the best pledge for the peaceful development of the Caucasus. In the same time, revolutionary Georgia and Armenia would become our most faithful allies in the event of a change in the policy of Kemal, and his siding with the imperialistic powers of the west.

Soviet Russia can have no intention of enslaving Georgia and Armenia. On the contrary, our vital interests in the Caucasus and in the whole East require, that Georgia and Armenia be actually independent and that they do not serve as a tool in the hands of the Entente, nor become provinces of Turkey, even though it be the Turkey of Kemal.

RUSSIAN PRISONERS IN POLAND

RIGA, January 10.—Last night Yoffe sent a note to Dombosky, in which he points out that though the Polish delegation had already promised to take measures for the improvement of conditions in which Russian and Ukrainian war prisoners and interned are living, in reality no effective measures have been taken. Yoffe says that camps in which the prisoners are kept are entirely unfit and unadapted for living purposes. There are no beds, no clothing, no footwear, no medicines. There are no decently equipped labor battalions. This is attested by the American Young Men's Christian Asso-

ciation's Warsaw Department. The rations fixed for prisoners remain fixed on paper only. The wounded are left without medical assistance for a long time, with the result that microbes multiply in every wound. Many men are frozen in their huts. These inhuman conditions frequently lead to death: the mortality is awful and epidemic dangers are greatly increased. Aside from this there are also many cruelties. The Lemberg newspaper *Vpered* on January 2 tells that forty-five men died in one day as a result of having been frozen. War prisoners are beaten with wires used for electrical purposes. An actress attached to a field theater, who was taken prisoner, states that she was beaten with rubber boots and hung up by her feet to the ceiling. Communist and Jewish soldiers are treated far worse. All these awful incidents have been reflected in the Polish press, which protests against such cruelty. In view of this, the note says that the Workers' and Peasants' Governments of Russia and Ukraine can not bear such actions to their citizens, and categorically insist on an immediate change of attitude. They particularly insist that officials responsible for such actions shall be removed. The Soviet Governments of Russia and Ukraine warn the Polish Government that unless it will refrain from such inhumane treatment of prisoners, the Soviet Governments of Russia and Ukraine will take the necessary measures toward the Polish war prisoners in Russia and Ukraine.

Next Week's

Soviet Russia

PICTURES—4 pages—reproductions of Soviet posters showing how the Workers' and Peasants' Republic encourages education, military service, etc.

THREE YEARS OF UNIVERSAL MILITARY TRAINING—by *G. Sax*. This article describes the system of obtaining recruits for service in the Russian army.

TRADE UNIONS—Statistics of the trade unions in Russia, a complete table of figures indicating the geographical distribution of all members of Russian trade unions.

FOREIGN CONCESSIONS—An extensive statistical account of the concession areas.

THE CITADEL OF HOPE—by *John S. Clarke*. Gives a complete historical account of the Kremlin, and tells how this fortress has been used as the stronghold of the proletarian revolution.

Wireless and Other News

THE DEMOBILIZED RED SOLDIER

Moscow, January 11 (*Rosta*).—On the subject of the partial demobilization of the Red Army, A. Verkhotursky writes in the Petrograd *Pravda*: "Under the Tsarist regime the soldier, who after the completion of his military service returned to his native village, was a rather doubtful bearer of culture—but the Red soldier who has received a political education will have to fulfill a very important mission among the peasants. We must avail ourselves of his aid for the purpose of a constant enlightenment of the peasants to the achievements of the Revolution, as well as for the purpose of a still closer organization of the landless peasants. It is the mission of the Red soldier to form a connecting link between city and country. In his person the Revolution obtains a new defender and representative of Communist ideas in the darkest and most backward corners of our great Russia."

LEFT SOCIAL-REVOLUTIONISTS

Moscow, January 11 (*Rosta*).—An All-Russian Conference of the International Party of Left Social-Revolutionists, which was convoked under a decision of the Central District Office, of October 26, 1920, was concerned with the tasks of the party with reference to the internal and international situation of Soviet Russia. The conference fully recognizes the tactical position of the Conference which was adopted in the resolution of April 29 and October 26, and decides that it shall be the basis for the further activity of the party. The party is to participate in the elections and in the work of the Soviets applying at the same time whatever criticism it wishes to make of Communist policies. The party wants to participate in productive work and rejects all efforts to bring the Left Social-Revolutionaries into antagonism with the ruling (Communist) Party.

POLAND PREPARING FOR WAR

January 18 (*Rosta*).—According to news from Danzig, train-loads of arms and ammunition are arriving every day. Under the command of the French officers an energetic reorganization of the Polish armies has begun. The number of batteries with the artillery regiments has been increased by 50 per cent. English firms have received large orders for soldiers' boots and army cloth. Everything points to the certainty that these are preparations for a spring offensive against Soviet Russia.

ITALIAN TRADE WITH RUSSIA

January 17 (*Rosta*, Vienna).—A correspondent of the *Daily Express* reports from Constantinople that while the negotiations between Russia and England were dragging on, Italy was already developing considerable activity in Russia.

A correspondent has it from a reliable source that Italian business firms have undertaken to fur-

nish Russia with manufactured goods in exchange for rugs.

Italian automobile concerns have concluded contracts for delivering 50 motor cars to the Government of Azerbaijan, and the Banca Commerciale Italiana is opening a credit in order to facilitate the transactions between Italy and Russia.

THE UKRAINIAN SOVIET REPUBLIC

Moscow, January 18.—Rakovsky (Ukrainian Commissar of Foreign Affairs) has granted an interview to a newspaper correspondent in which he declares that the Ukrainian Soviet Republic is at present conducting negotiations with five states, i.e., Poland, Lithuania, Georgia, Esthonia, and Latvia, for reestablishing normal political and economic relations. He further spoke of the plans of the government tending to cover the whole of Ukraine with a close network of electrical power stations in order to exploit thus in the best possible way the coal and peat deposits of the country.

RUSSIAN POLICY IN CONSTANTINOPLE

BERLIN, January 19 (*Rosta*).—According to the Russian counter-revolutionary paper *Golos Rossii*, appearing in Berlin, a French Military Court at Constantinople has caused ten soldiers of Wrangel's former army to be shot for Bolshevik propaganda among the interned troops. We do not know whether the appearance of the first number of a new Communist newspaper, printed in Russian at Constantinople, which is also reported in *Golos Rossii*, has anything to do with the execution of these men. This paper appears as an organ of the International Workers' Union and makes a strong appeal to continue the struggle against the Venizelists as well as against the adherents of Constantine and to organize the fight against the bourgeoisie.

TROTSKY ON DEMOBILIZATION

Moscow, January 4 (Wolf).—From the last speech of Trotsky at the Soviet congress the following passages have subsequently become known: "We hope that up to the middle of next summer we will be in a position to reduce the army to half of its present size, provided there will be no complications. We will reduce the strength of the cadres without weakening the army. But this result will be attained only then if we will improve the military and the political education. Therefore we will have to increase the number and the quality of the Red officers who are issued from the workmen's and peasant class. By demobilizing our armies in a cautious way, we will nevertheless be unable to remain without reserves. For this reason we must introduce the militia system, relying upon the experiences of the three years of serious struggles and defeats. We will also have to act according to the extent of the international intentions directed against us."

EINSTEIN WRITES TO RUSSIA

BERLIN, January 28 (Jewish Correspondence Bureau).—We have learned from reliable sources that Professor Einstein, now famous all over the world, has sent a letter of congratulations to the Soviet Government in which the activity of the Soviet's Foreign Bureau for Science is highly praised. Professor Einstein says in his letter that the Soviet Government deserves to be thanked for having reestablished relations between Russian and German scientists.

The following Moscow wireless statement probably is concerned with the matter in connection with which Professor Einstein forwarded the above letter:

Moscow, January 14.—The Section for Science and Technology of the Supreme Council of National Economy has created a bureau for Foreign Science and Technology, which is to enter into regular relations with the scholars of the West, in order to study new inventions and technical methods and to inform the West about the scientific achievements of Russia.

BUSINESS WITH HOLLAND

The Prime Minister of Holland has declared in the Parliament that private commercial transactions with Soviet Russia are allowed by the government.

A SOVIET BANK IN KHARBIN

A representative of the Soviet Government has arrived in Kharbin with instructions to establish a special Soviet bank.

The task of this bank will be the establishment of commercial relations between Soviet Russia and

the Eastern-Asiatic states, as well as the exchange of Soviet notes and valuables, such as precious stones, objects of art, etc.

With reference to the establishment of the bank, negotiations were conducted with one of the biggest local business men. For the organization of this bank the Soviet Government will in addition to its paper money and valuables advance 65 million rubles in gold.

On the other hand the Kharbin business man, in establishing the bank, will have to organize a financial syndicate to furnish the bank with a capital of no less than 100 million rubles.

In its commercial and financial transactions the bank will have complete independence. In order to watch its activity, however, there will be appointed a commercial agent from Moscow.

One month after the establishment of the bank the Soviet Government will have to receive from Manchuria goods for not less than 100 million rubles.

The negotiations lasted a week, and as a result the Kharbin business men informed the representative of Soviet Russia that the bank might be opened under the following conditions:

The bank will be an exclusively commercial undertaking and refrain from any political activity.

Fifty per cent of the net profits of the transactions of the bank will be used for the benefit of the private shareholders of the bank; 10 per cent for the management and the employees of the bank; the remaining 40 per cent for the Soviet Government.

The Kharbin terms have been reported to Moscow.

The Laws of the Russian Soviet Republic

How is labor protected by the Workers' and Peasants' Government? What do they mean by "the right to work" and "compulsory labor"? How are working hours regulated, and efficiency attained? These and other important facts are made clear in the booklet

Labor Laws of Soviet Russia

which gives the full official text of the labor laws.

The Marriage Laws of Soviet Russia

An 85 page booklet (size 5 by 7 inches) containing the full text of the first code of laws adopted by the All-Russian Central Executive Committee, September 16, 1918. This is the only complete, accurate, and authoritative statement of these laws, governing CIVIL STATUS, DOMESTIC RELATIONS, MARRIAGE AND DIVORCE, FAMILY RIGHTS, GUARDIANSHIP, etc.

Price of each booklet, 25 cents, postpaid. Send orders and remittances to

VILNA

This cartoon, taken from the Dutch daily "De Tribune", illustrates the reaction of all the proletariats of the small nations that have been invited to send troops to form an "international" army for the "policing" of Vilna. They understand that if they send even small bodies of troops, they may be involved in warfare against their brother-workers of Russia, for the Soviet Government has notified the Lithuanian Government that it will consider it an unfriendly act on the part of the Lithuanian Government if it permits any of these "international" troops to proceed to Vilna. The Swiss Government, knowing the temper of its workers, has already refused to allow such troops to pass through Switzerland.

PICTURES THIS WEEK

This week's SOVIET RUSSIA has four full page posters used by the Soviet Government to encourage the various activities for defending and building up the Soviet state. These posters are the following:

Page 183: Poster to encourage literacy: "The Illiterate Is a Blind Man: Everywhere Pitfalls and Misfortunes Waylay Him."

Page 187: Poster to encourage volunteering in the Red Army: "Have You Enrolled as a Volunteer?"

Page 193: Poster to stimulate education (particularly in agricultural areas): "In Order to Have More, We Must Produce More; To Produce More, We Must Know More."

Page 197: Poster to stimulate production: "With Arms We Got the Enemy, With Work We Will Get Bread. All Get to Work, Comrades."

The Kremlin, Citadel of Hope

By JOHN S. CLARKE

"Thou shalt call thy walls Salvation and thy gates Praise."—Isaiah, 60, 13.

LONDON has its Tower and Abbey, Rome its Capitol, Granada its Alhambra, Seville its Alcazar, and Moscow its Kremlin. "And the greatest of these"—is the Kremlin.

Come with me to the Kremlin, reader, and let the twentieth century take care of itself for a little while; leave the follies of this generation for a little hour and peep with me at the follies of those of former days. Follies as foolish, as wicked, as ineffectual as are our own, but which may claim a measure of extenuation in that they were the products of elemental impulse rather than the effects of a bastard culture. Come with me, then, and glimpse the fantastic and ornate, the bewildering and sublime prospects of far off years. We will saunter, you and I, through the streets of this tiny Byzantium, this sepulchre of despair, this necropolis of despotism, and if perchance we hear mad shrieks of pain and groans of hope abandoned, and sense the presence of human blood fresh-spilled—remember such things are but figments of the imagination conjured forth by memories which perception awakes. The heart may palpitate, the brain grow fevered, the blood turn cold and the hand clammy, but it may be that here and there the fragrance of some old time eastern garden shall scent our nostrils, borne on such an atmosphere as that with which the womanly wit or feminine cunning of Scheherazade bewitched her sultan. And from the clusters of iron and gold, of silver and precious stones, of paint and plaster, of jasper and agate and dead men's bones, we shall hear arise above the sound of passing souls and women's sighs and falling tear-drops, the trump of an inextinguishable renaissance. We shall walk on pathways paved with human skulls and tread the dust that shall be ours, for where others stretch both hands towards and gaze with eager eyes upon the past—we who walk the Kremlin's holy ground shall glimpse the future too.

There are many "kremlins" in Russia. The word is simply a Tartar word for fortress. Not one of them, however, is quite so wonderful as *the* Kremlin. It is triangular in shape and girdled by loop-holed walls sixty feet in height, with ramparts and picturesque bastions of Russo-Italian design. These fifteenth century fortifications (for previous to this the walls of the Kremlin were of oak like the walls

of the Athenian Acropolis) are breached by four magnificently towered gateways—the Troitsa, the Borovitsky, the Spasskoi, and the Nicholas.*

The most beautiful gateway of all is the glorious red and green Spasskoi Vorota or "Gate of the Saviour", which stands opposite St. Basil's Church in the Red Square. This was the entrance chiefly used by the delegates, and upon the lofty tower of which is fixed the clock which chimes the "International" every hour. What a miracle is this to be sure. What an irony of fate. What a delicately, tantalizing piece of sarcasm. Perhaps you don't see it, reader. Let me tell you something about the Saviour Gate. To begin with, the Palladium of the Russian Empire hangs here—the "Redeemer of Smolensk", it is called, and, before the Revolution, something like ten thousand people used to visit it every twelve hours. It is only a picture, but pictures have mysterious meanings to the folk of Russia. No one, not even the Tsar, was ever permitted to pass this sacred picture without uncovering the head, for it "delivered" Russia from the Polish yoke in 1613 when it went before the victorious army of Pozharski. On the conqueror's return he entered by this gate, since when the "uncovering" law has been in force. It is miraculously invulnerable, of course, for Tartars have attempted to steal it, but every ladder they scaled broke down at the precise moment, until in fear and vexation they abandoned their nefarious designs. When the French had possession of Moscow they brought along a cannon to bombard it into bits, but the Lord sent invisible angels to damp their powder and so frustrate *their* dirty doings. Along came the Bolsheviks and—well perhaps they think a thing so extraordinarily uncanny is better left alone. They haven't, therefore, interfered with it; instead when the superstitious muzhiks came along to cross themselves before the "Saviour", the Bolsheviks wickedly make the big clock above them tinkle forth—

"No Saviours from on high deliver!"

I wonder how many of them see the point.

Through this *porta sacra* we climb a cobbled incline and pass the Nunnery and the small Nikolai Palace. In front of us rises the enormous tower of Ivan the Great with its deep-toned bell, at the foot of which the "Tsar Kolokol" with the great

* Just within the latter is the spot where the Grand Duke Sergius was killed by the bomb of Kalayev on February 17, 1905.

piece broken out of its side, is lying. This tremendous bell was cast in 1733 by the Empress Anne from metal which had been used previously for a similar purpose by Boris Godunov. This Tsar tried to atone for his many crimes by presenting a big bell to the city. Originally it weighed 135 tons, but, when after lying broken for 100 years, Anne had it recast, she piously added something to it. It is now 19 feet high, 60 feet in circumference, and weighs 200 tons. The tongue is 18 feet long. The shed in which it was cast took fire, and the water thrown upon it to extinguish the flames cracked the over-heated bell and broke a huge piece from its side. Behind it the tower of Ivan the Great rises to a height of 318 feet. It is the grandest belfry in Russia, which is not saying much, and was erected in 1600 by Boris Godunov to commemorate the deliverance of the country from the great famine and to provide "relief work" for the famished people. Two of its bells weigh respectively 66 tons and 33 tons. Halfway up there is a balcony from which the Tsars from the time of Boris to Peter the Great made speeches to the multitude. Behind and beyond the belfry are the three Cathedrals of the Kremlin and the palace; while opposite, near the river, is the three-sided structure which once embraced the colossal statue of Alexander, but which the Bolsheviks have dethroned. The ceilings of the three-sided promenade are made of beautifully executed mosaics representing in effigy all the Tsars since Ivan's time.

The little river flows smoothly below the loop-holed walls, and the sun beats down upon the glorious golden-domed white marble Church of the Redeemer, away beyond the bridge over which the stricken troops of Napoleon crossed on their retreat. In the distance the low Sparrow hills break the monotony of the flat-lands, and recall the anguish of the days when the Siberia-bound criminals and "political" were gathered upon them and formed up in marching order for the murderous march in chains.

The great open space between the wall and the belfry is weed-grown and ruinous-looking, but always has been I understand; the soldiers quartered in the barracks behind the palace use it as a recreation ground. The three cathedrals (1) The Assumption, (2) The Annunciation, (3) The Archangel Michael are dreary and dilapidated looking in the extreme. Stucco and whitewashed piles with only elaborate frescoes and faded paintings on the exterior to save them from being little more than eyesores. But they teem with historical associations, and to view their half-tarnished gilt domes, golden crosses, and vividly colored roofs from across the river on either a moonlight night or a sunny day is to glimpse fairyland. Green, red, white, pink, and black clusters with gold and silver spires leaping heavenward like tongues of flame from out of the crowded flashing domes is an enchantment never to be forgotten.

I explored the Kremlin alone, and developed in the task an eeriness which has not been thrown off to this day. Around the bends, angles, curves

and twists, in and out the courts and alleys everything is silent, strange, weird, and spectral. One traverses the pathways of medieval Russia, and fancy creates out of every shadow a geni which startles the heart.

Cathedral of the Archangel Michael

Where solitude reigns there reigns not always peace. The mind becomes more alert, and the pulse is quickened, as memory brings to life the famous and infamous dead. And a multitude of ghosts haunt the Kremlin. The Russian Nero, Ivan the Terrible, grins at one round every corner. His is a most intrusive ghost, an unwelcome, objectionable, nightmarish ghost. The corpse lies with the body of the son—the son whom the father slew—in the Cathedral of the Archangel Michael. An old song, a translation of which Professor Morfill gives, describes his funeral:

"At the Ouspenski Cathedral
Of Michael the Archangel
They beat upon the great bell—
They gave forth a sound over the whole damp mother earth.
All the princes—the boyars—came together,
There was a new coffin made of cypress wood:
In the coffin lies the orthodox Tsar—
The orthodox Tsar—Ivan Vassilivich the Terrible.
At his head lies the life-giving cross;
By the cross lies the imperial crown;
At his feet lies the terrible sword;
Everyone prays to the life-giving cross;
Everyone bows to the golden diadem;
Everyone looks with trembling at the terrible sword.
Around the coffin the wax lights burn;
Before the coffin stand all the priests and patriarchs.
They read and sing the farewell hymn,
They sing farewell to our orthodox Tsar—
Our terrible Tsar—Ivan Vassilivich."

They were evidently bent on securing his admission into paradise at all costs, but on reflection one is surely justified in echoing the sentiments of Burns:

"If such as he in heaven may be,
Then welcome! hail! damnation."

Yes! the life-giving cross at his head. At the ghastly head of the monster who once amused himself by roasting and otherwise torturing 60,000 people at once; who used to let bears loose upon his Moscow "subjects"; who is alleged to have nailed a man's hat to his head as an "act of censure"; who caused a woman to be placed astride of a rope naked, and drawn to and fro until she was sawn in twain; who committed the horrors described in the last chapter, and who hammered the brains out of his own child. No doubt he is in the Christian heaven, for such deeds were performed by David of old, and was not David "a man after God's own heart"? Near him lies the body, or what remains of it, of another son, Feodor, the last male of the house of Rurik; while yet another, the youngest child, Dmitry, is buried nearby.*

Dmitry was murdered by creatures of the boyar Boris Godunov, who usurped the throne. Had he lived he would have succeeded Feodor the weakling, who was wedded to the sister of Boris. Thus the dynasty founded by Rurik came to an end, and in exactly the same manner as both Merovingian

*"Within the Church of the Archangel, amidst the tombs of the Tsars, the one coffin glittering with jewels and gold is that of the young child Demetrius, whose death or martyrdom was lamented with an everlasting lamentation, as the cause of the convulsions which followed upon it."—Stanley, "Church and State."

and Carolingian dynasties of France ended—by murder. Karamzin describes the murder with brutal realism:

"On the fifteenth of May, a Saturday, at the sixth hour of the day, the Tsaritsa came back from church with her son, and was preparing for dinner. Her brothers were away from the palace, and the servants were occupied with their domestic duties. At that moment the governess Volokhov called to Dmitry to take him out for a walk in the court; the Tsaritsa wished to follow, but unfortunately her attention was called off, and she lingered. The nurse wished to prevent the Tsarevich from going out, though from no reason which she could account for, but the governess drew him forcibly into the vestibule, and thence, upon the staircase, where they were met by Joseph Volokhov, Daniel Bitiagovsky, and Katchatov. The first of these, taking Dmitry by the hand, said, 'Sire, you have a new collar on.' The child, raising his head with an innocent smile, said, 'No, it is an old one.' At that moment the knife of the assassin struck him, but, while only slightly wounded in the throat, he slipped from the hands of Volokhov. The nurse then raised piercing outcries, clasping her infant sovereign in her arms. Volokhov took flight. But Daniel Bitiagovsky and Katchatov snatched the Tsarevich from his nurses, stabbed him, and threw him down the staircase, at the very moment when the Tsaritsa made her appearance, coming from the vestibule. The young martyr, of nine years old, already lay bleeding in the arms of his nurse, who had tried to defend him at the risk of her life. 'He palpitated like a dove,' and breathed his last without hearing the cries of his frantic mother."

Altogether there are between forty and fifty royal tombs in this one cathedral, some of them containing remains of princes who died before the building was erected and which were removed here by the "Terrible".

The Cathedral of the Assumption

The Cathedral of the Assumption, with its frescoed walls and five golden domes, stands at the northeast end of the palace almost opposite the building in which Lenin works. It contains the bones of many saints—St. Theognostos, who died in 1353 of the very "black death" which visited England; St. Jonah, who shook his bony hand at Napoleon when that invader looked at his mummy in the coffin to see if the body was "uncorrupt"; Cyprian and Photius lie here as well. Many of the former patriarchs found their last long home beneath these domes. Hermogenes, Philaret, the founder of the house of Romanov, and Philip, who, my readers will recollect, came from Solovetski. Philip is one of the few priests of Russia to whose memory I respectfully lift my hat. He was the one solitary martyr the Russian church has bred. He appears to have been, as far as men went in those days, a truly religious, gentle-hearted, and fearless hero. He aspired to no greatness, countenanced no intrigue; and though he never protested against the secular authority of Ivan, yet he

fearlessly denounced his enormities. "As the image of God I reverence thee," he once said to the tyrant, "but as a man, thou art but dust and ashes." He preached ceaselessly against the cruelties of the bloody Tsar, and questioned the virtue of offering up bloodless sacrifices to God, the while this beast was shedding Christian blood wholesale. Shade of Wycliffe, of John Ball, of Bruno, it wasn't in the nature of things that this could continue for long. Ivan sent his bosom friend Maluta Skuratov—the same who officiated at the massacres described in the last chapter—to Philip, to "ask his blessing" at the Tver monastery. Philip recognizing the miscreant, calmly said: "Execute thy mission", whereupon, says Muraviev, "he was strangled in his cell."

In this cathedral all the Tsars were crowned, and here Boris tore his coronation robe to signify that he would always be prepared to share his effects with the poor. Once upon a time, one of the nails which crucified Jesus, a seamless coat worn by him, and a piece of his mother's gown, were carefully enshrined as holy relics, in this church; and there is still a niche in the wall where Ivan peeped at the ceremony after he was excommunicated and dared not enter the building proper.

The Cathedral of the Annunciation

Adjoining the palace at the southeast corner, and almost dwarfed by it, is the small Cathedral of the Annunciation. It has a great many golden domes and contains the famous ikon called the "Virgin of the Don" which was carried at the battle of Kulikova (1380) and at the battle in 1591 between Boris and the Crimean Khan. Marvelous indeed are the legends surrounding its supernatural powers. One of them is related by Kohl:

"With the greatest goodwill in the world the French did not discover all the gold here. A rent was made with hammer and tongs in the frame of the Virgin of the Don, which is of pure gold, but they were smitten with blindness, and rejected it as copper."

These stories of the miraculous ikons, the authenticity of which is never for a moment doubted by the mass of the Russian people, give some idea of the appalling superstition in which they are submerged.

Before we enter the great Palace, reader, in the Vladimir Hall of which the delegates to the Congress of the Third Communist International are sitting, stand in the paved yard just between the Cathedrals of Annunciation and Assumption, and you will see the "Red Staircase" or "Beautiful" staircase as it is sometimes called. It is the bloodiest gangway in universal history. In three flights it leads from near the little cathedral to the Vladimir Hall, but we do not make use of it, but enter by the main staircase facing the river.

The Red Staircase has a truly gruesome history. As we approached the grand finale to the career of Ivan the Terrible in Karamzin's picturesque history, we read that Ivan came on to the Red Staircase one evening in 1584 to watch a comet which

had appeared in the sky, the tail of which "bore the form of a cross." After watching it for some time, he turned to those who stood with him and said, "It is the warning of my death." Soon afterwards, we read, he was attacked by a severe malady and "his entrails began to putrify and his body swelled."

After the death of the pretender Boris Godunov and when another pretender, "false Dmitry," ascended the throne, a hideous crime was enacted at the house of Boris, on the persons of Feodor and the young Tsar (and rightful successor to Boris) and upon his mother Marie, and his sister Xenie. Dmitry, who was a sheer imposter himself, determined to wipe the family of Boris completely out. The princes Galitsky and Masalsky with two functionaries, Molchanov and Scherefedinov and three soldiers went to the house of the late Tsar (which is still standing near the Red Square) on June 10, 1605, where the widow and two children were awaiting events.

"They snatched these tender children from the arms of the Tsaritsa, made then enter separate rooms, and bade the Strelsti do their work. These at once strangled the Tsaritsa Marie, but the young Feodor, endowed by nature with extraordinary strength, contended for a long time with the four assassins, who with difficulty succeeded in suffocating him at last.* Xenie was more fortunate than her brother and mother: they left her her life. The usurper had heard of her charms; he ordered Prince Massalsky to remove her to his house. It was announced in Moscow that Marie and her son had poisoned themselves. But their bodies exposed to insult and outrage, bore certain evidence of her violent death."—Karamzin.

This exposure to outrage and insult of the people took place upon the Red Staircase. Meanwhile the little Xenie was incarcerated and as yet unacquainted with the form her fate was to take. An old Russian song brought from Russia in the 17th century by an English clergyman called Richard James, gives a vivid picture of the little Tsarevna's melancholia at this period:

"The little bird laments,
The white quail,
Oh! how must I weep, young as I am—
They are going to destroy the vigorous oak,
To destroy my little nest,
To kill my little fledgelings,
And to capture me the quail.
The Tsarevna weeps in Moscow,
Alas, I, the youthful, must mourn
Because the traitor is coming to Moscow,
Who wishes to take me prisoner,
And having imprisoned me, to make me a nun,
And to put me among those who wear black robes

Thus the Tsarevna weeps in Moscow,
The daughter of Boris Godunov—
O God, merciful Saviour,
It is for the sins of my father,
For my mother's lock of prayer."

The ambitious and unhappy Boris is supposed to have been fond of his wife and children, but this horrible fate was his only heritage to them. However, the day came when the murderer—the false Dmitry—whose real name was Gregory Otrepiev,**

* "The young Tsar and his unhappy mother were smothered by murderers like those who had been employed to make away with Dmitry, for the Lord sometimes visits the sins of the fathers upon the children."—Monraviev.

was overthrown himself. The Tsaritsa Marpha who had been forced to swear that he was her son, now exposed him. The crowd shot him and then hacked him to pieces on the Red Staircase, hurling the mangled corpse down the steps on to the body of Basmanov, his friend, with the cry, "You were friends in this world, be equally inseparable in hell."

In the year 1682, after the death of Feodor Alexievich, another horror occurred on this staircase. The right to the throne was claimed by two factions—representatives of the two wives of the Emperor Alexis, Maria Miloslavski (mother of Feodor) and Natalia Nariskin (mother of Peter the Great). After a great deal of intrigue and barefaced lying, the soldiery accompanied by a huge multitude stormed the Kremlin. Natalia came out to the staircase with her two children, Ivan and Peter, but the Prince Dolgoruki spoilt the dramatic effect and turned it into tragedy by abusing the soldiery (streltsi) from a window. The infuriated soldiers rushed into the palace, and catching the prince they dragged him out and threw him down the staircase on to the spears of their companions below.

A Meeting With Lenin

The first time I visited the Red Staircase, I stood at the foot pondering—"wool-gathering" some people call it—when I heard sharp footfalls, and a crisp voice said: "Do you know this place, do you know it?" I turned round and faced—Vladimir Ilych Ulianov. Together we walked past the little cathedral, turned the corner and entered the palace. Lenin—to use his more familiarly-known name—talked of the war with Poland and the threatened entry of Great Britain into the fighting arena. (Great Britain had been the inspirer of it and the sleeping partner of treacherous Poland since the beginning of it.) On this particular day which, strange to say, was August 4, the anniversary of the first day of the great war and Shelley's birthday, there was every prospect of war being declared on Russia by Britain. The Red Army was within fifty miles of Warsaw; Germany was proclaiming strict neutrality and forbidding the Poles to seek refuge across her frontiers; France was preparing a number of divisions to join the British Expeditionary Force to Poland; and all sorts of international complications were arising. I paid keen and particular attention to the Chairman of the Council of People's Commissars as I walked along, but there appeared no black clouds on the brow, no forehead was knit with heavy thought, no lines of responsibility or fear of impending danger disturbed the placid peasant face. He chuckled, laughed, and hinted that I might be able to journey home via Paris in a short time! trotted light of foot up the staircase, and on reaching the Hall began to hum a tune. I am perfectly sure there was not a man

** "Thou hast sent us, O God, the deceiver.
The wicked, unfrocked priest Griaika Otrepiev,
He called himself the lawful Tsar.
The Tsar Dmitri Ivanovich of Uglich."

—Old Russian Song.

or woman in all that gathering of international delegates that did not love Lenin. In spite of the heavy pressure of work which he, in common with everyone had to face at that trying time, he always had a cheery word, a happy smile, and patient ear to lend to all. He was highly pleased at Gallacher's performance on the platform, and laughed at his vehemence; for when Gallacher was not vehement in Russia he was over-vehement. But it was a joyous laugh, for in spite of the philosophy of the "Infantile Sickness of Leftism", Lenin much prefers an over-zealous character to one which is never quite certain as to what constitutes "right" and what "left", and there were plenty of specimens of this latter type at the Congress. I was fortunate enough to hear Lenin make three long speeches, in German and French. He does not orate, he speaks with perfect articulation, very few gestures and most of them facial, and emphasizes his ironical points with a metallic, but not displeasing laugh.

Lenin, Marx, and Wells

He apologized to me for not being able "to speak the English language very well," yet every word he uttered in English was beautifully articulated, much better so, for instance, than Balabanova seemed capable of, though nothing like so fluently. I had many conversations with him at the palace, and paid one visit to his office. A visit to the office is a purely formal affair. It is not so much Comrade Lenin you go to see, as the "Chairman of the Council of People's Commissars, of the Russian Socialist Federation of Soviet Republics." Consequently one has to negotiate several corridors, rooms and inquisitors before access to Lenin is obtained, even though one has just left him five minutes previously at the entrance. I mention this in order to remove the false impression likely to be gathered from a perusal of H. G. Wells' chapter on Lenin in "Russia in the Shadows."

Armed sentinels stand at the door, and it is utterly impossible to reach Lenin unless he himself has made the appointment. Usually two or three healthy mucky children are playing chuckle-stones on the doorstep, with the sentry looking on. Apart from this necessary safeguard to protect an extremely busy man from being intruded upon too often, Lenin is as free as anyone else. He frequently goes out of the Spasskoi gate, walks briskly right around the Red Square and returns to his work. Out of his office he is just Comrade Lenin, the kindly soul we all found him, without a scrap of self-superiority or "standoffishness", which, to all appearances, is a very pronounced failing of the British puppet-maker who visited Lenin, on his own confession, out of "mere curiosity", and who details a worthless conversation he held with the little "dreamer" who "shuts one eye" and has "short legs". Mr. Wells approaches Lenin with the patronizing air of a superior person who imagines his august presence will convert the acknowledged leader of the World Revolution into a popular lecturer on Sovietism. But a fiasco is the result. To the

queries, "What are you doing and what are you going to do?" Lenin puts the counter question: "We have done it, but when are you going to do it?"—and Mr. Wells is too conceited to recognize the snub.

Accordingly, Marxism which he "abhors", and which to use his own words, he "is frightfully ignorant of", comes in for some severe manhandling at the hands of this middle-class "writer of Jules Verne stories", as Harry Quelch described him years ago.

But neither Marxian philosophy nor economics are abhorred, mind you, because of any fallacies they contain! No! the hostility to the old "bore" Marx on the part of Mr. Wells is due solely to irritation excited by the overplus of whiskers worn by him:

"In Russia I must confess my *passive objection* (due to self-confessed ignorance.—J.S.C.) to Marx has *changed to a very active hostility*. Wherever we went we encountered busts, statues, and portraits of Marx. About two-thirds of the face of Marx is beard that must have made all normal exercise impossible. It is not the sort of beard that happens to a man; it is a beard cultivated, cherished, and thrust patriarchally upon the world . . . A gnawing desire grew upon me to see Karl Marx shaved. Some day if I am spared I will take up shears and a razor against "Das Kapital"; I will write "The Shaving of Karl Marx."

What a terrible threat! It would be a much more intelligent occupation to take up the spectacles and *read* Karl Marx, of course; but to a man capable of penning the above puerility the theories and facts of Marxism would be equally unpalatable even had their discoverer been the present writer, who is not only destitute of facial hair, but possesses damned little on his head.

As for shaving the philosophy of Marx, far cleverer thinkers—though Wells is more of a philosopher than a thinker—than H. G. Wells have tried it. Such illustrious economist-tonorialists, for example, as Boehm-Bawerk, Nicholson, and Seligman, besides scores of smaller fry, and they didn't assist the Autocrat of all the Russias very materially, did they? And a new Marx-slayer arises in each generation to slaughter a corpse already slain over and over again by his predecessors, but after the "death" there is no "rigor mortis", no wake, and each little killer scratches his head like the alleged Irishman and mutters, "He doesn't seem as dead as I thought he was, and I knew he wouldn't be!"

Bound Volumes of Soviet Russia

VOLUME THREE (July to December, 1920, inclusive), durably bound in cloth, stamped in gold, with title page and index, 652 pages of text and illustrations, including many maps and sixteen full pages of half-tone plates, is now ready for delivery. Price five dollars, postpaid.

Three Years of General Military Training

By G. SAX

THE November Revolution has, in Soviet Russia, accomplished the ideas of the great European teachers of the working class, Marx and Engels, that the armed working class would be able to organize the revolution and to overcome the bourgeoisie. The general military training of the workers is the concrete expression of this idea in Soviet Russia. It is very difficult to organize the Russia of the workers into an "armed people", but the organization which has already been created represents an immense power, counting millions of people and is of the greatest historical interest and significance.

The German offensive along the Russian frontier, after it the Brest-Litovsk negotiations, compelled the Petrograd Workers to take up military training in a feverish haste. And here a short term of training was applied—96 hours—which afterwards became exemplary. A part of the workmen, the most qualified, went through a seven days' term of training for artillery service, being so occupied for six hours each day. Thus, the first foundation of the general military training was laid for the gigantic structure of the armed people, which is to assume shape in the form of a people's militia.

The "Chief Management of General Military Training" having been formed, strenuous work was started to help the front. Regiments were formed of workmen, brigades and detachments, which at the demand of the field staff, were regularly sent to the front. The organization of the general military training met with great obstacles of a material and moral order. The lack of technical means, of horses, munitions, wagons, supplies, extremely hindered the work, delaying the formation of the G. M. T. (General Military Training) regiment for months. But the organizers of the G. M. T., devoted to the revolution body and soul, exerted the greatest efforts to carry out the tasks which the revolution had put upon them.

To put matters in working order, two All-Russian Conferences were convened at which notes and experiences were compared, the necessary work to be undertaken outlined and the further course and the possibilities of organizing the militia settled. The ninth conference of the Russian Communist Party also adopted the following resolution dealing with the organization of the militia:

The Resolution Adopted at the Ninth Conference of the Russian Communist Party on the Question of Organizing a Militia

1. The approaching end of civil war and the favorable changes in the international position of Soviet Russia have placed on the order of the day the problem of introducing fundamental changes in our military organization which should be in keeping with the pressing economic and cultural needs of the country.

2. However, as long as the imperialist bour-

geoisie remains in power in most countries of the world, the position of the Socialist Republic cannot be regarded as safe.

The further progress of events may, at a certain point, again drive the imperialists, who feel the ground vanishing beneath their feet, on the way of bloody adventures directed against Soviet Russia.

Hence the necessity of maintaining the military defence of the Revolution on a proper level.

3. In keeping with the present transition period, which may prove to be of a protracted nature, an organization of the armed forces of the country must be established offering the workers the possibility of obtaining the necessary military training while taking away as little as possible of their time employed in productive labor. This may be accomplished solely by the organization of a Red Workers' and Peasants' Militia built on a territorial basis.

4. The essence of the Soviet Militia must be the approximation, as far as possible, of the army to producing areas so that the living human power of definite economic regions shall at the same time represent the living human forces of definite military units.

5. The militia sections (regiments, brigades, divisions) bearing in mind the territorial disposition of industry, must in the matter of territorial distribution be so arranged, that industrial centers with interdependent agricultural areas around them shall form the basis of the militia sections.

6. In matters of organization the militia must be based on units which are militarily, technically, and politically well trained, and which shall keep a constant register of the workers and peasants trained by them so as to be in a position to get at them at any time, and, when necessary, to incorporate them in the military organization, providing them with arms and leading them into battle.

7. The passing to the militia system must be carried out gradually, in accordance with the military and international diplomatic position of the Soviet Republic; with the proviso, that at all times the defensive strength of the republic be kept at a high level.

8. The gradually demobilized Red Army must be distributed so that its best units are put to the best advantage, that is to say, the distribution must run on lines best suited for the local industrial and social conditions, thus assuring a ready machinery of administration for the militia section.

9. Subsequently, the staff of the militia units will have to be gradually renewed, with a view to establishing a closer connection with the economic life of the given region, so that the commanding staff of the militia stationed in the territory embracing, let us say, a group of factories or works with an agricultural district adjoining it, should consist of the best elements of the local workers.

10. For the purposes of the indicated renewal of the staff, the military training courses must be

territorially distributed in accordance with the militia districts, and the best representatives of the local workers and peasants must pass through these courses.

11. To assure the highest military efficiency the military training for the militia shall be carried on as follows:

(a) Preliminary military training of citizens, the military departments, in this connection, working hand in hand with the departments of public education, with the trade unions, with the organizations of the party, with the leagues of youth, and with sporting societies, etc.

(b) Military training of citizens who have reached the age of military service, this training to be of an ever shorter and shorter duration with the approximation of the barracks to the type of military schools.

(c) Calling up, for a very brief period, of those who have been trained, in order to test the military efficiency of the militia units.

12. The organization of the militia units set up for the purpose of military defence must in due measure be adapted also to the purposes of labor service, that is to say, it must be in a position to form labor sections and supply them with the necessary machinery of instruction.

13. The militia tending to develop into the armed Communist organization of the people must in the present transition period retain in its organization all the elements of the dictatorship of the workers.

Operation of the Training System

The G. M. T. has made a beginning with those who have not yet reached the age of military service. All children from eight years of age are obliged to undergo, in school as well as out of school, a course of training in physical culture. Along with the ordinary primer they must acquire the primer of physical culture.

For the management of this great and responsible work a special "Supreme Council of Physical Culture" has been created, with scholars and professors at its head, controlling through its local branches the work throughout the republic. In this manner a new generation is being raised of bright, strong, and alert people, who will defend Socialism and the Revolution. In accordance with the decree of the Council of People's Commissars, the young, between the age of 16 and 18, are undergoing military training. By the terms of this decree boys and girls, the latter voluntarily, but the members of the Communist Union of Youth, by obligation, are receiving such military training as to acquire, at the age of 18, all that may be required of a young warrior of the Republic.

This scheme enables us to make the idea of the armed people, the militia, a reality with the smallest expense of energy and means. But the work of the General Military Training is going even farther. It is striving to solve the problem of improving the health of the working class, the problems of eugenics and of physical culture. Thousands

of different sporting societies and clubs have been established, institutions in which mass-sport is cultivated on scientific lines and with utilitarian aims. Hundreds of thousands of workers are taking part in the sports, thereby becoming bearers of the higher forms of culture.

Parallel with the work of physical culture, political as well as cultural and educational work is being carried on at the clubs, gymnasiums, etc., lectures, conversations on various subjects, moving pictures, and plastic art celebrations are being organized.

Special effort is made to draw the working women into the general military training. There are three to four month courses on communication service and on military matters for them. They may take up instructors' courses in sport and gymnastics. Many a hundred working women now training will be able to occupy different posts in military detachments. The G. M. T. is opening for Russian working women new possibilities, new horizons; and, in the near future, the Russian working woman will stand in the foremost ranks of the world movement.

Serious attention is being paid to the question of military training in schools and colleges. At present, there are about 100 schools in the regimental districts, in which non-commissioned officers are being prepared. The whole system of military training is conducted according to plan. First, a 96-hours' course of individual instruction is given, then a brief collective course, and finally a month is devoted to going over again the whole course of exercise. Then a part of the pupils are selected to attend the schools for non-commissioned officers (four months), from which they graduate as instructors. These instructors are sent to practice (for six months), after which they are transferred to higher instructors' courses. After a course of six months, they are again put to practice, and then the most able get into the highest organization and method courses (one year; after January, 1921, two years is proposed). They graduate from these courses as battalion instructors and as regimental commanders. After a practice of six to twelve months they are sent to a repeating course (not less than two months). This is, in short, the system of training instructors for the territorial militia. At the courses the applied method of work is that of the seminary type.

Soviet Russia is divided into regimental and brigade districts so that every province covers a regimental or brigade district. In each regimental district there is a sufficient number of instructors for the training of the young. Thus a regimental staff is to be found in every chief city of a province. This staff has different departments dealing with the technical work, as well as that of organization connected with the military training of the population. Each provincial regimental district is divided into three districts, and each company district into three platoon districts.

A noteworthy feature of the system is that a brigade is made up of three regiments, and that only a part of the commanders leave for the front

in war time while the rest are engaged in forming new units. Every regimental district is thus in a position, in time of peace, to go on forming brigades until the whole able-bodied population has been enrolled. The commander of a regiment in peace time becomes commander of a brigade in war time, etc., that is to say, we have potentially a staff who can occupy high positions in time of war. This is a very important feature of the system and due attention should be paid to it.

In spite of the severe times and in spite of the difficulties of the work, the General Military Training assists in the formation of labor-companies for work in the rear, helps to eradicate illiteracy, giving part of its time and of its instructors for these purposes.

Notwithstanding its gigantic work extending to millions of the working class, the General Military Training is in closest contact with the R. C. P.* All the commanding positions in the territorial companies are occupied by Communists. Besides, all the members of the Communist Party are taking part in the General Military Training, and are so distributed that a third of any military unit is composed of Communists. When the workers and the toiling peasants are, for instance, mobilized into a regiment, a third of that regiment must be Communists, besides sympathizers.

Glancing back at the road passed we can be proud of the great military, political, and cultural work that has been done. Millions of working men and working women, boys and girls, undergo military training. The gun and the hammer is their symbol while the future militia is their aim.

New French Inventions

RIGA, January 10.—Chicherin today forwards the following message:

"The campaign of lies regarding our alleged aggressive intentions towards our neighbors is becoming more and more outrageous. We cannot remain entirely indifferent toward this campaign, since the true reason for egging on our neighbors against us is becoming more and more apparent. The latest radio reports of American correspondents speak of a pretended serious danger on the part of the Bolsheviks with regard to neighboring states, and of the readiness of France to recognize the independence of Latvia and Esthonia because of this condition. A move like the latter we could only hail with approval. The *Temps* reports from official French sources that the independence of Latvia is endangered by the Bolsheviks. Similar reports are forwarded by the French military mission from Riga. In giving out these mendacious reports, the American correspondents mentioned the authority of the head of the American "Red Cross Mission", Col. Ryan, who is well-known as one of the worst enemies of the Soviet Government, and as a persistent originator of calumniating reports. This campaign of defamation apparently arises from France's attempts to prevent the inau-

guration of permanent friendly relations between Russia and its neighbors, as well as to destroy the possibility of an economic rapprochement. This campaign however is directed against the life interests of the Baltic provinces, whose welfare we desire to strengthen by the development of healthy economic relations. Please protest against these malicious attempts originating in French circles and declare categorically that the campaign of calumny is based upon evil inventions, redounding to the advantage not only of Soviet Russia, but also of the Baltic States. Point out that the tasks of present-day Soviet Russia are those of peaceful reconstruction, and refer to the character of the Eighth Congress of Soviets, which was devoted exclusively to such tasks.

"With regard to the movement of troops to which such calumniating reports make reference, the true state of affairs is as follows: During the military actions against Poland and Wrangel, troops were concentrated in certain directions. At present, in view of the transition to a peace condition, remobilization has begun to take place, but the latter cannot be carried out except in a gradual manner, which will require the immediate territorial deconcentration and equitable distribution of divisions not yet demobilized. For these reasons, detachments of troops have appeared in the vicinity of the Dniester which had not been in that region before. They are to be quartered for the winter in southwestern Ukraine. This deconcentration and equitable distribution, for peaceful reasons, will explain the transfers of troops that are exploited by the originators of lying reports with the object of egging on our peaceful neighboring states against us. Emphasize the extremely malevolent character of these intrigues on the part of French imperialism and again call attention to our unaltered ardent desire to advance the cause of the further development of an economic rapprochement with our neighbors."

Next Week's Soviet Russia

THE WELL-KNOWN GERMAN PROLETARIAN POET—MAX BARTHEL, gives his impressions of meetings he attended in Russia.

THE MAGNETIC CORPS: by Samuel Rafelovich. Describes Budenny's first Cavalry Army and its sensational and heroic exploits, especially in the fighting against the armies of Denikin and Wrangel.

This article takes the place of Col. Bek's weekly military review. The latter will shortly make its appearance again in this magazine.

DR. JUDAH L. MAGNES'S ADDRESS. (In January at the Metropolitan Opera House for the Soviet Russia Medical Relief Society.) The eloquent orator formulates the case of the Russian people against the Allied Blockade.

LENIN: "TRUTH TELLING" ABOUT SOVIET RUSSIA. Lenin, in a brilliant criticism of the speech of the Menshevik Dan, at the Eighth Congress of the Soviets in December, 1920, shows how the Liberal and opposition critics of Soviet Russia involuntarily make themselves the allies of the counter-revolution.

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION
110 West 40th Street New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

THE news of the "creation" of the Russian Constituent Assembly at Paris is interesting, but not important. This body, it is announced, is composed of "all the Russian elements opposed to Bolshevism", which is merely to say that it consists of that same self-perpetuating group of tsarists and bourgeois reactionaries who have flocked under the banner of every counter-revolutionary leader from Kornilov to Wrangel. For the moment they appear to lack a leader, from which it is to be understood that they have not yet sufficiently reconciled all their separate interests and jealousies, even under the pressure of their common anti-Bolshevism. Moreover, "loyal leaders" and "saviors" of Russia are somewhat out of repute. The hour calls for a liberal gesture; hence the Constituent Assembly. It is not even pretended that this is the actual Constituent Assembly of 1917, although, according to *The New York Times* (February 1, 1921) 33 members of the Assembly "created" in Paris were elected to the former body in Russia in 1917. We are not told the total number of the Paris Assembly, nor what proportion these 33 bear to the whole. We are merely told—by the *Times*—that a "majority of the members" of the 1917 Assembly left Russia, and to these is attributed the creation of the Paris group.

In a note to Admiral Kolchak in the spring of 1919, President Wilson and the other members of the Supreme Council at Paris suggested to the "supreme ruler" and his associates, as one of the conditions under which they might count upon the support of the allied and associated powers, that "as soon as they reach Moscow" they should "summon the Constituent Assembly elected in 1917 to sit until such time as new elections are possible" (*N. Y. Times*, June 13, 1919). To which Kolchak replied (*N. Y. Times*, June 14, 1919), that his government did not "consider itself authorized to substitute for the inalienable right of free and legal elections the mere establishment of the Assembly of 1917, which was elected under a regime of Bolshevik violence and a majority of whose members are now in the ranks of the Soviet." The admiral having similarly declined to follow every one of the essential conditions laid down for him by the Supreme Council, the latter announced quaintly that they welcomed his reply as in "substantial agreement with the propositions they had made."

Such little discrepancies are of trivial importance when great issues are at stake. As the matter now stands, so far as we can make out, the allies who extended support to Admiral Kolchak in 1919, because he refused to reconvene the Constituent Assembly, "a majority of whose members" were in the ranks of the Soviets, are now asked to extend recognition to a body in Paris, created, according to the *Times*, by a majority of that same Assembly. It is interesting and ridiculous. But, as we have said, not very important, except as a display of the extraordinary ability of these gentlemen to keep themselves in employment. Mr. Bakhmetiev, who started out originally for the United States as a representative of the Government of Prince Lvov, and who arrived as a representative of Kerensky, and who stayed as a representative of Kolchak, is shortly, it is announced, to return as a representative of this fantastic "Assembly".

* * *

EVEN their French hosts have begun to realize the futility of these émigrés and are somewhat embarrassed by their intrigues. A writer in the *Journal des Débats* (January 10) remarks of the recent Paris gathering that "one would hardly be wrong in saying that of the 32 or 33 deputies present a good 30 represented divergent views."

"The time for foreign intervention has passed," concludes this conservative French journalist. "Kolchak, Denikin, Wrangel, successively taken seriously and helped by France to the limit of her powers, . . . are now seen to have been phantoms arising out of a whirl of passionate and interested agitation. We do not reproach the exiled Russians for their errors, but we cannot forget that it was the mistaken information they supplied us that led us astray . . . Moreover, they could not have been ignorant of the intrigues and disorders which were the ruin of Wrangel's army . . . Apparently, our War Ministry had developed Napoleonic plans last summer—either misinformed by its agents from the Crimea, or else building castles in the air from their reports . . . It was pure phantasmagoria. If Wrangel had ever reached Moscow he could not have ruled there a week. For their strategy and their diplomacy our War and Finance Ministries simply drew on their imaginations."

The air of this healthy confession is scarcely favorable atmosphere for the new schemes of the émigrés. According to the *Gazette de Lausanne* (January 13), the main question to which the Paris meeting devoted its oratorical powers during the first session was that of military intervention. The Cadets, led by Milyukov, "eloquently advocated it." Next day, however, "there was a change of tune." Even Milyukov appeared to be won over. The *Gazette* suggests that "between the two sittings Milyukov had heard how the public had received his first speech, and realized the impossibility of ever obtaining Entente support for another anti-Bolshevik movement." In the independent bourgeois French paper *L'Oeuvre* Stephen Valot asks if Chernov, Avksentiev, Kerensky and the Duma "really once existed."

"In any case these people must have died years ago and it must be their ghosts who held the phantom Parliament here in Paris yesterday . . . The phantoms did not hurry themselves. They have all eternity before them. The assembly opened two hours late . . . and still melancholy

groups continued walking the corridors or tapping on the windows of the office where Maklakov continues to represent in Paris a dead Russia . . . There was no need to go to Russia to understand why the Bolsheviks swept away the bourgeois revolution of 1917; it was quite enough to be at yesterday's assembly—and at Tours last week." (*L'Œuvre*, January 9.)

Meanwhile the first "diplomatic" act of these irrepressibles, at the very moment when France and Poland were concluding a military and economic alliance, was to protest against the "violent" annexation by Poland of territory containing several millions of "purely Russian population." Their next move was even more engaging. Simultaneously with the announcement that Mr. Bakhmetiev was to return to the United States to seek recognition for the recreated Constituent Assembly, they proceeded to threaten America with a Japanese alliance. "It is believed in Russian émigré circles here," reports the correspondent of *The New York Globe*, "that Japan now is entering upon an energetic anti-Bolshevist Russian policy, the effect of which might in the end be to win Russia's friendship, thus leaving Japan's hands free to deal with her American relations as circumstances may dictate." The correspondent of the *Globe* reports a dinner given by Japanese officials in Paris to a number of Russian generals "at the Inter-Allied Club in the Faubourg Saint Honoré." "General Watanabe read a speech in Russian . . . in which he declared . . . that the Bolsheviks were frittering away Russia's territory and that Japan would stand by Russia staunchly to overthrow the Bolshevik and restore Russia's territorial integrity." The correspondent of the *Globe* thinks that the "political significance of such a speech can hardly be ignored."

Still another item to add to this muddle of intrigue and conspiracy. *The New York Times* reports that the English Shell and Royal Dutch oil interests have concluded "a rather remarkable political-commercial bargain which amounts to betting that the Bolshevik regime in Russia will fall within ten years." Under the arrangement reported by the *Times*, the British oil interests are said to have purchased from certain émigrés the rights to the exclusive control of all oil production in the Grozny district in the Caucasus. The British realize apparently that the worthies in Paris cannot deliver at present and so the deal is made contingent upon the overthrow of the Soviet Government within ten years. Considerable secrecy, says the *Times*, surrounds the transaction, "but it is learned that it is of such magnitude that the lawyers who handled the deal got a commission of several millions of francs . . . A number of Russians owning property in the Grozny fields are refugees in Paris, and are engaged directly in the negotiations, it is said. It is common report in the Russian colonies here that a number of Russians have recently had much money to spend—men who did not have so much a short time ago." (*New York Times*, February 11, 1921.) Similar negotiations, the *Times* reports, are under way by both British and French oil interests for the control of petroleum in the Baku district.

Thus runs the course of anti-Bolshevism in Paris: a weird jungle of nationalist pretensions, grandiose political alliances, sordid huckstering and sheer buffoonery.

THE death of Peter Kropotkin, the aged Russian scientist and revolutionary writer, on February 8, was announced in a special cable to SOVIET RUSSIA from Professor George Lomonossov, head of the Soviet Government railway purchasing mission at Stockholm.

Before the report of Kropotkin's death reached this country no account of his serious illness had appeared in the American press, and the news of his death, therefore, came as a surprise. This, however, was due to the censorship which prevails against all news coming from Russia, and not to any heedlessness on the part of the Soviet Government which issued daily wireless bulletins on Kropotkin's illness. Copies of the official Rosta wireless despatches which have just arrived by mail show that Kropotkin was given every possible care. A Rosta message of January 21 reported that the President of the Council of the People's Commissars, himself, was interested in Kropotkin's condition and did what he could to alleviate it: "As soon as Lenin had been informed of the illness of Peter Kropotkin he at once ordered a special train with nurses, medicines, etc., sent to Dmitrov, where Kropotkin lived. This veteran of the Russian and the world revolution is now 78 years old." Another Rosta message of the same date announced that daily bulletins were being issued by the Commissariat of Health concerning Kropotkin's illness. The Rosta wireless of January 19 reported that Kropotkin was suffering from a light pneumonia, aggravated by the patient's great age and delicate health. The Rosta despatches of January 20, 21 and 22 contain daily bulletins of the patient's temperature, pulse, respiration and other medical details. Some of these bulletins are signed by Semashko, People's Commissar for Health, and by the consulting physicians, Shurovskich, Pletnev, Konchalovski, Levin, Ivanovski. Although sent out broadcast by the Moscow wireless, none of these bulletins was transmitted to America.

THE Allies are not always grateful to their "associates". A recent issue of the *Jewish Chronicle*, London, states that the British mandate over Palestine by no means satisfies all the Zionist ambitions. Russian counter-revolutionists would also perhaps be not fully pleased with the British or French disposal of Russian affairs. The Soviet Government will not be disappointed—it expects nothing from the Allies.

But it is very likely that the people of Soviet Russia will determine their own fate without any recourse to the Allied formula of "self-determination", apparently applied very efficiently in the case of Palestine: "self-determination" means that the Allies "themselves" determine the fate of small nations.

The Epoch of Great Tasks

By N. BUKHARIN

In a certain utopian romance by A. Bogdanov called the "Red Star", a book that was at one time swallowed whole by party workers, there is a chapter entitled, "The Epoch of Great Tasks."

The scene takes place on Mars, where a Russian Bolshevik, a child of the Russian Revolution and the best representative of terrestrial Man, happens to find himself.

On the borders between Capitalism and Communism, even before the conquest of power by the proletariat, the great agricultural crisis called forth the necessity of unprecedented work in the digging of canals. "The Epoch of Great Tasks", sets in. Hundreds of thousands of men were sent to this work. And, when it was accomplished, it became the technical foundation of the new Society. The leader of the Great Tasks was an engineer called Mani, a denizen of the old world looking already into the new world, the physical father of the proletarian leader.

I recalled all this while listening to Comrade Krizhanovsky's report at the Congress of the Soviets. The surroundings were unusual. The vast hall of the Grand Theater was overcrowded with workers and peasants, a great assembly of the ruling masses. On the rostrum stood, not a political leader, but an engineer, and, although an old and worthy party comrade, he is not a professional politician.

Behind the tribune is a great map of Soviet Russia, dotted over with many colored lamps which flare up in a strange and beautiful glow as the engineer enumerates every new electric station that we are going to build.

The speech, too, is unusual for our congress. Not a single word about politics; but there is the fervor of labor, the fervor of "The Great Tasks", Poor, starving and sheep-skinned Old Russia, Russia of primitive lighting and the repast of a crust of black bread, is going to be covered by a network of electric stations. The electric current will be transmitted by cables; it will set our factories and mills in motion; it will move freight and people by railway and waterway; it will drive the tractors and the ploughs; it will illuminate our buildings; it will transform Russia into a unique economy, and the dismembered nation into an intelligent and organized section of humanity. The horizon is endless and beautiful.

And all this is not taking place on Mars, neither is it the contents of a utopian romance. It has all been calculated and verified dozens of times. We can do it, we must start it.

The thousands of comrades strain all their facial muscles to catch the whole of the report, a report which lasted over two hours. One feels the palpitation of the new spirit, the spirit of the "Great Tasks", in the hall as it flaps its invisible wings . . .

When the "group of usurpers" declared through Lenin at the beginning of the war that the civil war was coming, they were considered irresponsible babblers.

When this "group", carried forward by the wave of revolution, took the helm of government into its hands, its ruin was prognosticated every day.

Today this "group", now a tremendous force, affirms: the chaos will give birth to an order such as mankind has not yet seen. We shall make this order, and shall now begin the "Epoch of Great Tasks".

Millions of builders of the future society, do you not feel the warm blood of this future coursing through your veins?

PETROGRAD CHILDREN AT HOME

Our readers will be glad to know that most of the Russian children who passed through the United States from Siberia last fall in charge of the American Red Cross are once more safe at home with their parents and relatives in Soviet Russia. A dispatch from Viborg, Finland, December 17, announced that on that date more than 600 out of the total of 781 children had crossed the border into Soviet Russia and had been returned to their homes.

It will be remembered that the intention of the Red Cross to land the children in France, which was frustrated only by the indignant and active protests of the children themselves, was based upon the alleged difficulty of locating the parents and a doubt as to whether the parents would desire their children to be returned to Soviet Russia. It is interesting to see how these imaginary fears and difficulties dissolved in actual experience. We quote from a statement issued by the Red Cross:

"Only a few parents were located outside of Soviet Russia. Since the arrival of the colony in Finland, hundreds of the children have received letters from relatives in Soviet Russia urging their return as soon as possible, and in response to these requests five groups have been repatriated, about a hundred in each group, at fortnightly intervals. A few of the letters received asked the children not to return immediately, owing to the difficult circumstances of the parents.

"Each successive group of children was taken to the Finnish border by special train from Halila. At Rajeki, the border town, the American officers delivered them to a 'parents' committee from Petrograd, which conducted the children into Russia and arranged all details of their meeting with relatives."

"SOVIET RUSSIA" LOSES A SUBSCRIBER

We are in receipt of the following communication:

"DEPARTMENT OF STATE

"Washington

"February 3, 1921.

"SOVIET RUSSIA,

"110 West 40th Street,

"New York.

"The Economic Intelligence Section, Foreign Trade Adviser's Office, Department of State, Washington, D. C., does not desire to renew its subscription for 1921.

"Very truly yours,

"W. W. CUMBERLAND,

"Assistant Foreign Trade Adviser."

Soviet Russia Medical Relief Committee

[The following documents are published at the request of the Soviet Russia Medical Relief Committee. The first is a statement of the Committee itself, the second and third are letters passing between Mr. L. A. Martens and the Committee.]

I

By action of the Central Soviet Russia Medical Relief Committee in New York City, the Western District office of this Committee at 59 E. Van Buren Street, Chicago, Ill., with Charles L. Drake as Director, was closed on January 15, 1921. Mr. Charles L. Drake is no longer connected in any capacity whatever with the Soviet Russia Medical Relief Committee.

The Central Russia Medical Relief Committee desires to establish closer contact with all its local Committees in the western states, to avoid the expense of the now abolished intermediary Western District office, and to put the Soviet Russia Medical Relief work on a more efficient basis through the cooperation of the local Committees.

The Committee desires all its supporters and sympathizers to understand that it has no connection whatever with the so-called "American Red Star League," organized by Charles L. Drake and others. It emphasizes this, because the headquarters of this League will probably be located at the same address where the Western District office of the Soviet Russia Medical Relief Committee was previously housed.

The attention of our Committee has been called to the fact that rumors are being spread in the Western States and Canada, about the discontinuation of the Soviet Russia Medical Relief Committee's work, and about the substitution of our work by that of some other organization. This is a plain misrepresentation.

We urge all the local committees and other organizations interested in the Medical Relief of Soviet Russia to continue their work, and to communicate with, and send all contributions direct to the Soviet Russia Medical Relief Committee, Room 506, 110 West 40th Street, New York City.

II

L. C. A. K. Martens,
Representative of the Russian Soviet
Republic in the United States,
New York City.

New York, January 22, 1921.

Dear Comrade:

Before your forced departure from the United States for Soviet Russia, the Soviet Russia Medical Relief Committee submits to you herewith the following report:

The Soviet Russia Medical Relief Committee was organized as a volunteer organization in April, 1920, with headquarters in New York City. Local Committees grew up gradually in other cities, and up to the present moment there are about 115 local committees throughout the United States and Canada.

The aim of this organization has been and is to collect medical supplies, and money for the purchase of medical supplies and surgical instruments, also medical literature for Soviet Russia. With this end in view, 130 public meetings have been held in various cities throughout the United States and Canada, at which moneys were collected for the above purpose. Also subscription lists were circulated, and individual donations were solicited, both from organizations and individuals sympathetic to the above cause.

Up to date, the Treasurer of the Central Committee in New York has received \$58,199.39. Out of this sum \$51,663.34 has been paid towards shipments for medical supplies shipped to Soviet Russia, and \$5,014.82 was paid for organization expenses, printing of pamphlets, post cards, etc., leaving a balance on hand in the treasury January 21 of \$1,521.23. The total value of shipments consigned to Soviet Russia is \$74,283.06, which means that the balance payable on these shipments is \$22,619.72.

In addition to the above shipments purchased from funds

collected, drugs, instruments and other medical supplies were collected, to the value of over \$3,000.00, and likewise shipped to Soviet Russia.

Several hundred valuable text books and other publications on medicine have been collected and sent to the commissariat of Public Health of Soviet Russia.

Doubtless you are aware, both from the Russian official publications and from other sources that the bulk of these shipments have already been received by the public health authorities of Soviet Russia, and put to immediate use.

Most of the local Soviet Russia Medical Relief Committees have been organized only recently, and some of them are still in the process of organization. Among the tasks on which they are working one stands paramount in their minds, and that is the organization of medical councils, composed of physicians only, who are willing to collect for Soviet Russia medical literature, and all necessary information for the combating of diseases, and to acquaint Soviet Russia with the latest discoveries and achievements in medical science, and with the hospital care of infectious and other diseases. They desire ultimately to organize medical units of experts for service in Soviet Russia, when communication between this country and Russia shall have been thrown open. Through these councils we have secured the cooperation of medical men of note, who have expressed their desire to acquaint Russian physicians with the achievements of the medical and sanitary sciences in the United States during the seven years of blockade of Soviet Russia. Some of them have traveled to Europe to familiarize themselves with the present status of medical science in the Western European countries.

The lack of nurses and other hospital attendants seems to be a great handicap to Soviet Russia at the present time, according to reports which have reached us. Therefore the above medical councils are drawing within their sphere of influence nurses and other hospital personnel, who are willing to go to Russia to help alleviate the suffering of the victims of the war and the blockade. Serious consideration is given to the medical education of Russian emigrants desiring to return to Soviet Russia, especially to the unskilled laborer, who would be of great help in the hospital service in Soviet Russia.

With reference to the Western District Committee, the Central Committee has found it necessary to suspend the Western District office, and request Charles L. Drake to transfer in detail all the records concerning the work done in the Western District in the past. A local committee was organized in Chicago to go on with the work there, and the Central Committee is now in direct communication with the sub-committees, trying to coordinate their efforts for the sake of greater efficiency.

The work in Canada, under the supervision of the Central Committee, is making very good progress. The comrades in charge of the work there have proven to be exceedingly worthy by virtue of their accomplishments.

The general conditions of the country, with the enormous unemployment prevailing, do not promise a very bright outlook for collections in the near future. Our collections at present are almost exclusively from labor organizations. Notwithstanding these difficulties, the Committee will continue to endeavor to unite and coordinate the work throughout the country so as to produce the best results.

For the purpose of acquainting the people of the United States with conditions in Soviet Russia our Committee has published and distributed up to the present time about thirty thousand pamphlets, and in addition to these has issued a large number of leaflets, letters, and statements to the press.

Certain difficulties were encountered by the Soviet Russia Medical Relief Committee, due to the activities of the "presumable friends" and open enemies of Soviet Russia,

who insisted that their hobbies and their politics be dragged into this work, which was, from the very beginning, carried on and maintained as a non-partisan affair. Only on this basis has it been possible to maintain the organization, and make the work as successful as it has been under the circumstances. Regardless of the opposition and animosity, the Medical Relief Committee in New York, as the authorized mouthpiece of this undertaking, is outlining various plans to perfect an efficient organization in order to carry out the work successfully.

The Soviet Russia Medical Relief Committee owes its existence and the success of its work up to this time chiefly, if not solely, to the earnest support and endorsement given to it by your Bureau and yourself. It is essential that you give us, as a parting word, a definite expression as to the future possible usefulness of our Committee, and your suggestions to aid us in our activities.

With cordial and comradely greetings to yourself and the comrades over there,

Faternally yours,

SOVIET RUSSIA MEDICAL RELIEF COMMITTEE,
(Signed) Joseph Michael, Secretary.

III

Soviet Russia Medical Relief Committee,
New York City, N. Y.

Dear Friends: New York, January 22, 1921.

Before leaving the United States of America it is my pleasant duty to thank you most sincerely on behalf of the people and the government of Soviet Russia for your earnest and successful efforts to bring medical relief to the men, women and children of Soviet Russia, who are suffering because of the dreadful war and the inhuman blockade.

It is my profound wish that my absence from this country should not deter you for a moment from the continuation of your highly useful and commendable work. On the contrary, my forced departure from this country should spur on the Soviet Russia Medical Relief Committee, and all its supporters and sympathizers, to redouble their efforts to wipe out the apparent unfriendliness of America towards Soviet Russia, as exhibited by the deportation decree of the Secretary of Labor. I still refuse to believe that the American people share his sentiments. The vast number of assurances of sympathy and regret received by me during the last week of my stay in this country have now convinced me more than ever that the American people, whether of the working class or of the general public, bear no enmity toward the hard-trying people of Soviet Russia. I appreciate most deeply not only the physical relief offered through the medicines shipped by your Committee to Soviet Russia, but also the feeling of sympathy and friendly understanding created through the efforts of your Committee.

It will be one of my first tasks upon my arrival at Moscow to lay your report before the Commissariat of Health, and I shall urge that your recommendations be acted upon as quickly as possible. I hope that your work will meet with the heartiest approval of the Soviet Government, and of the peasants and workers of Soviet Russia.

Again I wish to thank your Committee and the men and women of the United States whose sympathy for the people of Soviet Russia has contributed to the success of your work. I most heartily endorse the efforts of your Committee, and urge you to go on with your tasks, as heretofore, regardless of carping criticism and slanderous attacks, either through misconception of your work or deliberate malicious intent.

I remain,

Most sincerely,
(Signed) L. MARTENS.

SWEDISH TRADE WITH RUSSIA

The steamer *Kalevipoeg* left Stockholm January 13 with a cargo consigned to Russia by way of Reval, consisting of 85 tons of saws, hoisting tackle, scythes, cranes, etc., valued altogether at 395,000 crowns.

Russian Trade for America?

Official Statement by the United States Department of Commerce

The following article is reproduced from the annual report of the Director of the Bureau of Foreign and Domestic Commerce at Washington, to the Secretary of Commerce, for the fiscal year ended June 30, 1920:

"Importance of the Russian Field and Interest Manifested in it"

"The territory assigned to the Russian division of the Bureau is that of the former Russian Empire, Finland, and Poland. The former Russian Empire includes such grand divisions as Siberia, the Caucasus, the Baltic Provinces, the Ukraine, and Turkestan. The importance of this field lies mainly in its capacity as an enormous consuming market of nearly 200,000,000 people, who are now in need of almost every kind of commodity. Russia is rich in raw materials, some of which are very much needed for American industries. Though only a small fraction of the former Russian Empire was open to trade and chaotic conditions prevailed, the United States exported to that country goods valued at more than \$66,000,000, and imported from it about \$15,000,000 worth of merchandise during the year ended June 30, 1920. The total transactions with Russia during this period amounted, therefore, to approximately \$81,000,000; with Finland, to \$26,000,000; and with Poland, during the first six months of 1920, to \$50,000,000. It is necessary to bear in mind, also, that the imports into certain other European countries from the United States include a large amount of goods that were purchased for reselling to Russia as soon as conditions permit. Since a fairly large trade is now being carried on with certain parts of the former Russian Empire under the conditions stated, one can readily realize what an amount of trade there will be when conditions are again normal.

"Russia will be a tremendous field for investments. Its whole economic fabric (railways, factories, mills, mines, etc.) is disorganized and damaged and the country needs outside help to rebuild it.

"If one may judge by the communications addressed to the Russian division of the Bureau, American business men feel that this field is of very great importance to the United States. The leading concerns are giving much of their attention to it, and the board of directors of the United States Chamber of Commerce has held several meetings mainly to discuss Russian affairs. When the so-called 'Ambassador' Ludwig C. A. K. Martens first made his appearance in the United States and there were vague rumors about the possibility of trading with Russia, many concerns wrote or called on the Russian division personally for information on the subject. Many inquiries were received for advice on trade with Russia at the time the lifting of the blockade with Soviet Russia by the Supreme Economic Council in Paris was announced, indicating to American business men that the possibility of resuming trade was near.

"The United States is probably less familiar with Russia than any of its competitors, and it conducted very little direct trade with that country prior to the war. The goods that were exported from the United States were sent through intermediary countries, such as Germany, and Finland. It is felt that America must now discontinue that practice and endeavor to promote direct commercial intercourse with Russia. One of the aims of the Russian division is to try, so far as possible, to further this object."

PETER KROPOTKIN

The recent death of the famous anarchist theorist furnishes the occasion for a thorough exposition of his social philosophy, from the pen of Mr. Max Strypynsky.

See page 177. True translation filed with the Postmaster, New York, on Feb. 16, 1921, as required by the Act of October 6, 1917.

. Concessions to Foreign Enterprise

(Latest Data on Regions and Organizations Concerned in the Concessions.)

The Natural Resources Involved in the Concessions

IN CONNECTION with the proposals that concessions be granted to foreigners, the National Publishing House of the Soviet Government has issued a book containing a detailed description of all concession areas. In addition, the Vice-Chairman of the Supreme Council of National Economy, Milyutin, recently handed to foreign journalists very interesting data concerning these points: We reprint below a number of figures taken from both these sources. The entire material in the above named book has been divided into four general heads according to the areas to be exploited.

1. First come the extensive rich forest areas situated around the rivers Obi, Irtish and Taz, containing more than 70,000,000 dessiatins (one dessiatin equals 1.092 hectares), suitable for lumbering. Assuming that only those districts should be exploited that are situated within a zone of 30 versts to each side of the rivers above named, the concessions would cover about 15,500,000 dessiatins. Another region for which concessions are also proposed includes the tributaries of the river Taz, which flows into the Arctic Sea by way of the Obi Gulf. Here also we may count on at least 1,000,000 dessiatins of forests. The forests in the above named tracts consist of fir and pine, with patches of cedar and larch. On the average we may reckon each dessiatin will yield at least 25 or 40 trunks of selected lumber, and at least 8 cubic fathoms (one Russian fathom, *sazhen* equals 2.143 meters), excellently adapted for use as mining props and struts. We may therefore assume that in a zone extending 30 versts to each side of the rivers, about 200,000,000 such trunks and about 140,000,000 cubic fathoms of struts could thus be obtained.

Milyutin points out in the above exposition that it is entirely probable that such an unheard of quantity cannot be exported as raw material and that the holders of the concessions will therefore have to establish a great number of factories for manufacturing articles of wood, for preparing cellulose, as well as other enterprises of enormous dimensions. At the same place there are tremendously rich deposits of coal, ore, etc., which can also be transferred to the concessionaires for purposes of exploitation.

Of course the fur industry could easily be developed in this region and should be sold to the concessionaires under special contracts.

2. In the northern part of European Russia, 18,500,000 dessiatins of forests (the total area of all the forests in Northern Russia is calculated to be about 65,000,000 dessiatins) are to be assigned to exploitation by concessionaires. These forests extend to the shores of the Arctic Sea. In the west they consist of pine areas, in the other districts predominantly of spruce and fir. Rights may also be

here granted not only for working the forests, but also for digging mineral resources (naphtha, etc.), in the Uhtinsk, and in the Sub-Ural section near the Pechora; railroads will have to be built and rivers adapted as canals, etc.

In the case of some of these concessions the first drafts of the negotiations have been already elaborated.

3. The following districts are open in Siberia for mining concessions: In the Kuznietsk region the concessionaires are to be offered immensely rich deposits of anthracite, amounting in all to 250,000,000,000 tons, exceeding England's supply of coal by fifty per cent. In quality the anthracite of the Kuznietsk region is superior to that which is mined in the Donets region.

Eighty versts south of the Kuznietsk lies the region in which the Tolbest iron ores are found. By uniting the latter places with the Kuznietsk mines by a railway line, it will be possible to instal an iron industry with an annual production of 40,000,000 to 50,000,000 poods (one pood equals 1.1638 kilograms, 36.07 pounds). The combined ore resources of this district amount to over 1,500,000 poods, with an average iron content of 63 per cent.

One hundred versts from Irtish lie the coal deposits of Ekibastuz, with a total anthracite supply of 35,000,000,000 poods. Not far from the above mentioned place lie the zinc deposits of Riderov. The amount of zinc ore is calculated at 150,000,000 poods. In addition each hundred poods of zinc ore contains 29.8 grams of gold, over 250 grams of silver, besides 8 per cent of lead and 1 per cent of copper.

In the lower course of the Yenessei lie the iron deposits of Irbinsk and Abarkamsk, with a total supply of about 100,000,000 tons of magnetic iron ore, containing 65 per cent of iron.

Immense resources of ore and coal may be offered to the foreigners also in other places in Siberia. Thus, in the Ezychansk district alone, on the river Abakan, anthracite deposits totalling 3,000,000,000 poods are to be reserved for exploitation in concessions.

4. On the subject of concessions of foodstuffs, Milyutin said:

"There are immense, extremely rich and fruitful areas that are now not being exploited because of the devastations that they suffered during the civil war. Over 3,000,000 dessiatins of such area is to be found in the Government of Samara, the Ural region, and the Government of Tsaritsin, in the Donets region, as well as in the Governments of Kuban, Chernomorsk, and Stavropol. These are exceptionally rich black earth regions, in which a harvest under favorable circumstances cannot yield less than 100 poods of grain per dessiatin. Our foremost condition in the granting of concessions is that the technique of agriculture shall be

improved and elevated. Another indispensable condition that we have set up is that the soil shall be worked with tractors, and with the application of the best perfected threshing machines, seeding machines, mowing machines, harvesters, etc.

"The Soviet Government in other forest concessions makes the same conditions as above, namely, that the foreign concessionaires shall apply the most modern means of production and place Russia's forestry methods on as high a technical plane as possible."

Finally Milyutin in his conversation with the foreign journalists touched upon the question of the advantage accruing to the Russians from the granting of these concessions: "The advantage to us is in the fact of the awakening of our forces to life; they will import into Russia a certain number of machines, and in addition will build factories and works which we ourselves could not introduce; further, they will teach our workers and specialists the best approved technical methods. We hope that through these concessions we shall make a tremendous progress in our work, and Western Europe, which needs our raw materials, and which seems not to be able to extricate itself from the difficulties and obstacles it meets in the reconstruction of its industrial life after the devastation of war, will obtain from us the aid and assistance it needs in lightening the burdens of its population."

Names of Concessionaires

Moscow, January 6.—The Vice-President of the Supreme Council of National Economy, Lomov, has made the following interesting communications to the foreign press:

As yet the concessions are not fully completed. Everything has been done on our part to make them a reality, and we are convinced that the other parties also will no longer experience any obstacles to arriving at an agreement with us. For the present the following concessions are being drafted:

1. A concession to the American citizen, Gold-

stone, in Ust-Kamenogorsk, southwestern Siberia, permitting him to establish tanneries.

2. The second concession is made to the Swedish Asea firm (General Electric Company). This concession covers the manufacture of steam turbines after the Ljungstrom system, as well as other products by this firm.

3. The third concession, which has already been much discussed, belongs to the German dye stuff industry corporation, *Interessengemeinschaft für die Manufaktur von Farbstoffen und Pharmazeutischen Erzeugnissen*.

4. The fourth concession is allotted to the leather factories of the firm of Steinberg Brothers. This firm is to obtain the right to manufacture leather from Russian raw materials.

As for the concessions in raw materials, they involve chiefly forest areas. An approximate estimate indicates that we can for the present dispose of 140,000,000 dessiatins of forests in Siberia and northern Russia. These forests must be exploited in accordance with the best technical principles. At the present time negotiations are in progress with England, involving 18,000,000 dessiatins, of which 5,000,000 have practically been covered by almost concluded agreements. The term of the concession is to be for from 60 to 70 years.

The great concessions in Eastern Siberia which are to be held by the American citizen Vanderlip have been worked out in detail and are to be valid for a period of 60 years. As for the situation of the workers in this enterprise, Lomov declares that the laws of the Soviet Republic on workers' insurance, protection of labor, wage-scale, etc., are to apply in spite of the right of the concessionaires to import from 50 to 70 per cent of their workers from foreign countries. These workers shall receive the same food rations as Russian workers. The concessionaires must also provide for a certain number of Russian Socialists in their factories, who are to study the methods of production and the conditions of labor.

The Fishing Industry of Kamchatka

[The following report on the fishing industry of the Kamchatka Peninsula, prepared by the Russian Division of the Bureau of Foreign and Domestic Commerce of the Department of Commerce at Washington, was published in the U. S. Commerce Reports, May 1, 1920. This article is of special interest at this time in view of the fact that fishing rights on the Kamchatka Peninsula are included in the concession granted by the Soviet Government to the American syndicate represented by Mr. Washington B. Vanderlip.]

THE principal port and city in the Kamchatka Peninsula is Petropavlovsk, which had about 1,500 inhabitants in 1913. Other settlements in the peninsula are: Okhotsk, Aian, Iamsk, Gizhiga, Bolsheretsk (on the western coast), Verkhne Kamchatskoie, Nizhne Kamchatskoie, and Markovo and Novo Mariinsk in the Anadyr region. The navigation season is from April to October, but sometimes it extends from March to the end of December. In general, navigation is difficult, because

there are no good ports, and storms and fogs are rather frequent.

Kamchatka offers for export fish, caviar, and furs (especially sable and bear furs). The reindeer industry is important; in 1913, the peninsula had 700,000 reindeer. Foodstuffs, particularly flour, salt, tea, and sugar, are greatly needed in Kamchatka, as are also dry goods, powder, etc. The peninsula imports a large quantity of alcohol.

Fishing is the most important industry in Kam-

chatka. It is carried on to a greater extent on the western coast than on the eastern coast. Most of the following information regarding the fishing industry is taken from a report on "Fishing in the Priamur District of Siberia," by John K. Caldwell, American consul at Vladivostok, Siberia, published by the Bureau of Fisheries in 1917.

Fishing in Western Kamchatka

The West Kamchatka district follows the coast line from the Sopochnaya River down to the southern Osernov shore-fishing stations, a distance of about 335 miles. Kamchatka is very interesting between the middle of July and the last of August, the season for the red and pink salmon. On the west coast, the Osernaya River is the only stream that the red salmon inhabit in any quantities. All

| Stations | King salmon Number | Chum salmon Number |
|------------------------------|-----------------------|-----------------------|
| Coast stations: | | |
| Russian (8) | 95 | 191,873 |
| Japanese (140) | 5,216 | 3,902,646 |
| River stations: Russian (13) | 4,196 | 373,812 |
| Total | 9,507 | 4,468,331 |

The output at the coast stations in 1913 amounted to 37,604 tons of fish, of which 1,030 tons, chiefly sockeyes, were canned and the balance was Japanese dry-salted. There were prepared 1,134 tons of caviar, 102 tons according to the Japanese method and the remainder by the Russian method.

The catch of the river stations amounted to 4,010 tons, from which there was prepared 215 tons of caviar by the Russian method.

In 1913 the canneries on the coast produced 41,186 cases of canned salmon, and 4,208 cases were packed at river stations.

The catch in the West Kamchatka district amounted to 12,300,000 fish in 1910, 14,400,000 in 1911, 23,000,000 in 1912, 33,500,000 in 1913, and

| Items | King Number |
|------------------------|----------------|
| 1911, 38 stations..... | 8,000 |
| 1912, 54 stations..... | 29,000 |
| 1913, 61 stations..... | 30,167 |

In 1912, at 10 coast fishing stations, 700,000 sockeyes and 250,000 cohos were caught, while in 1913, at 9 stations, only 393,000 sockeyes and 95,000 cohos were taken. The output of fish amounted to 11,399 tons in 1911, 11,467 tons in 1912, and 21,192 tons in 1913. Of the 1913 product, 250 tons were salted according to the Russian method; 19,076 tons were dry-salted by the Japanese method; 1,030 tons were canned; and 700 tons of caviar were prepared for the Russian market and 136 tons for the Japanese market. Twenty-five cases of crabs were also canned.

At the river stations, 28 in number, of which 26 were operated in 1913, the catch in that year was 1,315 king salmon, 1,055,045 chum salmon, 647,595 humpback salmon, 460,494 sockeye salmon, 54,780

| Years | Sockeye Cases |
|------------|------------------|
| 1913 | 33,000 |
| 1914 | 41,203 |
| 1915 | 36,763 |

fishing is done with a device called "kaku-ami", which consists of a main net and a fence net. The main net is 70 fathoms long and the fence net is 120 fathoms long. The fence net extends outward so as to guide the fish toward the main net. This device is set near the seashore in 10 fathoms of water, where the salmon run. When the fish are caught, the main net is hauled up by a boat and the fish are transferred to a bagnet called "waku-ami", used for landing the fish.

In 1913 there were 152 fishing stations in this district, of which only 9 were leased by Russians and 143 by Japanese. In 1912 there were 133 such stations. One hundred and forty-eight stations were operated in 1913, and four were idle.

The catch of fish in 1913 was as follows:

| Hump back salmon Number | Sockeye salmon Number | Coho salmon Number | Dolly Varden trout Number |
|----------------------------|--------------------------|-----------------------|------------------------------|
| 1,340,685 | 25,447 | 1,198 | |
| 24,160,762 | 1,269,176 | 67,076 | |
| 1,842,090 | 226,653 | 33,195 | 99,690 |
| 27,343,537 | 1,521,276 | 101,469 | 99,690 |

61,800,000 fish in 1914. In 1914 the catch of fish was 4,211,000 poods (68,000 long tons), of which 90 per cent was exported into Japan and 10 per cent shipped to Russia.

Fishing Industry in Eastern Kamchatka

The East Kamchatka district covers the coast line of the eastern Kamchatka and Anadyr Peninsulas, about 1,843 miles. The majority of the fishing stations are concentrated around Karaguinsky (Count Litka) Bay, in the straits from the Malo-Voyam River to Kichigin River, about 135 miles long, and in the region of the Kamchatka River.

The catch of salmon at the coast stations for the years 1911 to 1913 was as follows:

| Chum Number | Humpback Number | Sockeye Number | Coho Number |
|----------------|--------------------|-------------------|----------------|
| 3,085,000 | 1,627,000 | 750,000 | 218,000 |
| 3,414,000 | 497,000 | 745,000 | 249,000 |
| 6,464,224 | 2,623,997 | 399,207 | 98,043 |

coho salmon, 18,671 Dolly Varden trout, and 88,740 herring. Products prepared amounted to 1,405 tons of fish, Russian-salted, 611 tons canned, 2,261 tons Japanese dry-salted, and 198 tons of Russian caviar, a total of 4,475 tons.

The grand total of the catch of fish in this district amounted to 4,800,000 in 1912, 8,300,000 in 1913, and 8,200,000 in 1914. The catch in 1914 came to 1,161,000 poods (19,000 long tons), of which 76 per cent was exported to Japan and 24 per cent shipped to Russia.

All canning factories in this district are located in the neighborhood of the Kamchatka River. During 1913, 1914, and 1915 the Russian firm Denbigh & Co. packed salmon as follows:

| Coho Cases | Chum Cases | Humpback Cases | Ring Cases | Total Cases |
|---------------|---------------|-------------------|---------------|----------------|
| 10,000 | 18,000 | | | 61,000 |
| 11,253 | 19,103 | | | 71,559 |
| 26,176 | 39,426 | 1,441 | 20 | 103,826 |

Wireless and Other News

OLD LIES IN A NEW FORM

Moscow, January 12.—While Russia enters the year 1921 prepared for peace and peaceful labor, the European capitalist press indulges in even more absolutely ridiculous orgies of accusations and lies about Soviet Russia. Deliberate falsifications are circulated, which the capitalist newspapers themselves know to be untrue, and communications are even sent out through official channels, ascribing to Soviet Russia all manner of ill-intentioned plans toward the neighboring states, with whom Russia is maintaining and developing the most friendly relations.

The Chairman of the Polish Delegation at Riga called the attention of the Chairman of the Russian Delegation to a rumor of unknown source to the effect that the Russian Delegation at Riga intended to arrest the Polish Delegation. The German wireless stations ascribe to Lenin a speech in which he is said to have called for a war in favor of world revolution. No such speech was delivered. Forged issues of *Pravda*, specially prepared for the purpose, have been distributed in foreign countries, ascribing to Trotsky and other Soviet leaders—articles of an openly provocative character, threatening new war from the side of Soviet Russia, speeches which were never delivered by Trotsky or by the others to whom they are assigned. The governments of the neighboring states of Russia have repeatedly called the attention of the Soviet Government to communications from obscure sources concerning alleged concentrations of Red troops near the boundaries.

The intention of this vile campaign of lies is fairly clear. The conscienceless enemies of Soviet Russia, who have lost all hope of a successful military intervention, are now attempting to prevent the energetic peace work of the nation and the incipient economic reconstruction. The reports should have opened the eyes of even the most childish and credulous. From beginning to end the Congress was devoted to questions of economic and administrative reconstruction. Neither from the speaker's rostrum nor from the seats of the delegates did a single word come that might be interpreted as indicating warlike intentions of any kind whatsoever. The campaign of lies and calumnies now beginning to be uttered by Russia's enemies shows only to what depths the irreconcilable enemies of the country have degenerated.

GERMAN WORKERS FOR RUSSIA

BERLIN, January 12.—German newspapers contain reports of the participation of German workers in the economic and industrial reconstruction of Russia. *Freiheit* speaks of the approaching departure of 5,000 skilled workers for Russia. Of these 4,000 are to be assigned to the metal industries and the remaining thousand are to be divided among the Commissariats for Agriculture, Commerce, and Public Health.

EXHIBITION OF VRUBEL'S PAINTINGS

An exhibition has been opened in the Tretyakov Gallery, at Moscow (perhaps the most famous collection of nineteenth century paintings in Europe), of the paintings of the great Russian artist, M. A. Vrubel, on the occasion of the tenth anniversary of his death. The exhibition includes about one hundred and fifty pictures, collected from various museums and galleries in Moscow. *Izvestia* reports that the management of the Tretyakov Gallery proposes an entire series of exhibitions in celebration of the memory of deceased artists.

RUSSIAN SHIPS GIVEN TO FRANCE

Moscow, January 12.—In the city of Poti (on the eastern shore of the Black Sea) the French authorities aided in carrying off the Russian vessels that were threatened with delivery to Soviet Russia. The steamship *Princip* was sent from the Crimea to Constantinople. The French cruiser has arrived at Batum and its officers have confiscated all vessels about to be handed over to Soviet Russia.

Additional Note: *Volya Rossii*, appearing at Prague, says that the French have declared that they intend to place an embargo on the entire White Russian fleet, numbering 120 vessels, as a compensation for aid given by the French Government to the White Russians. *Volya Rossii* is extremely displeased with this French measure and says that "the future Russia" (the peculiar adjective is intended to indicate the Russia of Kerensky) will not recognize the validity of the treaties or agreements of economic or other nature which White generals are concluding with foreign powers, either voluntarily or under compulsion.

PROGRESS OF ELECTRIFICATION

Moscow, January 15.—Aerial postal communication has been established by the Red aerial fleet on the Khabarov-Kiev-Yekaterinoslav-Sebastopol line. Postal aeroplanes made their first journey on January 13.

The Makhonin electric train has made its first journey from Petrograd to Luban.

The Putilov electric stations have been restarted.

The work of electrification in the Crimea is proceeding energetically. A large electric station is to be erected for the purpose of utilizing the power obtainable from the mountain rivers. Special attention is also being paid to the electrification of the Crimean hospitals and the establishment of Röntgen rays, electric baths, and electric massage.

GEORGIA PROSECUTES COMMUNISTS

Moscow, January 11.—Mass arrests of Bolsheviks are taking place in Georgia. Many Communist organizations have been dissolved and the activity of the Communist Party made impossible. The Kutais jail now holds 200 Communists.

BULGARIA AND SOVIET RUSSIA

The Minister for the Interior and Provisional Minister for Foreign Affairs, Dimitriev, submitted to the Chamber an exposition of Bulgaria's foreign policy and simultaneously answered an interpellation from the Communist Party regarding the resumption of diplomatic and economic relations with Soviet Russia. The Minister communicated to the Chamber Bulgaria's answer to Chicherin's note and thereupon declared that Bulgaria would take a position of watchful waiting toward Russia, as the situation had not yet been consolidated and as the Great Powers had not yet begun their diplomatic and economic relations with Russia. As to the arms which Bulgaria had furnished to Russian counter-revolutionists, the Minister could not assume any responsibility, since Bulgaria, according to the treaty of peace, was obliged to deliver up these arms without having any influence whatever over the use to which they would be put.

SOVIET RUSSIA AND GEORGIA

The Soviet Russian representative in Georgia on December 17 handed a note of the following contents to the Georgian Government: The Georgian Government is herewith informed of the Soviet Government's consent to abolish the neutral zone in the Sukhum district, in the region around the rivers Psou and Mekhadir, so that troops from both countries may have thoroughfare to occupy the boundaries in accordance with the treaty of May 27, as provided in Section 4, article 3, of that treaty.

SOLDIERS SENT HOME

Moscow, January 11.—Danilov reported at the Non-Partisan Meeting in the Moscow Government that the annual classes preceding 1885 had already been demobilized. In a few days demobilization is to be effected for the annual classes of 1885, 1887, 1888. He said also that an opportunity would be found to demobilize other annual classes also. The classes 1889 to 1891 are to be sent home on furlough at once if no new danger should materialize, and it is the intention similarly to furlough all annual classes up to 1894. The soldiers are sent home for an indefinite period, but may be recalled to the colors at need.

SOCIALIST THEATER SOCIETIES

The Moscow Theater Society is at present occupied with a solution of the question of organizing a new institution—the Socialist Theater. The society is to trace each step in the evolution of the Socialist Theater, to gather all material touching upon this matter, to sift it by a scientific-ideologic investigation, and to make known the acquired results in the widest circles. The object of the theater is to create a mental tool for solidifying the new work that has been undertaken by the Theater Society. For this purpose all theaters (also all halls in which theatrical questions are discussed) have been distributed among the members of the institution. At the head of the society stands P. S. Kogan, and among his nearest associates are: A. Rodionov, V. Mass, Meyerholdt, Gan, Kerzhentsev, and Bebutov. (See *Kerzhentsev's Biography next week.*)

When Workers and Peasants Rule

"All citizens able to work have the right to employment at their vocations."

How does the Soviet Republic apply this principle? Read

Labor Laws of Soviet Russia

A booklet of 93 pages (size 5 by 7 inches) containing the official code of labor laws of the Russian Socialist Federal Soviet Republic. Among other subjects, these are included: Protection of Labor; Compulsory Labor; the Right to Work; Working Hours; Labor Distribution. Price, 25 cents, postpaid.

The Marriage Laws of Soviet Russia

A new booklet (85 pages, size 5 by 7 inches). Contains the full text of the first code of laws of the Russian Soviet Republic dealing with Civil Status and Domestic Relations, Marriage and Divorce, Guardianship, Family Rights, etc. This code of laws refutes the alandorous lie about "nationalizing women". Price, postpaid, 25 cents. Send orders and remittances to

Peter Kropotkin

(Born December 9, 1842—Died February 8, 1921)

By MAX STRYPYANSKY

[The recent death of the famous author of "Mutual Aid", "The French Revolution", and other important works, and long the principal figure among intellectual anarchists, renders timely a careful analysis of the foundation of his thought. This study reveals Kropotkin as in reality a reformist of the "democratic" type.]

WHEN in November, 1917, the Bolsheviki overthrew the government of Kerensky, they found themselves opposed and denounced not only by the *beati possidentes* of all the world. Among the enemies were also the other revolutionary parties of their country, including some of the most famous, most venerable names of Russian revolutionary history. The whole bourgeois and "socialist" press of two worlds did not tire of exploiting this fact. They steadily pointed to such men as Plekhanov, the founder of Russian Marxism, to Burtsev, the indefatigable unmasker of Tsarist police spies, to Chaikovsky, the Nestor of the Russian revolutionists of the seventies, to Katherine Breshkovskaya, the "Grandmother" of the Revolution, and especially to Prince Peter Kropotkin, the great geologist, naturalist and historian.

Peter Kropotkin was especially suited to be a capital witness against the Russian proletarian revolution, as he, at least, could not be accused of any moderate leanings, of any "rose-water Socialism". For he was the founder and main theorist of that ultra-revolutionary creed called "Communist Anarchism", whose adherents used from time to time to startle the world with their terroristic deeds.

Kropotkin was a lonely star in the Russian revolutionary firmament. The place he occupied as the founder of a school was somewhat akin to that of Leo Tolstoy. Generally venerated for his purely scientific achievements—as the sage of Yasnaya Polyana was for his literary work—he was just as generally disregarded as far as his political ideas were concerned. Although surrounded with a glamor

that had almost no equal in the long list of Russian revolutionary heroes—his princely origin—his imprisonment in the fortress of Peter and Paul—his sensational flight in 1876—his imprisonment in France as an anarchist "conspirator"—his long exile in England—he was not to be a prophet in his own country.

His anarchist teachings were far better known and had more adherents in all other countries than in Russia. But even in the Latin countries of Western Europe, where for a certain time his ideas were in vogue, his prestige began to wane with the beginning of the twentieth century. The sterile utopianism of his gospel which expects the masses to rise in revolt for the beautiful ideal of "anarchy" (i.e., a communist society without any government) had condemned the anarchist movement to an existence as a sect of naive enthusiasts and talkative cranks, its more intelligent or more revolutionary elements usually joining the rising syndicalist movement, in which they saw a more effective protest against both bourgeois society and reformist Socialism.

He was almost forgotten to the labor movement of all countries, when the beginning of the world war brought him again into the foreground of public attention. At that time he came out with his public manifesto to his French comrades, exhorting them to enlist in the army, to defend French freedom and civilization against German militarism and absolutism . . . And shortly before that time he had conjured his comrades—he the anarchist and anti-militarist—in the face of the impending

German danger, not to protest against the efforts of the French Government to extend the time of obligatory military service.

To many of his adherents this attitude of their beloved teacher came as a painful surprise. Russian as well as French anarchists tried to explain it as a sudden relapse into patriotic and democratic illusions. But they were wrong. For those who had followed Kropotkin's theoretical career, this attitude was not an act of treason—it was the consequence of his whole theoretical system, it was the logical outcome of the whole mental and psychological make-up of a man who thought himself to be the most radical enemy of bourgeois society, the most irreconcilable of all revolutionists, and who in reality was a fervent democrat and "progressive."

Anarchist or Democrat?

The basis of his theory was his conception of the state. Not burdened by any Marxian views as to the class character of historical phenomena, he envisages the state not as a machine for the oppression of one class by another—he perceives this only where it appears in the form of a strongly centralized apparatus, covering a vast territory. "The state," says Kropotkin in his *Anarchy—Its Philosophy, Its Ideal*—"represents . . . a form of social life that in our European societies was established only a very short time ago. Man had already existed for thousands of years, before the first states were formed; Greece and Rome had been flourishing for many centuries before the appearance of the Macedonian and Roman empires; and for us present-day Europeans, the state has been in existence, properly speaking, only since the sixteenth century. At that time there was created that society of mutual protection between the military and judicial power, the landowners and capitalists that is called the state."

We see, Kropotkin's historical investigations have led him to a very amazing discovery. The city republics of Rome and Athens in the ancient world, the cities of the Middle Ages, such as Florence, Bremen, Novgorod, etc., were not yet states, were not organizations for the oppression of one class by another—they were "free communes", stateless organisms, and only became states at a very late epoch, that of Alexander the Great of Macedonia, and of the Emperors, in Rome, and in Europe, with the relatively recent rise of centralistic absolutism. And this is Kropotkin's view, despite the fact that for many centuries before the formation of these great empires the majority of the population of the communities mentioned consisted of slaves; despite the fact that there were class struggles and class oppression in the cities of the Middle Ages.

The above quotation furnishes the key for the explanation of the tragic misunderstanding that is the essence of Kropotkin's anarchist theory.

Brought up in the atmosphere of idealistically minded intellectuals and "repentant noblemen"* he

* Thus were sometimes called those members of the nobility who, feeling a sense of responsibility for the misery and ignorance of the people, in the middle of the past century advocated the abolition of serfdom and the spread of education among the people. They were predecessors of that later generation of the seventies that decided to "go into the people".

deeply resented the way his great country was kept in a state of Oriental subjection and barbarity by a corrupt and ignorant governmental clique that, with its innumerable ramifications, octopus-like, from one central point, was oppressing, devouring, and devastating a vast empire. This idea must have specially impressed his mind during the extensive journeys which he undertook for scientific purposes when, a liberally-minded officer, he served with the Amur Cossacks in Eastern Siberia. Thus a deep hostility against absolutism and centralism became, under the influence of the teachings of Proudhon and Bakunin, the basis for his "total negation of the state."

But subconsciously, there always remained in him the Russian intellectual's admiration for the bourgeois-democratic form of the states of Western Europe, where the management is more intelligent, less wasteful, where there is local autonomy—in one word, where there is more "democracy" and federalism, as in the "free" cities of antiquity and the Middle Ages—as against the centralist absolutism of Alexander the Great, Caesar, Louis XIV, and the Romanovs. It did not occur to him that for the great mass of the workers, the slaves of manual labor, the benefits of democracy and autonomy did not exist; that they were excluded from any participation in the democratic management of the state, and that there was just as much starvation and bloody repression of the rebellious workers under democratic liberty as under autocratic tyranny. For after all, despite all his generosity and the idealism with which he sacrificed his personal and class interests, he always remained a bourgeois intellectual who was unable to look at things from the workingman's angle.

True, there was a moment in his life when he almost approached the really proletarian point of view. It was during his trial at Lyons, France, in 1883, when he was indicted for being a member of a secret anarchist organization, the "International Workingmen's Association." At that time he said: "History teaches us that all governments are similar to each other and that one is worth as much as another. The best are the worst. Some of them display more cynicism—others again more hypocrisy . . ." And thirty years later he appealed to his followers to give their life in defense of the ones that displayed more hypocrisy, when they were attacked by the one that displayed more cynicism . . .

His Views on Revolutionary Prospects in Europe

But it did not take him thirty years to change his views so radically. Already in 1892, in his main work *La Conquête du Pain*, speaking of the prospects of the coming European revolution, he expressed views for which he could have been congratulated by the most moderate Mensheviks (if they had existed at that time), nay, even by simple "Progressives". He says in this book that in France the people may ask "free if not communist communes" (i.e., a federalistic republic as against the present centralism); that "Germany will go a little

farther than France went in 1848" (i.e., that it would become a republic like the United States) and that "the ideas which will govern the Russian Revolution will be the ideas of the year 1789, modified to a certain point by the intellectual currents of our century" (i.e., the ideas of Milyukov, Kerensky and their little group of lovers of freedom).*

This opinion of his that Russia was not "ripe" for a social revolution, Kropotkin voiced also during the first Russian Revolution of 1905-1907. In the French *Almanach de la Revolution*, of 1907, he wrote at that time about the Russian Revolution: "This will not yet be the social revolution—the honor of inaugurating it will belong to the Latin nations—but it will be a step towards this revolution . . ." True, almost at the same time he wrote in the Russian Anarchist paper *Listki Khleb i Volya*, No. 18: "The land to the people, the factories, the shops and the railways to the workers; everywhere the free, revolutionary Commune, taking into its hands the management of the national economy . . .—this should be the watch-word of the second, now impending period of the Russian Revolution." But this direct contradiction to the passage quoted from the French *Almanach* can only be explained if we assume that by the word "period" he must have understood not a short term of years, but some cosmic epoch as is employed in geology, his favorite science . . .

Anarchist Ideal and Democratic Reality

The aim of Kropotkin's anarchism is the abolition of the state and the establishment of a free communism—a society in which there is no established authority, no organized body, able and entitled to enforce the will of the community, no compulsion to work, and where "everybody works according to his abilities and receives according to his needs." A rather ideally beautiful condition of affairs, which has only one little drawback—it is too beautiful. So beautiful, that even its most ardent adherents hardly believe in the possibility of establishing it immediately by a violent revolution. A long period of preliminary education, preparation, development of the sentiments of solidarity and mutual help, is, according to their theorists, necessary—some of them, like Jean Grave or Cornelissen, extending this period even into centuries—before humanity would be able to adopt this ideal system.

And there you are. This ultra-revolutionary gospel, this reddest of all red systems, in spite of occasional acts of violence committed by some of its more temperamental adepts, is hardly more than an educational, an "uplift" movement, chiefly concerned with the "revolutionizing of intellects." And at any historical moment, when a really revolution-

ary situation presents itself, as in Russia in 1917 or in Germany in 1918, its adherents are doomed to remain helpless and perplexed, as they cannot help being perfectly aware that the hour for their ideal revolution has not yet struck.

There is no doubt that there must have arrived in Kropotkin's life a moment when he became aware of this situation and drew the necessary conclusions from it. If a long period of preliminary intellectual preparation is necessary—then that form of a government is preferable that gives you more chances for propaganda, viz., a democratic republican government such as, e.g., France, which in a much higher degree respects freedom of speech and freedom of the press than semi-absolutist Germany. So, here again, he looked at the matter from the standpoint of the intellectual, of the teacher of the people, and not from the standpoint of the worker, for whom this "freedom" means only the freedom to read or to listen to inspiring phrases at a time when this does not harm his masters; for all these "liberties" are abrogated the moment he becomes unruly and the "free word" might really become a danger to the privileged classes.

Moreover, Kropotkin had devised a rather curious idea of destroying the state—by instalments. According to him the state was strongest under an absolute regime and was weaker the more democratic its form. In his preface to Michael Bakunin's *Paris Commune*, he says: "The Anarchists are striving . . . not to strengthen the power of the state, but to weaken it, to split it up, territorially as well as functionally, and finally, to abolish it altogether." And in his little pamphlet *The Russian Revolution*, issued in 1905, he says that the democratic republic has the advantage of having cut somewhat the fangs of the state power. It is hardly necessary to emphasize how naive this whole idea is—for everybody knows now that the more "democratic" a state, the stronger will be its foundations and the harder the tasks of its slaves in shaking off the chains which, though invisible (or rather, *because* they are invisible), are stronger than in a monarchist tyranny that has no "liberal" ornaments.

The ideal of anarchy has thus become for Kropotkin a guiding star for a continuous demand for more national independence, for provincial and municipal autonomy, in one word, for more democracy! The anarchist ideal had reconciled him to democratic reality.

Defender of France

His first skirmish as defender of French democracy he had—strangely enough—to fight out with nobody else but Gustave Hervé, the great master of the editorial, the greatest weathercock of the nineteenth and twentieth centuries, at present the staunch supporter of Wrangel, Pilsudski, Clemenceau, Millerand and all the cut-throats of European imperialism. At that time, in 1905, Hervé, parading as an "extreme Lefter", invents a new "stunt"—*pour épater le bourgeois*. He formulates his theory of "Antipatriotism", based mainly on Marx's fam-

* On this point, one of Kropotkin's critics, the Polish-Russian revolutionist, A. Wolski (W. Machajski), once very cleverly remarked that "while the cause of the workers is identical all over the world, the inductive-deductive method of Kropotkin puts the finger first on the line that goes along the Rhine and later along the line that goes through Alexandrovo, Verzhbolovo and Radzivilovo (Russian-German border-points), and teaches that these are not simply border-lines, frames within which the ruling classes of the different states are dividing among each other the riches of the earth and the products of the exploitation of the workers, but natural limits of quite different social organisms."

ous sentence in the *Communist Manifesto* ("The Worker Has No Country"). All Syndicalists and Anarchists acclaim him. But what happens? Who takes the field against him, to the plaudits of the whole bourgeois press? Why, the "father of anarchy" himself, Peter Kropotkin. "No" was the essential tendency of his argument, "if France is attacked, we cannot fold our arms and let her be defeated by a reactionary, monarchist power. But we are not going to defend the present form of French government either. We will make the social revolution, raise the red flag on the City Hall, and then defend our country." Very nice. But if that was what he meant, why did the *Temps*, the main organ of French plutocracy, applaud so enthusiastically and ask the Government to withdraw the order of expulsion which, twenty years before, the authorities had issued against that brave friend of France? Was the capitalist *Temps* so foolish as to ask for the rehabilitation of a man who advocated the raising of the red flag on the City Hall? Or did the paper perfectly well understand that he was waving the red flag only as a sop for his flock, so that they might the more easily swallow his patriotic pill? How right the *Temps* was, appeared eight years later (1914), when France was attacked by Germany, and Kropotkin, in his patriotic appeal to the French comrades, did not even mention a word about making a revolution or "raising the red flag."

It is interesting that when Kropotkin took his well-known stand at the beginning of the war, the *New York Times* of August 27, 1914, in an editorial entitled "Peter Kropotkin's Hopes", called him the "veteran Russian agitator and democrat (!)" (For once the editorial writer, no doubt congratulating himself on the accomplishment of a useful falsehood, was unintentionally telling the truth.) But even for the *Times* his enthusiastic hope for a "strengthening of the liberalizing forces in Russia," whatever the issue, seemed a little exaggerated. "It would be interesting to know the specific grounds of his optimism" the paper asked. His specific grounds were the hopes that "democratic" France and England would probably exert on the Tsar a pressure in this direction. You see, a great geologist may be just as wise as a great novelist, for H. G. Wells at the same time expressed exactly the same view. Only Wells was ultimately disillusioned in his belief in the generous intentions of the Allies, while Kropotkin never showed signs of any such weakening.

Kropotkin and the November Revolution

When the Revolution broke out in March, 1917, Kropotkin saw the immediate cause of this event in the fact that the Russian people had noticed "that our autocracy, with the whole clique of its civil and ecclesiastical henchmen would be on the side of the German conquerors." The obvious reason, namely, that hunger and war-weariness had driven the people as well as the soldiers to revolt, had completely escaped his attention. And the main task of Russia at that moment was to "drive out the Germans from the occupied territories."

When he came back to Russia—the reception he got was very cool. The stand he took was not dissimilar to that of the great Marxian protagonist Plekhanov, and oh, irony of fate!—these two bitter theoretical antagonists, together with the Social-Revolutionists Burtsev and Savinkov, were so to speak the only out-and-out bitter-enders in a world of more or less pacifistic Mensheviks, Social-Revolutionists and Bolsheviks. Even his own disciples, the Anarchists, had deserted him almost entirely.

The November Revolution met with his double disapproval. For in the first place it interfered with the main task of the Revolution, which according to him was "to drive out the Germans". And secondly, it was centralistic, dictatorial, "Jacobinic"; three words that were anathema to him since early youth. He did not believe that the Soviet Revolution would succeed. Not only because of the intervention of the Germans and the Allies; but mainly because by their "centralistic methods" they were "paralyzing the constructive work of the people." Brailsford and even Bertrand Russell have shown that without those "centralistic methods" the "constructive work of the people", i.e., the egoism and greed of the capitalistically-minded peasant, would simply starve out the cities and finally destroy what little was left after the imperialistic and civil war. This utopian delusion as to the "constructive work of the people" made him also bewail the "destruction of local cooperative societies by changing them into party bureaucratic organs": this at a time when the "free" cooperatives were developing more and more into bourgeois counter-revolutionary organizations whose heads in very many cases were conspiring with Kolchak and Denikin; at a time, when only the most ruthless application of dictatorially organized force could save the Revolution from total destruction by the White and imperialist armies and by internal sabotage and disintegration.

But to his credit it must be said that in spite of all his doctrinaire opposition he did not countenance the Russian and international counter-revolutionary activities against the Soviet regime. And twice, once in a letter to his old friend Georg Brandes, the great Danish critic (April 28, 1919), and again in a letter to the English workers (June, 1920) he protested against the blockade and intervention. But although he thus dissociated himself from his former intimates, the Russian Social-Revolutionists, who had become open helpers of world imperialism and capitalism against the rising working class, he never struck, in his protest against the strangling of proletarian Soviet Russia such ardent tones as at the time when bourgeois, but democratic, France was menaced by monarchist Germany. While in 1914 he called his followers to fight sword in hand against the brutal invaders of *la belle France*—at a time when the great cause of the emancipation of the whole working class was at stake, he contented himself with tearful appeals to the Allies, in whom he still believed, and could not let even this opportunity go by for voicing his indignation towards the "criminal" attitude of the Bolsheviks.

during the war. The passage against intervention in his letter to Brandes, reads as follows: "They speak in the West of restoring order in Russia by an armed intervention of the Allies. Ah, well, dear friend, you know how criminal towards all social progress in Europe was, in my opinion, the attitude of those who worked to disorganize the Russian power of resistance—which prolonged the war by a year, gave us a German invasion under the cover of a treaty and cost seas of blood—to prevent conquering Germany from crushing Europe under its imperial boot. You know well my feelings with regard to this. And nevertheless I protest with all my strength against any kind of armed intervention of the Allies in Russian affairs. That intervention would result in an increase of Russian chauvinism. It would restore over us a chauvinist monarchy, and note it well, it produces in the masses of the Russian people a hostile attitude towards Western Europe—an attitude which will have the saddest consequences . . . Those of the Allies who see clearly into events ought to repudiate all armed intervention. Moreover, if they really wish to come to the aid of Russia, they will find a tremendous amount to do in another direction . . ."

This shows that on the very eve of the Versailles treaty, when even the most gullible admirers of Western "democracy" had already seen through its hypocritical pretensions, he still believed in the good intentions of the Allies and thought them different from the German imperialist cut-throats. He persisted in his democratic illusions to the very end.

But for all that—he was a man whose memory the Russia of the future will always honor. For although not free from the bourgeois democratic prejudices of the old generation of Russian revolutionists, although unable to understand the meaning of the greatest upheaval in the history of mankind, and although this revolution was in strict contradiction to all his historical and political conceptions,—he kept his revolutionary honor untarnished—while most of his contemporaries of the seventies and the eighties, the Burtsevs, the Chaikovskys, the Breshkovskayas, the Morozovs, after a glorious past of heroic struggle for bourgeois revolution in Russia—became conscious or unconscious tools of world imperialism and capitalist counter-revolution and set themselves down in Russian history as the worst enemies of working-class emancipation.

The Magnetic Corps

By SAMUEL RAFELOVICH

[In the absence of our weekly Military Review by our regular military critic, Lt.-Col. B. Roustam Bek, who is now in Russia, we are printing below an interesting account of the First Cavalry Army, written on the occasion of its first anniversary, in November, 1920.]

"Proletarians to Horse!"
—Leon Trotsky.

All the way from Uzman-Sobakhina and Voronezh to Mykop against Denikin, from Tytnev in a remarkably swift ride to Zhitomir and Berdichev, up to the gates of Lemberg against the Poles, and now the new blow against the moribund baron (Wrangel)—is this not a brilliant, an astonishing progress on the part of the first Cavalry Army, all in one year?

Whatever may be the future lot of this army of horsemen, there is no doubt that the victorious, creative activity of the Red Army has found in the activity of this cavalry body a brilliant expression of the military strength which arose like a phoenix from its ashes, hurling thunderbolts and menacing . . .

Something has happened that must really seem remarkable in the eyes of the certificated generals.

The sergeant of the Nizhni-Novgorod Dragoon Regiment, Budenny, has not read Sakharov's *History of the Cavalry*, nor has he studied the tactics of cavalry according to Dragomirov; he has not buried himself in the deeds of Seidlitz or Stuart, and has surely not gone back to the days of Alexander of Macedonia or Hannibal, who was the most famous cavalry leader in the history of warfare—and yet in his operations he carries out in the most brilliant manner the best technical rules of cavalry warfare.

The technical resources of our cavalry are, particularly in the matter of intelligence service, very modest, at present even very deficient, and yet there is no doubt that Budenny fully controls his army. The enemy had artillery of long range, tanks, airplanes, and in our cavalry army there are a number of regiments which at the time of the suppression of the counter-revolution in the south did not even have rifles. The rifles were superfluous.

In full order of march, with sabres drawn, our fighters threw themselves upon the armored trains, and lord knows how they did it—conquered them. They dismounted, crept up to the invulnerable tanks and blew them up with hand grenades.

Budenny knew very well the power of his sabres, twirled his mustache and pursued his opponent, simultaneously cutting off his retreat.

I should like to report to the reader a meeting I had with Budenny.

It was exactly a year ago, November 17, after the notable battle for the conquest of the extremely important railroad center at the station of Kastornaya, where Mamontov, Shkurov, and Postavsky, were completely destroyed. I set out to meet Budenny at the village of Nizhni Olshanka.

My nerves were somewhat strained by the unusual conditions of the cavalry campaign. In my ears there still rang an artillery cannonade, and I still heard the rattle of the machine guns with im-

udent persistence. I had made 45 versts on horse that day in spite of the slippery ice and the severe frost. I handed Budenny the green flag of the notorious Shkurov "Wolf Division", which had just been cut down by our young cavalry division, arriving from the north in its occupation of Kastornaya. Budenny smiled and turned to his assistant:

"Syemchko! Take this rag and show it to the comrades on the staff."

Not another word. As if the occupation of such a strongly fortified point,—and besides the little Olyn River had first to be forced, which was defended by several thousand infantry, and by picked officer regiments—had been a mere bagatelle.

Later I understood that it was impossible to astonish Budenny and his men, with whom heroic deeds had become every day matters.

It is late at night . . . The command for the cavalry corps is being worked out; all those standing around except the men on guard, are sleeping the deepest sleep. You can sleep thus only at the front when you are obliged to refresh your exhausted organism thirsting for relaxation, in the short period of two or three hours. Especially your brain needs this. None of them could have been awakened by any noise however great. It seemed as if sound had ceased for them, and only a peculiar

force of habit makes them wake up at the proper time in order to ride on until a fortunate accident may permit them, three or four days later, again to go to sleep for a few hours, tightly wrapped in their cloaks, with their caps on their heads . . . Comrade Pograbyev, head of the Corps Staff enters the room and reports directly:

"General Olagai's corps has been thrown against the cavalry from the Tsaritsin front." Our conversation is interrupted. Budenny listens calmly, again twirls his mustache, as is his habit and observes:

"Well, we shall be able to dispose of him. But do you know who this Olagai is? He was the Commandant of my train troop—the time I was in the Nizhni-Novgorod Dragoon Regiment."

Going to sleep I still observed him walking off stealthily in order not to awaken anyone, to his Staff in order to work there. Next morning he again set out for the line of battle.

The Red Cavalry Army has passed through a campaign unparalleled in history in the course of this single year; if you include all the skirmishes, marches, regroupings, shiftings of front, it will make a distance of 6,000 versts. Honor and praise to the Cavalry Army; honor and praise to its leader, Comrade Budenny!

Medical Relief for Soviet Russia

[An Address Delivered at the Metropolitan Opera House, Philadelphia, Pa., on January 18, 1921.]

By J. L. MAGNES

ANTI-RUSSIAN propaganda has been carried on by departments of government, by the press, by preachers, lawyers, and teachers.

A large part of the responsibility for the hostility or indifference of the American people to suffering in Soviet Russia is, I am sorry to say, to be borne by the two greatest of American relief organizations, the American Red Cross and the American Relief Administration. I realize, of course, that these two organizations have a quasi-governmental character, and that they are, in large measure, dependent upon the weird, blundering policy of our State Department in relation to Soviet Russia; that these two institutions simply hardened their hearts towards the innocent and suffering millions of the great Communist Republic. They are recorded as having brought aid and comfort to every enemy of Soviet Russia from first to last, from Kolchak all the way through Wrangel. They were all ready with their barges of food and clothing and medicines to bring the message of brotherhood and compassion from America to the population of Russia, provided—provided the adventurer Yudenich, with his hangman Balakhovich, and the mercenaries of a dozen nationalities should capture Petrograd on the scheduled day. The valor of Red Petrograd disturbed the Entente schedule, and the message of humanity and compassion from America

is still undelivered. Instead of bringing supplies to assuage the misery of suffering Russia, there is an authentic record, made by a member of the Kerensky Cabinet and of the Wrangel Cabinet, of which I hold a copy, that large portions of the food supplies of an American relief organization were sold speculatively by the Yudenich authorities at six times the legal Esthonian rate, and that the proceeds from these sales of American relief supplies were used not for relief, but for the political and military benefit of the bankrupt Yudenich Northwestern Government.

In preparing for this meeting, I took the liberty of communicating with the State Department, the American Relief Administration, or European Relief Council, of which Mr. Hoover is chairman, and the Soviet envoy to the United States, Mr. L. C. A. K. Martens. What I saw is based upon statements contained in these written communications. I repeat, therefore that, with the exception of the American Friends Service Committee and the Jewish Joint Distribution Committee, no sincere attempt has been made to find a way of bringing relief to Soviet Russia.

This statement may appear strange to you in view of a statement published on January 14, just four days ago, from Mr. Norman H. Davis, Acting Secretary of State, on American policy towards

Soviet Russia. Despite its many contradictions, this statement was, on the whole, the most hopeful we have yet had of the opening up of communications between this country and Soviet Russia.

In this statement, Mr. Davis declared that large-scale relief work in Soviet Russia had not been undertaken by American organizations because of difficulties raised, not by the Government of the United States, but by the Soviets. "Representatives of the large relief organizations, with the knowledge and approval of the Department of State," he continued, "have visited the central Soviet authorities in Moscow in the hope of establishing a *modus vivendi* for such work, but with two exceptions have been met by rebuffs." The two exceptions he specifies later in his letter, as the Jewish Joint Distribution Committee and the American Friends Service Committee (Quakers). Other relief organizations, however—meaning the American Red Cross and the American Relief Administration—have experienced only rebuffs from the Soviets, so he declares; and he concludes, therefore, that "the official obstruction to the feeding of sick Russian children by Americans has come not from this Government, but from the Soviets." In other words, Mr. Davis bases the hostile policy of the State Department towards relief in Soviet Russia upon alleged rebuffs to the American Relief Administration.

As to the experiences of the American Relief Administration, I can assert the following: First, the American Relief Administration has never sought assurances from the Soviet Government, and has never sought to find out the terms under which relief work in Soviet Russia might have been carried on. Second, two representatives of the American Relief Administration, whose names are a matter of common knowledge, and who happened to cross the lines into Soviet Russia last spring, have presented the most favorable reports and recommendations for relief work in Russia to the American Relief Administration. In view of this, how can the Acting Secretary of State speak of Soviet rebuffs to this American organization?

But whereas, on the one hand, the State Department bases its policy upon the alleged experiences of the American Relief Administration, which that organization never had, the American Relief Administration, in its turn, places full responsibility for failure to do relief work in Russia upon the State Department. The American Relief Administration declared but a few days ago that

"It is not so much a question of assurances between the Soviet Government and the American Relief Administration as it is the necessity of having our own State Department satisfied that such assurances as we might be able to secure would be satisfactory, and they would be satisfied that we would be protected in using contributions from American citizens in undertaking this work. We would suggest that, as we look to the State Department for approval of any plans for entering any comprehensive arrangement for child feeding in Soviet Russia, you secure their opinion for use in your address in Philadelphia."

We thus see that the American Relief Administration shifts the responsibility to the State De-

partment, and the State Department shifts it to the American Relief Administration. It is the familiar and delightful indoor sport of "passing the buck." Between the two, hundreds of thousands of innocent children in Soviet Russia are deprived of the assistance which the generosity of the American public might bring them.

It may be interesting to add that before the American Relief Administration was ready to admit on January 12, that it was not a question of assurances from the Soviet Government, but that it was all "up to" the State Department, they declared on January 8 that

"As to Soviet Russia, we have refrained from entering into this field until we could secure satisfactory assurances which would protect our workers and our supplies, and give us the necessary freedom in distributing to the children, without discriminating as to politics, race, or religion. Such assurances have not been forthcoming."

On January 8 it was a question of Soviet assurances; and on January 12, it was not. In the middle of November, the Associate Editor of the Newspaper Enterprise Association of Cleveland, Ohio, was informed by an official of the American Relief Administration that

"We have not been allowed by the Soviet Government to go into Soviet Russia."

Would not a more exact statement have been:

"We have not asked the Soviet Government to be allowed to go into Soviet Russia?"

And in view of all of this, the "Literary Digest", which has devoted itself high-mindedly and wholeheartedly to the cause of European relief, as the publicity organ of the American Relief Administration, declared to a correspondent at the end of December, that

"It is a mistake to say that the children of Russia are 'excluded' from the benefits of the American Relief Administration and the European Relief Council. . . . The Quakers are in Soviet Russia carrying organized relief to Russian children and receive their financial support from Mr. Hoover's organization."

Upon inquiry, I find that the American Friends Service Committee (the Quakers) receive no financial support whatever for Soviet Russia from Mr. Hoover's organization.

We find, therefore, that the policy of the State Department of our government in relation to relief to Soviet Russia is based upon alleged rebuffs to an organization which that organization never met with. Some of the representatives of that organization declare that they are doing work in Soviet Russia through the Quakers, although this is not so. Others declare that they have not been allowed by the Soviet Government to go into Soviet Russia, although we do not know that they have ever asked for permission. Still other representatives complain that assurances have not been forthcoming from the Soviet Government for the proper distribution of their supplies, although such assurances were never sought; and when this is pointed out, the admission is finally made that it is not these assurances, which they have never sought, that mat-

ter, but that the State Department is to be held responsible.

In a communication of January 14, Mr. Hoover asserts that he will not ask for American help for Soviet Russia until the distribution of American supplies can be supervised there "upon the same terms as everywhere else in the world"; and furthermore, that his organization "will not jeopardize Americans by establishing them in Russia as long as Americans are held prisoners there without cause." Mr. Hoover has therefore now been asked to state the terms upon which his organization would be willing to engage upon relief work in Soviet Russia; and, should he do so, it would be the first time, so far as I am aware, that these terms will have been made known. If these terms are reasonable and are not an interference with the sovereignty of the Soviet Government, we have the assurance of Mr. Martens, who said on November 18:

"If the American Relief Administration desires to use the funds which it is now collecting, or the stocks which it has on hand, for the relief of starving children in Soviet Russia, it may easily do so. There is nothing to prevent the Relief Administration from shipping supplies directly to Soviet Russia. These supplies will be gladly received and fairly distributed by the Soviet Government. If the American Relief Administration desires to inspect the manner of distribution of these supplies, or to cooperate in their distribution, I am sure this could be arranged."

This statement by Mr. Martens is based not only upon what he knows of the spirit and intentions of the Soviet Government, but also upon the past experiences of American relief organizations which, so far from meeting rebuffs, have always enjoyed the utmost cooperation of the Soviet authorities.

I would refer, first, to the experiences of the American Red Cross Mission to Russia in the distribution of 400,000 cans of condensed milk in the city of Petrograd during the months of February, March, and April, 1918. The Distributing Committee which was then organized jointly by the American Red Cross Mission on the one hand, and by the District Soviets of Petrograd, the Central Petrograd Soviet, and the Commissariat of Social Welfare, functioned in accordance with approved American social service methods, and gave complete satisfaction not only to the population of Petrograd and the Soviet authorities, but also to the American Red Cross. All of this is recorded in reports submitted to the American Red Cross by Col. Raymond Robbins, who was at the head of the Red Cross Mission, and by Major Allen Wardwell, who was at its head after Col. Robbins' departure. Mr. R. R. Stevens, the Manager of the National City Bank in Petrograd, was in charge of this work during Major Wardwell's absence from Petrograd.

The Americans who had this work in hand have declared that none of the milk was misapplied or used for any purpose other than that of giving nourishment and sustenance to the helpless and the weak.

I refer next to the experiences of the two representatives of the American Relief Administration

who happened to cross into Soviet Russia last Spring. As I have already said, they did not meet with rebuffs. On the contrary, they portrayed the situation in such colors as might satisfy all the scruples of the American Relief Administration.

I refer also to the experiences of the American Friends Service Committee, with its headquarters in Philadelphia. As the Acting Secretary of State points out, this organization "has been operating almost continuously in Russia on a small scale under British management." Inquiry of the American Friends Service Committee will show that their relief supplies, now their third shipment, have reached Russia safely and have been distributed satisfactorily, and that the Friends have met with no rebuffs, but have had the utmost cooperation from the Soviet authorities. Their workers have been given every opportunity to visit institutions and homes, to direct that supplies be shipped to these particular homes, and to visit these homes afterwards.

I refer finally to the experiences of the Jewish Joint Distribution Committee. This Committee has not met with rebuffs, but has been able to effect an arrangement with the Soviet authorities whereby a relief committee was formed in Moscow of all elements of the Jewish population, including the bourgeois, for the purpose of bringing relief to the tens of thousands of victims of barbarous pogroms perpetrated under the banners of those counter-revolutionary armies which the American Red Cross and the American Relief Administration have not scrupled to support.

What, in view of these experiences, becomes of the charge, upon which the State Department policy is based, that American relief organizations have experienced rebuffs at the hands of Soviet Russia? On the contrary, we see that if there be but the will, there is the way; and this, in face of the statement by the Acting Secretary of State, that the Soviets' theory of Communism will not permit the exercise of private philanthropy. Yes, if the blockade were lifted in fact as well as in name, Russia would need no private philanthropy. Russia has enough gold and materials and human power to pay for the satisfaction of all her needs. But as long as the human *cordon sanitaire* is stretched around Russia by America and the Entente Powers, it becomes the duty and the privilege of every American to do whatever he can to bring the aid of private philanthropy to the innocents without food, without clothes, without medical and surgical help.

Further encouragement for keeping up our work is to be found in a very recent statement by Mr. Hoover—something that was entirely new to me and which I have endeavored to have confirmed at the State Department, thus far without result—that the State Department has established the fact

"that so far as the United States is concerned, nothing prevents the Bolshevik Government from devoting their gold to the purchase of American milk for their children."

In the sincere hope of being contradicted tomorrow, I would nevertheless hazard the guess that even

for so humane a purpose as buying milk for rickety children, Bolsheviki gold is still taboo for the present Administration in Washington. They have ordered the Assay Office of the United States Mint to refuse to assay any gold having even remotely a Russian Soviet origin. American smelters have been threatened, so I am informed, with a withdrawal of their usual assay privileges, should they ever be caught offering for assay this terrible Soviet gold. Banking institutions have refrained from paying out Russian gold under threats from the Federal Reserve Board which, because of present business depression, can exercise its terror at will. Producers and merchants of all kinds, large and small, who have been desirous of exporting goods and supplies to Russia, have been given conflicting opinions and advice at Washington, ranging all the way from a complete shifting of responsibility to definite threats and warnings. This is all on the theory that Soviet gold is dirty and may not be handled, and the rest of the gold of the world is clean and may not only be handled, but grabbed after. The gold found in Russia by the Soviet Revolution is stolen property and not to be touched, but the gold being expended by the so-called Russian Ambassador at Washington through the so-called embassy of a non-existent Russian Government is vouched for by our State Department. This virtual maintenance of the blockade of Russia, despite all pious phrases to the contrary, through the prohibition of the conversion of Russian gold into usable American currency, is, I am afraid, in the way of Mr. Hoover's hopeful reading of what he thinks is the State Department's permission to sell American milk for Russian children in return for Bolsheviki gold.

The enemies of Soviet Russia thought to break down her resistance by denying her people the aid of medicines and drugs and hospital supplies from abroad. Let the Soviets be destroyed even though the Russian people be ravaged by disease and plague; and they believed, in their shortsightedness, that their *cordon sanitaire*, their cordon of death, could keep behind the Russian barrier not only Russian revolutionary ideas, but disease and plague as well. But, despite the fatuous readiness of Russia's enemies to have Russia's plagues and epidemics spread over into the western world if only Russia's revolutionary ideals might be crushed, it is due to the heroic efforts of the Russian people themselves, under the guidance of the Commissariat for Public Health, that not only the Russian people, but the western world as well have been spared the infections that might just as well have come out of Russia if it had depended solely upon the barbarism of Russia's enemies.

There is in this country a copy of the official Soviet Calendar for 1920, and in this Calendar among other things is an official statement of the Commissariat for Public Health on its organization and activities up to the fall of 1919. I am hoping that the complete statement, which is but a dry recital of facts, may soon be published, in order that in this way the American public may be en-

couraged to support the vast public health work which is now going on in Russia despite the blockade, despite the lack of medicines and hospital supplies.

From of old, as many of you here know all too well, the death rate of Russia has been much in excess of that of the rest of Europe. At the outbreak of the war in 1914, the death rate of Russia was 26.7 per thousand, and in the rest of Europe 14 per thousand. There was a record at that time of over 14,500,000 cases of contagious diseases, and of over 7,000,000 cases of what are classified as parasitic diseases. In addition to these general categories, the record shows over 1,000,000 cases of syphilis and over 700,000 of tuberculosis. Altogether, the health figures of Russia at the beginning of the war present a stupendous picture of misery, filth, and disease.

It was only with the coming of the Soviet revolution in November of 1917 that energetic and intelligent steps were taken to save the Russian people from disintegration through sickness, disease, and plague. During the period of the World War from 1914 up to the time of the Bolshevik revolution, typhus and smallpox and cholera and influenza had assumed alarming proportions. For example, in 1916, although large parts of the Russian territories, particularly those inhabited by congested industrial populations, were held by the Germans, there were recorded, in the shrunken Russia alone, over 150,000 cases of typhus, over 100,000 cases of smallpox, and over 1,200 cases of cholera, this being the beginning of the cholera epidemic that broke out in the summer of 1918 just as the Commissariat for Public Health was being established.

It was combating this cholera epidemic in the summer of 1918 that gave the first proof of the efficiency of the Commissariat for Public Health and of the devotion of the thousands of health workers who were enlisted in the service of the people. During the cholera epidemic in 1908, ten years before, under the Tsarist regime, when the whole world was anxious to keep this epidemic localized and when Russia had access to all the world's sources of supplies, 200,000 cases of cholera were recorded. In the epidemic of the summer of 1918, despite the difficult circumstances under which the Commissariat had to labor, with war within and without Russia, the number of cholera cases was kept down to 35,619.

In the fall of 1918, the country was ravaged by the Spanish influenza, 700,000 cases of this sickness being recorded.

From the fall of 1918 to the spring of 1919, during eight months, the Commissariat for Public Health had to combat an additional epidemic, that of eruptive typhus; and the story of this forms in itself a great object-lesson of what intelligence and self-sacrifice and devotion to a great idea can achieve. During these eight months there was recorded the stupendous number of 1,299,262 cases of eruptive typhus. I am informed that medical records contain no parallel to this. An outline of

the steps taken to combat typhus will give an indication of the general methods of the Commissariat for Public Health:

1. 200,000,000 rubles were appropriated for educating the public as to the nature and causes of this sickness, and as to methods of prevention.
2. Thousands of beds were added to hospitals for the treatment of typhus cases alone. In the city of Moscow, 9,000 such additional beds were established.
3. Baths, laundries, and delousing plants were established throughout the whole country, and the use of them was made compulsory upon the population. All of this service was free of charge.
4. Special commissions with large powers were created, the membership of which was recruited from workmen's organizations throughout the country.
5. Special laboratories for research work on new cures were established.
6. Special commissions with great sums of money at their disposal were created for experimentation with new vaccines. Among these vaccine centers were Moscow, Petrograd, Saratov, Kharkov, Smolensk.
7. Two congresses of scientists were convened in Moscow in February and in March, 1919, to discuss the scientific material gathered in the course of combating the disease. The Commissariat also convened an All-Russian Congress of bacteriologists and specialists in epidemic diseases at the end of April, 1919. At this Congress, Prof. Predechenaki presented the chief report on the epidemic and its causes, stating at the same time that an approximate solution of the problem had been found, and that the specific typhus parasite had been definitely established. (It may also be of interest to remark that the same Prof. Predtechenski headed an expedition later to Astrakhan for the purpose of studying cholera at one of its sources.)

The net result of this vigorous and heroic campaign against typhus has been that the Russian people, though still suffering grievously, has been saved from being stricken down by this plague, and as far as the rest of the world is concerned Russia, at least, will not be the chief source of typhus infection.

As for the rest of the activities of the Commissariat for Public Health, I can but mention in passing that they have attacked with similar energy problems of sanitation and hygiene, as also social diseases such as tuberculosis and venereal infections. The Commissariat has established a central hygienic museum in Moscow. It has distributed millions of copies of popular pamphlets on questions of health, and has issued scientific works and periodicals. It has created in Moscow, in a building devoted solely to this purpose, a central medical library, and it has convened congresses and conferences not only in Moscow and other large cities, but also in smaller towns and country districts, dealing with all phases of medical and health work.

A RUMANIAN BUSINESS DELEGATION IN RUSSIA AND IN UKRAINE

BUCHAREST, February 7.—A commercial delegation of Rumanian cooperatives left Odessa for Kiev and Moscow, to negotiate with the Russian and Ukrainian Soviet Governments concerning exchange of commodities.

ENGLISH NEWSPAPER LIES

On December 21 in all English newspapers, but especially in the *Times*, there appeared extracts from the English White Books dealing with the inhuman treatment of English prisoners. These reports are either wholly untrue or at least in a great measure falsified. English prisoners in Russia were treated in the same way as other prisoners, or when an exception was made it was all to the advantage of the Englishman. The English spy Keeling was better treated in Russia than he would have been in any other place in a similar situation. The fact that he was director of the theater for the prisoners proves how false are the stories about his treatment. The English Railway Mission members who were arrested in Siberia were released on parole a long time ago, although they were taken prisoner along with the troops of Kolchak, whose operations they were supporting. They were brought to Moscow and interned in a convent where they had every opportunity for social intercourse, lectures, etc. According to the reports of all witnesses the director of this prison is a kind, humane man. The prisoners received the same food as any other people in Russia. They were also allowed to receive packages from the different relief missions, as a result of which their rations were better than is usual in Russia. How the English were treated is to be seen from the Grumby case. Grumby, as the White papers report, was even employed as an official. English people who have left Soviet Russia have repeatedly thanked the Commissariat for Foreign Affairs for their good treatment. English soldiers who were taken prisoner were allowed freedom in Moscow when they had given their parole, and could also have theater tickets. If English people in Russia could not enjoy the comforts of the Piccadilly clubs that is only a result of the present situation in Russia. Even then they lived much better than the great masses of the Russian people whom the English Government tried its best to kill by hunger. The prisons used by the Soviet authorities were an improvement on those used before they came into power.

As to the charge that Russia has illegally detained and interned people, it is to be taken into account that all governments, the English Government included, have acted in the same way towards foreign subjects when they have acted in a manner hostile to the government. The time when the treatment is alleged to have been worst was the period when the workers and peasants were fighting desperately against foreign and domestic enemies. The English Government belonged to those who were the most energetic in the counter-revolution. English subjects took part in speculation which is tolerated in bourgeois states, but which in Russia is considered a crime. Russian subjects in Baku were not only taken prisoner by the English, but also executed. On the other hand the way that England allows its subjects in India and Ireland to be treated shows that the English themselves live in a glass house and cannot afford to throw stones even if the Soviet Government did maltreat prisoners, which it does not.

Platon Mikhailovich Kerzhentsev

Platon Mikhailovich Kerzhentsev, whose appointment as Soviet Russian representative in Sweden, with the consent of the Swedish Government, has just been announced, was born in Moscow in 1881. He is the son of a physician, was raised in a refined and cultured home, and pursued his studies in the Historical-Philological Faculty of the Moscow University. He began taking active part in the revolutionary movement as early as 1904 and was arrested in that year and deported, after a period of incarceration, to the Government of Vologda, where he was placed under police surveillance. In 1906 he succeeded in making his escape and lived "illegally"* in Russia for six years. In January, 1912, he was obliged to emigrate and lived successively in Paris, London, and New York. From the very beginning of his revolutionary activity, Kerzhentsev was a member of the Bolshevik section of the Russian Social Democratic Party, with which he has been associated ever since.

Kerzhentsev is chiefly prominent as a writer and author. Among his many books and pamphlets, several deal with political and social conditions in England, where he spent three and one-half years, such as "The New England", "Revolutionary Ireland", and "England and the English". His other books are also concerned with cultural questions.

Kerzhentsev is considered in Soviet Russia as one of the foremost theoreticians and creators of the new proletarian theater. His book "The Creative Theater" is particularly popular and passed through four editions in two years. Another important work of Kerzhentsev's, "Toward the New Culture", treats the foundations and methods of the Communist civilization.

Kerzhentsev, as a further indication of his pioneer work in the new Socialist culture, was one of the foremost leaders of the *Proletkult* (Organization for Proletarian Culture).

Kerzhentsev's book "The Newspaper", became a textbook for Soviet journalists all over Russia. Beginning with the spring of 1919, Kerzhentsev was at the head of the Rosta office (Russian Telegraph Agency), which established branches all over Soviet Russia during his incumbency.

He is one of the founders and the present chairman of the "Press House", at Moscow, an institute for journalists, etc.

His productivity as an author is very great and covers many varying fields. One of his plays took the first prize in a competition for plays for the Workers' Theater.

Finally, Kerzhentsev's activity as a member of the Russian Peace Delegation at Dorpat during the peace negotiations with Finland is generally known.** Kerzhentsev is a professor at the Socialist Academy, Sverdlov University, and also at the University of Moscow.

—Vienna Office of Rosta.

* To live "illegally" means to undertake to move about and take domicile without the necessary papers, or with false papers.
** An interview with Kerzhentsev on the subject of the conclusion of these negotiations was printed in *SOVIET RUSSIA* for December 18, 1920 (Volume III, page 609).

DIES FOR LENIN

A few days ago there went through the newspapers of the world a false report of Lenin's serious illness, occasionally varied by rumors of his death. These reports were based on a confusion of Lenin with another well-known person named Karpov, whose name was considered to be one of Lenin's pseudonyms, and who really did die in Moscow on January 6 after a long illness.

Soviet newspapers, particularly *Ekonomicheskaya Zhizn*, devote very warm eulogies to Karpov, reviewing his activities, which have been very important for the welfare of Soviet Russia.

Lev Yakovlevich Karpov was a member of the presidium of the Supreme Council of National Economy. He had been a member of the Russian Communist Party. After the November Revolution he became one of the organizers and leaders of the Supreme Council of National Economy and upon him lay the extraordinarily difficult task of rebuilding Soviet Russia's chemical industry. He performed great things in the way of establishing a number of new branches of this industry.

Karpov has given much pleasure to the counter-revolutionary press by affording them another opportunity to report Lenin's death. But it is not the last such opportunity, nor yet the last report of Lenin's death that will come before Lenin actually dies. When that event really does take place, much of the joy of it will already have been discounted by exaggerated preliminary instalments.

In Next Week's

Soviet Russia

G. ZINOVIEV—*The Progress of Soviet Organization.*

An account of the extent to which organization has been accomplished and an outline of problems still facing the workers. Discusses employment of bourgeois specialists, vital statistics, cooperation of trade unions, etc. (An address delivered at the Eighth Congress of Soviets in December.)

LEON TROTSKY—*The Single Economic Plan.*

Takes up the necessity for a certain type of administrative centralization.

ARTHUR J. WATTS—*Care of Children in Soviet Russia.*

Mr. Watts represents the Society of Friends in Russia. He tells an interesting story based on what he saw of the practical working out of the Soviet Government's plans for the welfare of the children.

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION

110 West 40th Street

New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

THE reader will find elsewhere in this issue some material of interest in connection with the progress—if progress it may be called—of the trade negotiations between Soviet Russia and Great Britain. The manner in which the British Government is delaying the proceedings is well shown by the repeated announcements in the American press that new obstacles have been encountered in the negotiations. But is it not only in the American press that we read of such difficulties.

The Russian press continues its discussion on the question of the Anglo-Russian commercial agreement. In *Izvestia* of December 31, Steklov subjects the English proposal to a sharp criticism, saying, among other things:

"The English Government solicitously safeguards the interests of its citizens by attempting, in article 3, to withdraw them from the jurisdiction of the Russian national laws. But you would seek in vain in the proposed plan any guarantees for the interests of Soviet Russia, even of commercial interests, not to mention political interests.

"In exchange for the products received from England, Soviet Russia must send its goods to England, or, preferably, export gold and objects of value. If these objects, gold, or other objects of value, are not absolutely guaranteed against any attempt to seize them, all talk of trade between the two countries is illusory. The English Government promises not to take the initiative in confiscating Russian gold, valuable objects, or commodities, that may be imported into England, unless these can be proved to be the property of the British Government, and provided they are exported to England as payment for goods imported from England. All this is ambiguous, unclear, and evades giving any guarantee to Russian interests.

"Who can guarantee that gold, valuable articles, or commodities may not be confiscated under the subterfuge that such funds are not intended as payments for English goods? Who is to decide this question, the Russian or the English Government? The English Supreme Court, perhaps? Why not simply provide for a guarantee for all Soviet Russian funds that may be imported to England by the Russian Government or its agents?

"But the English Government guarantees absolutely no protection to Russian funds. To be sure it promises that it will not take the initiative in

confiscating such funds, but suppose private individuals, English or foreigners, should take this initiative in English courts? What then? Will the English Government in such a case guarantee the Russian funds? The British proposition says not a word to that effect."

On the subject of Great Britain's legal attitude toward Soviet Russia, Steklov mentions the case of a certain factory in Staraya which was nationalized quite some time ago by the Russian Government. A certain Reval firm named Luter started an action in an English court against the nationalization of this factory. The English commercial court made use of the fact that the Soviet power had not been recognized by the British Government and denied the Soviet Government the right to nationalize or requisition, and that on *Russian territory*, and on the basis of this fact declared that the firm of Luter was the proprietor of the disputed factory.*

Steklov concludes his article as follows:

"We cannot have any confidence whatever in such courts. Unless we have the guarantees we ask, a commercial agreement would be purposeless and the resumption of commercial relations a dangerous experiment."

* * *

ESTHONIA, like Latvia, is a Russian border-state whose bourgeois population is occasionally inclined to glorify the achievement of its independence. Like Latvia, Lithuania, and Finland—Esthonia, in the language of its bourgeois beneficiaries, "struggled heroically for its independence", and got it. This independence is of an interesting kind, although not at all exceptional in the world of today. The first ally of the Esthonian bourgeoisie in this heroic struggle, after the Tsar had abdicated and new alignments were necessarily the order of the day, was the German army of occupation, which was received in February 1918 with shouts of hurrah, flowers, cakes, and music, in gratitude for having "delivered" Esthonia from the Soviets and driven out the Red (Esthonian) troops. After the flight of the Kaiser and the erection of the new German Empire under President Ebert in November, 1918, as a consequence of the military collapse of Germany, the Esthonian worthies naturally sought the aid of the victor in their battle with the Esthonian proletariat. Already on December 28, of the same year, the "heroic defenders" of Esthonia requested the commander of an English cruiser in the port of Reval to arrange for an English occupation of independent Esthonia, to protect it against invasion by Red *Esthonian* troops. Like all other bourgeoisies, that of Esthonia also practices the doctrine of keeping its "eye on the main chance." But British imperialism plays a longer game than that—and perhaps on the whole it is the longest and most intelligent game of all the imperialisms—and never really accomplished an open occupation of Esthonia, for British im-

* An interesting discussion based on a similar case of denial of Soviet Russian sovereignty appeared in *SOVIET RUSSIA* for January 22, 1921, by Lincoln Colcord (page 97).

perialism sometimes considers psychological values and at this period of the world's history knows better than to occupy small nations by open use of military force, except as a last resort. But England occupied Esthonia in every other sense, paid for a "White" police, made Esthonia the base for Yudenich's later attack on Petrograd, and in every way afforded employment for counter-revolutionaries in Esthonia, in putting down the Esthonian proletariat.

While it is by no means a part of our task to seek to condone the misdeeds of the late Tsar and his retainers, we shall take the liberty to communicate a few statistical data which show that the Tsar was not always as bloodthirsty as a triumphant "heroic bourgeoisie" can be. The Tsar took, in expiation for the death of the Esthonian-German Baron Budberg, murdered in Esthonia in 1907, the lives of only half a dozen proletarians, while the Public Prosecutor of "independent" Esthonia, named Temant, found it necessary to kill not less than 250 proletarians because Baron Büxhowden and a few of the lesser Baltic nobility were killed in the insurrection on the island of Oesel in February, 1919. Even an Esthonian social-patriot, the wretched M. Martna, the author of a long book glorifying the accomplishments of the "independent" Esthonian Republic, is forced to admit, speaking in a session of the Esthonian Constituent Assembly (September 7, 1920), that the present form of government is fully as tyrannical as the Tsar's. He does not say it is more tyrannical, but he could say so without exaggeration.

One of the most striking incidents in the "restoration of law and order" in Esthonia we cannot refrain from citing, although it is only one of many, and not even the worst. On August 30, 1919, there assembled at Reval a National Congress of Trades Unions, with 412 delegates. All were for peace with Soviet Russia, and as a peace proposal from Soviet Russia was en route to Reval, it was felt by the Esthonian bourgeoisie that the Congress might achieve the dreadful step of making peace between the two countries inevitable. To prevent this terrible consummation, 102 of the more radical delegates were arrested and spirited away; 76 were later delivered near Soviet Army trenches from armored trains in a manner to suggest that they were hostile troops, thus drawing the fire of the Soviet rifles. Fortunately none were hurt and all were gladly welcomed by the Red soldiers; the remaining 26 were executed in the night between September 5 and 6 at Izborsk, near Pskov, on the southeastern border of Esthonia, and portions of their clothing, sold at the market place in Walk by Esthonian officers, for private profit (note the survival of the noble impulse to rise at the expense of one's neighbor, to pass over corpses, even in little Esthonia!), were the first indication to the outer world of the crime that had been committed.

From the opening of the German revolution (November, 1918) to the conclusion of peace between Soviet Russia and Esthonia (February, 1920), the number of victims of the White Terror in Es-

thonia was about 2,500, out of a total population of about 1,120,000. During the same period, the number of Esthonian soldiers who fell in open battle against the Esthonian Red troops, the Soviet Russian Army, and the Baltic *Landwehr*, was altogether only 1,000. Internal counter-revolution is often more bloody than petty "international" warfare.

And Esthonia is only one of the border-states. The tale in the other states would be different in no essential feature. This is a foretaste, on a small scale, of the bloodbath that would ensue in Russia if a "democratic" Constituent Assembly should come to power and the Soviet Government be overthrown.

* * *

WHEN Jean Efremoff, "Russian Minister to Switzerland", wrote to Montgomery Schuyler, Secretary of the "American Central Committee for Russian Relief", that "there can be no doubt that the government of resuscitated Russia would consider as a debt of honor any expenses made to relieve its distressed citizens", he must have meant this: any aid now given to counter-revolutionary persons or organizations will be gratefully remembered by the beneficiaries of such aid, and will be requited in kind if they should ever return to power. Even the *New York Globe*, not a Bolshevik paper, in its issue of February 17 comments on this statement as follows: "The reference here is apparently to the hope that the anti-Bolshevist Russians may some day regain control of the Russian territory." Yes, apparently that is the reference, and the "resuscitation" of such a Russian will be quite a job. Particularly pleasing is the *Globe's* comment, elsewhere in its article:

"The reference to 'Russia' and to the 'Russian Government' made in this article does not refer to the Soviet Government, at present in control of Russia. Apparently the reference is to the former Kerensky Government, representatives of which met recently in Paris."

For it is gratifying to observe even one daily newspaper waking up to the fact that it is rather ridiculous to speak of a Russian Government that died three years ago as if it were still alive.

* * *

DR. SIMONS, present German Minister for Foreign Affairs, is said in a recent Paris message to be about to propose to the London Conference a means by which European powers will be able to raise money in order to repay the great loans which they expect to obtain from the United States. The world is to be divided into zones, and each industrial power is to exploit its zone for raw materials and commercial penetration. Germany's zone would be Russia. As French sources now point out, this would make Russia a German colony. In spite of asseverations to the contrary, we are certain that if Allied imperialists do not themselves intend to exploit Russia directly, they will yet permit Germany, or any other power ready to do the work, to make the attempt to subject and enslave the Russian people.

Letters from Soviet Russia

By MAX BARTHEL

(Translated from the German for SOVIET RUSSIA.)

I

Moscow, November 30, 1920.

THE German bourgeois papers were full of reports of counter-revolutionary activity. In Smolensk all the regiments were said to have mutinied, and uprisings were reported in Moscow and Petersburg, which had been choked in blood. I was in Smolensk at the time and heard and saw nothing of the rebellious regiments. It is true that in the last days of October a counter-revolutionary conspiracy was discovered in Moscow and a number of arrests were made.

Soviet Russia is preparing for the Third Anniversary of the Proletarian Revolution. Grey cities are adorning themselves with red flags, and every morning the workers and soldiers in Petersburg march in long processions singing the profound revolutionary song. In Petersburg these days there was a great exhibition of vegetables and machines. The workers of Petersburg had laid out great gardens during the summer, the fruits and products of which were now exhibited on Nevsky Prospekt. You could see potatoes and cabbages, tomatoes and beets, cucumbers, and great yellow and red melons. Instructive placards indicated the productivity of the hitherto unused soil. The exhibition of machinery included the products of Soviet machine shops. There were plows, printing presses, leather goods, chemicals, and objects of wood. The primitive exhibition rooms had been installed in the great bazaar on Nevsky Prospekt, and adorned with red cloth in the Soviet symbols. After three years of civil war and revolution, Petersburg, Soviet Russia's vanguard city, establishes an exhibition! These exhibitions, are among other things, a visible sign of the economic rejuvenation of the country. A city which, according to the accounts of the bourgeois press, is perishing of hunger, can surely not afford to pile up mountains of melons, heads of cabbage, and potatoes for purposes of exhibition.

Petersburg again took the lead in placing its street cars at the disposal of traffic without payment of fares. The cars are not more full than before, in other words, they are packed full and people hang on to the running board like grapes from a vine. Beginning with the day of the anniversary of the Revolution, electric light will also be furnished free. Gas, water, and house rent also are provided at no cost to the worker. The "naturalization" of pay for work (the transfer from payment in money to payment in kind—natural products) is the Socialistic task of the Soviet power and is about to be realized.

The third anniversary of the Revolution was more quiet and more thoughtful than before. The Russians have been fighting for three years and you cannot keep yourself in a permanent state of exaltation. The evening before the anniversary there was a session of the Petersburg Soviet in Smolny

Institute at which Zinoviev, who had just returned from Germany, delivered a magnificently outlined speech on the present situation. In the midst of the speech reference was made to the dead. All stood with heads bared when the funeral march of the Russian Revolutionists was played. On the same evening, Clara Zetkin, who was about to return to Germany, also delivered a speech. Toward midnight a troop of sailors arrived in Smolny. At their head was the Red Flag guarded by rifles. The sailors were laughing, and those still in the building hastened to gather together in the middle of the night for a meeting. There were meetings everywhere that night, and on the next day wreaths were placed on the graves of the fallen heroes of the Revolution. The Mars field was festively adorned: there were many green pyramids of fir branches and in the middle of the square, where the dead lie, a great round tower of dark green.

Next evening, about 10 o'clock there was to be a dramatic performance on Uritsky Square. A whole city had been built up of arched bridges and houses painted in impressionistic colors. It was raining, but the play was nevertheless given. Expressionism and cubism—although they are now declared in the latest publications of the Proletkult to be decadent phenomena of disintegration, continue to live a gorgeous life in many placards and in most of the Rosta posters. Now it is cool and sharp, and these gay butterflies look pathetic in the light of day. But they were very pretty when it was still summer.

Not much has changed in the theaters of Petersburg and Moscow. The old plays and pieces of the bourgeoisie are still being performed. But the audience has changed, for the tickets are distributed through the trade unions. Political plays may be seen in the Proletkult productions, and in summer in the open air theaters. In the Marinsky Theater (Petersburg)—a splendid interior of blue and silver—we saw a ballet of French importation. It was a sentimental pantomime of chivalrous romance. Cupids and unrequited love were the poor outline in which graceful dances moved. In Moscow there are more political plays. Often these are clownish performances, with the worker ever victorious and the wicked bourgeoisie ever soundly thrashed. From these plays—living posters—in the most intoxicating colors, yellow, blue, red, and full of aggressive energy, out of these primitive plays of simple triumph the great political drama will one day arise.

Vorwärts said of the Russian village that the children run around naked, and the men have no shirts, and everybody goes about in rags. I saw Russian villages in the vicinity of Smolensk and Minsk. The Russian village has many provisions, few manufactured products. There is a lack of salt and petroleum. I saw no one running around

naked, although it was still summer. In many villages linen is woven. The peasants suffer from lack of clothing. In the vicinity of Moscow a peasant last summer furnished milk every day for a whole month in exchange for a pair of trousers. Now, in autumn and winter, the clothing situation is better, for all are dressed in their sheepskins: men, women, and children. The same report in *Vorwärts* also said that all the village schools had been closed for lack of wood to burn. This is a lie. There is enough wood in the villages, at any rate the village schools around Smolensk were running. At the noble estate of Preobrasensk this winter a big school was opened in the palace for the children of the vicinity, and this school was especially adapted to the needs of fifty children from Smolensk. There were six women teachers in this palace. I also had a fleeting glimpse of a village in Ukraine, in which there seemed to be about the same conditions of life. By the way, great masses of cloth are sent to the provinces from Moscow to distribute, as well as salt, soap, petroleum, scythes, and agricultural machines from the industrial cities, in order to conquer the village in a bloodless attack.

We saw a few days ago in Moscow a troop of thirty peasant men and women exhibiting to Red Army soldiers their primitive art: songs, dances, wedding games. These games, songs, and dances are endless and melancholy, timeless and spaceless—like the great Russian plain.

Moscow the Golden, the barbarous village with its gold cupolas and Asiatic spires, its white squares, is now covered with snow. The street cars are not available for passenger traffic, as they use them to transport wood, and the Communists going to the Subbotniki on Sundays. The electric light functions very well. Even in the suburban streets arc lights are burning and in the evening almost every room can be seen brightly illuminated. The people in Moscow, as well as in Petersburg are very well dressed as compared with those in the provinces. The food condition is much improved. While only 40 to 60 per cent of the rations could be given out last summer, there is now 70 to 80 per cent, in spite of the poor crops. But the children always get 100 per cent.

II

Poltava (no date)

We arrived at eight in the evening. The railroad station is again more than filled with soldiers and workers. Music, flags, and salutations. The Chairman of the Soviet is a Galician, tall and red-headed, an old Revolutionist. Manuilsky says he is one of the best workers. In the vicinity of Poltava, Makhno is active. A few days ago the city was alarmed, for he was only eight miles away. The comrade already believed that we had been waylaid by Makhno, as our train was much delayed. Representatives of the Poltava Workers greeted us in German. The refrain of all speeches is always: "Comrades, help us."

A meeting takes place outside of the railroad station. I deliver a speech in Poltava.

"Comrades, a train arrived once before at this railroad station, and in that train were German soldiers, a captain commanding them, and they treated you with the gun stocks and hanged you from a portable gallows. They covered themselves with blood. Blood can only be expiated with blood. The German workers are washing off the shame of the war period with their blood. The best and the bravest have fallen in this struggle. The German proletarians have made unheard of sacrifices, but he who sacrifices much will gain much.

"Germany's flag is still black, red, and gold. We shall extinguish the gold with our blood. We shall fight until we are able to raise the flag that you also have raised: the flag of the Soviet Republic!"

After this meeting we drove through broad streets into the hilly green city. Cossacks on wild horses galloped along by our side. We drove to the Palace of the Children. The iron dictatorship is filled with the tenderest affection for the growing generation. The Palace of the Children is a large and beautiful house with bright rooms. These rooms are decorated with cheerful mural paintings, child-like and happy. Flowers and animals, landscapes and fairy tales. We passed through this whole house accompanied by a laughing host of children. We saw their workrooms, their charming little pictures and paper toys. We saw the labor school and the natural history collection, the library and the zoological museum, the gymnasium and the great room for games. In this house there are several hundred children of Poltava workers. We heard Ukrainian songs and witnessed delightful dances.

Then we went to the theater. Manuilsky, People's Commissar for Agriculture, introduced us. He delivered a great speech on Serrati, and Lefebvre, and Humbert-Droz, the Swiss-French priest, who is now on the side of the Revolution. He made his introductions as one who has precious things to disclose. One of these precious things was myself.

Another meeting was held outside of the theater in the cool starlight night. In the foreground was a cordon of soldiers, then a thick wall of human beings, limited by another cordon, this time of Cossacks.

I delivered a speech that night.

"During the war Germany was the backbone of reaction. Wherever the Germans marched, the cities burned and the earth steamed with human blood. Berlin was the great general staff of reaction, where the nets were spun for the strangling of freedom.

"The German workers are now marching, but they are marching to conquer their freedom. A new general staff has been formed, the Third International at Moscow, and this is the general staff under whose direction the German workers will succeed in placing the bourgeoisie in chains, and in crushing them." Then we drove in the cool of night through the sleeping city, which reminds you much of Toscana. Dashing Cossacks on unbroken horses, galloped as fast as your autos. The trot of horses,

steaming nostrils, cries of Cossacks, sparks, cool wind, and unspeakably beautiful stars. A sweet sensation of liberty, voluptuous and melancholy. In the railroad station the peasants and workers are lying on the bare floor, looking like gray soil themselves. We depart and roll on through the night. In my ear is still the twittering of the little children of Poltava, as well as the heaviness of sleep. Before I fall asleep I think of an inscription that I read in the Palace of the Children:

"Liberty and Education belong together like fire and heat. One cannot be without the other."

Of Poltava there still remains to be said that it is a city of 140,000 inhabitants, with 2,000 members of the Communist Party and 300 members of the Communist Youth. From seven in the morning, three thousand people waited for us at the railroad station at eight at night there were still two thousand standing there.

Our train passes through fields, with peasants

at work, plowing with four or six oxen. The land, the soil, fairly shrieks for steam plows. At every single bridge Red soldiers stand on guard. At the way station of Romadan, which looks like a jail, we meet an armored train and an international regiment going to the front. On the station building there are two pictures, to the left Shevchenko, the great Ukrainian revolutionist and poet, and to the right of him, Karl Marx. The soldiers at the station are in rags and almost all are barefoot. All have weapons, many of them have revolvers shining uncovered in their belts.

Misha is the leader of the Ukrainian Communists. A splendid Caucasian type, blue eyes, high brow, white of head and beard; he has been in the revolutionary movement for forty years. We speak of social poetry and he says that they have four or five workingmen-poets in the Caucasus and that—as is the case in Germany—the young intellectuals sympathize with Communism.

Menshevism and Counter-Revolution

By N. LENIN

[The following speech was delivered at the conclusion of the Eighth All-Russian Congress of Soviets in Moscow last December. It points out how grave is the responsibility incurred by those who aid the counter-revolution by opposing the Soviet Government.]

I HAVE been reproached for having recently advanced a new theory of a new period of wars to come. I have no need to cite history in order to show on what I have based my assertions. We have just finished Wrangel, but Wrangel's troops still exist somewhere not far away from the borders of our Republic, and are awaiting something. Whoever forgets the danger which will constantly threaten us as long as world imperialism exists, who forgets that, forgets our Labor Republic. To tell us that we are carrying on secret diplomacy, to tell us that we must not wage any war unless we are compelled to in self-defence, when the sword is still raised above our heads, when, notwithstanding the hundreds of our proposals and our liberal concessions, not one of the great powers has concluded peace with us, to say this means to repeat the old phrases of petty bourgeois pacifism which have long ago lost their sense. If, in the face of our active hostile enemies, we accepted the propositions made to us, and gave assurance that we should never resort to certain actions, which might be construed as offensive from the military-strategical point of view, then we should be not only fools but criminals as well. What are these pacifist phrases and resolutions leading us to? The consequence to be drawn from them is that they want to bind the Soviet Government hand and foot although it is surrounded by enemies, and give us up to the mercy of the imperialist robbers.

When the unity of the proletariat is mentioned and it is said that we are breaking up this unity, it is difficult to listen without a smile. We heard here of the unity of the proletariat; but we have

now learned from experience, that the unity of the proletariat in the period of the social revolution can be accomplished only by the extreme revolutionary party of Marxism, only by a merciless struggle against all other parties. (Stormy applause.)

They talk to us about arming the whole people, they repeat this old slogan of the bourgeois democracy at a time when among the people the most decisive struggle of the classes is being waged.

I had the pleasure yesterday to be present at a small private meeting of non-partisan peasant delegates of our Congress, and I learned very much from their discussions about the most acute problems of village life, about the problems of food, ruin, and need, which you all know. And the most manifest thing in these debates was the fact that they showed plainly the great difference and the struggle which is carried on between the poor and really toiling peasants, and the rich ones and idlers. The greatest significance of our Revolution lies in the fact that we have succeeded in introducing not only theoretically, but in practice, this fundamental problem of the social revolution to the lowest layers of the peasantry, to the politically most backward mass of the non-partisan peasantry. At present, in all villages of great Soviet Russia, our political and economic measures are being discussed at length, and the peasantry sees for itself in whose interests these measures are being passed. In the most remote corners, the question of the toiling peasant and the rich one is discussed and made plain. Sometimes the discussions are too hot and passionate, but at any rate, the peasants come to

understand that it is necessary to assist the toiling peasant and oppose the assaults of the rich.

The class struggle has become a reality in the village among the great mass of the peasants, and we have done and are doing everything to insure that this struggle is carried on consciously. And if after all this, the leaders of some special "International" come to us and talk about arming the people, we feel as though we were being turned into pupils of the preparatory classes in the questions of Marxism and Socialism. To forget about the class struggle, which is carried on all over the world, means to help involuntarily the imperialists of all the world against the struggling proletariat. The slogan of our enemies is the arming of the "people"; but we stand on the basis of class arming. By this we conquered, and shall conquer in the future. (Great applause.)

The representatives of the Mensheviks and of the Social-Revolutionaries have said to us here that we should not have adopted such a decision as that of concessions without a special people's council; and they have asked us why in our economic policy we do not introduce the principle of labor equality (in the resolution of the Social Revolutionaries it was called "Labor Government" (*trudovlastie*) and in the resolution of the Mensheviks, it was somewhat changed to "equality of the toiling of the city and village"). But all these phrases about labor government and equality of labor amount to an agitation for the independence of the trade unions from the proletarian class government. Together with the Social Revolutionaries and Mensheviks, the whole Western European bourgeois press is troubling itself about this "independence".

When Martov appeared at the Congress of the Independents at Halle and had an opportunity to talk without being constrained by the disagreeable dictatorship of the Bolsheviks, what was the result? The result was, that a few days later, the speech of Martov appeared as a fine dish on the columns of the most reactionary and imperialistic press of England. This press was thankful to Citizen Martov for disclosing the "designs of the Bolsheviks". When such speeches are delivered in an atmosphere of the struggle of world imperialism against us, what else are they but a part of the politics of the Entente? Of course, one might say that this idea of toil government, etc., is simply petty bourgeois nonsense. But, as a matter of fact, it is only a part of the politics of the Entente. Tomorrow, if there is an agent of the Entente present here, your speech, Citizen Dan, will be delivered into all capitalist countries and it will be printed in millions of copies and used to deceive part of the class-unconscious European workers.

According to Citizen Dan, I have defended only the principle of compulsion in the question of labor discipline. The representative of the Social Revolutionaries was more accurate, and said that I defend compulsion on the basis of persuasion. The best answer to this is our whole policy. We do not maintain that we are carrying on the thing without making any blunders. But, please, tell us

what the blunders are; show us how else the thing could be done. We have not heard here about any other way. Neither the Mensheviks nor the Social Revolutionaries say: "Here we have to deal with need, with the poverty of the workers and peasants, and this is the way out of this poverty." No, they do not say that. They only say that what we do is compulsion based on persuasion. Yes, we can not deny that. But we ask you, Citizen Dan, do you uphold this or not? Here is the essence. Answer to the point—yes or no. Neither yes, nor no. You see, they just want to chat about labor government and our infringement of the liberty of the peasants. But who are the peasants? Why, our Soviet Constitution says, that peasants are toilers, men of labor; this kind of peasant we respect and we consider him a brother of the workers with all their rights. Without that peasantry, we would not have been able to make a single step in our Soviet policy. There is a fraternal treaty between the toiling peasantry and the workers, confirmed in our Soviet Constitution. But there is another element of the peasantry, that element which creates the speculative markets. I hope that any gathering, even of non-partisans, will comprehend this thoroughly. Do the peasants who are engaged in speculation, represent the toilers: this is the essence of the economic problem of the village. The peasants, petty householders, and workers—are distinct classes, and we shall eliminate the difference between them when we destroy the bases of petty holdings and create the new bases of the gigantic machine economy, as I have pointed out in my report. This is an economic necessity, and the Mensheviks and Social Revolutionaries, who have spoken here, are only babbling about some labor equality of workers and peasants. These are only words which have no justification in economy and which are denied by scientific Marxism. Take our revolutions in Siberia and in Georgia, take the experience of the international revolution, and you will see for yourself that the fine talk of labor equality is mere deception.

Dan has said here that there is an order in the office of the All-Russian Extraordinary Commission to the effect that the October amnesty should not be applied to the Mensheviks. Dan has merely tried to play a game. It is hard to believe that the Presidium or the Operative Section of the All-Russian Extraordinary Commission, or any other would be giving directions and making their own explanations of a decree of the Central Executive Committee, and would construe it to mean that amnesty is not to be applied with regard to the Mensheviks. What conclusion was intended by Dan? It is quite clear: the Extraordinary Commission gives orders and governs the Presidium of the Central Executive Committee. But we who are in the government, can we believe it? The 70 to 80 per cent of Communists who are sitting here know perfectly well that at the head of the Extraordinary Commission is Comrade Dzerzhinsky, a member of the Central Executive Committee and of the Central Committee of our party, and that there are six members of

the Central Committee of our party in the Presidium of the Central Executive Committee. Of course, nobody could think that under such conditions there is any possibility of the Presidium of the Extraordinary Commission or of the Operative Section giving any rules or governing the Presidium of the Central Executive Committee. It would make anybody laugh to hear such an assertion as that made by Dan, and, of course, there is nothing interesting in it. But I hope you will get hold, a few days from now, of some bourgeois newspaper of Western Europe or America with a circulation of half a million or a million, and you will see printed there in heavy type, that Citizen Dan has disclosed that the Extraordinary Commission gives orders to and governs the Presidium of the Central Executive Committee. (Long and stormy applause.)

After Lenin's speech, Comrade Boguslavsky proposed in the name of the Communist Party the resolution introduced by the Communist fraction of the Congress, and Comrade Kalinin put to a vote both resolutions, that of Comrade Boguslavsky and the one proposed by the Mensheviks. There was not a single vote for the resolution of Dan. The resolution proposed by Boguslavsky was adopted by the Congress unanimously.

The Resolution on Lenin's Report

"Having heard and discussed the report of the Workers' and Peasants' Government, the Eighth All-Russian Congress of the Soviets indorses completely the activity of its government."

Unfriendly Georgia

(A special interview by the correspondent of the "Manchester Guardian" with Litvinov.)

REVAL, January 15.

I have interviewed Mr. Litvinov on the subject of Georgia. Mr. Litvinov explicitly denies the rumored break of diplomatic relations between Georgia and Russia. "It has frequently happened," he said, "that direct communication between Tiflis and Russia has been broken, and consequently it is impossible to keep in touch with our representative in Georgia. He has merely gone to Baku for the purpose of convenient communication with the Russian Government. He is still at Baku, and will return to Tiflis when the present conflict is happily settled."

"Then there is conflict?" I said.

Mr. Litvinov replied: "Certainly. The attitude of Georgia is extremely unfriendly, and she has not kept the agreement made with us. Thus, after Wrangel's collapse, Georgia agreed to hand over the Russian ships at Batum, instead of which one ship after another mysteriously disappears. I have just heard that the large ship Prinzip has gone to Constantinople.

"The Georgians are fermenting trouble among the mountain tribes of Daghestan. Georgia has occupied the neutral zone on the Armenian frontier. The Georgians refuse transit of our goods, naphtha,

etc., to Soviet Armenia. They are continually arresting our representatives and releasing them after our protest, but the arrests continue. By the terms of our agreement with Georgia the Communist Party in Georgia is legalized and should enjoy the same rights as the other political parties. This agreement has not been kept, and thousands of workmen have been sent to jail on the suspicion of being in sympathy with Communism. Either Georgian policy towards us is a deliberate policy of pinpricks or the Georgian police are not under proper control of the Georgian Government."

"You do not think these grievances will lead to war?"

Litvinov replied: "That depends on the Georgians. We have nothing to gain by war, nor would a revolution in Georgia mean any material gain for us. Even from the point of view of propaganda we prefer to have democratic republics on our borders, confident that in time the comparison between the two forms of government will be to our advantage. We are interested in preserving the integral independence of Georgia, though in case of aggression on her part we would give unreserved support to Baku and Azerbaijan.

"It is unfortunate for everybody that Georgia pursues such a shortsighted foreign policy based on fear. We have reason to believe that she is negotiating with representatives of the Angora Government for a partition of Soviet Armenia. Here her policy is probably dictated by fear of Turkey. We, of course, do not think that such negotiations will have any result, because we are confident that the Angora Government would not accept proposals tending to destroy the excellent relations existing between the Turks and ourselves. Again, fear of Russia leads to the foolish Georgian belief that it is to her advantage that war in Russia, no matter what kind, should continue. She knows that a White victory would be her own death-knell, but thinks that continued war, by weakening Russia, strengthens her own position.

"Again, her own economic condition is so bad that perhaps the Georgian Government looks to a permanent war scare as a means of keeping the nation together, and, by holding up the bogey of Russia as an enemy, enables itself to discredit the Georgian Communists by calling them 'traitors'. We, however, have no aggressive designs. We ask for the delivery of Russian ships according to the agreement, diplomatic immunity for members of our mission, and the stoppage of intrigues with Daghestan mutineers. If, having good relations with Georgia, we can use Batum as a transit port in the same way that we use Reval, we want nothing more."

Manchester Guardian.

Treaty between Soviet Russia and Soviet Ukraine

[The close relation existing between the two great Soviet Republics is strengthened by the following new treaty between them.]

The Government of the Russian Soviet Republic on the one hand, and the Government of the Ukrainian Soviet Republic on the other hand, on the basis of the right of self-determination of nations, proclaimed by the great proletarian revolution, having recognized their respective sovereignty, in view of the necessity of uniting their forces for defence and mutual protection, and also in the interest of economic reconstruction, have determined to conclude a true treaty and have for this purpose appointed as their plenipotentiaries the following: as representatives of the Russian Soviet Republic, the President of the Council of People's Commissars, Vladimir Ilyich Ulianov, and People's Commissar for Foreign Affairs, Georgyi Vassilyevich Chicherin; as representative of the Ukrainian Soviet Republic, the President of the Ukrainian Council of People's Commissars, and People's Commissar for Foreign Affairs, Christian Georgevich Rakovsky. These plenipotentiary representatives have reciprocally inspected one another's credentials, and finding them completely satisfactory, have come to the following agreement:

1. The Russian Socialist Federative Soviet Republic, and the Ukrainian Soviet Republic, conclude with each other a military and economic treaty;

2. Both powers consider it necessary to announce that all obligations they may in the future incur toward other states may be conditioned only by the common interests of the workers and peasants who have concluded a true treaty of alliance between the two republics, and that the fact of its formerly having belonged to the former Russian Empire, does not involve any obligation for the Ukrainian Soviet Republic toward any other state;

3. To facilitate the execution of the desiderata indicated in Par. 1, the two governments declare that the following Commissariats are hereby united: (a) Army and Navy, (b) Supreme Council of National Economy, (c) Foreign Trade, (d) Finance, (e) Labor, (f) Communications, (g) Post and Telegraph;

4. The united People's Commissariats of the two republics become members of the Council of People's Commissars of the Russian Soviet Republic and have their plenipotentiary representatives in the Council of People's Commissars of the Ukrainian Soviet Republic, which is appointed and controlled by the Ukrainian Central Executive Committee and the Soviet Congress;

5. The regulation and the form of internal administration shall be determined by individual agreements between the two governments;

6. The conduct and control of the combined Commissariats shall be in the hands of an All-Russian Soviet Congress of delegates of workers,

peasants, and Red Army soldiers, but also of the All-Russian Central Executive Committee, to which the Ukrainian Soviet Republic shall send its representatives, on the basis of the decisions of the All-Russian Soviet Congress.

7. This treaty is subject to ratification by the corresponding supreme legislative bodies of the two republics. The original is drawn up and signed in two copies, in the Russian and Ukrainian languages, at Moscow, December 28, 1920.

UNITY OF RUSSIAN COMMUNISTS

In a leading article appearing in a recent number of *Pravda*, it is stated that the Eighth Congress has had a greater importance for Soviet Russia than any of the preceding congresses. We quote from the article the following paragraph:

"This Congress met at a crisis in our Revolution, when we had terminated our armed struggle against our external and internal enemies, and we were preparing ourselves to take up the work of reconstructing our economic life. Therefore this Congress devoted but slight attention to questions of foreign policy or to military affairs, in other words, to the subjects on which the Soviet power had hitherto concentrated the greater part of its attention. The Congress devoted all its forces and all its attention to immediately remedying economic evils, and the construction of a technical basis on which the Communist social structure might truly be erected."

After pointing out the concrete measures that had been taken in the matter of this economic work, *Pravda* continues: "The enemies of the Soviet power have declared that the latter is strong and united only so long as it must struggle against its enemies arms in hand. They have predicted that the end of this struggle would necessarily bring about a division and disunion within the ranks of the Communist Party and deprive it of the support of the great non-partisan masses. The Congress proved the contrary to be the case. Never have we been so united as at the present hour. Formerly there was always an opposition at the congresses against the predominant tendency. At the Eighth Congress there was no such opposition. The elections went off with uncommon unanimity and what is more, never before did the non-partisan working masses support the Communists as they do now."

OFFICIAL COMMUNICATIONS

of the

Russian Soviet Government

during the months of July to December, 1920, were sent to England, Hungary, Austria, Poland, France, Rumania, Italy, Bulgaria, Finland, Turkey, and Persia.

They are printed in Volume III of SOVIET RUSSIA, which contains 652 pages of text and illustrations, including many maps. Cloth bound. Price \$5.00 postpaid.

SOVIET RUSSIA

110 W. 40th Street

New York, N. Y.

Russia and Great Britain

By G. STEKLOV

[The following editorial appearing in "Izvestia", Moscow, on December 30, 1920, from the pen of the editor of the official organ, is of interest as a reflection of the attitude of the Soviet Government toward the negotiations with Great Britain, of which the two documents following it are also an expression.]

FROM the very first day of the November Revolution the Soviet Government never stopped proposing peace to England. In the course of three years the English Government either did not pay any attention at all to the proposals of the Soviet Government, or by every means postponed its answer, at the same time continuing its hostile operations against Soviet Russia. After a long series of procrastinations and postponements, there was some hope, in the course of last summer, that the question concerning the conclusion of an agreement between these two nations was finally to become a matter of actuality. In its note of July 7 the Soviet Government declared its readiness to accept the principles put forward by the British Government on June 30 as a basis for an agreement between the two countries. Moreover, our Government, at that time as well as later, emphasized the fact that it considered the plan suggested by the British Government as a kind of an armistice between Russia and Great Britain which ought to prepare for the conclusion of a final peace. The terms of the latter were to be the subject of special negotiations between both governments. Besides, the Russian Government had always taken the stand that negotiations concerning the commercial agreement should be accompanied by negotiations of a political character, or that the negotiations concerning a political agreement should begin immediately after the conclusion of the commercial agreement.

For almost half a year the British Government has in every way been protracting negotiations, and now at last it has submitted to us a draft of a commercial agreement which is hardly of such a character as to be considered by the Soviet Government as being in the interest of both parties. First of all, most striking in this project is the absence of the basic characteristic of similar international agreements, namely, reciprocity. The English draft imposes upon the Soviet Government a great number of one-sided obligations, and even in those points in which the draft gives the obligation a reciprocal character, it consistently emphasizes the special and double contract obligation and responsibility of the Russian Government in contrast to the British. Moreover, in violation of the spirit and the letter of the foregoing negotiations, the English draft bears a kind of final character and remains silent as to the peace conference which, according to the Russian proposals, was to follow the trade agreement and settle all questions at issue between the two governments. We get the impression that the English Government does not want this peace conference, but that it has not decided to say so openly.

As if it foresaw that all its foregoing policy towards Soviet Russia would place it in an unenviable position in a peace conference, it decided to elude this difficult question by converting the trade agreement into a political one, and at the same time giving it an entirely one-sided character. For, indeed, does this document constitute at all a purely commercial agreement? It is sufficient to glance only at its preamble to come immediately to the conclusion that we have before us a draft of a political agreement which moreover is drawn up in an extremely one-sided spirit. Taking upon itself hardly any obligations, and rather unequivocally emphasizing its refusal legally to recognize its contracting party on whom, however, a great number of very serious obligations are imposed, the British Government has so much been carried away by its role of the party that dictates the agreement, that among its demands upon the other party it includes also the obligation to refrain from any hostile activities against British interests, not only in Asia Minor, Persia, Afghanistan, and India, which England considers her colonies and possessions, but even in the Caucasus, an important part of which belongs to Russia and as far as we know no part of which belongs to England. This is, of course, only a detail and the British Government seems to be inclined not to anticipate events, and for the time being does not include the Caucasus in the number of its colonies, but this detail is very characteristic of the whole spirit of the English draft.

Every clause of this draft contains some reservation, and the meaning of all these reservations tends to the one purpose of giving the English Government a free hand should it in the future intend to proceed against Russian citizens and the Soviet Government. Whether it is a question of the kind of goods the importation or exportation of which is permitted, or whether it is a question of merchant ships, their captains and crews, of future representatives of the contracting governments and of their rights, or of the citizens of both countries to whom it will be permitted to settle down in the countries of the contracting parties,—immediately after the general statement there inevitably follows some reservation, the aim of which is explained by the entire contents of the document in question and its general character of extreme onesidedness.

Only a victorious country could impose such one-sided obligations on a conquered country. But Soviet Russia does not at all consider herself a conquered country, and much as she desires a speedy conclusion of peace, she feels no inclination at all to accept humbly the ultimatums that are dictated to her. For three years England has been fighting Soviet Russia, for three years she has been

arming our enemies, killing our citizens in the North, in the East, and in the South, and nevertheless she has not been victorious in this conflict. On the contrary, since all her agents have been crushed, since her undertakings against the Soviet Republic have been failures, and since the Soviet Government after a three-years' war having recovered almost all Russian territory, has concluded peace with almost all of her former enemies and is now much stronger than she ever was—it should be admitted that the beaten party was the English Government. From this fact Soviet Russia by no means draws the conclusion that she is entitled to impose upon anyone one-sided obligations for the benefit of her own specific interests, but at the same time she is unflinchingly determined to reject any attempts to impose upon her a foreign will that is contrary to her interests.

Humanity needs peace. It is also necessary to Soviet Russia in order to enable her to begin peaceful reconstruction. To obtain this peace the Soviet Government repeatedly has shown its readiness to make concessions. But at the same time it always emphasized that its yielding has certain limits and that it will never permit anybody to treat Russia as a conquered country.

The Recall of Krassin

(A Statement by the Commissariat of Foreign Affairs)

A certain time ago there was published the note of Lord Curzon of June 30, in which there were indicated those four principles on whose acceptance, as a basis for an agreement, the English Government was prepared to enter into commercial relations with Russia.

One of these principles was the reciprocal obligation to abstain from hostile activity and direct or indirect official propaganda against the political and social structure of the other party. Literally: "More particularly, the Soviet Government will abstain from any attempt to cooperate with the peoples of Asia by military actions and propaganda in any form of hostile activity against British interests and the British Empire."

The second principle is the repatriation of the prisoners of war. The third principle is the recognition of the obligation to pay compensations to private individuals who are citizens of the other country for commodities and personal services rendered, for which they have not been paid. The ultimate settlement of the question concerning the debts was to take place on the occasion of the peace negotiations, but the above declaration of principle had to be made immediately.

The fourth principle is the acceptance of conditions for the conducting of business. The British Government, immediately after the acceptance of these principles, was to consider these questions with the representatives and experts designated by the Soviet Government.

In the note of the Commissariat of Foreign Affairs of July 7 it was declared that the Russian

Government accepted the principles of the English note of June 30, as a basis of an agreement between Russia and England, which has to be a subject of negotiations between them, to begin without any delay.

Of the above mentioned principles there has been settled in the mean time the question of the repatriation of the prisoners, and the details of the commercial agreement proper have been elaborated and are still being elaborated in the negotiations between Comrade Krassin and the English Government. The settlement of the debt question shall take place at the future peace conference. As for the political negotiations concerning the reciprocal cessation of hostile activities and propaganda—they have not taken place, but not through the fault of the Russian Government.

The English Government, which not long ago was standing by the principles of the July agreement, has now radically altered its position. In its draft trade agreement there are no longer any indications as to the impending political negotiations, and the passage concerning the reciprocal cessation of hostile activities and propaganda has the character of a final decision, while, according to the agreement of July, this point should enter into force only after its provisions had been agreed upon at an English-Russian conference which was to take place later.

This point, moreover, substantially enlarged, contains an enumeration of those countries to whose peoples the Soviet Government must take care not to give any assistance in any activity whatsoever that may be harmful to British interests. All these obligations are also extended to Russian private individuals.

When, on December 22, Krassin met Lloyd George, Bonar Law, and the Minister of Commerce Sir Horne, the English Prime Minister declared that he insisted upon mentioning Asia Minor, Persia, Afghanistan, and India in the agreement, and that he was ready to accept the omission of the Caucasus only. The English Government has also refused to submit this question to a future conference, as was requested by the July agreement. As a concession, it would assent that also those countries should be enumerated in which England should refrain from hostile activities against Soviet Russia. It agreed also to omit mention of the extension of this obligation to private individuals and to replace this with a reciprocal obligation not to countenance any hostile propaganda against the other party outside its frontiers and to give corresponding instructions to its officials.

In view of the fact that England openly declines the obligation which it accepted in the July agreement, the Soviet Government has decided to recall Comrade Krassin to Moscow for further consultation.

—*Petrograd Pravda*, December 30, 1920.

Chicherin to the British Government on the Trade Negotiations

The following is the text of the reply of the Soviet Government to the draft proposals submitted by the British Government, as it appeared in the *Petrograd Pravda*, December 30, 1920, addressed to Curzon:

The Russian Government, having through Mr. Krassin received the draft trade agreement of the British Government, wishes to point out that the fundamental political principles dealt with in the above draft have already been agreed upon by both parties as laid down in the British memorandum of June 30 and in the Russian note of July 7. This refers both to the question of mutual abstinence from hostile action and official propaganda, and that of the compensation to private citizens who had supplied goods or services to Soviet Russia. It was further agreed that the acceptance of these principles as a basis of all subsequent political agreement, all further details, and the elaboration of the political agreement should be referred to the pending conference of delegates and experts properly nominated by both governments. The British Government in its memorandum described the condition that would be created between the two governments by the adoption of these principles as an armistice preceding the conclusion of peace. In its answer of July 7 the Russian Government emphasized with no less clearness that it was adopting the proposed principles as the basis of an agreement which would be the object of negotiations subsequently to be conducted between the two governments. The Russian Government on its part sent for this purpose a plenipotentiary delegation to London, but unfortunately the British Government, by forcibly eliminating one member of the delegation after another, has been deliberately avoiding for five months any discussion, and thus postponing the carrying into effect of the agreement concluded. The Russian Government is therefore not a little surprised to find in the draft now presented to it the principles agreed upon altered and particularized in such a way as to suggest a considerable amplification and extension of the engagements of one part, namely of Russia. It can be well understood that the British Government had been temporizing in coming to a final agreement with the Russian Government, in the hope that the war with Poland and the mutiny of Wrangel might go against Soviet Russia and thus make the latter amenable to harsher terms than those accepted by it in July when the fortunes of war seemed to the misinformed outside world to be in the balance. But now that the conflict with Poland is obviously nearing a peaceful solution and the last organized forces of the counter-revolution have been utterly crushed, now that peace with Finland has been concluded and ratified and the popularity of Soviet Russia is growing from day to day both in the west and more particularly in the east, one fails to see on what expectations the British Government bases its attempts to impose upon the Russian Republic new obligations as to which no discussion has taken place and no consent has been obtained from it. Although in spite of its repeated friendly and peaceful assurances the British Government, during the interval in the negotiations, has on many occasions been a party to acts injurious and detrimental to the interests of Russia, as for instance in the case of Bessarabia and of Danzig, the Russian Government, true to its peaceful intentions, declares its readiness to abide by the basis of the agreement of June-July, but much as it would like to see trade with Great Britain renewed, it is not prepared to go beyond that agreement or to alter therein a single point without properly conducted political negotiations at which both parties can formulate their understanding of the main principles and meet each other's desires by way of mutual concessions as laid down once more by the Russian Government in its note of November 9. In that note the Russian Government expressed once more the view that the trade agreement between Great Britain and Russia would have to be accompanied or followed by negotiations of a political nature, namely in London or some neutral city selected by mutual consent. As to mutual abstention from hostile

action and propaganda, and recognition of claims of British citizens for goods delivered and services rendered to Soviet Russia, it is quite ready to mention in the trade agreement the simultaneous adoption of the principles as worded in the exchange of notes of June 30 and July 7 as of the basis of a subsequent elaborate agreement which must be the object of a political conference between Russia and Great Britain. The engagements which Russia will enter upon towards Great Britain in every particular political question referred to in this respect, will be discussed and negotiated at this conference parallel with engagements which Great Britain will enter upon towards Russia. Such has always been the basis on which the Russian Government was ready to bind itself as to its action in different parts of the world, particularly in Asia in its relations towards Great Britain, and it does not see any reason why it should adopt a new attitude in this respect. The preamble of the proposed draft and article eight must therefore be removed and replaced by a simultaneously adopted repetition of the principles laid down in the June and July notes as of the basis of the pending conference. As to the other articles of the draft strictly referring to trade, their final formulation will have to be discussed between the British Government and Mr. Krassin to whom the necessary instructions are forthcoming. The final draft will then have to be forwarded to the Russian Government for examination and adoption. Parallel with the negotiations as to the trade agreement or immediately after this has been signed, and independently from such signing, the political conference provided for in the June and July notes will have to be convened in order to settle on the basis of the principles agreed upon all outstanding political questions between Great Britain and Russia. The Russian Government hopes that the British Government will agree with it as to the expediency of a speedy reply and of a prompt solution of all pending questions and that it will meet the sincere desire of the Russian Government for establishing peaceful and friendly relations to the mutual advantage of both parties.

CHICHERIN.

RUSSIA WILL NOT BETRAY EASTERN RACES

MOSCOW, January 15.—In a letter written for *Izvestia*, Steklov, the editor, again treats the Anglo-Russian peace negotiations, and remarks that the English Government, which had at first refused to enter into any other than a commercial agreement with Russia, is now asking that the agreement be made to depend on political questions, and that it requests an extension of the July understanding. The English Government's demand is this: Russia is to declare that it is entirely disinterested in the fate of the Eastern countries. Steklov states that while Russia is ready to undertake not to interfere in the internal affairs of England, it cannot on the other hand undertake to deliver up the Eastern races bound hand and foot to the British imperialists. If Soviet Russia should do this to the countries who live under the iron rule of British imperialism, and who are considered by Russia as its natural allies against British imperialism, such a step would completely discredit Soviet Russia in the eyes of the peoples of the East. The English imperialists cannot expect that Soviet Russia will be so simple as to enter this trap. England is not ready to make any concessions, in spite of the fact that diplomacy operates by means of a certain degree of mutual consideration. The Soviet Government has gone as far as it could in its readiness to meet the English demands half way, but has not met with a similar attitude on the part of England.

Wireless and Other News

THE DAILY SLANDER

Moscow, January 12, 1921.—In the *Izvestia* of yesterday, Steklov has a leading article: According to the latest newspapers and wireless despatches from foreign countries, Soviet Russia is preparing to attack Esthonia, Lettland, Georgia, Rumania, and even the whole of Middle Europe. Imaginary speeches of Soviet leaders are published which call for the setting up of revolutionary governments by the force of our arms. The work of fiction is completed by accounts of our plans to murder the leading statesmen of foreign countries. Our neighbors will, however, remain unmoved by these slanders, but it is of great interest both to them and to us to learn in whose interests they are being launched. It is not a mere repetition of the attacks of our counter-revolutionaries, although they have a finger in the pie. We hear of the plans of the German General Hoffmann. We learn that the British General Malcolm confers with the representatives of Semionov in Berlin. But the cause of all is to be found among the French agents. France reorganizes the remnants of the Wrangel bands. Pilsudski has gone to Paris to talk with his bread-givers.

MISREPRESENTATIONS DENIED

HELSINGFORS, January 13, 1921.—The Finnish Peace Delegation which has just returned from Moscow reports that the situation is good. The general impression is that stable conditions prevail. By a visit to the Kremlin they ascertained that the art treasures were undamaged and well taken care of.

DEMobilIZATION IN RUSSIA

Moscow, January 12, 1921.—In Mohilev the demobilization of the Red Soldiers was the occasion of great celebrations. Before leaving, the Red soldiers took a vow to work just as hard on the working front as they had fought on the military front and upon the first call to hurry back to the colors.

LATEST NOTE TO HUNGARY

The Hungarian Government, which maintains its rule by murder, slaughter, tortures and banditism, as well as those representatives of this caste, who at present are in Russia, are responsible with their lives for the acts which the Hungarian Government will commit toward the Commissars of the People and the Russian prisoners of war. They have to blame for this not us, but their own government, because the latter forces us to resort to the only means that is in our possession to save those of its victims whose rescue is our plain duty.

We suggest to you to start negotiations in Reval with our diplomatic representative Litvinov, who for this purpose will provide himself with all the necessary powers and who together with your representative, will arrange the form of the impending negotiations.

The People's Commissar for Foreign Affairs,
CHICHERIN.

TELEGRAPH COMMUNICATIONS WITH RUSSIA?

COPENHAGEN, January 4 (NCP).—*Nationaltidende* prints a rumor which the newspaper found confirmed when it applied to the Great Northern Telegraph Company, that this company had recently been negotiating with Sweden and Soviet Russia for the purpose of resuming telegraph communications with Russia. According to the report, no definite agreement has as yet been arrived at, but at the offices of the Great Northern hopes were expressed that the matter might soon be regulated.

RUSSIAN AGRICULTURE

Moscow, January 12, 1921.—According to one of the resolutions of the Eighth Soviet Congress the preparation of an agricultural program for the whole land was approved. Not a foot of land must remain unworked, and it is the duty of the peasants to fulfill their responsibilities to the Communist State.

Moscow, January 12, 1921.—At the present moment all the efforts of the Commissariat of Agriculture are being directed to the erection of repair shops for agricultural machinery. Specialists are being sent where required. It is hoped to work out a plan by which there will be a repair shop in each province, and that one-fifth of the ploughs and one-third of the seeding machines will be attended to.

SOVIETS IN THE CRIMEA

Moscow, January 12, 1921.—In the Crimea, where only a short time ago all the horrors of war were to be seen, the people are now working feverishly to make good the waste of war. The city of Sebastopol now has an electric light service. The surplus power is being used for the neighboring villages.

Moscow, January 12, 1921.—Engineers, technicians, and other specialists who were unemployed in Yalta, have been sent to other parts of the Crimea where they will work in the factories.

Moscow, January 12, 1921.—The soldiers of the Red Army have set several chemical factories in operation. In the district of Baydar the development of the mineral resources has been undertaken. In Kerch the development of the naphtha resources is being feverishly undertaken in order to increase the output. On the railways great activity also exists.

CHINA DISARMS WHITE GUARDS

Izvestia reports: The governor of Chinese Turkestan has reported to Peking that 2,000 Russian White Guards who had crossed the frontier have been disarmed.

THE CULMINATING ATROCITY

Moscow, January 7.—The Commissariat of Labor in Sebastopol has sentenced four thousand speculators to compulsory labor.

PUNISHED FOR AIDING SOVIET RUSSIA

Three German workmen were recently tried by jury at Stuttgart (Württemberg), for a breach of law of which they were accused in connection with operations to prevent the delivery of supplies to the enemies of Soviet Russia. The charge was that in August, 1920, they destroyed three gun-carriages belonging to the firm of Daimler, on which occasion they were said to have been the ringleaders of a mob of at least one thousand persons. The workers at the Daimler factory were under the impression that these gun-carriages were intended for Poland in its struggle against Russia, and had demanded that the carriages remain under the supervision of the workers in the Daimler works. The management categorically refused to discuss the subject. The angered workers thereupon proceeded to break up the bodies of the carriages by the application of oxy-hydrogen flames. The prosecuting attorney characterized the attitude of the workers and of those "behind" them as hostile to the state. After a two-day's trial, the jury rendered a verdict of guilty. Comrade Rösch was sentenced to one year in prison, Comrade Merk to four months in prison, and Erich Gentsch, shop steward, was acquitted.

JAPAN MAKES TROUBLE IN MONGOLIA

Izvestia reports: According to reports from Urga the Chinese Government had proofs of the part that Japan is playing in the Mongolian troubles. A Japanese major has been captured who was the leader of the undertaking against Urga. From him it was learned that 44 Japanese officers were serving in the Russian White Guards.

NEW FACTORY IN NOVOROSSISK

Izvestia reports that the Chairman of the Ukrainian Council of Economic Soviets has received a telegram from the trade union center of metal workers at Novorossisk, stating that the Yussov factory at Novorossisk has begun operating a blast furnace. This new victory on the labor front was gained through the energetic work of the workers and the administrative and technical personnel, thus greatly raising the hopes of the workers, who have promised to devote all their energies in the struggle against the economic decline.

IMPROVED CONDITIONS FOR WORKERS

Moscow, January 12, 1921.—*Pravda* writes that it would be quite possible greatly to improve the lot of the Russian workers by relieving them of the small household duties, such as washing, repairing, etc. It is absolutely necessary to establish laundries, shoe repair shops, etc. Workers must be given small articles of household necessity, such as dishes, etc., and even toys for the children. It demands that the local authorities shall at once undertake some measures, however small, in order to make an improvement.

SHIP FOR POLAND HELD UP

BERLIN, February 14.—Communists yesterday prevented the departure from Kiel of the former German steamer *Franz Zahl*, now sailing under the English flag. The Communists had been informed by the English crew of the steamer that the ship was carrying arms and munitions destined for Danzig and assumed that these were meant for Poland.

Inheritance Abolished in Soviet Russia

The laws regarding property rights and obligations of children and parents, as well as the laws governing marriage and divorce, guardianship, domestic relations, descent, adoption, etc., are printed in full in the booklet

The Marriage Laws of Soviet Russia

which gives the full text of the entire code of laws on these subjects. Price 25 cents, postpaid.

Labor Laws of Soviet Russia

A booklet of 93 pages, giving the official code of labor laws of Soviet Russia. Tells how labor is protected, how the right to work is guaranteed; how labor is paid; hours of work, etc. Price, postpaid, 25 cents a copy. Send orders and remittances to

The Single Economic Plan

By LEON TROTSKY

[The Commissar of War, as is well-known, is in favor of a rigid centralization in all government activities. The following is the first instalment of his latest statement on unification in the economic field.. We expect soon to receive an even more important expression from Trotsky on this question.]

1. *The Various Industrial Commissariats should be United*

CAPITALISM runs the industries of a country without a plan. But society cannot exist without a certain unity in production. This unity, continuously broken and reestablished is maintained under capitalism by the law of supply and demand, by the rise and fall of prices, by the ebbs and flows of the "free" market.

The Socialist organization of industry begins with the liquidation of the market and, in consequence, suppresses the "free" play of the law of supply and demand, which is the regulator of the market. The result aimed at, to carry on production in accordance with the needs of society, must be achieved by the singleness of the economic plan, in principle embracing all branches of industry.

One of the first acts of the Soviet Government was the creation of the Supreme Council of National Economy. The original ideal was to concentrate in this council the entire economic life of the country including production as well as distribution. The Commissariats of Supply, Agriculture, Ways and Communications, Finance, and Foreign Trade, were to be sections of this council. The organization of this Supreme Council was planned and partly carried out in accordance with these all-embracing problems. However, the object aimed at has not been achieved owing to economic as well as formal organizational reasons.

Had we taken over the capitalist mechanism in working order, our problems in matters of organization and technique would have been incomparably

easier. We should have had a relative equilibrium between the main branches of industry. Production, which is the main lever of economic progress, would have passed into our hands in the process of its "normal" development. The growing predominance of industry in the economic life of the country would have found its natural expression in the organization of the Supreme Council of National Economy. Taking the interdependence of the various branches of industry bequeathed by capitalism as a foundation, the Supreme Council could have elaborated the single economic plan, the chief part of which would be the energetic and uninterrupted development of industry. But the sheer march of events, the class war, and the needs of the proletarian revolution, placed this hypothetical eventuality out of the question. We took over the capitalist heritage after the war in a state of great disorder. The war industry had disturbed the relative and unstable proportion established by capitalism between the various branches of industry through the interplay of the free market. The proletarian revolution, having assumed the form of civil war, has withdrawn the workers from industry at the most critical period, and in its turn, contributed further to the demolition of the old industrial relations and ties and even of technical bases, such as whole industrial centers, various workers with their equipment, etc.

We were thus denied the possibility of building our economic plan as a continuation of the economic process (introducing corrections, more exactness and unification) which, with all its capi-

talist anarchy, nevertheless managed to maintain some unity. We could not base our practical measures on the calculations of private capitalist business and the industrial statistics of the capitalist state because the economic heritage received by us did not correspond to the situation as reflected in the old statistics.

Thus the material as well as the organizational conditions needed for the elaboration of a single plan embracing all the branches of economic life, were lacking. Therefore the original plan of the one center embracing the whole of the economic life of the country was doomed to failure. Moreover, there was the danger that, in the absence of an economic plan and of the conditions necessary for the same, such a single center might bring about a soulless bureaucratic centralization.

The elaboration of the single economic plan progressed much more slowly, more deviously, and in greater zigzags than it was previously imagined. Before the supremacy of industry could be established over the other branches of economic activity, it was necessary to create some more or less efficient and centralized organization of food supply. The same applied to agriculture, finance, railway, water transport, and foreign trade. Finally, and this is the most important, industry itself, before it could subordinate the departments of transport, food supply, etc., to its needs, had to get together its disjointed parts first of all and have them registered, i.e., it had to create its own machinery of centralized administration.

It was impossible to speak seriously, during this period, of the single economic plan, and still less of the leading role of the Supreme Council of National Economy in respect to food, agriculture, transport, finance, and foreign trade. The Commissariats for Food, Ways and Communications, Agriculture, Finance, and Foreign Trade have built up their organizations and elaborated their methods of management quite independently of the Supreme Council of National Economy. And now, when the work of centralized construction has been completed in rough outline, we are faced by the fact that the Supreme Council of National Economy has actually become the Commissariat for Industry, (existing side by side with the Commissariat for Food, Ways and Communications, etc.). True, in the composition of the Supreme Council of National Economy there still remain some "Centers" (Centro-Textile, Centro-Leather, etc.), and institutions which protrude from this Commissariat for Industry, like so many broken pieces of the original and incompleated plan, and which look like casual out-houses or . . . a sort of ruins. It would be radically wrong to assume that the transition from the period of "Centrocracy" (i.e., the rule of "Centers" centralized on vertical lines, badly coordinated in all their work, and not fully linked up organizationally), to Socialist centralization, i.e., to an economic system based on a single plan, will bring us back to the original idea of the Supreme Council of National Economy. The problem appears now in a radically different aspect. It must be stated first

of all that the centralization of the different branches of industry, in production as well as in distribution, has already found expression in the separate Commissariats. Within the Supreme Council of National Economy, which is the Commissariat of Industry, certain branches, such as textile, metal, fuel, etc., have developed into independent centralized centers, the coordination of whose work is as yet to a large degree a problem of the future.

The machinery of management of industry (the Supreme Council of National Economy) must be simplified and all the cumbersome growths and additions removed from its body.

Unity of management must be assured in respect to all the Economic Commissariats.

II. *The Positive and Negative Sides of "Centrocracy"*

The spread of "Centrocracy" was a necessary stage in the development of the Socialist industrial order. Much is being said about Soviet bureaucracy, its vices, and the necessity of combating it; "Centrocracy" has undoubtedly developed many vicious features of bureaucracy; a soulless formalism, procrastination, etc. But it must not be forgotten, and this is the essence of the matter, that the Commissariats and the Centers which we have created and are creating, however clumsy they may be in many respects, are not something casual and harmful, but something necessary. I mean the administrative Soviet bureaucracy without which no state, so long as it continues to be a state, can exist, i.e., during the transition stage to Communism. Bureaucracy has not only negative but also positive features: as for instance, a closer acquaintance with particular branches of management and industry, a clearly defined grade of interrelations, definite methods of work acquired by long practice, etc. This apparatus of Soviet bureaucracy (party or non-party) has taken the place of home-made methods, and of primitive chaos, and therefore represents a necessary stage in the development of our state.

This is not understood by many of our comrades, particularly by those who, out of hatred for "bureaucracy", are against general organizational contact between, and complete amalgamation in, particular branches of the administration of the water transport and that of the Commissariat of Ways and Communication. Some of these comrades say that by such means the machinery of the Centro-Water-Transport is being bureaucratized. This reproach, when used in the sense indicated, ceases to be a reproach. The centralized organization of the railway transport remains so far a model which has not been attained in water transport even during its capitalist period, when it was utterly disconnected and disjointed. The problem of creating and evolving a good bureaucratic apparatus (proper building up of departments, sections, etc., accuracy and promptitude on the part of the staff, good connections, proper bookkeeping, and office work), has not yet been solved. The reproach we hear so often that the Soviet institutions have become "infected" by the vices of the old bureaucrats,

(formalism, delay, etc.), does not touch the root of the matter. So far, we suffer not so much because we have acquired the bad points of bureaucracy, but because we have not acquired its good points.

Procrastination, captious formalism, and organizational helplessness are not the outcome of the bad habits acquired by the Soviet institutions, but have their root much deeper, in the temporary structure, in the transition stage of our industries and their administration. "Centrocrcacy" is a necessary stage of development, but it creates desperate situations and exceptional difficulties in matters of organization which only outwardly assume the form of departmental procrastination, but in reality are the result of the lack of coordination not only between the various centers and departments, but also within each of them. We steer our course towards the single economic plan, but this single plan is not here yet. Moreover, we have not even the machinery for the elaboration or for the carrying out of such a single plan.

We have centralized (so far very incompletely) various individual branches of industry, but none of these can live and develop without the others. Their interdependence, locally and at the center, is inseparable, and any break in this connection creates the greatest difficulties. The more or less well thought out, regular, uniform organs needed to secure the smooth cogwheel working of the services, the various branches of industry mutually feeding one another, are almost lacking. However imperfect our Economic Commissariats are at the center, nevertheless everyone of them covers its ground and keeps a register of the component elements of its industry, a register which, however slow, is constantly improving. The most acute organizational difficulty, with consequent procrastination, begins as soon as there is a question of coordinating the work of various economic departments and securing the necessary contact between them.

Here we have not passed yet from the experimental stage of creating auxiliary, temporary, and extraordinary organs, collegiate as well as individual.

For the purposes of securing the necessary labor power for the economic organs, a new interdepartmental organ has been created—the Centro-Labor, which is immediately subordinated to the Labor and Defence Council; this in its turn represents a combination of the military and administrative departments formed with the object of removing the more acute differences arising in their current work. For the purposes of providing the Red Army with ammunition and clothing, it was found necessary to create a new extraordinary organ, incorporating it with the Revolutionary Military Council of the Republic. A similar organ has been created for the Food Supply of the Army, called the Centro-Army Supply. To coordinate the claims of various departments upon our transport, an interdepartmental Supreme Council for Freight and Carriage was established under the Commissariat of Ways and Communications. The Principal Transport Com-

mittee was established for the purpose of fully coordinating the work of the railway workshops, etc., under the authority of the Supreme Council of National Economy, with those of the Commissariat of Ways and Communications. This Principal Transport Committee subsequently formed auxiliary organs. A number of interdepartmental committees, with a varying degree of authority, were formed under the Supreme Council of National Economy. There is a permanent committee for supply to workers at the Commissariat for Food. These auxiliary organs (of contact, coordination and regulation), which make the current daily work at all possible, provide the necessary link between the isolated Centers and the Commissariats.

The Commissariats and the Centers were obliged to take stock, however roughly, of their property, and put matters in order in every branch. Thus work was accomplished without which one could not speak seriously of Soviet economy. The interdepartmental institutions and the temporary organs of coordination have proved very valuable material for the elaboration of more regular and permanent methods of coordinating the work of the various departments and consequently for the elaboration and carrying into effect of the Single Economic Plan.

Now at last we have the possibility of coming into close grips with this problem.

(To be continued)

TROTSKY SUMMONS A CONFERENCE

RICA, January 29.—At the Conference on the scientific organization of labor, which gathered at the suggestion of Trotsky, papers were read by the well-known academician Bekhterev, on the national exploitation of human labor power, by Yermanski on the question of *guardianship*, and by Dubelions on the scientific organization of production. After hearing a lecture on the advantages and disadvantages of the Taylor System, the Conference proceeded to the deliberations of its various sections. The Section on Labor Psychology was addressed by the well-known Russian psychologist Professor Chalpanov, on the following subject: "The tasks of the psychology of labor." The section for railway transportation concluded its work on the 28th of January.

WHAT RUSSIA HAS DONE

during the last six months of 1920 is told fully and authoritatively in SOVIET RUSSIA. All the issues covering this vitally important period may be obtained in one volume, durably bound in cloth. Ask for Volume III. It contains 652 pages of text and illustrations, including many maps. Price, \$5.00 postpaid.

Theses on the Work of the Soviet

By G. ZINOVIEV

ZINOVIEV was intrusted with the report on paragraph 6 of the order of the day of the Eighth All-Russian Soviet Congress, "On Regulation of the Activity of Soviet Organs of the Center and in the Country, and on the Fight Against Bureaucracy". The presidency of the Central Executive Committee makes public the following theses of Zinoviev on this question:

Danger of Bureaucracy

1. One of the most important tasks which the Soviet power had already set for itself in the first period of its existence, was the creation of a government machine which would stand as closely as possible to the masses, and be the least bureaucratic and simplest possible, a machine in which each worker, male or female, could find his place intelligently. Bureaucracy means literally: the domination of the government office, neglect of the real nature of a thing together with a more or less punctual execution of its form,—thus may the present bureaucracy be characterized, although it may not by any means be entirely confused with excessive punctuality in carrying out formalities, which are really indispensable in the colossal work of a state. The danger of bureaucracy was already visible in the first period of the proletarian revolution. As early as two and a half years ago the Soviet Government first sounded the alarm and gave warning of this danger. A significant place was granted to the question of the fight with firmly established bureaucracy in the party program of the Eighth and Ninth Congress of the Russian Communist Party. But under the influence of external conditions the bureaucratic disease was ever assuming a more severe and chronic form. Experience has shown that a long period of time is necessary for transforming present Soviet Russia into a real organism (Commune). The growth of bureaucracy in the first three years of the existence of the Soviet power was above all conditioned on the following principal factors:

Economic Ruin and Poverty. The Soviet power took possession of the country at a moment when the powers of production and the old machinery were almost destroyed. The growth of bureaucracy was effected, for example, through such factors, as the breakdown of the means of transportation. If the organs of traffic are able to despatch only the most limited number of passengers and goods, there results as a consequence, involuntarily, a complicated system of filtration of those desirous of travel, through a large number of administrative offices, through the system of travel licenses, etc., etc. If the scanty supply of materials for shoes, which the Soviet power provides, must be apportioned under unfavorable conditions among a very large number of needy people, a no less complicated system likewise arises, which increases the acute shortage of paper. And if the country is unable to provide any

fuel, there naturally result many misuses in wood rationing; so, for example, in large cities, as a defensive measure against theft and smuggling even the scantiest wood transports are provided with protection licenses which again give occasion to new bureaucratic outgrowths. These examples can be multiplied without end.

Even in the early days of the proletarian revolution, in consequence of the attack of world imperialism on the workers' and peasants' republic, the Soviet power was compelled to create an ever larger Red Army. The success of the Soviet power in the matter of the organization of a Red Army proved the life power of our great Revolution, for only that revolution is worthy of being called won, which knows how to defend its gains with an armed hand. But on the other hand, the necessity of maintaining an army for a long period of time, must exercise its unfavorable influence on the Soviet structure.

Bourgeois Specialists

2. Bureaucracy consists not only in writing too much. The conditions of an arduous civil war, which consumed almost the entire work of the worker-and-peasant state (to the extent of almost nine-tenths) in an outright struggle for existence on the part of the directly threatened Soviet power—these conditions did not permit Soviet Russia to approach systematically and quietly the erection of a vigorous and simple administrative apparatus. All interests were subordinated to the tasks of war. The front could not bear even the slightest delay. New offices and commissions were created in the greatest hurry. As a result, the apparatus did not become simplified, but complicated. All the best forces and means of organization had to serve the Red front. Disputes over jurisdiction, especially in the provinces, made this service impossible. Even the central organs of the Soviet power suffered the same fate. The best responsible administrative powers proceeded to the front. The role of the bureaucratic elements and their influence grew in a similar relation.

The cultural level of the masses of the people and the inheritance of Tsarism—illiteracy—must on the other hand unavoidably check the process of attracting larger masses of workers and peasants for administrative work, particularly in the first years of Soviet construction. The successes won in this field are significant in and for themselves, but they are only a drop in the bucket when compared with what is yet to be accomplished here.

The bringing in of bourgeois specialists for the economic and administrative structure was absolutely necessary and unavoidable. But the less reliable portion of the specialists, who completed their work without spirit and without energy, brought the worst traditions of the bourgeois bureaucracy into our economic and administrative organs. In view of these malpractices by the worse elements of the bourgeois members of the intelligentsia, that part of the work-

ers and peasants which has been won for direct administrative work is particularly angry with the specialists. For that reason there exists an ill feeling towards intellectual workers which is so often unjust. But the inconsiderate contempt for "specialists" who have been branded as bureaucrats, although in some cases nothing can be said against them, has nothing to do with the real struggle against bureaucracy. The whole complex of these conditions furnishes that difficult environment with which the assembling Eighth Congress will have to reckon,—a Congress which will be convened at a moment when we have already completed the first part of the war. The period of the civil war is approaching its end. For that reason, the Eighth Congress, which raises the question of the fight against bureaucracy, must not point to the fact that this conflict consists in the restriction of the amount of red-tape in the Soviet offices, but above all it must root out the previously mentioned causes for the increasing power of the bureaucracy. To fight against bureaucracy means to fight against economic ruin, to fight against poverty, to raise the cultural level of the people, to win back the best administrators of the Red Army for Soviet work, to admit more proletarian elements into the cultural offices, to simplify the system of our economic and administrative organs and to put life into the activities of the rural Soviets.

Reconstruction Work

3. This work must be begun in the provincial Soviets and its organs. In three years of proletarian revolution, the Soviets have made considerable progress. In the first period, immediately after November 7, the Soviets were, above all, organs of revolt and of seizure of power. In the second period, approximately until the victory over Wrangel, the Soviets were, above all, organs of the universal mobilization of the masses for the war. At present, at the time of the convening of the Eighth Congress, the third period begins.

The Soviets must become, above all, the organs of mobilization of the masses for the reconstruction of domestic administration. In view of this new administrative perspective, one must recollect what was said in 1917 regarding the meaning and the role of the Soviets: the Soviets are organs in which there is found the provision of the freest and most organized course for the masses, the Soviets as organs into which there is always assured the infusion of fresh strength from the "lower strata"; the Soviets as organs in which the masses learn at the same time both law-making and the execution of their own laws. It is absolutely necessary to adhere to the holding of regular new elections in the Soviets. Provision must be made not only for the regular convening of plenary sessions of the Soviets and their executives, but also for this—that in these sessions, not only shall questions of agitation be discussed, but also the most important administrative economic questions. That particular executive committee which has held no meeting during the period of one month without an adequate excuse,

must be dismissed. The sessions of the executive committee must be public and accessible to all workers and peasants. In large cities and in important industrial centers the executive sessions must be held alternately in different working districts, in factories, and in barracks. The same applies to the district Soviets, where such exist. Important questions of Soviet life have to be considered at mass-meetings with the cooperation of Soviet members at the right time and before the decisions go into effect.

Soviets and Trade Unions

4. Now, when the economic front has become the main front, a great task will be allotted to the trade unions. The role of the trade unions in production will continually acquire a greater importance. In a certain measure, the burden of work falls on the trade unions. The first task of the Soviets in the provinces is a systematic stimulation of the trade unions in the achievement of their tasks of production. The provincial Soviets should under no circumstances set for themselves as a task the supplanting in any way of the trade unions in the building up of production. On the contrary, by the coordination of their work with the trade union committees, they are to promote the activity of the latter and mutually to approach the goal of our struggles of today—the building up and increase of production. The entire complex of these measures is the best means of fighting bureaucracy.

Provincial Soviets

5. A step forward must be taken in comparison with the decisions of the Seventh All-Russian Congress, in granting to the provincial Soviets not only the right of control of the activity of different representations of the central organs in the provinces, but in granting the right of immediate participation in the activity of such organs. That concession would contribute at the same time to the simplifications of the activity of the central offices above all the economic offices.

The Central Executive Committee had instructions to work out during the period of one month, means for the transfer of function of certain plenipotentiary commissions of the central offices in the country to the provincial Soviets, that is, directly to the local proletariat. Wherever the corresponding decisions of the Seventh Soviet Congress had not yet been carried out through the fault of the local Soviet or of the central offices, this had to take place within a period of two months under the personal responsibility of the leader of the corresponding organs.

Skilled Workers

6. The recall from the Red Army of at least a preliminary number of skilled workers and of responsible Soviet employees must be promptly placed on the order of the day of the provincial Soviets. Experiments made in this field have proven to be very successful.

Central Executive Committee

7. Similarly, it is necessary to put life into the activity of the Central Executive Committee. The

Central Executive Committee must be called into session at least once in two months, as is provided in the decisions of the Seventh Congress. Based on the experience of three years, the Eighth Congress must present a series of general lawmaking questions to the jurisdiction of the Central Executive Committee. The laws, decrees, and orders considered here, must be made public by the Central Executive Committee quite some time before they go into effect, and before they are proposed for the deliberation of the country Soviets. The control of the Central Executive Committee over the activity of different Soviet organs in the country must be made more regular than has been the case heretofore.

Collegiums of the People's Commissariats

8. The Central Executive Committee in its new make-up, and the Council of People's Commissars receive from the Eighth Congress the urgent task of scrutinizing the composition of the collegiums of the People's Commissariats and of the collective important central organs. Into all these organs, fresh energy is to be infused, particularly proletarian elements, workers and peasants who have done active work in successful organizing.

Questions of Jurisdiction

9. Disputes about questions of jurisdiction which are multiplying rapidly, and in fact are occurring in all acuteness between different divisions of one office, are doing a great deal of injury to the upbuilding of the Soviet state, and in any case they are promoting bureaucracy.

For that reason, the Central Executive Committee and the Council of People's Commissars, are instructed by the Eighth Congress, systematically to set boundaries between each other's activities so that above all, the paving of energy, the bare possibility of execution of work and the avoiding of duplication—would have to be taken into consideration.

Publication of Decrees

10. In all cases not of pressing importance, the Council of People's Commissars also makes public its decrees before putting them into effect in order to be able to take into consideration opinions and experiences of the Soviets, and in order to make corresponding changes. The first experiment should be made with the Agrarian Law.

Workers' and Peasants' Inspection

11. The institution of workers' and peasants' inspections must be extended, and must immediately effect an introduction of broader proletarian strata into administrative work as required by the decree of the Central Executive Committee of February 17, 1920. The Workers' and Peasants' Inspection Committee received exact, fixed, more extensive authority, that is, the bringing in of thousands of workers for the revision of the common kitchens in Petersburg, of the proletarian council of elders, of proletarian home administration, etc.

Simplifications

12. In their fight against bureaucracy, the Central Executive Committee and the Council of People's Commissars, must critically examine the execution of the simplest state functions, for example,

the apportioning of provisions, the assignment of dwellings, forcible measures for the abolition of smuggling, registration of births and deaths, etc. In all these fields, the greatest possible simplification should be gradually introduced.

Utilization of Surplus Employees for Industrial Activity

13. With the cooperation of the trade unions, the wage scale and the number of officials of different offices in the central cities and in the country must be checked up, and the working standard of the employees of the Soviets, their quantitative relations, their working efficiency, etc., must be definitely determined. The mobilization of superfluous employees into productive work—e.g., for the war with illiteracy—must be strictly carried out. In doing this, care must be taken that these shifts of labor power should be considered not in the way of a punishment but rather as a more suitable utilization of their working energies. The superfluous employees could also be transferred, in accordance with their abilities, to useful work in the industries.

Raising the Efficiency of Production

14. The ending of the first period of the civil war renders possible a slacking of military activities, but at the same time it confronts the Soviet power with new and enormous difficulties. The psychology of our transition period is determined among other things by this: that exhausted masses of workers and peasants who suffer unheard of privations, are ever making more demands of the Soviet power, since they justify these by the settlement of the war. Here too some of our comrades committed gross blunders. Instead of pointing out to the workers and peasants that we cannot conquer poverty without raising the efficiency of production up to the maximum, instead of directing the attention of the masses to matters of production, instead of educating the type of worker-manager who can lead in production, instead of all this, we are often content merely with reviling the bureaucracy. The Eighth All-Russian Soviet Congress demands of all adherents of the worker and peasant power, to abandon this procedure as false and to fight the principal causes of bureaucratic disease in order to destroy them effectually.

In the three years of the existence of the Soviet power, there has grown up in the government, in the districts, and in the circuits, a new generation of active State workers which has gone through a good school of class struggle. The Eighth All-Russian Soviet Congress is convinced that just this new proletarian generation will be able to take up the fight against bureaucracy and to build up again the worker and peasant democracy in the Soviet. The fight against bureaucracy should in no case involve a weakening of our administrative forces and of discipline. On the contrary, all the facts of the moment demand of us a military punctuality in our construction work, that work, with all its self sacrifice, to which the Eighth Congress of the Russian Communist Party has summoned all of our Soviets, party organizations, and trade unions.—*Petrograd, December 11, 1920.*

The Care of Children in Soviet Russia

By ARTHUR J. WATTS
(First Instalment)

[The following survey of the work of the Russian Socialist Federal Soviet Republic in the care of children is published by permission of the American Friends Service Committee. Mr. Watts forwarded this report from Moscow, where he has been for several months distributing relief supplies for the English and American Friends. Information regarding the relief work of the Friends in Soviet Russia may be obtained from the American Friends Service Committee, 20 South Twelfth Street, Philadelphia, Pa.]

THIS report does not pretend to be a complete account of all that is being done by the Socialist State for the care and education of children. It is simply a general outline drawn from personal observation during a period of four months' work in connection with the distribution of children's clothing and food donated by the Friends Emergency and War Victims Relief Committee (England). There may be gaps, as I can only write of what I have observed or learned in the course of my work.

The People's Commissariat for Social Maintenance.

This Commissariat is responsible for the maintenance of the children of soldiers and sailors and of the disabled (by work or war). This is done by pensions to their mothers or in cooperation with other Commissariats.

The People's Commissariat for Supplies.

This Commissariat is responsible for the feeding and clothing of every child. This Commissariat supplies food and clothes to all the institutions of other Commissariats. It has special children's kitchens of its own and supplies food to children on the family ration cards.

Departments and institutions obtain their supplies of food and clothing from the Commissariat for Supplies and are not allowed to purchase their own. By this means competition in buying between departments is avoided.

Departments and institutions may receive gifts. These donated supplies often reach large amounts, as, for example, when the Red Armies captured large stores of condensed milk from Kolchak and in Archangel they gave them to the Commissariat for Health for use in children's houses and hospitals. The Navy recently sent several car-loads from Odessa to the Commissariat for Public Instruction. Institutions may also receive supplies from abroad and have received gifts from time to time from the Danish Red Cross, the Norwegian Famine Committee, and the English Society of Friends.

In addition some departments and institutions have established farms and workshops of their own to augment the supplies received from the People's Commissariat for Supplies.

Department for Protection of Motherhood and Infants.

This is a department of the Commissariat for Public Health and is responsible for the health of mothers and infants to the age of three years.

Maternity Exhibitions.

Very excellent exhibitions on motherhood and the care of infants have been arranged by this department in Moscow and Petrograd and smaller ones in the provinces. These exhibitions are divided into two sections, viz., pre-birth and after-birth. By means of charts, pictures, diagrams and models which the simplest peasant woman can understand, valuable instruction is given on all points connected with the care of the mother and child. Pictures illustrating the results of hereditary disease and of the need of greater care before birth form a prominent part of these exhibitions. Models showing the amount and strength of milk to be given at various ages and very descriptive pictures and diagrams indicate the advantages which a breast child has over one fed artificially. The proper clothing of infants is also very well illustrated by a series of models and I am told that this has had a very beneficial effect in causing mothers to abandon the Russian practice of wrapping their babies so tight that they could scarcely move.

Rest Homes for Mothers.

Every mother who performs manual work is entitled to eight weeks rest on pay before the birth of her child and a similar period following. In the case of sedentary workers the period of rest is for six weeks before and after the birth of the child. Special rest homes have therefore been established for expectant mothers, and for mothers with their children, where extra food is given and every care is taken of the mothers and infants.

Maternity Hospitals.

Unfortunately, owing to the lack of suitable buildings and equipment, there are not sufficient Maternity Hospitals in Moscow, and mothers have to leave them from six to nine days after the birth of their child; but a new combined Rest Home and Hospital is now being prepared which will enable mothers to remain for a longer period in the same home.

Special assistance is also given to mothers who remain at their own homes, and they are entitled to draw extra rations either from the ordinary kitchens or from the special kitchens attached to some of the Consultation Depots.

There is now a proposal under consideration for considerably extending the period of rest, for increasing the mothers' food ration still more, and allowing her fuel for an extra room in her own home with a view to encouraging her to have a

room for herself and child separate from the rest of the family.

Consultation Depots.

Before the revolution there was one Consultation Depot in Petrograd and another in Moscow; these have now been increased to 25 and 17 respectively.

Mothers attend these depots for advice every 14 days unless there is some special reason for more frequent visits. In all these depots there are pictures, models and charts similar to the most important ones in the Maternity Exhibitions.

Attached to many of the Consultation Depots are milk distributing depots and in some instances kitchens, where special warm meals are served to mothers.

Every mother attending a consultation receives clothes for her child and such other material help as may be required, such as feeding bottles, nipples, etc. At some of these depots lectures are given to mothers and special training courses are arranged for nurses.

Milk Depots.

Special Milk Depots have been established or extended for the supply of milk to infants, who receive prescriptions from doctors at Consultation Depots where no milk distribution is made. Here the milk is sterilized, diluted or merely added, according to prescription, and put up in bottles with a slip attached indicating the number of feeds in each bottle.

Infants' Homes.

These are divided into two classes, one for infants up to the age of one year and the other for infants between the ages of one and three. There are also special wards attached to some of the Mothers' Rest Homes where motherless babies are cared for up to the age of two months. The infants are very well cared for in these homes. The standard (or model) homes are well-equipped and have very efficient staffs. These standard homes are also used as training centers for girls who are preparing to become nurses in similar homes or in day nurseries and creches.

Careful records are kept of the weight and development of each child together with the amount and kind of food it receives. A new home is now being opened for 15 infants who will be cared for according to a scheme drawn up by a Russian doctor as the result of a study of the books of leading American and European experts.

Creches and Day Nurseries.

There has been a very large development of these since the revolution and many factories employing women have their own creches. The demand at the moment is greater than can be met, with the present personnel and equipment. The Maternity Department takes the view that to open a poor creche is worse than to have no creche at all.

The People's Commissariat for Public Instruction.

The responsibility for the care and education of

normal healthy children after they attain the age of three rests with the Commissariat for Public Instruction, though education is not compulsory before the age of eight.

*Children's Gardens.**

There has been a great development of children's gardens since the revolution and there are now over a quarter of a million children registered in these gardens all over Russia. A children's garden is a delightful picture on a warm summer day with little boys and girls at play dressed in single tunics of varied colors, as full of life as one could wish. In winter, when the little ones have to be kept indoors because there are not sufficient boots or clothes, the picture is not so gay.

The children spend the whole day here returning at night to their homes. Dinner and supper are provided for all the children in these gardens, but unfortunately the food shortage does not allow the full norm to be supplied.

Children's Houses (or Communes).

These are similar to boarding schools in England, though a greater number of scholars spend their whole days in these houses than is the case in England. This is due to several reasons. First, children go at a much younger age and then, as there are no orphanages as distinct from commune houses, there are a large number of boarders who have no homes to go to in vacation.

Usually speaking there are separate houses for children between the ages of three and eight. From 8 to 17 the commune house is also a school, or the children attend a school in the locality.

The principle of coeducation exists throughout and the children are taught on the principle of learning some handicraft at the same time as they learn from books and lectures. The children have their own committees for arranging entertainments amongst themselves. Here, of course, the children receive all their meals and here again the food shortage is manifest particularly in the scarcity of fats. Clothes and boots are also lacking for the winter months.

Children's Colonies.

Children's colonies are of two kinds: children's houses where children live all the year round, and summer colonies in the country for the children of the town to live in during the warm months. The largest settlement of children is at Dyetskoye Selo (Children's Village) about 40 miles from Petrograd. This used to be the "Tsar's Village" (Tsarskoye Selo), where the late Tsar had two palaces. The houses of many of the courtiers have now been turned into children's colonies, a group of three or four houses forming a colony. There are usually 25 boys and girls in each house, with a manager in charge. One house in each group is used as a center for meals and household administration. The colonies are all run on coeducational lines, grouped according to pre-school age (three to eight) and school age (8 to 16).

* Kindergartens.

The communal spirit is very great in these colonies, both among the children and between the staffs and the children.

The children perform a large part of the household duties and in the colonies for older children have their own committees for electing orderlies and so forth. As far as one can judge from visiting about a dozen of these colonies the results of coeducation are good, boys and girls seem to be growing up in a natural and healthy companionship with a very great sense of equality and communal responsibility.

In Moscow the colonies are more scattered than is the case at "Dyetskoye Selo", where there are over 2,000 children in 32 colonies, with a special colony run on George Junior Republic lines for defective boys and girls, a sanatorium and a children's hospital. The Children's Village was occupied by Yudenich at the time of his attempt on Petrograd and several of the houses were destroyed, but now the colonies have resumed their normal life again. As is the case in Children's Houses, the parents are allowed to visit their children very frequently.

Day Schools.

First and second grade schools are run on the coeducational principle for children between the ages of 8 and 16. Manual training both for boys and girls fills a very important place in their program and many schools have very excellent carpentry, bookbinding, and engineering shops and needlework and other handicraft workrooms. There are also special schools for art and music, some of which are children's houses (boarding schools).

The teachers are greatly handicapped by the shortage of books and writing materials and as a consequence most of the exercises and tests have to be done orally.

Discipline is maintained without punishment in the ordinary sense of the word, but natural consequences follow from a breach of rules, e.g., a child does not receive any dinner till its hands are clean but it is not punished otherwise. For anti-social acts a child may be isolated for a period. Corporal punishment is quite forbidden.

Every scholar and student is entitled to an extra food ration and the education authorities endeavor to give every scholar a warm luncheon consisting of

| | |
|-------------------|---------------|
| Bread | 100 grams* |
| Meal | 20 " |
| Fats | 13 " |
| Sugar | 17 " |
| Meat or fish..... | 27 " |
| Egg | 4/5 of an egg |

Unfortunately the food supplies are not sufficient to allow of this ration being supplied at all adequately.

Trade Schools.

There are special Trade Schools for boys and girls, apart from the Technical Schools and Universities for older students.

Children's Theaters.

There are special theatrical performances and concerts arranged for school children, in many of which the children take part. The theme of orchestral music is explained before the performance and everything possible is done to develop their appreciation of the artistic.

Special performances are also arranged in Moscow for the children who are found loitering in streets and markets, but it is hoped that before long all these children will be in the schools, as is the case in Petrograd.

(To be concluded)

Foreign Relief Work in Soviet Russia

THE attitude of the Soviet Government towards foreign relief organizations was clearly stated in the letter written on November 18, 1920, by the Representative of the Soviet Republic in reply to an inquiry on this subject.

"Knowing the desire of the Soviet Government to use every practical means for relieving the acute needs of the population," wrote Mr. Martens, "I cannot believe that a bona fide offer . . . to send relief to Soviet Russia would meet with anything but a cordial and sympathetic reception by the Soviet Government. The Soviet Government has already manifested its willingness to cooperate with foreign relief organizations, as in the case of the Joint Distribution Committee, and in the case of the American and English Friends Societies. . . ."

"While the Soviet Government would gladly receive relief for its suffering population from any disinterested foreign agency, it does not ask for charity in this respect. We ask rather to be allowed to purchase in foreign markets those essential supplies of medicine, soap and other necessities, for lack of which men, women and children in Soviet Russia are now suffering. Relief would be welcome; but the suffering would be removed and relief would be unnecessary, if the foreign governments would remove their ruthless blockade against the resumption of normal commerce."

The cooperation extended to the relief workers of the Society of Friends (Quakers) and the freedom of operation allowed to them in Soviet Russia was described in a letter of January 29, 1921, from the Executive Secretary of the American Friends Service Committee: "At the present time our workers have supervision of the supplies that are shipped in, fullest opportunity to investigate homes and institutions, and opportunity to order their own supplies shipped to these particular places."

We are now able to publish the official correspondence between the agents of the Society of Friends and the Soviet authorities regarding warehouse and transport facilities. These letters show the cordial cooperation extended by the Soviet Government to any bona fide organization sincerely desiring to aid the Russian people.

In transmitting this correspondence, the representatives of the American Friends Service Committee of Philadelphia write from Moscow, Janu-

* 100 grams=3/4 oz.

ary 8, 1921: "We enclose herewith copies and translations of correspondence between ourselves and the People's Commissariat for Supplies which constitute our agreement with them concerning warehouse and transport. The letters refer to a part of a warehouse, but in reality it is a self-contained storeroom in a very large warehouse. Our office and storeroom will be entered through a separate door, the key of which will be in our keeping." The correspondence follows:

FRIENDS INTERNATIONAL SERVICE

Moscow, December 28, 1920.

To the Management for Preparation of the Centrosoyuz (Cooperatives):

The representatives of the Society of Friends (Quakers) hereby submit to you the request to grant them warehouse No. 5 on Instrumental Street, House No. 7, for the storage of goods which are arriving from abroad.

(Signed) A. J. HAINES,
ARTHUR WATTS,
Representatives of the Society.

CENTROSOYUZ

Moscow, December 28, 1920.

To the Representatives of the Society of Friends:

In answer to your letter of this date, the Management of Preparation of the Centrosoyuz states that it is ready to provide for your occupation a part of warehouse No. 5 on Instrumental Street, House No. 7, for the storage of goods.

(Signed) *Manager in Chief.*
Manager of the Sub-Department of Warehouses.

FRIENDS INTERNATIONAL SERVICE

126 Hotel Savoy

Moscow, December 13, 1920.

To the People's Commissariat of Supplies:

Dear Sirs:

The religious Society of Friends in England and America wishes in a spirit of love and universal brotherhood to do its best to help the people of Russia with gifts of food and clothing.

As our resources are small compared with the great population of Soviet Russia, we consider it advisable in the first instance to limit what help we have to offer to the children of Moscow and particularly to the sick and undernourished.

During the past six months we have distributed our supplies through many departments of various commissariats. This has resulted in the wastage of much time and transport. We therefore desire now to have all supplies donated by the Friends International Service stored in one warehouse under our supervision.

We therefore suggest the following plan for your consideration:

Warehouse and Transport

1. That the People's Commissariat for Supplies (Narkomprod) through the Central Cooperative Association (Centrosoyuz) provides a warehouse, together with the necessary lighting and heating. Such warehouse to be used exclusively for the sup-

plies donated by the Friends International Service or supplies entrusted to their care.

2. That the Centrosoyuz supplies and maintains the necessary personnel for the handling and controlling of all such supplies. (In our opinion this should include, to begin with, the full time service of a person capable of checking all stores in and out of the warehouse and of making the necessary arrangements for transport, and a clerk capable of typewriting in both English and Russian.)

3. We ask that the Centrosoyuz provides the necessary transport. We hope, however, to import one or two motor vehicles and shall be glad to know whether you would provide the necessary garage, gasoline and drivers.

Control of Supplies

1. We propose that all supplies and Bills of Lading should be handed over by our agent in Reval to the Representative of the R.S.F.S.R. Commissariat for Foreign Trade, on his giving a receipt agreeing to forwarding the supplies to the Friends International Service, care of Centrosoyuz, Moscow.

2. We suggest that on arrival at Moscow all supplies should be checked by a representative of the Centrosoyuz and ourselves and that a receipt signed by both should be sufficient. It being understood that the Workers and Peasants Inspection and the Extraordinary Commission may send representatives if they so desire.

3. That in making the distribution to institutions we should do so in accordance with a scheme to be agreed upon by a representative of the Department of Children's Health or such other Departments as may seem desirable, and ourselves.

4. Lists of all supplies received and distributed to be sent to the Centrosoyuz and to the Commissariats responsible for the institutions to which such supplies are sent. Lists with detailed enumeration of the institutions, their addresses and the amount of supplies given, must be sent by us to the People's Commissariat for Supplies.

5. All orders for goods to leave the warehouse to be signed by a representative of the Friends International Service.

6. All supplies to be distributed as gifts from the Friends International Service and without payment.

The above proposals form the basis on which we, the undersigned, feel that we can satisfactorily carry out the distribution of supplies by the Friends International Service. Such proposals to be subject to alteration by mutual agreement.

Yours sincerely,

(Signed) ANNA J. HAINES,
ARTHUR WATTS,

Representing the Friends International Service.

PEOPLE'S COMMISSARIAT FOR SUPPLIES

Moscow, December 30, 1920.

No. 1088.

To the Representatives of the Society of Friends (Quakers):

We acknowledge your letter of December 13, in

which you have stated all the conditions under which you will be able to make a satisfactory distribution of your goods.

The Foreign Department of the People's Commissariat for Supplies has the honor of informing you that the People's Commissariat for Supplies accepts your terms as satisfactory and promises to give you every assistance in your useful work.

We are sending a copy of your proposals to the *Centroysoyuz*.

(Signed) *Members of the Collegium.*

(Signed) *Manager of the Foreign Department.*
SOCIETY OF FRIENDS

126 Hotel Savoy

Moscow, December 31, 1920.

To the Department for Imports,
The People's Commissariat for Supplies,
Moscow.

Dear Sirs:

We are in receipt of yours of December 30, No. 1088.

We are pleased to note that you agree to the proposals contained in our letter of December 13, and we intend to proceed with our distribution accordingly.

Yours sincerely,

(Signed) ANNA J. HAINES,
ARTHUR WATTS,

Representing the Friends International Service.

The "Dneprovets" Commune

(A Letter by Alexander Kostenko, a Member of the Commune)

In the district of Starodubsk, province of Gomel, there is an agricultural commune called "Dneprovets". This commune was organized after the Germans left the province of Gomel. Its members were recruited, for the most part, from the middle peasants. The land occupied by the commune had formerly belonged to a big landholder—about 300 *dessiatins** of arable land and 50 *dessiatins* of pasture land, but the livestock and implements, as well as the buildings had been completely looted and destroyed.

After two years of activity, the members of the commune have almost completely restored the estate to its previous condition. They lack only cattle for breeding. The commune has reintroduced the nine-field system. It acquired a steam threshing machine and a locomobile. The crops are gathered with the help of harvesting machines.

The sowing of the grain is being done exclusively by regular sowing machines. This year a *dessiatin* of rye yielded 100 *poods*** (about 3,600 pounds) of pure grain. There was an unusually rich buckwheat crop. This year the commune collected 3,000 *poods* (108,000 pounds) of rye from an area of 33 *dessiatins*. Planting of corn has been introduced.

Altogether 117 persons of both sexes and different ages live in the commune. Besides, about 40

men from this commune are in the Red Army, some of them occupying commanding positions.

The commune is giving special attention to the education of the children. It has established a creche and a kindergarten, and the children of school age are taught in the district school of the commune.

Moreover, the council of the commune this year set aside two *dessiatins*, on which, under the supervision of the older members, various sorts of grain have been planted.

The children work eagerly and successfully in their field. The potatoes gathered on the children's field were, before leaving for school, collected to serve as family fund for the following spring.

In the "Dneprovets" Commune everything is decidedly socialized. Absolute solidarity prevails among the members of the commune and they show a high degree of consciousness. For the next year the commune has sown 66 *dessiatins* with rye. The rye crop is extraordinary. The buildings that were destroyed are now rebuilt. Very soon the members of the commune will start erecting new communal buildings. The plans have already been drafted.

The organizer of the commune is Comrade Mikhaildyka. In my opinion it will be necessary in the spring to provide the "Dneprovets" with a tractor or a motor plow. Then the economy of the commune will be really organized on a technical basis. After that, half of the members of the commune may be detached and assigned to other property where, owing to their training and consciousness, they will be able to organize successfully another commune similar to the "Dneprovets".

Owing to its exceptional management, its economy, and its organization the commune is famous all over the province of Gomel. Members of other communes visit it, sometimes as many as twenty peasants a day, in order to learn how it works.

The Next Issue of **Soviet Russia**

will be a special electrical and industrial number.

The great plan of electrification of agriculture and industry will be described in several interesting articles:

1. Speech of Nicolai Lenin at Eighth Congress of Soviets in December.
2. The plan itself described by Kryzhanovsky in a comprehensive address also delivered at the Eighth Congress of Soviets and accompanied by his own map showing the proposed new system of power houses.
3. Dr. Alfons Goldschmidt, a German Communist, whose work *SOVIET RUSSIA* readers know, tells in his own picturesque style of the possibilities of the new electrical arrangement in Russia.
4. Numerous news items showing the progress of electrification activities in Russia (from official sources).

INDUSTRIAL RECONSTRUCTION—Latest data on industrial and labor conditions in Soviet Russia.

* 1 *dessiatin*=2.7 acres.
** 1 *pood*=36 lbs.

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION

110 West 40th Street

New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

THERE is a generally prevailing opinion that the English have no sense of humor. A short telegraphic item from London published in the daily press on February 24 and 25 proves that this is nothing but a prejudice dictated by American playfulness. It refers to the recent incidents in Persia, where it appears that the "Persian Cossacks under General Reza Khan have occupied Teheran . . . because of the Government's apathy toward the spread of Bolshevism and because of the Bolshevist tendencies among the ruling classes in Persia." The "Bolshevist tendencies among the ruling classes" mean of course that, just as is the case in Asia Minor, in Persia also nearly the whole population has taken a friendly attitude toward Soviet Russia, in order to avoid for themselves the fate of India and Egypt. The "Persian Cossacks"—by the way, a creation of the Tsarist and British imperialists—according to newspaper reports, had come from the Western border, where the *British* troops are stationed. And the same reports add: "The opinion generally expressed in diplomatic quarters here today was that England would not interfere, since the affair was *purely internal*." It is for the same reason probably that England does not interfere with the activities of the "Black and Tans", since this is a purely internal affair of Ireland and interference would probably mean a violation of the principle of "self-determination."

This bit of news is quite in keeping with that powerful specimen of dry English humor that was displayed by the Right Hon. Winston Churchill in his article against Wells, in which he accuses the radicals of preaching "better a world of equally hungry slaves than a world of unequally prosperous freemen." To convert the Persians definitely into such Churchillian "freemen"—after the fashion of the population of India, Egypt, and Ireland—was the aim of this "purely internal affair."

* * *

AFTER the misfortunes that had befallen Kolchak, Yudenich, and Wrangel, after the elimination of the Finnish, Esthonian, Latvian, Polish, and other border-lands from the list of the ever-ready champions of "Western democracy and civilization" as against "Eastern autocracy and barbarism", after the rulers of freedom-loving France

had begun to run short of cannon-fodder willing to die for the interests of financial sharks and corrupt politicians, after England had finally realized the ever-increasing dangers of her Irish, Indian, Mesopotamian, and, last but not least, her own domestic labor problems—the whole respectable world of enemies of the Russian Workers' Republic has been cheered again by the Parisian conference of the Russian "Constituent Assembly" at which Bakhmetiev, Milyukov, Kerensky, Chernov, and other stars of Russian Liberalism and "Socialism" once more declared that they were the only legitimate representatives of Russia and that they would never desist from their struggle against the tyranny of the Bolshevist usurpers. But this struggle, they asserted, was not to be in the form of an armed intervention of foreign powers, but in the form of an internal revolution of the Russians themselves.

How complete this unity of Russian Liberals and "Socialists" is, and how sincere their repudiation of foreign intervention, may be gathered from the following statement of the Russian Menshevist Party (Social-Democratic Labor Party of Russia) which was printed in the Parisian anti-Bolshevist organ *Pour la Russie* of February 5, 1921. The Menshevist statement reads as follows: "The rumor having been spread that the creation of a "National Block" between Socialists, Cadets, etc., is being contemplated, the Central Committee of the Russian Social-Democratic Labor Party has declared that such coalitions of Socialist parties with the possessing classes—whatever flag they may be flying—can in reality have only one aim, viz., to rekindle again the flames of civil war, and to provoke a new intervention, whether open or disguised, on the part of the imperialist powers, into the internal affairs of Revolutionary Russia. Therefore the Russian Central Committee of the Social Democratic Labor Party declares in the most categorical manner that the Party, in spite of its negative attitude towards the policy of the Bolshevist Government, not only will not give any support to a Socialist coalition with the parties of the possessing classes, but on the contrary will fight side by side with the Bolshevist authorities against this new form of counter-revolution and imperialist interventionism."

The Menshevists who are thus dissociating themselves from the counter-revolutionary activities of their former associates, the Social-Revolutionists of the Kerensky-Chernov type, are in the unenviable position of being between the hammer and the anvil. They loathe the Soviet Republic in which middle-of-the-road-reformers have little or nothing to say, and at the same time they are too intelligent not to see that a triumph of the anti-Bolshevist forces would be nothing else than a victory of an extremely reactionary combination of world imperialism and capitalism where no honorable place would be left to the Socialist advocates of "real democracy". Typical representatives of the intelligentsia, that class that with its interests and its sympathies dangles between the capitalist and the worker, that dislikes and envies the capitalist but just as much

fears and abhors the rule of the workers, they are—while perhaps believing themselves to be furthering the cause of Socialism,—in reality, through their mouthpieces, Martov, Abramovich and Dan, providing a grateful capitalist world with the customary intellectual poison gas that precedes and accompanies all the military attacks against Soviet Russia.

* * *

MR. John Hays Hammond is reported in *The New York Times* of February 17 as saying: "I don't think Russia will go back to Tsar rule, and I hope not." This is paraphrased by the opening paragraph of the Washington dispatch of February 16, from which we are quoting, in these words: "There is hope in the near future of a constitutional monarchy and later a democracy in Russia, John Hays Hammond declared today before the House Foreign Affairs Committee."

Just what are the hopes of Mr. Hammond and the *Times* is not clear from these quotations. Mr. Hammond's statement gives the impression that he thinks the Tsar's government was undesirable; we think so too. But as the *Times* restates his position, it would seem to be in favor of a Tsar with a constitution attached, or some other sort of monarch less offensive than the Tsar. In the latter case Mr. Hammond's position would appear to be more fastidious than that of Mr. Milyukov and the other Russian "democrats", who, shortly after the suppression of the Revolution of 1905, publicly stated, in spite of the fact that they knew how bloodily the proletariat had been put down in that revolution, that now the Russian people were no longer governed by an autocracy, but had a constitution and a Duma, and must therefore be considered as a limited monarchy.

As for us, we are quite neutral on this subject. If counter-revolution should—which it will not—come out victorious in Russia, we think it will matter little to the Russian people whether they are slaughtered off by an absolute or a limited monarch.

* * *

THE latest counter-revolutionary organization of whose birth we are informed is the "Russian National Society", of New York. It has just begun issuing a *Weekly Bulletin*, of which the first issue (February 3) has reached us. The motto printed at the head of this issue is: "*Not to fight Bolshevism is to surrender to it. Bolshevism is: a machine of destruction, a machine of corruption, a machine of oppression, a machine for promoting world revolution. Bolshevism is not a Russian danger; it is a mortal danger to Russia; it is an attempt to kill Russia. Russia is its first victim. America is its last goal.*" The *Bulletin* recommends for reading the following (and only the following) books on Russia: General Basil Gurko, *Russia, 1914-1917*; Dr. E. J. Dillon, *The Inside Story of the Peace Conference*; Andrew Kalpashnikov, *A Prisoner of Trotsky*; Boris Brasol, *Socialism vs. Civilization*. Cultural items are not lacking in the

new *Bulletin*, and they are printed in a newsy, paragraphy style; to parallel the numerous items printed in SOVIET RUSSIA on educational matters within Russia, the *Bulletin* prints, under the curious head "From Russian Quarters" (or do they mean the Russian quarters in large foreign cities?), the following: "A Russian monarchical organization has been established in Munich. Its official organ is *The Ray of Light*, published monthly." "The Russian monarchists in Bavaria are opening a school for Russian children." Russian nationalists in Paris," etc., etc. And here is one (of many) paragraphs, showing that the whole venture is not innocent of anti-Semitic (or is it pro-Semitic?) influences:

"The Association Unity of Russia of New York published a pamphlet entitled: 'Who Are the Murderers of the Russian Tsar?' Therein the fact is revealed that three Russian Emperors—Alexander II, Alexander III, and Nicholas II, were murdered by the Jews."

* * *

THE following message has been received by the SOVIET RUSSIA office, denying the reports of mutinies and uprisings alleged in the press of capitalist countries to have taken place in Soviet Russia:

Moscow, February 26.—Foreign newspapers again carry mendacious stories about alleged mutinies and uprisings in Moscow, Kronstadt, and Petrograd. This is another malicious slander by the enemies of Russia in their attempts to confuse public opinion abroad. There have been neither uprisings nor mutinies in Kronstadt, Petrograd, or Moscow.

These stories appear to have been based upon certain events in Moscow which, far from showing any widespread unrest, rather prove the determination of the Russian workers to stand behind their revolutionary achievements despite all hardships. The workers in the government printing office, who had been receiving extra rations, protested against the cutting off of a special allowance of flour which they received in addition to the pound and a half ration of bread. This curtailment was made in pursuance of the Soviet Government's general policy of equalizing rations. The workers in the printing office tried to induce other factory groups to join their demonstration, but their efforts aroused general indignation amongst most of the other workers, who regarded them as a breach of revolutionary solidarity. When the situation was explained to the demonstrators the protest movement ceased instantly. Everything is now absolutely peaceful.

This insignificant incident has been magnified by malicious agents into fantastic accounts of widespread unrest. The Soviet Government has traced these stories to the Lettish Legation in Moscow, which seemingly is abusing hospitality and diplomatic privilege for a malicious campaign against Soviet Russia.

The stories in the foreign press about alleged mutinies in Petrograd and Kronstadt, claiming that the military forces surrounding Petrograd are not allowing anyone to enter the city, are without any foundation whatsoever. Russia is passing through a serious food crisis, due to fuel shortage, but now as before the Russian workers will prove to the world that their revolutionary solidarity and their determination to stand by their achievements knows no weakness.—*Russian Telegraph Agency*.

The Soviet Power and the Public Health

By A. SEMASHKO

[The Commissar for Public Health has appeared in our columns before. He tells below of the recent accomplishments of his branch of the administration in public health service and education.]

TO FORM an idea of the profound change brought about by the November Revolution, we must look into one of our "peaceful" activities: the protection of public health.

This activity felt the influence of the March Revolution less than any other. The March Revolution was as unfruitful for the medical organization and the practice of medicine as the biblical fig-tree. The November Revolution succeeded to what had existed in January: the same selfish bureaucracy, the same "hierarchy" of medicine (the best for the rich, the "leavings" for the poor) camouflaged by middle-class, democratic slogans, such as: the best medical aid free and accessible to all. But the most important point, the organization of medical affairs, was absolutely wrong. The landowners and capitalists were not at all concerned with the health of the masses of the people; all they did was mend the health of the worker just enough to drive him back again to the sweat-shop. The result of such organization appeared in the budget as follows: 95 per cent of the whole budget (a very small one, of course) was fixed for medicaments, and only five per cent for prophylactic (the most important) medicine.

Under the old regime it could not be otherwise. As long as labor was unprotected, the health of the workers was unprotected. Regulations for the protection of labor ran up against an insurmountable wall—the interests of capitalist profit.

The bourgeoisie permitted only the discussion of mothers' and childrens' health protection, but never indulged in any serious reform. Without wholesome living quarters, good health is an impossibility; private property has secured the apartment houses for merchants' wives with their lap-dogs, while underground dwellings are allotted to workers' wives with their children. Caste (i.e., class) medicine is inevitably bound up with the capitalist system.

The Soviet Government has done away with this deplorable state of affairs. It has surmounted the difficulties brought about by private property and profits. Medical activities are no longer hampered by social obstacles. Labor protection has taken children out of the factories; it has given sick-leave to women before and after childbirth; it has accomplished many other reforms, but, most important of all, it has entrusted the workers to the trade unions by turning over entirely to the latter all questions of labor protection.

The socialization of buildings and apartments made it possible to rescue pale-faced, weak, and sickly children from their basement dwellings. Nowhere else in the world has so much been done for the children as in struggling Soviet Russia during the last three years. Hundreds of thousands are

now living in colonies housed in the former luxurious homes of the parasites of the working masses and their lap-dogs. This destitute republic, for the first time in the history of the world has introduced gratuitous feeding for children to the age of sixteen; for the first time also, it has been declared that there are no criminals under eighteen years of age, that they are only violators of law, mentally or physically sick, to be cured either under the Commissariat of Education or under that for Public Health; but not to be taken before the common law courts. For the first time, also, physical care and entertainment are being thought of. Children's establishments, such as orphan asylums, homes, etc., are increasing from day to day; for the protection of mothers and children, we have 402 establishments (of which 123 are asylums for babies and minors, 151 creches, 100 consultation depots and milk kitchens, 80 homes for mother and child, and lying-in hospitals).

In the sphere of medical science, medical aid is accessible and absolutely gratis to all. The number of sanitariums for the civilian population has, in spite of all kinds of difficulties, increased about 80 per cent over that of pre-war times. Over 100,000 beds were organized for use in epidemics last winter.

A long stride forward has been taken in regard to quality of medical service. In the sanitariums for tuberculosis (in the Russian Federal Soviet Republic alone, the other Soviet republics not included) more than 20,000 new beds and 100 new ambulatories for venereal diseases were established. Six are still to be opened (in the territory of Soviet Russia alone). New establishments of so high a grade as physical-mechanical therapeutic institutions were created (five are to be opened). Health resorts, once resorts of recreation and debauchery for the bourgeoisie, have been transformed into real health resorts for workers; according to incomplete statistical data, our health resorts (not including the Crimea) were frequented last summer by 65,000 patients, 75 per cent of whom were workers, peasants, and Red Army soldiers. All healing powers and remedies have been taken from private individuals and placed at the service of the whole nation. The private sanitariums have ceased to be a means of enrichment to their proprietors, and are now nationalized; the sale of drugs by speculators has been stopped, and all drugs are now in the hands of the government.

Special attention has been given to the Red Army. In the field of army-sanitary administration, the Soviet Government inherited only atrocities and brutalities from the Tsaristic regime. Here literally everything had to be created from nothing. We now have 397,496 beds in military hospitals and

242 completely equipped ambulances. We have improved institutions, equipping trains with bath-rooms, laundries, and provisioning trains so that they would now be the pride of any European military medical organization. And most important of all, we have a vast rigidly disciplined organ for the valuation of requirements of the Red Army.

All this had to be accomplished under very difficult conditions, known only to those engaged in this task.

Russia has never ceased to be a victim of epidemics. Suffering from cold and famine, ruined by the world war, Russia was overwhelmed by epidemics, one more virulent than another, with spotted typhus, intermittent fever, and typhoid; Spanish influenza and cholera relieved and followed each other. It is a characteristic fact that the former White Guard border provinces (Siberia and Ukraine) infected our Red Army (not inversely) and through them our civilian population. Even their larger food supplies and the aid of the Almighty Entente, could not save them from the results of their sanitary and social laws. Where work, sweating, and ignorance exist, there will always be epidemics: the best remedy is Socialism.

What gave us the power not only to fight epidemics, but to overcome other difficulties as well? How did the Soviet power overcome them? Most of all by the mobilization of the whole population:

"The health of the working class is properly the worker's affair." We not only preached but practiced this. Anti-epidemic commissions, made up of workers, peasants, and soldiers of the Red Army were organized "to fight for cleanliness" in every city, in each body of troops, and in the villages. Every important sanitary decision was first discussed with the representatives of the trade unions, the women's division, and the young people's organization, and then it was executed. The whole task was supported by an educational activity unknown before not only in Russia, but in the whole world. The Commissariat for Public Health published during two years (the National publications, the committee in memory of W. M. Bonch-Bruyevich and the local publication not included) over 8 million announcements, 395,000 placards, and 434,000 copies of popular pamphlets. Only the cooperation of the whole working population made it possible to overcome difficulties which sometimes seemed insurmountable.

Indeed, there is still much to be finished, much more to be begun, there are still defects and imperfections. But in spite of these we survived the most critical period and have come off victorious. The most difficult achievements lie behind us. The future is guaranteed by the amelioration of our position in general, the social basis on which we stand, and the experience which we have acquired.

First Hand Reports from Soviet Russia

We take the following two articles, containing the reports of eye-witnesses on Russian conditions, from the February 22 issue of the *New Yorker Volkszeitung*, which apparently has obtained them from some other German newspaper. The first is an account of an interview with a young German of very limited education, who had just returned to Germany. The second is a report of an Italian bourgeois observer, Guglielmo Pannunzio, who also recently visited Russia. Some of our readers will recall that in one of Dr. Goldschmidt's articles on Russia, printed by us, a rather vivid picture was painted of the repatriation of German prisoners of war who had been in Russia for a long time, and who were overjoyed, some of them, at the prospect of returning home. The young German's remarks, as quoted below, will give somewhat of an idea of the lot that awaited these returning citizens in Germany.

A Young German in Russia

"A few days ago I had occasion to speak to a twenty-two year old man on conditions in Russia. He had arrived from Moscow and said he was not a Bolshevik, but a citizen of the German empire. We met as we were walking towards the Rotebühl Barracks. He asked for the location of the "Office for Germans Abroad." As I have been intending for some time to emigrate to Russia myself, I was very eager to learn more about the country. Our

conversation soon became quite fluent and he gave me the following information: His name was Albert Berner, and his father was a native of Stuttgart who had gone to Petrograd twenty-four years ago as a young journeyman. There he (the father) had married a Swedish woman and opened a bakery, in which he had done good business. The young man himself was born in Petrograd and had learned there to speak, read and write not only Russian, but also German.

"When the war opened my parents were ordered out of the country and I was interned and taken to Siberia, for I had the right, being a native Russian, to remain within the country. In Siberia I fared moderately well. When the revolution broke out I immediately went to Petrograd in order to get news of my parents. I was told by the German Council in Moscow that my parents had gone to Stuttgart, for that was where my father came from. In the spring of 1920 an edict was issued permitting all those interned to leave the country, and go anywhere they wished. I decided to go to Germany and look for my parents. I was warned by the German Council against traveling to Germany, and informed that I should not find any work there and that I should have to starve, since conditions of life were very bad there for workers; and in addition, I should have to be prepared for bad treatment. I paid no attention to these warnings, as I

was very eager to see my parents and believed that Germany was a Republic, and that work could be had there. I arrived in Svinemünde with a consignment of prisoners, and after passing through quarantine, immediately started looking for my parents. In Svinemünde I was referred to Berlin, and there informed that I must learn in Cologne where my parents were. In Cologne I was referred to Frankfurt, and in Frankfurt to Stuttgart. Here I am now in Stuttgart, without having found my parents, but having had the "good fortune" of learning that the German Republic is a capitalist state. For this reason, and now fully understanding that the German Council in Moscow had told me the truth I immediately went over to the "Office for Germans Abroad" with the request to permit me to get to Russia, no matter how bad the stories are that are told about it, as soon as possible. This is not as simple a matter as I had thought. The first thing I got in answer to my request was the same information on Russia which had been given to me by the German Council in Moscow on Germany. It was therefore up to me to decide which of the two was right, the German Council in Moscow or the man in the 'Office for Germans Abroad.' When I told them that it was the German Council that was right they would not believe me and said I would have to prove it. And so I said about the following:

'Look at me, look at my clothing, it does not look very bad yet. When I get to Moscow they will give me a card and on that card I can get clothing, food, dwelling, and whatever else the Russian Economic Soviet is able to give its citizens. When this Soviet card says that I must work somewhere and I refuse, the same thing will happen to me that is now happening to me in Germany. I must starve. For in Russia there is only one law: he who does not work shall not eat. But if for any reason I cannot work, I receive full support in Russia. But in the German Republic that is not the case. Here in Germany people who do not work, eat the best of all, for they can get others to work for them, as was the case in Russia also before the revolution.'

'The answer these gentlemen then made was not pleasant. At any rate I shall make every attempt to get back to Russia as soon as possible, I finally said.'

Money and Prices in Russia

"The young man offered me a few thousand rubles in paper money. I had to decline them, as I had no use for them, I asked him why money was necessary at all, if you could get everything you needed on your Soviet card? He explained that with this money you could purchase luxuries and other little comforts in Moscow, things not yet being manufactured by the Government as it still is obliged to furnish foodstuffs, clothing, dwellings, as well as means of transportation. This matter of paper money, he said, was a rather funny thing, for now all paper money of the Moscow region had been called in by the government and no more is issued, which means that those who are not yet

working and who wish to live only at the expense of other people are now about to lose their last means of exploitation. There is then left for them only one choice, for they must work or leave the country and go to some country where free trade still exists. When he now gets back to Moscow he said he will not have any money and will have to earn a little first, if he wishes to supply himself with little luxuries and extra comforts. This is not difficult for a workingman. All he needs to do is to hire himself out to a peasant for a few hours in his free time, to repair something or do a little work for some former capitalists, which quickly yields ready money. In Russia work in the free time of the workers is paid very highly. He compared the prices of things under free trade and under the purchase by Soviet card. A pound of bread purchased in the open market costs thirty rubles, while it costs only three rubles with the Soviet card, for capitalists and idlers this is of course a difficult condition for money runs lightly through their fingers. They are then up against the choice of doing useful work or making themselves scarce. We spoke a little more about labor questions and conditions of life and his remarks coincided pretty well with those that have often been printed in the Communist press. I asked him also whether he believed that the Soviet system could maintain itself, whether he feared it might fall. His opinion was that all the world together could not succeed in overthrowing the Soviet system.

"After this conversation is compared with the reports of the "Anti-Bolshevist League", and if we recall that this man is taking the greatest pains to get back to Russia, much will become clear to us. Nor is it surprising that in bourgeois and "Socialist" papers so little is read of the reports of prisoners who have returned from Russia. These people, belonging to the working class and who were prisoners of war in Russia until after it became Soviet Russia, will inform you, if you converse with them, that they much regret not having remained in Russia."

A Conservative Italian on Soviet Russia

We have had many opportunities to note that honest men even of the bourgeois camp, when they visit Soviet Russia, receive the most profound impression of the tremendous work of reconstruction that is there being accomplished. One must really be a German Social Democratic official of the Dittmann type to be able to walk through Soviet Russia with one's eyes open and still be blind. The most widely known case of a man whose eyes were opened by a visit to Soviet Russia is probably that of the English Colonel Malone. Malone, now the only Communist of the English Lower House, was elected to Parliament in December, 1918, not as a Communist, but as a Liberal. He was in Soviet Russia in 1919 and there received the impressions which impelled him, after his return to England, to enter the Communist camp. Malone is at present serving a six months' sentence in prison which was imposed upon him by class justice.

Another witness for Soviet Russia, from the bourgeois camp, is Guglielmo Pannunzio, contributor to the conservative Roman newspaper *L'Epoca*, who spent several months in Soviet Russia. After his return from Russia he delivered a number of public lectures on his experiences, concerning which *L'Ordine Nuovo*, a Communist paper appearing in Turin, publishes a full report. Pannunzio says, among other things:

"Life in Soviet Russia is by no means in the sign of murder, of terror, and of violence, which is the impression spread by the bourgeois papers. On the contrary, since my return to Italy I must say that this characterization would be far more appropriate to Italian conditions. In Russia on the other hand, life is entirely normal in spite of all revolution. There is no such thing as terror, and I never felt calmer and more secure in any foreign country than I did in Russia. No one placed any limitations on my personal or journalistic freedom. I could at any time go anywhere I liked. Beginning with January 1 of this year, the workers no longer need to pay any money for commodities of any kind, provided they are obtained from the Commissariat of Provisions, and dwellings, gas for illumination, and telephones, are also furnished them without charge in exchange for their labor performance. The hunt for money, which animates men in the capitalistic state, will thus be entirely eliminated, and this fact will transform the entire mental attitude of the people. It is not true that people who are not entirely accustomed to labor are forced to carry out hard tasks in Russia, but every man and woman may seek activity in that calling or in that art which he or she has voluntarily chosen. The bourgeoisie is no longer capable of healing the wounds from which the whole world suffers. In the various countries the revolution, depending on the special conditions of each country, will be accomplished in different ways, but the revolution itself must come, and when it does come it can only be in the sense of Communism!"

We have nothing to add to the words of this Italian conservative.

DEPORTATION WARRANT AGAINST MARTENS CANCELLED

The Department of Labor has cancelled the warrants of arrest and deportation against Mr. L. C. Martens, former Representative of the Russian Soviet Government in the United States, and his secretary, Mr. Gregory Weinstein.

On January 3rd last Mr. Martens, attended by Mr. Charles Recht, his counsel, and by the secretary of his Bureau, went to Washington to deliver himself formally to the Department of Labor for deportation, pursuant to the order of the Secretary of Labor dated December 15, 1920. In so doing Mr. Martens was acting under instructions from the Commissariat of Foreign Affairs, which ordered him to accept the decision of the Secretary of Labor and not to appeal to the courts against his decision.

In a conference which ensued in the office of the

Secretary of Labor, January 3, 1921, the Secretary stated that upon the receipt of information of the arrival of Mr. Martens in Russia the warrant of deportation would be cancelled. In view of the extraordinary significance of this statement, counsel for Mr. Martens asked the Secretary of Labor whether it was his desire to make public announcement of this intention prior to the actual cancellation of the warrant. The Secretary replied that he did not desire any announcement to be made. It was agreed, therefore, that no announcement should be made until the warrant had actually been cancelled. Counsel for Mr. Martens was requested by the Secretary of Labor to advise the Department of Labor immediately upon the receipt of information that Mr. Martens had arrived in Moscow. On February 21st Mr. Recht received a cable from Mr. Martens, announcing his arrival in Moscow, and immediately informed the Department of Labor. On February 24th Mr. Recht received the following telegram from the Department of Labor dated Washington, February 23rd:

"L. C. A. K. Martens and Gregory Weinstein having departed from the United States for Russia, warrants of arrest and deportation against them have been cancelled."

This action by the Department of Labor is the conclusion of the long series of hearings and investigations, of which Mr. Martens and his activities were the subject during his stay in the United States. It finally acquits Mr. Martens of all the accusations brought against him, and leaves his record clear of any charges. Mr. Martens was first investigated by the so-called Lusk Committee of New York State and also by the office of the District Attorney of New York State. Subsequently he appeared before an investigating committee of the Committee on Foreign Relations of the United States Senate. Immediately upon the conclusion of that investigation last March, he was served with a deportation warrant by the Department of Labor. Hearings in this case proceeded during the summer and autumn, and final oral argument by counsel was held December 7th. On December 15th Secretary Wilson ordered the deportation of Mr. Martens on the ground that he was the accredited representative of the Soviet Government. The decision stated that there was "no evidence to show that Martens has personally made any direct statement of a belief in the use of force or violence to overthrow the United States, nor is there any evidence that he had ever distributed or caused to be distributed any literature containing propaganda of that character." The decision also stated that Mr. Martens was not a member of any political party or organization. The cancellation of the warrant of deportation is the last step in these proceedings, which were based not upon any activities of Mr. Martens, but upon the policy of the United States Government towards the Government of Russia. In the opinion of Counsel, Mr. Martens is now free to return to the United States, if he cares to do so, and his entry could be barred only by the institution of entirely new proceedings.

The Soviet Revolution in Armenia

[From a recent issue of "The Russian Press Review" we take the following two documents showing the friendly relations existing between Soviet Russia and Soviet Armenia. The situation in the latter country is at present not very clear, but we shall furnish concrete data concerning it as soon as we can.]

Long Live Soviet Armenia

Exhausted, long suffering Armenia, handed over by the grace of the Entente and the party of the *Dashnaks* to famine, ruin, desolation, and deceived by all its "friends", has now found release by declaring itself a Soviet Republic.

Neither the lying assurances of England, the "traditional defender" of Armenian interests, the notorious fourteen points of Wilson, nor the pompous promises of the League of Nations with its "mandates" for the administration of Armenia, were of any avail (and never could be) to save Armenia from massacre and physical extermination. Only the idea of Soviet Government brought peace and the possibility of regeneration to Armenia.

Here are a few facts which have brought about the sovietization of Armenia: the ruinous policy of the *Dashnaks*, the agents of the Entente, was reducing the country to anarchy and misery. The war with Turkey brought the difficult position of Armenia to the limits of extremity. Exhausted by famine and lawlessness, the northern provinces of Armenia rose at the end of November and set up a Revolutionary Military Committee of Armenia headed by Comrade Kassian. On November 30, a telegram was sent by the chairman of the Revolutionary Committee of Armenia to Comrade Lenin with the news of the birth of Soviet Armenia, and of the occupation of Delijan by the Revolutionary Committee. On December 1, Soviet Azerbaijan voluntarily renounced its rights to the disputed provinces and handed over Zangezour, Nakhichevan, and Karabach to Soviet Armenia. On December 1, the Revolutionary Committee received congratulations from the Turkish Command. On December 2, a communication was received from Comrade Orjonikidze with the news that the *Dashnak* Government was overthrown at Erivan and that the armies of Armenia had placed themselves at the disposal of the Revolutionary Committee. Erivan, the capital of Armenia, is now in the hands of the Soviet Government of Armenia. The centuries-old hatred between Armenia and the Moslem people surrounding it has found its instant solution by the establishment of a brotherly solidarity between the working masses of Armenia, Turkey, and Azerbaijan.

Let all whom it may concern, know that the so-called Armenian "problem", over which the old wolves of imperialist diplomacy have been breaking their heads in vain, could only be solved, as it has been now, by the Soviet Government.

Long live Soviet Armenia!

STALIN.

Greetings from the Armenian Revolutionary Committee to Comrade Lenin

KARAVAN SARAY, November 30, 1920.

May it be known to the leader of the World Revolution that the peasants of the Delijan and

Karavan Saray regions, outraged by the criminal policy of the *Dashnak* Government and the growing anarchy in the country, have raised the standard of revolt. The Communist Party of Armenia has taken upon itself the leadership of this spontaneous movement, and established the Revolutionary Committee of Armenia, proclaiming Armenia a Socialist Soviet Republic. The first blow has fallen—the town of Delijan is in our hands. The enthusiastic rebels are impatiently moving forward to the final overthrow of the hated enemy, the agents of the Entente. And in obedience to their will we, having formed the Revolutionary Committee, are marching forward in the hope that the liberator of the oppressed nationalities of the East—the heroic Red Army of Great Socialist Russia, will render us material help in our difficult struggle. On behalf of all the workers and peasants of Armenia, we ask the Soviet Government to give us assistance. Long live the Russian Socialist Federative Republic!

Long live its victorious Red Army!

Chairman of the Revolutionary Committee of Armenia,

KASSIAN.

Members of the Armenian Revolutionary Committee,

AVIS,

BEKZADIAN,

DEVLATIAN,

MURAVIAN,

TER-GABRELIAN.

Communication by Comrade Orjonikidze

Communicate to Comrades Lenin and Stalin the following: News has just been received from Erivan to the effect that a Soviet Government has been proclaimed there, that the old government has been removed, and that temporarily, until the arrival of the Revolutionary Committee, power has been transferred to the military command, headed by Dro; Silin has been appointed Military Commissar for Armenia and the armies have been given the order to place themselves at the disposal of the Revolutionary Committee. The Revolutionary Committee is at present at Delijan, and leaves tomorrow morning for Erivan. The Revolutionary Committee has received a telegram of congratulation from Karabekir, the Commander of the Turkish front, and from the representative of Turkey, Kiazim Bey. The Revolutionary Committee is on the way to Erivan. A comrade who arrived today from Alexandropol, brings news that the attitude of the Kemalists troops is very friendly to us, they carry red emblems and consider themselves Red Army men. The transfer of Nakhichevan, Zangezour, and Karabach to Soviet Armenia was declared yesterday by Azerbaijan.

ORJONIKIDZE.

Baku, December 2, 1920.

Comrade Lenin's Reply

To Comrade Kassian, the Chairman of the Revolutionary Committee of Armenia, Erivan.

I greet in your person Soviet Armenia now liberated from the oppression of imperialism. I am confident that you will do all in your power to establish brotherly solidarity between the workers of Armenia, Turkey, and Azerbaijan.

Chairman of the Council of Commissars,
LENIN.

Moscow, December 2, 1920.

The Russo-Chinese Negotiations

In "Kuo-Bao", a newspaper appearing in China, the following editorial recently appeared:

A few days ago the French Ambassador in Peking sent a note to the Minister of Foreign Affairs in which he protested against the negotiations between Yurin* and the Chinese Government concerning the renewal of business relations between Russia and China. Judging from the contents of this note which appeared in our paper, as well as in other papers, we can say without exaggeration that this note tries to found its protest on the two following reasons:

1. Chinese foreign trade is subject to a protective tariff, while French and English trade is free.
2. Everything that is connected with Soviet Russia is dangerous and harmful.

Inasmuch as the second reason for the French protest is beneath criticism, the same as any other prejudice, we will confine ourselves only to an answer to the first point.

First, does the French Ambassador or even the French Government have any right to interfere in our negotiations with Russia?

As long as any country "A" is negotiating with another country "B" about questions that do not interfere at all with the interests of a third country "C"—these negotiations are in no contradiction whatever to international law. Or else the diplomatic manners of that country "C" are so impudent that she can take a menacing attitude in a matter which does not concern her at all. We would be very thankful to the French Ambassador if he would prove to us that he does not base his protest on this ground, but on some other.

Second, it is painful for us to admit that our policy concerning Russia has to follow in the footsteps of the policy of the big powers. At a time when England has already elaborated the draft of a commercial agreement with Soviet Russia, at a time when the French Premier has already declared in the French Parliament that the French Government has lifted for its citizens the trade embargo of Russia—we have not heard that the French Government has protested against the statement of its premier. What then is the matter with the French Ambassador in Peking who has adopted a self-confident and courageous attitude? If his Government ordered him to file this protest, then how can the corresponding policy of this Government towards

Soviet Russia be brought into unison with the policy of its Ambassador? But if the French Government did not give its Ambassador in Peking any instructions in this respect, then it becomes clear that the French Ambassador by his protest intended to insult China, being well aware of her weakness. It is quite evident that we would like to know what is going on behind the scenes in regard to this note.

And finally, the argument mentioned in the note, that Chinese foreign trade is "protective", etc, is stupid and illogical. We are really sorry that owing to the different agreements which were imposed upon us by the powers, we were unable to develop our own policy. We were offering our thanks to the French Ambassador when he called our policy "protective". But if our foreign trade policy is really "protective", who could deprive us of the right to change it at any time. France has not the right to dictate to us.

Unfortunately, we must say that the French Ambassador has recently sufficiently incensed our people against himself, as well as the people of other countries, in connection with his protest against the suspension of recognition of Tsarist diplomats and rights in China, and in connection with the incident concerning the hoisting of the French flag over the Russo-Asiatic Bank.

CONDITIONS FOR CONCESSIONS

As Provided by the Council of People's Commissars

1. The concessionaire is to receive compensation in the form of a portion of his production, the quantity is to be fixed by the contract, and this he may export to foreign countries.

2. If the concessionaire applies technical methods of an exceptionally perfected character, on a large scale, he shall receive further advantages (such as granting of machines, special contracts for large deliveries).

3. In accordance with the character and the conditions of the concession, longer periods of concessions shall be granted the concessionaire in order to guarantee a full indemnification for risks and for technical apparatus invested in the concession.

4. The Government of the Russian Socialist Federated Soviet Republic guarantees that the property of the concessionaire which is invested in the enterprise shall neither be nationalized, confiscated, nor requisitioned.

5. The concessionaire shall have the right to employ workers and clerical helpers for his enterprise on the territory of the Russian Socialist Federated Soviet Republic, for pay, observing the laws of labor as well as other special contracts guaranteeing that the workers shall have certain conditions of work that will safeguard their lives and their health.

6. The Government of the Russian Socialist Federated Soviet Republic guarantees the concessionaire that the conditions of the concession contract shall not be violated by any decrees or provisions of the Soviet Government in a one-sided manner.

THE SLAUGHTER OF THE JEWS IN THE UKRAINE. By *Elias Heifetz*. New York: Thomas Seltzer.

RUSSIA IN THE SHADOWS. By *H. G. Wells*. New York: George H. Doran Company.

RED EUROPE. By *Frank Anstey, M.P.* Melbourne: Fraser and Jenkinson.

During the year 1919 Ukraine was devastated by a terrible wave of pogroms. One hundred and twenty thousand men, women, and children were massacred; and the whole Jewish population of southern Russia was brought literally to the verge of destruction. Scarcely any city or village escaped at least one outburst of looting and murder; and some communities were practically wiped out of existence.

Dr. Heifetz has collected a large amount of material about this pogrom epidemic, including the depositions of many eyewitnesses. But he is not content merely to repeat, with slight variations, the familiar revolting story of pillage, torture, rape, and murder. The appendix of his book contains an abundance of details about individual massacres. But, in the body of his work, he undertakes an objective and scientific study of the factors which entered into this appalling demonstration of mass savagery.

Ukrainian social and political conditions in 1919 were peculiarly favorable to an outburst of anti-Jewish excesses on a large scale. The younger peasants had come home from the war armed to the teeth with rifles, bombs, and machine-guns. Aside from religious and race bigotry, which was often artificially stimulated by the village "intellectuals", teachers, priests, etc., they were eager for an excuse to loot the cities and towns, to seize the clothing and manufactured articles of which they were in need. So they organized themselves in bandit gangs, under the leadership of guerrilla chieftains like Makhno and Grigoriev, and set out to rob and murder the Jews. The Soviet Government, which alone possessed the moral courage and humanity to repress rigorously any manifestations of anti-Semitism on the part of its troops, was compelled to withdraw a large part of its forces from the Ukraine in order to meet the more pressing menace of Kolchak. As a result the unfortunate Jews were handed over to the tender mercies of Petlura and his Ukrainian nationalists, of Denikin and his Volunteer Army led by Black Hundred officers, and of the numerous outlaw bands.

There has been a great effort, on the part of representatives of the various counter-revolutionary elements in Western Europe, to shift the responsibility for pogroms to their opponents. So that venerable revolutionary hero, Nicholas Chaikovsky, who gave up his post as advance agent and hangman of British imperialism in North Russia for the even more congenial task of acting as apologist for the Tsarist leaders, Denikin and Kolchak, in Paris, solemnly assured the correspondent of a Warsaw Jewish paper that Denikin's Cossacks "only" robbed, but did not murder, and that Denikin was eager to repress every demonstration of anti-Semitism. This lying statement was made at a time when Denikin was "purging" his army of all Jewish officers, when Shulgín, a notorious Black Hundred leader and monarchist, was given free scope for his anti-Semitic agitation in the official newspaper of the Denikin regime, *Velikaya Rossia*, when every town taken by the Volunteer Army was made the scene of a systematic, organized, and prolonged pogrom. The butchery at Fastov, so vividly described in a recent issue of *The Nation*, is only typical of the innumerable atrocities committed by the Volunteer Army in the Ukraine, with the open encouragement and approval of many high officials in the Denikin government.

Equally hypocritical and untruthful is the plea of Petlura's apologists that all the pogroms were committed by Denikin's troops or by lawless gangs. It is true that in August, 1919, after Denikin had monopolized the political advantages of anti-Semitism, Petlura put forth an order denouncing pogroms. But this order, issued for the purpose of influencing public opinion in Western Europe, is

altogether discredited by the numerous massacres perpetrated by Petlura's soldiery,—massacres which Dr. Heifetz substantiates with ample documentary evidence. Petlura was even present at one pogrom, in Zhitomir, late in March. And a certain Colonel Petrov, a notorious organizer of pogroms, was given the post of Minister of War in the Petlura government.

Very different was the attitude of the Ukrainian Soviet Government, which consistently, intelligently, and successfully combated anti-Semitism in the districts under its control. A propaganda of education was carried on; anti-Jewish excesses were summarily punished; Jewish recruits were scattered among the various regiments of the Red Army, in order to destroy, by personal contact, the ignorant prejudice of the more backward peasant soldiers. Dr. Heifetz describes the very different behavior of the same troops, when they were fighting on the side of the Soviet Government, and when they deserted to the camp of the counter-revolutionists:

"The great majority of the freebooting troops finally fell away from the Soviet power and went over to the side of their enemies amid the enactment of horrible blood baths (Grigoriev and his people). It must be openly and honestly admitted that the effect of the Soviet Government upon the troops must have been extraordinarily great, for as long as they were actually subject to the Soviet Government at Kiev, they were scarcely guilty of any excesses. We see here at any rate that two opposite political systems (the Kiev Soviet Government fighting against pogroms and the opposite party making use of them) working on the same basis, namely the anti-Jewish feeling throughout the Ukraine and on the same human material, led to entirely opposite results."

Three main conclusions may be drawn from Dr. Heifetz's thoroughgoing analysis of the situation in Ukraine during 1919.

First: the utter moral bankruptcy of the various counter-revolutionary elements. The "Socialist" Petlura, and the various independent Ukrainian leaders, who professed to be ardent revolutionaries, were just as guilty in this horrible slaughter of the defenseless Jewish population as the Tsarist General Denikin, who was clearly inspired by the ideals of the Black Hundreds.

Second: Anti-Semitism is not an ineradicable expression of racial and religious antipathy. It is rather the product of a faulty economic system combined with malicious and deceitful propaganda designed to convince the masses that the Jews, as a race, are responsible for their exploitation. It can be altogether eliminated under the Soviet system of government, which at once removes the causes of economic exploitation and emphasizes, in its educational work, the brotherhood and solidarity of the workers of all countries and races.

Third: the Soviet Government alone saved the Jews of southern Russia from utter destruction.

Having just disposed of the history of the world in two volumes, Mr. Wells doubtless felt that fifteen days was a sufficient amount of time to devote to such an insignificant fragment of the comic story as the Russian Revolution. However, his book, while interesting and entertaining, proves quite conclusively that it is quite impossible, even for the most well-meaning and gifted observer, to gain an adequate conception of a mighty social upheaval in a foreign country by means of a hurried trip of inspection through two large cities, and a few interviews with leading personalities. This is especially true when the observer is obviously, and almost boastfully ignorant of the economic philosophy upon which the revolution is based. Baiting Marx's beard and dogmatically insisting that Marxism has no creative or constructive ideas, Wells is somewhat inconsistently brought to the conclusion that the Bolsheviki, the one group of consistent Marxians in Russia, are the only possible agency of Russia's reconstruction. His lack of firm grasp of the situation is also

revealed by the fact that, after declaring that the Soviet Government is "as securely established as any government in Europe," he subsequently alludes to "the by no means firmly established government in Moscow." His conclusions, however, are generally sound. He sees the Russian economic collapse in proper perspective, as a result of the sins of Tsarism, Capitalism and the War. He points out that the Bolsheviki are not wreckers, but builders, who are heroically undertaking a very difficult work of salvage and reconstruction in the face of foreign war, blockade, and subsidized counter-revolution. He recommends as the only practicable solution of the Russian problem peace and trade,—the very things which Soviet Russia has long and vainly attempted to secure. The book reprints Mr. Well's article in *The New York Times*, with an additional chapter describing a meeting of the Petrograd Soviet, and a number of Russian illustrations.

Mr. Anstey is an Australian M.P., of apparently radical political tendencies. Along with a certain amount of irrelevant material his work presents a review of the chief incidents in Russian history from the March Revolution to the defeat of Denikin and Kolchak in the fall of 1919. The author has evidently made a careful study of the European and American press; and many of his quotations possess genuine historical interest and value. The book contains much evidence about the various plots launched by Allied agents against Soviet Russia in 1918.

For Trade with Soviet Russia

San Francisco, Cal., February 8, 1921.

The following resolution was adopted by the American Labor Alliance for Trade with Russia, and the secretary of that body was asked to communicate with all affiliated unions, recommending them at once to request their respective international officers to attend the A. F. of L. Conference to be held February 23, at Washington, and insist on opening trade relations with Russia.

WHEREAS, The economic blockade imposed against Soviet Russia by the late administration is hindering the Russian people from organization of their industrial life, and from remedying the intolerable condition created by more than six years of continued war; and has even led to prohibiting the various relief agencies from sending medical supplies for the sick and food for starving women and children. And further,—this inhuman policy has prevented the consummation of peace between the nations, a condition which all true Americans sincerely desire; and is also preventing reciprocal trade relations between the people of the United States and the people of Russia, thereby disturbing the economic welfare of the workers of both countries, and

WHEREAS, The rapidly growing unemployment in our country would be materially relieved, and lagging industry revived if Americans were permitted to supply Russia with clothing, tools, machinery, locomotives and numerous other commodities which Russia is ready to purchase, and

WHEREAS, Public opinion in the United States against the infamous blockade had compelled the Department of State to announce on July 7, 1920, a nominal lifting of the blockade, without however permitting the execution of commercial transactions between this country and Soviet Russia, therefore be it

RESOLVED, That we demand that the Government of the United States take immediate steps to remove the obstacles to trade and commerce with Soviet Russia, to establish communication by post, cable and wireless, to restore the right to travel between the United States and Russia, and to permit the transfer of funds from Russia to be used in the purchase of American goods, to allow authorized representatives of the Soviet Russian Government to act in its behalf regarding all commercial transactions, and otherwise establish complete and unrestricted trade relations with Soviet Russia, and be it further

RESOLVED, That all affiliated organizations forward

copies of this, or similar, resolution to the State Department and to Senators and Representatives, and that copies be immediately sent by all affiliated organizations to the Secretary of the A. F. of L. and to the National Executive Officers of all unions, urging them to secure its endorsement at the coming conference of National and Executive Officials, in Washington, on February 23, 1921.

Russia's Foreign Trade

Report For the Delegates to the Eighth Congress

On December 26 Comrade Lezhava, Assistant People's Commissary of Foreign Trade made a report to the delegates to the Eighth Soviet Congress, on the subject of "Our Foreign Trade."

Comrade Lezhava in his speech that lasted two and a half hours emphasized the successes that we obtained on our new and until now unnoticed foreign trade front; he gave an exhaustive description about the imports and exports in the pre-war and present period and drafted the perspectives of the future.

The imperialist war and the civil war that was imposed upon us shortly afterwards have definitely disarranged our foreign trade. It was necessary to conduct an energetic struggle in order to break somehow the ring of the blockade that was strangling us on all sides.

For this purpose it was necessary to use all means. And the first of these means to which we had to resort at the end of 1919 was contraband trade. It was necessary for us, at any price, to get medicaments and some chemical products from abroad, as our supplies had definitely given out.

Soon afterwards we made peace with Esthonia which enabled us to start a more regular exchange of commodities.

Our need of foreign commodities at that time far from diminishing, had rather increased. At that time we did not have as yet any definite plan. It was necessary to elaborate a single importing plan that was so important in our nationalized economy. First of all there were entered in this importing plan those articles that were necessary for the reestablishment of transport and main industries. Now we have already an elaborated importing plan which has been built upon our internal production plan.

One of the shortcomings of our foreign trade is the fact that for the time being we are compelled to buy goods against gold, due to the restrictions on the immediate sale of our gold in those countries in which we are placing our orders.

Another way of paying for imported goods would be the delivery of our raw materials. We have to start immediately to obtain these raw materials—was the concluding argument of Comrade Lezhava, in order to facilitate the importation from abroad which is so necessary for the economic rebirth of our country.

FINNS DEMAND TRADE WITH RUSSIA

HELSINGFORS, January 27.—In Viborg (Finland) a congress of farmers has just taken place. The farmers demand complete free trade with Soviet Russia, without any state control.

Wireless and Other News

RUSSIAN ACADEMY OF SCIENCES

Krasnaya Gazeta reports: In the solemn annual session of the Russian Academy of Sciences, the Academician, S. Oldenburg, reported that the manuscript collection of the Academy had received important new accessions. Among other precious items the famous Pskov manuscript was included, as well as the other correspondence between Tsar Peter the Great and his son Alexei, and letters from the poet Lomonossov. The Asiatic manuscripts also had been considerably increased, for more than 4,000 such manuscripts have recently passed into the hands of the Academy. Many learned works, particularly of historical and physico-mathematical nature have been prepared for printing. The scholars are assigned to foreign countries for purposes of study. Lunacharsky had formed a special commission whose job is to afford every possible facility to scholars.

THE BOOK INDUSTRY

RICA, January, 1921.—In spite of the extremely difficult economic situation of Soviet Russia, due to the long war, and the great lack of linotype machines, and accessories, the Soviet Government has nevertheless succeeded in attaining great results in the printing of books. There are now five great publishing establishments: (1) The National Publishing House (Editions de l'Etat), (2) The Third International Publishing House, (3) The Scientific-Technical Publishing House, (4) Publications of the People's Commissar for Transportation, (5) Publications of the Revolutionary War Councils of the Soviet Republic.

INSTRUMENTS OF PRECISION

January 26.—The Supreme Council of National Economy has established a new industry in Soviet Russia, the manufacture of optical, surgical, and medical instruments. Ten factories in Petrograd are engaged in producing these articles.

STEAM FLOUR MILLS

January 26. *Pravda* describes the immense accomplishments of the Petrograd steam mills. Production in the steam mills has attained the maximum of the pre-war period, 44,000 poods* per day. Steam mill Number 2 announces that it is running 50 per cent beyond its normal production. This factory in addition to its own repair shop also has a theater, a moving picture house, a club, an artists home, in which pictures from the history of the milling industry adorn the walls.

RECONSTRUCTION OF TRANSPORTATION

Moscow, January 26.—The Supreme Council of National Economy has sent a decree signed by Lenin to the railroad workers of the eastern lines calling upon them to exert all their forces in order to carry consignments of food stuffs quickly to the consuming centers. The average distance covered by these trains for each twenty-four hour period is not less than 200 versts (132 miles).

* 1 pood=36 lbs.

TRAINING TEACHERS

Pravda reports: On December 1 there were in Soviet Russia 57 higher pedagogical institutions, 171 with a three year course and 89 with a one year course. The number of persons attending these schools is about 30,000. In January, 1920, about 5,000 persons went into teaching; this year it is expected the number of new teachers will be 10,000. In addition 300 short term courses are being established for teachers already engaged in their work.

GLAZUNOV IN ESTHONIA

REVAL, January 26.—The famous composer and director of the Petrograd Conservatory, Glazunov, has arrived at Reval to give a series of concerts consisting chiefly of his own compositions.

COURSES IN REPAIRING IMPLEMENTS

Ekonomicheskaya Zhizn reports: The agricultural office of the province of Viatka has organized courses of instruction for the soldiers of the Red Army in repairing agricultural implements. In these courses, which last four months, the following subjects will be taught: the technology of metals and of wood, mathematics, geometry, drawing. Practical instruction is to include: forge work, locksmithing, cabinet making, as well as their application in repairing agricultural implements. The courses were established for 120 soldiers who were assigned from the army divisions.

Already in May it transpired that the activity of the courses had to be considerably extended. A second group was organized of 170 soldiers and the length of the course in this case may be six months, in order to include new subjects of instruction, as follows: the assembling and taking apart of agricultural machines, civics, bookkeeping and commercial arithmetic, the Russian language. The directors of the courses already had soldiers serving as their assistants who had learned some of these trades previously and who were now specializing in the repair of agricultural implements while aiding in the course. In the period of three and one-half months there were produced in these school shops: 6,000 rakes, more than 3,000 hoes, a great number of blacksmith and locksmith tools, locks, harnesses, etc. In addition agricultural machines were repaired, which involved even the casting of certain parts in the school shops.

AGRICULTURAL SCHOOLS

There are at present in Russia 272 agricultural schools, of which 77 were opened in 1918-1920. Of these 272 schools, 16 are universities, 18 agricultural faculties, 10 higher technical schools, 25 technical schools of the "instructor" type, 28 lower agricultural schools, 8 technical schools for workers, 44 nursery schools, and 16 dairy schools, 13 common agricultural schools. In addition there are 26 schools for forestry, 16 forestry courses, 16 surveyors' schools, and 22 surveyors' courses.

BRIQUETTE FUEL

The mining industry of Petrograd has made a new conquest in the economic field by succeeding in the organization of a factory for briquettes, the first factory of this kind in Russia. It is designed to produce six thousand poods of briquettes (one pood equals 36 pounds) per day, and will begin operating in March. Briquettes are shaped masses of compressed coal dust used for fuel as a substitute for coal.

SWEDISH TRADE WITH RUSSIA

SOVIET RUSSIA two weeks ago reported that the steamer *Kalivpog* had left Stockholm January 15 for Reval with a cargo ultimately destined for Russia. A Rosta report received from Stockholm, dated January 27, reports the departure of the same steamer on that day for Reval, with a cargo consigned to Petrograd, amounting to 110 tons of various metal articles, including dumb craft, hoisting tackle, jacks, motors, scythes, saws, and drills, valued at about 800,000 Swedish crowns.

PIANO MANUFACTURE

Almost all the factories of Russia are gradually resuming or even extending their operations. *Ekonomicheskaya Zhizn* reports that a national piano factory is to take up its work again after a long interruption. The factory will at first be engaged chiefly in filling the orders of the Commissariat for Education.

DEPOSIT OF SCHIST

Geological explorations in the district of Kem, Archangel, have revealed the existence of great deposits of mica-schist. It is planned to erect colonies for workers in the vicinities of these deposits, who will be supplied with the necessary provisions for the winter, as well as with all tools and materials necessary for work.

THE RICHES OF SEMIRYECHYE

The staff of the Soviet Museum of Beysk last summer conducted geological investigations in the province of Semiryechye. There have been discovered rich beds of zinc ore. In the valley of Kartal, in one of the tributary streams of the Kartal river, zinc ore was found; the layer is eight meters deep. The ore reserve may be estimated in millions of poods.*

In the district of Pshevalsk, on the southern shore of the lake Isil-Kula there are ten layers of coal, every one of which is approximately one-quarter of a sazhen** deep. Coal has been also found on the southwestern slope of Terbagatay near the settlement of Uruzarsk and also on the outpost of Argonoty. In the district of Djarkent in the Kisil Kurul mountains there are immense beds of micaceous iron ore. The available reserve of ore is estimated at 30 millions of poods. In the district of Ser-Kul there are layers of carbonic soda. There have been found many layers of copper, lead, and silver ore. Moreover there are layers of gypsum and balkashite from which it is possible to distill kerosene.

* 1 pood=36 English lbs.
** 1 sazhen=7 English feet.

THE WELFARE OF THE WORKERS

Moscow, January 26.—The Council of People's Commissars has provided that state aid for workers, in the case of temporary loss of ability to work is to be extended also to the members of their families. Thus a woman who is caring for her child has a claim to state aid until the child has reached the age of two years; in addition a mother receives, on the birth of her child, a sum of money equal to one month's pay. Mothers giving the breast to their children receive additional assistance.

THE STRUGGLE WITH TYPHUS

Moscow, January 26.—In order to take up energetically the struggle with typhus, orders have just been issued to the effect that dwelling places must above all be put in good condition and the living together of many persons must be stopped. In order to assure absolutely healthy dwellings to the Red soldiers, the engineering troops have been commissioned to subject all barracks to a thorough overhauling and to undertake the necessary reconstructions.

MAILS BETWEEN FINLAND AND RUSSIA

Moscow, January 25.—According to a report from Helsingfors the Director of the Finnish Post Office has declared that Finland is ready at any moment to resume postal communications with Soviet Russia.

NOTE OF PROTEST

RIGA, January 28.—Yoffe, Chairman of the Russian Peace Delegation, forwarded to the Chairman of the Polish Peace Delegation, Dombiski, a note of protest against the sentences passed by the Polish Military Court in the case of nine Red Army volunteers of German citizenship, who were sentenced to death and executed. The names of those shot are: Herman Wibusch, Richard Kretschmar, Albert Schulz, Konrad Meitschke, Julius Edwertz, Albert Ruppertus, Karl Redner, Robert Romeike, Marcus Roffing. The sentence was imposed on the basis of alleged maltreatment of Polish prisoners of war. Yoffe points to the provisions of the international law on prisoners of war, of the Hague Convention, under which German citizens, as in this case, must also be considered as prisoners of war, and may not be treated otherwise than as Russian prisoners of war. Yoffe refers to an earlier note, concerning Balakhovich's troops, in which these troops are threatened with severer treatment, as they are to be considered as bandits and not as members of the Polish army. Furthermore, the Russian Government has always applied the provisions of the international law on prisoners of war to members of the Polish Army, even when these soldiers were of other, for instance French, citizenship. Yoffe categorically protests against sentences of this kind and demands the strictest observance of international law even with regard to volunteers of other citizenship and other nationality than Russian.

POLISH-LITHUANIAN NEGOTIATIONS BROKEN OFF

VIENNA, January 11.—It is reported from Kovno that the Polish-Lithuanian negotiations have been broken off, as no agreement was reached on the points in dispute. The Lithuanian delegates returned to Kovno.

The Lithuanian delegates had proposed to establish a plebiscite in the disputed regions, while the Poles wanted such plebiscites only in regions already occupied by General Zeligowski. No agreement could be reached concerning Vilna, either, since Lithuania wished to retain this city, while the Poles desired to have a plebiscite held there.

BURTSEV'S DISMAY

The counter-revolutionary *La Cause Commune*, published by Burtsev in Paris, is greatly depressed by Premier Briand's declaration against intervention in Russia.

"We have oftentimes heard former French administrations declare that there is no peace and there will be no peace so long as the world is threatened by the menace of Bolshevism," says the paper editorially. . . . "The new French Cabinet puts the question differently . . . Briand's ministry declares that it, too, does not recognize the Soviet Government, with the qualification, however, that 'Bolshevism is an affair of the Russians, insofar as it does not cross its own boundaries, and, therefore, there is no occasion for us to interfere in their internal affairs.'"

TWO NEW SOVIET REPUBLICS

Moscow, January 26.—The Republics of Daghestan and Gorsk have been declared autonomous Soviet Republics. Daghestan embraces the former Daghestan region, while the Republic of Gorsk includes the regions of Chechensk, Grozhni, Vedensk, and Kislak, the latter on the right bank of the Terek, as well as Ossetia and the Vladikavkas region.

DISCUSSION BETWEEN LENIN AND TROTSKY

The newspapers of Western Europe have made a great fuss about the discussion now in progress between Lenin and Trotsky on the subject of the trade unions and has stated that a serious quarrel has arisen between them. On this subject the Stockholm office of Rosta has asked for first hand data and has received the following telegram:

RIGA, January 29.—*Pravda* has been printing, on the occasion of the impending Congress of the Communist Party, detailed discussions on the trade union problems. Chicherin telegraphs to this paper today:

"The difference of opinion between Lenin and Trotsky is not to the effect that Lenin wishes to recognize the trade unions and Trotsky does not wish to recognize them, but in the fact that Trotsky wishes to transform them into an organ of the state, while Lenin would like to see them kept independent of the state apparatus."

The discussion concerning the trade union question is now closed at Moscow. The theses of Lenin and Zinoviev were passed with an overwhelming majority.

How Soviet Russia Regulates Marriage

What prerequisites are necessary, how divorces may be obtained, the rights and duties of husbands and wives, the rights of children and many kindred subjects are discussed in

The Marriage Laws of Soviet Russia

an 85 page booklet giving the complete text of the first code of laws of the Russian Socialist Federal Soviet Republic dealing with Civil Status, Domestic Relations, etc. Price 25 cents, postpaid. Send orders and remittances to

Problems before the Eighth Congress

By N. LENIN

[The following speech was made by Lenin after the speech of the chairman, Kalinin, at the Eighth All-Russian Congress of Soviets which opened in Moscow on December 22. It is a report on the international and internal situation of the Soviet Republic.]

THE policy of the Entente, which is directed towards military intervention and the military suppression of the Soviet Government is continually suffering defeat. We are continually drawing into our policy of peace an ever-growing number of states that are undoubtedly hostile to the Soviet Government. The number of states that are signing peace treaties with us is growing, and it can be said with full confidence that the final peace treaty with Poland will be signed in the immediate future. Thus, another grave blow will be dealt to the alliance of capitalist countries, which has been striving to overthrow us by military means.

Wrangel's Defeat

Our temporary setbacks in the war against Poland were due to the fact that we were compelled to fight Wrangel, who was officially recognized by one of the imperialist powers, and who received incredible military supplies and all other kinds of material means. We had to crush Wrangel at all costs, and you know what unprecedented heroism our Red Army displayed in overcoming these obstacles, storming fortifications recognized by military experts to be invulnerable. The complete, decisive, rapid, and splendid victory that we gained against Wrangel forms one of the brightest pages in the history of our Red Army. The war forced upon us by the Russian White Guards is liquidated.

On the Alert

We can now set to work on economic construction with much more assurance, but we should be on the alert; under no circumstances can we consider ourselves insured against war. The capitalist pow-

ers and the remnants of Wrangel's forces are not yet exterminated. Other White Guard Russian organizations are endeavoring to organize military forces, to throw themselves upon Soviet Russia at any convenient moment. We must therefore preserve our military preparedness at all costs. Nay, we should improve the fighting quality of the Red Army. This, of course, does not hinder the freeing of a certain part of the army and its rapid demobilization. We think that the vast experience that has been acquired by the Red Army and its leaders during the period of the war will help us to improve its quality. And in diminishing our army, we will preserve a fundamental nucleus that will not be an excessive burden to the Republic, and yet will at the same time make it possible to mobilize and fit out large military forces, more easily than has been the case hitherto.

Our Relations With the Neighboring States

All the neighboring states have already learned the lesson of the past. After three years, they have all been forced to see that when we manifest the most conciliatory and peaceful spirit, we are at the same time ever ready in the military sense, and that every attempt to involve us in war will turn against our enemies and they will get worse terms than those they might have obtained without war. This is not a mere threat, but has been proved by facts. Thanks to this circumstance, our relations with the neighboring states are constantly improving.

In regard to the Latvian Government, I must say that at one time there was the danger of a

break in the relations, even going as far as the idea of suspending diplomatic relations. At the last moment, however, we learned that a change had taken place in the policy of Latvia and that many misunderstandings had been removed. There is hope that we will be in close economic relations with Latvia in the near future.

The Success of Our Policy in the East

Our policy in the East during the last year has achieved great success. The instances of Bokhara and Azerbaijan have shown that the ideas and principles of the Soviet Government are accessible to and immediately realizable not only in industrially developed countries with such a social support as the proletariat, but also among the peasantry. The idea of the peasant soviets has triumphed.

We should likewise hail the imminent signing of the treaty with Persia. Similar friendly relations are likewise assured with Afghanistan and still more with Turkey.

As regards the latter, all the plotting of the Entente has proved futile; union and friendly relations are assured in so far as the international policy of the imperialist states inevitably results in the rapprochement, the union, and friendship of all the oppressed.

The Negotiations With England

At the present time, negotiations are still going on with England. But unfortunately these negotiations are being protracted, and not by any fault of ours. We are ready to sign the commercial contracts immediately, and the fact that they have not been signed up till now is exclusively the fault of those in the British ruling circles who desire to sever the negotiations, against the will of the majority even of the bourgeoisie, let alone of the workers. The longer this kind of policy is going to continue the more acute is the financial situation in England going to become; England is only approaching nearer to a full agreement, instead of perhaps a half agreement.

Concessions

Among the number of important laws that the Soviet Government has passed for this period is the Decree on Concessions. We do not in the least hide the risk that the Soviet Republic runs in making these concessions, as it is a very weak and backward country. Here I must quote a highly characteristic statement made by a non-party peasant concerning concessions at the Arzamas County Congress of Soviets:

"Comrades", he said, "we are sending you to the National Congress and declare that we, peasants, are prepared to starve, freeze, and suffer for another three years, if we know that mother-Russia won't be sold by concessions."

We hail this expression of sentiment—which is very widespread—with delight. For us it is highly demonstrative that among the non-party masses of both workers and peasants, during these three years, there has grown that political experience which allows and induces one to appreciate above all the

emancipation from the capitalists, which induces one to regard with threefold vigilance and intense suspicion every step that may possibly carry with it new danger as far as the reestablishment of capitalism is concerned. We, undoubtedly, mark such statements with great attention, but we should explain there can be no talk about selling Russia to the capitalists. The concession contracts have nothing in common with the selling of Russia, but they do give the possibility of alleviating the position of our workers and peasants, and this is a thing that cannot be trifled with.

The Moment of Transition

The present political moment is characterized by the fact that we are living through a transition period, when we leave the war and go over to economic construction.

The dictatorship of the proletariat has survived because it was able to combine coercion with conviction. The Kolchak and Denikin experiences have convinced the peasantry that only the iron hand of proletarian leadership will save the peasants from exploitation and violence. And it is only thanks to the fact that we have succeeded in convincing the peasantry of this, that our policy, based on the firm and absolute conviction of its righteousness, has achieved such great success. Now we should remember that in going over to the front of labor, the same task is put before us under new circumstances and on a broader scale. In our war with the White Guards, our worker and peasant masses displayed an energy that was not and could not have been equalled in any other country. This was one of the basic reasons why we, after all, defeated the stronger enemy.

At the present moment, new economic problems are coming to the fore, the problem of the single economic plan, the reorganization of the very foundations of Russian economy and of small peasant farming. These problems demand that absolutely all the members of the trade unions be drawn into this work. The peasant masses and the members of the trade unions must learn to understand that Russia belongs to us, that we, the workers and peasants, by our activity and our strict labor discipline alone can rebuild the old economic conditions of existence into one great economic plan. Outside of this there is no salvation.

We must get all, absolutely all, the members of the trade unions interested in production, and see that they understand that Soviet Russia can triumph on the economic front as well, only by increasing the productivity of labor.

Development of Agricultural Production

I now pass on to the bill concerning the development of the farming industry and support of the peasant farms, which the Council of People's Commissars has submitted to the Congress for confirmation.

We have been and remain a country of small farmers, and with us the transition to Communism is infinitely harder than under any other conditions.

Our fundamental task here is to convince the peasant masses of the necessity for State levies, in the interests of all the toilers of Soviet Russia. All our forces of propaganda, all our State means and our education, all our Party forces,—should be resolutely applied to uplift our non-party peasants. Only after we have convinced the bulk of the peasantry of the necessity for intensified farming shall we be able to establish our chief mainstay, agriculture and farming. We are the peasants' debtor, we recognize that; we have taken his crops in exchange for paper-money, but we will return this debt as soon as we establish our industry. And to establish it we must have the surplus of the farming industry.

Electrification

Allow me a few words on the last question, the question of electrification, which has been put on the agenda of the Congress. This report on this most cardinal question, upon which the development of future proletarian Russia depends, should serve as the prologue to a whole series of similar special reports, which from now on should be put on the agenda of all our congresses, both in the center and in the provinces. I think that we here today are the witnesses of a very great change: the rostrum of our national congresses will be occupied not only by politicians and administrators, but also by engineers and agriculturalists. This is the beginning of that happy epoch when people will speak less and less about politics, and the whole attention of our congresses and conferences will be fixed on economic construction, and the enrichment of Soviet Russia with new creative realities. This change should encompass our Soviets and organizations from top to bottom.

From the reports of the State Commission on Electrification you can see what tremendous work has been accomplished in this sphere. A number of the best specialists of the Supreme Council of Public Economy, over one hundred men, have entirely devoted themselves to this task, and as a result we see a printed volume of their investigations. In my opinion, this book should become the second program of the Party, for we can't start on actual construction unless we have electrification. The reestablishment of our farming industry, the reestablishment of transport and other important branches of industry, is possible only through the steady carrying out of the program of electrification, of which I have spoken.

Communism is the Soviet Government plus the electrification of the whole country. Our victory will be final only after we have electrified the whole country, when our industry, agriculture, and transport will be organized on the technical basis of big industry.

I have been to the Volokolamsky country in a village during the opening of an electric station. One of the local peasants who spoke at this celebration, said:

"We peasants have been living in the dark, and now we have been given unnatural light, light that will illuminate our peasant life."

Of course, it isn't the light that is unnatural, but it is unnatural that the peasants have lived for centuries in darkness and oppression. We must make it our task that every factory and every electric station shall become a hearth of enlightenment. And when Russia is enveloped in a dense network of electric stations and powerful technical plants,—then our Communist economy will become an example for the future Socialist Europe and Asia.

Krzyzanowski's Speech

[Comrade Krzyzanowski, the first engineer to report at the Soviet Congress, was born in 1872; in 1894 he was graduated from the Technological Institute, and became organizer in the rural handicrafts Nizhni Novgorod. Then he went to work at the Alexandrov Works in Petrograd, but Union organizations which attracted the attention Ermolov, Minister for Agriculture, who de-organization of crafts which attracted the attention of Ermelov, Minister for Agriculture, who demanded that the author be found. Imagine the surprise and wrath of the Tsarist henchman when he learned that the address of the talented engineer was His Imperial Majesty's prison! Krzyzanowski was then sent to Siberia, where he lived in exile for three years. After his exile he got to Samara, where he worked both on the railway and at the center of the old Russian organization "Iskra". He was elected member of the Central Committee at the Second Congress of the Party. He served on the railroad and in the 1905 Revolution was chairman of the Strike Committee on the north-western line. After the suppression of the revolution he went to Petrograd, chose electrical engineering as his profession, and soon won for himself a reputation as one of the best electrical engineers. In 1912 he became the organizer of the Electrical Transmission Enterprise. He is the author of the Russian version of the well-known war song of the working-class "Warszawianka".]

WE ARE coming to grips with the fundamental problems of our economic life at a most difficult time. Events have proved that Russia cannot be thrown out of the circle of world economy. The problem before us is to elaborate such a plan of industry as to enable us, in a very short time, to gain a victory on the labor front

similar to that gained by us on the military front;—and we have settled in a most determined manner upon the electrification of Russia. Electricity is that new force born in the old capitalist order, which places in the hands of man a mastery over the forces of nature which cannot be bound in the limits of private property. Where it is a question

of forcing tremendous rivers into bounds of stone, and building powerful electric stations to serve and influence the life of huge territories; and where there is a question of uniting various territories into one economic unit, it is clear that not only private property in land, but also private property as an institution blocks the way and must be removed if we are to approach the resources of nature in accordance with the demands of technique and science.

In order to fortify the conquests of the Revolution it is necessary to strengthen our economic front and maintain a severe struggle with the capitalist economy of the West. Here, in spite of our energy, we may be defeated if we overestimate the elements of so-called human power at our disposal.

The regeneration of the economic life of the country in connection with the liquidation of the crisis in our food supply, transport, fuel, and labor, may be brought about in three different ways. One and the most simple is the intensification of labor. The second is the mechanization of labor, and the third is the better organization and coordination of labor on a rational basis. By establishing a comparatively small number of electric stations in the whole country, connected with one another, and forming one single network, we could unite the economy of the country into one single whole. The mere existence of such an electrical system would have as its effect a coordinated rational economy embracing the whole country. Besides this there is the possibility of utilizing as sources of energy, the refuse of industry such as coal dust and slack, shavings of wood, etc., which under present conditions are mere waste.

Electrification must therefore become the foundation on which the plan of our public economy must be based.

Fuel Difficulties

The removal of the fuel crisis will be decisive for the destinies of our industries. The Donets Basin is at the forefront of our fuel problem. According to our specialists the Donets Basin might yield, if we pull ourselves together, up to three thousand million poods* of coal. The regeneration of the Donets coal industry would require a few years, and then about forty per cent of the fuel required by our industries would be covered by the Donets coal. There are, however, two aspects which make the utilization of the Donets coal difficult. The first is the nature of the former methods of coal-mining in the Donets Basin which paid attention mainly to the best coking coal, that is coal which is urgently needed for purposes of metallurgy, whereas the anthracite region representing a tremendous wealth has hardly been touched. To destroy the best source of coal is irrational. As to the development of anthracite mining it will be necessary, not to reestablish a former industry, but to create a new one. Even if we should at the beginning continue to work the Donets Basin on the old lines, we shall come up against another difficulty of transport. To carry coal such long dis-

tances as to the Moscow and Petrograd centers of industry, is a matter of great difficulty. It is therefore necessary that the industrial centers should utilize the local sources of fuel. Our reserves of peat are tremendous. The deposits of peat increase every year to an extent representing five billion poods per annum. This is exclusive of our peat marshes in the North. Peat cannot be carried long distances. It is therefore more useful to utilize it on the spot. Local electric stations could be built where the peat would be turned into electric energy and transmitted along a radius of two hundred versts,* and with improved methods, even four hundred versts, wherever it may be required.

The Grain Problem

Apart from peat, wood waste etc., could be utilized and turned into electrical energy. The fears that the utilization of wood fuel may be harmful for our forest economy are groundless. Our forest reserves are colossal. We don't even utilize a portion of our annual growth of timber.

Our other difficult front is that of the food supply which equally requires exceptional measures. Russia produces about four billion poods of corn, the greater part of which is grown on our periphery, such as Ukraine, Northern Caucasus, Middle Volga, and Siberia. This disposition resembles the disposition of our fuel. Very little corn is produced in our industrial center and food has to be brought up across long distances, which greatly taxes our transport. The non-production of cereals in Central and North Russia is due to causes which may be overcome. Our reserves of arable land are enormous. Out of two billion dessiatins** of land we have up to now utilized not more than one hundred and three million, this is because of the limitations of peasant labor which could not physically handle such tremendous areas. The total area of arable land can be divided into two regions suffering from opposite shortcomings. The whole North is situated in a climatical sphere where the soil suffers from excess of humidity, while the North-East suffers from drought. The mechanical cultivation of the soil may be carried out in such a way as to preserve the moisture which enters the soil. The treatment of the land with tractors and electrical ploughs becomes an urgent matter.

The disposition of our main sources of supply of fuel and food creates a situation where the crisis in the transport involves a fuel and food crisis.

It is evident that, for the present, we shall be obliged to fall back, in the center and in the north, chiefly upon Donets coal and southern and southeastern grain. We are therefore faced with the problem of improving our transport and bringing it into a state of efficiency, so that it may be able to cope with the difficult tasks before it.

The waterways of Russia may be divided into two parts. In the east there is the Volga and in the west the Dnieper. Our network of railways, although considerable, is nevertheless weak, and

* 1 pood=36 lbs.

* 1 verst=.66 miles.

** 1 dessiatin=2.7 acres.

we are faced with the enormous problem of extending this network still further and also of improving the carrying capacity of the railways. The radical solution of the problem as practiced abroad is the construction of special trunk lines for purposes of freight only. In view of our present conditions such a course is impracticable and the most economical method would be to adapt some of our railways for such trunk lines by means of electrification. Such a course, which would not involve any large work of reconstruction of the existing lines, would raise the carrying capacity of the railways to one and a half or two billion poods per verst, and reduce the cost of freight by two-thirds as compared with pre-war conditions. This is tantamount to reducing distances three times, if not more. Thus, for instance, the 1,500 versts dividing Petrograd from the Donets Basin would actually mean not more than 500 versts when the line is electrified, and the distance of 600 versts between Moscow and Petrograd would mean not more than two hundred. The lines to be electrified would be the one running from north to south—from Moscow which is the chief industrial distributing center, through Kursk, Belgorod, and Nikitovka, that is throughout the Donets Basin to the suitable harbor of Mariupol. The other would run from east to west, from Krivoi Rog through Alexandrovsk, Likhaya, Belaya-Kalitva to Tsaritsin, connecting our two great arteries, the Volga and the Dnieper. It would give an outlet for Donets anthracite to the Volga: The importance of the electrification of these lines for the liquidation of our fuel, food, and transport crises cannot be overestimated.

Electrification will have a great effect on our water transport. You see on the map here marked in red a number of electric stations to be erected on the Volga and the Dnieper so as to provide electrical energy for the needs of our water transport and harbors. Electrification will be of particular importance for the Dnieper, the navigation on which, up and down the river, is broken by the rapids near Alexandrovsk. By erecting here an electric station we shall cover the rapids and make the river navigable right through, and at the same time, we shall create one of the most powerful hydro-electric stations in Russia. Our calculations show that we have in our rivers a supply of energy to the extent of 20 million horsepower, counting only such of them that have not less than ten thousand horsepower each. This is distributed approximately as follows: 10 million horsepower in Siberia, 2.7 million horsepower in the Caucasus, 3 million in Turkestan, about 1½ million on the Dnieper, Dniester, and Bug, and the remainder in the Petrograd region, the Murmansk, and the White Sea. I must give warning that caution must be exercised in the construction of large hydraulic stations. In our scheme we have selected only such stations the energy of which could be utilized to the full.

We had in Russia before the war 45,000 small electric plants utilizing water power and represent-

ing an aggregate of one million horsepower. The number of these plants could be increased by the peasants constructing new stations in their spare time, while we would provide them with the necessary equipment. Subsequently all these stations would be included in the general state system. The industries of such a town as Petrograd, which in the past lived upon imported coal, could not be maintained and developed without electrification.

Our calculations have shown that by electrification we may increase the productivity of our industries twice, as compared with pre-war conditions, but at any rate, the increase would not be less than 80 per cent, while the increase in the expenditure of fuel would be only 35 per cent and the increase of labor 17 per cent, and the increase in the number of mechanical motors only 67 per cent.

The New Electric Stations

The Commission on Electrification proposes to construct during the first period 27 stations, in such regions as would make it possible to connect the whole of Russia by one electrical system.

It is proposed first of all to electrify the Donets Basin, and the first station of 20,000 kw. will be erected at the village Kashperovka. In close proximity there will be erected another station near Lisichansk, in the region of the coking coal. These electric stations will utilize the coal refuse and the low grade coal so as to economize the better sorts.

Of particular importance for the Donets Basin will be the station to be erected on the Dnieper, near Alexandrovsk, which will supply the works in connection with the sluicing of the river, which will create a pressure of water enabling at first the utilization of from 200 to 300 million kw., later developing the power to about 800 thousand horsepower. This station alone will mean a saving of from 100 to 130 million poods of coal per annum.

The fourth station in the same region is proposed to be built at Grushev. All these stations will be connected into one and thus will enable us to introduce mechanical methods of coal mining and to create better conditions of life and labor for the miners, to increase output while reducing by half the number of men.

Next is the station Belaya-Kalitva, near the Volga, in the anthracite region. This station could be connected with the Yekaterinodar station in the Caucasus, forming one single system. Then there is a station to be built in the Kuban region, which will make possible to increase the production of zinc, lead, copper, etc. Next is a station on the Terek, near Georgia, which could also supply the latter with energy. A station will be erected at Grosny, in the Caucasus, in the oil region.

Then come stations which will supply the Volga regions. The Tsaritsin station will make it possible to bring the coal from Kalitva to the Volga, and reduce the consumption of oil by the Volga fleet. The Kashparsk station near Samara will consume local shales. Near Kazan, a station will be built at Svyazhsk, which will utilize peat and wood waste.

These stations will enable us to electrify the Volga region's agriculture. Near Novo-Usensk a station will be built which will consume the local natural gas and will supply energy for purposes of agriculture.

In the central industrial regions stations will be built for using the local low grade coal and peat.

At Nizhni a station consuming peat will be erected and will make possible the development of the chemical and metallurgical industry, and in particular at Ivanovo-Vosnessensk, apart from the electrification of the industries, will make possible the introduction of improvement in peat mining. The station at Machursk consuming peat will supply energy to Moscow. The stations of Kashira and Epifan, consuming the low grade coal near Moscow, will also supply Moscow and the industries of the low grade Moscow coal basin. The Epifan and other stations will make possible the electrification of the Kursk railway with its outlet to the harbor of Mariupol.

The stations to be erected on the rivers Volkhov and Svir will provide power for the entire industrial area of the Petrograd region, so that the 200 electric stations in the Petrograd region may be transferred elsewhere.

In the Urals stations will be built at Kiselovsk on the river Chusovaya, at Egorshino (using anthracite) and Cheliabinsk (using brown coal).

These 27 stations will be built at most important points and will be able to cover the whole of our industry.

Quite apart from this is the plan of the electrification of the Murmansk railway, of Siberia and of Turkestan.

The outlined plan may be accomplished to a large extent by our own means, but will require an enormous amount of human labor. However, if we will obtain from abroad powerful machinery, our scheme will be realized within the next ten years.

The effects of electrification on the development of Russia will be enormous. The power developed by those stations would have the same effect as if one threw an army of 15 million fresh people on the labor front. This is true if the stations will work only eight hours a day. Working with a double shift they would develop a power substituting the energy of 30 million people.

Comrade Krzyzanowski demonstrated his scheme on a huge map suspended from the ceiling of the stage of the Great Theater, on which were marked in red circles the stations to be erected, and in blue those in existence. At the mention of a station by Comrade Krzyzanowski it was immediately lit up on the map by a little electric lamp, producing a strong impression upon the audience.

Electricity a Transforming Factor

By DR. ALFONS GOLDSCHMIDT

The following is a chapter from the author's book "Wirtschaftsorganisation Sowjetrusslands", which has not yet been translated into English.

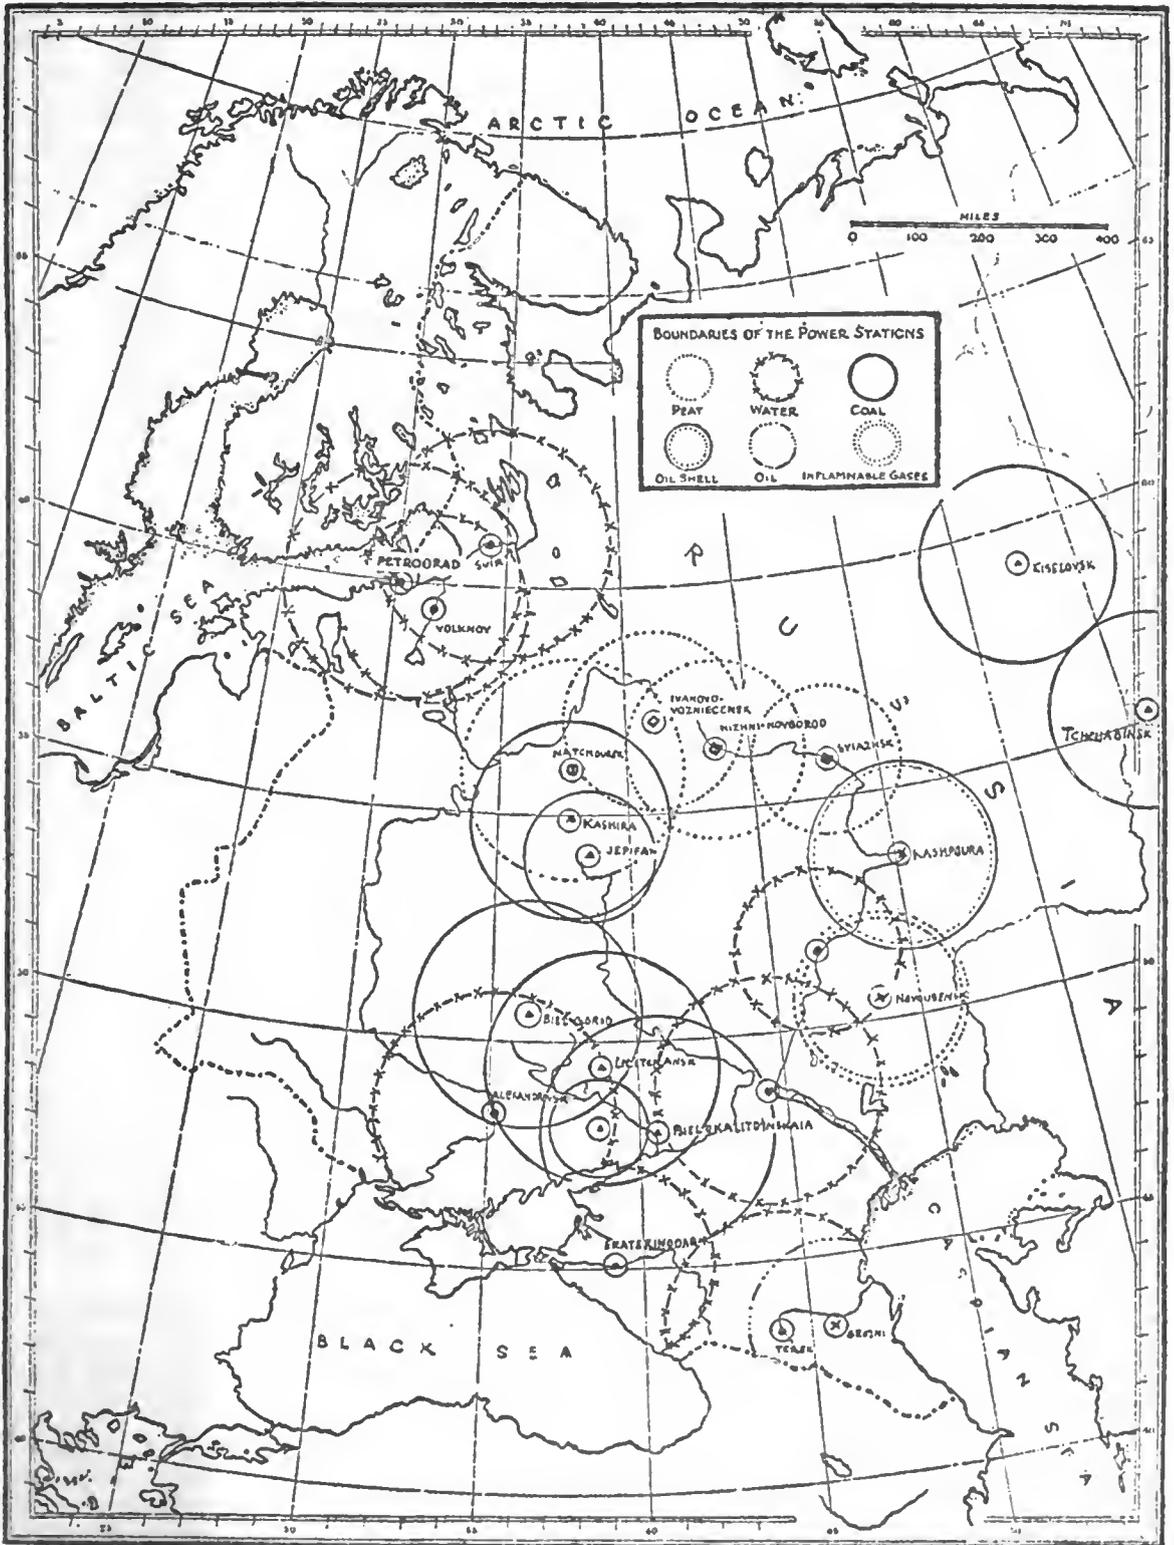

THREE great dislocations are taking place in Russia. Three transfers with the object of abolishing the inorganic quality of economy, of realizing a national location of industry. The metal industry is traveling from the North to the Urals and the South, the cotton industry is moving from the central region to the Caucasus and Turkestan, and in the third—and most important—place, agriculture is moving throughout Russia, is traveling on to cultivate Russia through and through, to intensify the entire soil of Russia. From the North, from the Volga, from Siberia, the pioneer of production and the pioneer of intensive operations, agriculture is being sent out all over Russia.

These three gigantic changes of location are being accomplished with the aid of electricity, with the aid of great overland power stations, with the aid of a tremendous network through which the electric current is loosed in order that everything, from the most elementary commodity down to the smallest product of skill may be given by it.

But this transfer is not equivalent to an evacuation, a desertion of the regions. On the contrary, it is equivalent also to an intensification, an intensification of the production of these regions, but it means an exploitation of other possibilities also.

First, the economy of Russia is divided into new fields in accordance with a plan of electrification—limits are set, on the basis of a new principle—that of electrical geography. This electrical geography is the basis of all nationalization of economy. Once the new limits have been set, once economic divisions have been made in accordance with the sources of raw materials, then it will be possible also to establish rational power stations, and together with them, a practicable rationing of production. With this practicable rationing of production, there will be much greater comforts of administration. This is the immediate purpose.

Fuel possibilities, power transformation possibilities, transportation possibilities must be investigated before the complete execution of the plan is attempted. Studies of economic geographical nature, technological-scientific explorations must be made to all regions in order to anticipate the course of events. The problem of enhancing production in connection with the original sources of materials must be investigated. We must limit ourselves not only to regions already settled, regions on which there is already a capitalist economic culture, we must pass over the Urals, into Siberia, into the Far East, we must go everywhere.

THE ELECTRIFICATION OF RUSSIA

The *Manchester Guardian's* map of the proposed stations and their territory is here reproduced. The words "oil shell" used in the explanation should properly be "oil shale" (combustible slate). Spellings above diverge somewhat from those followed in SOVIET RUSSIA.

In Russia this has already been done and is being done more and more. And more and more the errors of private economy are being exposed, an exposure which was already begun during the war.

In connection with German plans of electrification, particularly those of Klingenberg (*Allgemeine Elektrizitäts-Gesellschaft*), an electrical rational economy, the planful electrical economy of Russia is being carried out, under the guidance of Krzyzanowski, Lenin's friend and economic advisor, who has explained this plan to me. Two problems are to be solved, first the question of the location of production, and the question of fuel for the furnaces of the electrical power stations.

Water Power

But these problems are already solved in essential points. In the Petrograd region, in the northern region, in the region evacuated by the metal industries, white coal (water power) is being utilized for the production of electrical power. In the first place the falls of the rivers Svir and Volkhov. These centrals are already under construction. With their aid the transport routes, the railroads of the northern regions are to be electrified. The electrification of the Murmansk Railway is also to be undertaken soon. Great power stations are being built on the White Sea, and at Murmansk. There is excellent water power in this region, convenient sources for the production of electrical energy. Entirely new conditions for production are thus being created for the North. Great nitrogen works are there being established, also aluminium works. With artificial nitrogen, as well as with potash, it is intended to intensify agriculture in these regions. A connection by electric railway will be effected between the White Sea, Murmansk, and Petrograd. The Petrograd region will thus become an absolutely modern transportation region, with Petrograd as its central point, perhaps a gigantic storehouse for the Socialistic foreign trade. It has been calculated that in the region on the White Sea a million horse power (in water power) can be conveniently exploited.

The Petrograd region will therefore obtain power stations which will serve the transportation routes to the seas and to the interior, create new industries by using the mighty water power resources, and intensify agriculture into a model economy. The electrical line from Murmansk to Petrograd will render possible the opening up of the ice-free port of Murmansk, which hitherto has been very little used.

The production of great quantities of artificial fertilizer, as well as the supply of electric current will be to the peasant a spur to a collectivistic cultivation of the soil. Artificial fertilizer and electric power are not only means for enhancing production in agriculture, but also a means for grouping together the small holdings, the peasant farms. As electric power produces large scale industry so it also renders possible large scale agriculture. It facilitates farming, increases the productivity of the soil, saves time, instructs, inspires, furnishes

an example in the sense of collectivism. Artificial fertilizer and electric power are being systematically used by the Soviet Government with the object of gaining the adherence of the peasants to the collective plan, to the agricultural commune. They are impulses and pressures toward unification, toward the rational joining of forces, toward an enlightenment of the peasant souls in the sense of a Socialist economy. The more artificial fertilizer, the more electric power you have in agriculture, the more collective will be your agriculture.

We therefore are to consider an exploitation of the water power resources for the creation of a far-reaching and extremely closely webbed electric current in Russia's northern region. This region, which Russia is ready to subject to capitalist exploitation will be newly fructified after the removal of its industrial heterogeneities without in any way violating the rational principle of location of industry. Its possibilities are water power and the resources of the soil, both agricultural and in certain minerals. By means of water power and the electric current which it produces, transportation in this region will be modernized and accelerated, artificial fertilizer will be produced and immediately brought to the surrounding farm lands for purposes of intensification and agricultural training, ultimately strengthening the collective spirit. In this way this region will become a center for two kinds of influence. In the first place the rapid transportation of socialistic objects of foreign trade from the interior to the ports of the north and to the boundaries of these regions as well as the rapid transportation of imported goods into the interior of Russia will be possible. Furthermore, a fruitful agriculture, a richly yielding soil will be attained, which will be a soil for the future instruction and enrichment of Russia.

Agricultural Matters

In this connection let me at once outline the agricultural plan. The object is to eliminate the old three-field system which is unprofitable, which is an unproductive economy of partial land-idleness. The primitive plow must be eliminated in favor of modern means of cultivation. In the process of this elimination, the economy of endless division of energy must be relinquished and replaced by a collective agriculture.

For this purpose not only agriculture of the northern region, of the vicinity of Petrograd and its radiations, must be intensified, but the agriculture of the Volga region. The Volga region has excellent soils, great tracts of rich black earth, easily exploited. To be sure there is great trouble from draughts, a large scale and fine-combing irrigation is to be undertaken with the aid of electricity, and the mechanical cultivation of the soils of these regions is also to be facilitated by electricity, irrigation, watering, modernizing of implements and tools, and, in consequence a collectivization of agriculture will make these regions not only the granary of Russia, but also a source of food for the whole world. This is one of the most important

problems in the feeding of Europe. Germany has a direct interest in it. Germany should send hosts of skilled farmers, trained agriculturists, machines and implements in great quantities to these regions, for they are so to say the breasts of the mother that can feed Germany. There are immense possibilities of enlightenment here. All that is needed is the will, and in a few years the fruits will be apparent; the German starving may be fed with grain from the Volga. This is not a Utopia, it is a reality if only there is the will.

Siberia's Resources

But this does not exhaust the resources, the possibilities of useful yields from electrical energy in agriculture. To the east of the Urals, far into Western Siberia there exist great areas of land which are partly, in fact almost entirely, untouched. This is also a question of world-wide importance. The Altai region for instance is a garden of paradise. Krzyzanowski told me that in Western Siberia 150,000,000 dessiatins of good land, rich fat land, are waiting for a fructifying cultivation. He said it was almost virgin soil, with only primitive manipulation, scratched only by the *sokha**, by a population that lives in accordance with what the Bible says of lilies. It is a pious farm land, a farm land with faith in God, a farm land that leaves everything to God. An area such as Tolstoy's peasants love, an area that is left to fructify itself, not a modern farm land, which is attacked and fought with, but a farm land that reposes and idles in God. The 150,000,000 dessiatins are here waiting for electrification, for a delving into their entrails, for a shifting about of their forces, for a unification of their forces, for illumination, for energizing by modern machines, for Americanization so to speak, for an extension, an intensive extension of cultivation.

Americans and English have already called attention to the fact that Western Siberia is a new California. If I have the time and the opportunity, I shall take a trip through Western Siberia next spring, in order to let you know precisely what grows there on the ground and under the ground, and what more can be made to grow upon the ground if it is not entirely left to its own devices. I was told in Moscow, scratch this soil only with a pin, with the most primitive community agriculture, with a non-intensive, un-modern cultivation, and these fields, these trees, these bushes, will feed at last 40,000,000 people. Fire them with electricity, drive currents through them, supply them with mounds of fertilizer, collectivize and start an ant-like activity, and this region can feed as many people as Canada, and Canada asked for 90,000,000 settlers before the war. You see the world is big enough. We need not break each others heads for colonies, all we need to do is to distribute and exploit rationally. We need only to proceed socialistically, and the thing will work very well. No one on all this earth would need to hunger if people would only act socialistically. We have electricity, and that means our pinions, we have the

* Primitive Russian plow.

riches that need such pinions; why should we not go right about the job? We only need to reorganize society, transform the administration, get rid of considerations of petty profit, and soon the riches will be visible, soon all the shabby insufficiencies of the past will be only a dreadful memory.

In Western Siberia there are so many natural resources that we may say there is hardly anything lacking; in fact Russia as a whole, once it has been transformed by machinery, once it has been electrified, has hardly any need of obtaining anything from foreign parts. Russia does not need us, does not need Europe. Europe needs Russia. This is a fact. This is not a fact of immediate realization, it is a fact of the future; but it is a fact of the *near* future, already a tangible thing. Since Europe needs Russia it should help Russia so that it may itself be aided by Russia. Go and place yourself at the disposal of Russia, with motors, with porcelain insulators, with rubber, with knowledge, with engineering abilities, with skilled workers. You will not regret it.

Western Siberia has mountain torrents, coal deposits, peat bogs. The problem of electricity from peat is approaching its solution in Russia. Accordingly great power houses are being built near the bogs. Western Siberia has all the resources of fuel. It has also great quantities of polymorphous ores and it is hoped therefore that a new metallurgical industry may arise in these regions, particularly in the environs of Krassnoyarsk.

We shall not have all these things tomorrow, but the day after tomorrow, not without foreign aid, not without skilled aid can Russia immediately raise these treasures. It should therefore immediately have this skilled aid. But do not fool yourself, this skilled aid will not be a corroding capitalist aid, an aid that carries any infection from without. This is no longer possible. You will believe me after you have studied the organization, its tremendous scale, and its inescapable conditions, as presented in this book. You can get from Russia everything you need, but you will not disintegrate Russia's Socialism, Russia's incipient Communism. The Russian proletariat and the Russian peasantry will not permit you to take away what they have accomplished. If the Russian peasant is to this day still opposed to collectivism, because he fears the return of the great landed proprietors and with them the assigning of his collectivized property to the holding of the old proprietor, he will tomorrow be already free from this fear and he will become more and more free from this fear as agriculture is progressively electrified. For electric power is the pioneer and the uniter, the ally of the Soviet system, which is also a uniting and a pioneer power.

Canals, Cotton, and Slate

Of course Russian electrical economy must proceed in a *real*-political manner, along the lines of least resistance. In other words, there is a theoretical and a practical electrical economy, the latter having the object of realizing the former. And at this moment everything is being made real that can be made real.

That is why the cotton industry of the central region (Moscow) is not being immediately transferred to the Caucasus and to Turkestan, in other words to the sources of the cotton, but for the present to the Government of Samara. This is a station on the road to Turkestan, and arrangements are already being made to shift the cotton industry all the way to Turkestan. At present, work is being carried on in Turkestan for enlarging the cotton plantations.

In the Government of Samara the electrical conditions are extremely favorable. Immense quantities of combustible slate (oil shale) are there available, whose fuel value is about equivalent to that of brown coal. In addition to this combustible slate, there are tremendous quantities of combustible gases. The Samara region is the beginning of the great naphtha territory. It is the so-called dry naphtha region: naphtha itself is not found there, but there are very valuable naphtha gases. The ordinary artesian well will furnish you with enough gas to serve a 300 horse power motor for a long time. The Samara power stations are therefore to be fired with naphtha gases and combustible slate. The Volga problem has been a subject of consideration for a long time. It has been found that the "head" of the Volga is not sufficient for purposes of electrification. And besides, the spring floods are a disturbing factor. A new canal is therefore to be built to connect the Volga and the Don. The differences of level in this canal are to make possible the driving of a station of 20,000 horse power. Simultaneously the canal is to serve as the connecting link between the Volga region and the Donets region, in other words, between the Caspian Sea and the Black Sea. This new waterway will enlarge and accelerate the south Russian transportation facilities. Already now the Volga takes care of twenty per cent of all of Russia's transportation. We need hardly point out what this new canal will mean for south Russian traffic, for all the trade of Russia, and for the south Russian industry in particular.

The canal will supply the Volga region and the Ural region with good coal (anthracite) and, in return, will supply the Donets region with the Ural ores and simultaneously move the motors of great power stations in its descent. They are counting, as I have said, on 20,000 horse power stations. Here also, therefore, we have a heating with white coal, with water; just as in the northern region it is the natural rivers, so here it will be the canal that furnishes the white coal, while in the Samara region the electrical power will be taken from the naphtha gases and combustible slate.

After the cotton industry has moved from the central region to Samara, in order later to take up its abode in Turkestan where there are already possibilities of electrification and of irrigation by means of electricity, the textile industry of the central region will be reorganized and extended as a national industry. It will be a great flax and linen industry. The Russian flax is so excellent that it is conquering one region after the other. To be

sure there have thus far been great difficulties through lack of machinery, and no one knew exactly how to adapt the English cotton machinery to linen manufacture. But this machine problem has already been solved. In the first place by an improvement of the flax (mixing it with cotton, etc.), and in the second place, by refitting the machines of the Saxon system for this manufacture. It is hoped that the electrification, together with a gigantic production of flax in the central region, on the Volga, and the border states, etc., may supply Russia with a great textile industry. This textile industry will be fed brown coal fuel, of which there are great quantities in the central region. One gigantic power station is already in operation. It was built before the war by German firms, by the A. E. G., Siemens, Rosenthal. It works well, reliably. Other stations are now perhaps already functioning, at any rate the electrification is proceeding rapidly, particularly in the Moscow region.

The electrification of the Donets region will be effected with the aid of coal dust; the new canal, the utilization of its differences of level for the creation of electrical energy, the mutual exchange of raw materials between the Donets region and the Volga region, the electrification of the Don region with coal dust fuel, all this will facilitate in an extraordinary manner the industrialization of the rich mineral region of the south.

Dividing the Territory

For the present there are four chief centers of electrification: the northern region, central region, the Samara region, the Donets region. Furthermore, there will later be Turkestan, and particularly, Western Siberia. This is the beginning of an entirely new Russian economic geography, an entirely new economic map for Russia. This will systematize and guide Russian industry toward its raw materials, by a rational utilization of force, a rational application of electric current. The forces will be united, transferred wherever necessary, collectivized when necessary, and so unified and distributed that the pursuit of raw materials by industry will not be rendered difficult.

The electrical technology of this shifting, of this industrialization, this unification and feeding the regions with current, is the following:

From the overland power stations, from the great central stations, the current is sent by means of transformers into the sub-stations already present or to be constructed. The small electrical works are in this way to be standardized, so to speak. They will be attached to the systems of the great central stations. For example, already all of the Moscow electrical stations have been connected with a gigantic overland power station near Moscow, the lighting plant, the tramway service of Moscow, etc. Similar is the practice with the electrical works in the metallurgical industry, in the coal industry, etc.

In this way a great net is being spread all over Russia, consisting of regional networks that can be drawn into one. Each regional network is a tribu-

tary of a main central station, from which all the sub-stations, all the power houses of the region are standardized.

We are therefore dealing with a complete electrification of Russia which will involve a utilization of all the possibilities of electrification, of all the fuels, of peat, of coal, of coal dust, of naphtha gases, etc., the utilization of hydraulic power, the utilization of existing works, the construction of branch works, of sub-stations, sub-centrals, etc.

There is to be sure no better means, no more powerful way of achieving a unification of the entire national economy in the direction of a planful socialistic system. Electricity is, so to speak, the energy of Socialism, the technical force of Socialism. Steam was the power of liberalism, of Manchesterism, of so-called free competition. Electricity leads to the elimination of competition, the doing away with the capitalistic throat-cutting. But this does not mean the elimination of the technical cultural competition. On the contrary electricity will kindle the lust for invention, ever opening new fields, ever making new discoveries. Electricity will accelerate the machine, the tool, the spirit that guides machine and tool. Electricity thus may be considered as an immense and important socialistic motor of culture, a power moving toward the Socialistic Society, a power bringing about the Communist Society.

That is why the Third Congress of Economic Soviets passed the following resolution (literal translation:

"Whereas Soviet Russia disposes of immense supplies of fuel, such as naphtha, coal, peat, etc.; and likewise possesses great resources of water power in the form of water-falls, and whereas the rational utilization of these resources for the needs of the country may only be a converting them into electrical energy, the Third Congress of Economic Soviets resolves that the erection of technical power houses for the purpose of supplying industry and the cultural needs of the entire region of the Republic must be considered as one of the most important technical tasks of the nation in the near future, and instructs the Presidium of the Supreme Council of National Economy to draw up and issue concrete plans for the execution of this provision."

Krzyzanowski's formulation of the situation is this:

The Soviet Power + Electricity = Communism.

LOCAL ELECTRICAL INSTALLATIONS

Izvestia in recent issues printed the following small electrical items:

It is reported from Kursk that in the village of Shamenka, district of Staroskelsk, an electrical power station has been constructed, which will furnish light to three hundred houses.

It is reported from Orel that in the village of Chernavsk, district of Yeletz, a dynamo has been installed in the turbine works which furnishes illumination for the building of the local executive committee, the hospital, the school, the post-office, the

telephone station, and a number of private dwellings.

An electrical station has begun to operate in the village of Yassikov, province of Tula, furnishing illumination for all the settlements of the district.

Near the station of Porashino an electrical power house has just been opened, which furnishes electric light to ten villages.

ELECTRICAL POWER HOUSE AT KOLOMNA

Moscow, February 15. The electrical power house at Kolomna has begun operations. It supplies the entire city with electric light and most of the factories with electric power.

ELECTRIFICATION

Twelve glass works have been electrified in the northern portion of Soviet Russia. A power house also supplies the surrounding towns with electricity.

The Next Issue of

Soviet Russia

1) WHEN ARMS ARE FAIR, by John S. Clarke. The well-known editor of the *Worker*, of Glasgow, Scotland, points out that an armed insurrection was inevitable for the overthrow of the Tsarist and capitalist order in Russia.

2) THE FACTORY IN SOVIET RUSSIA, by Dr. Alfons Goldschmidt. A forcible and dramatic presentation of the division of authority in the administration of Russian industry today.

3) PROCEEDINGS OF THE EDUCATIONAL CONGRESS. This congress took place immediately after the close of the Eighth Congress of Soviets, in December 1920, and discussed a number of important educational questions.

4) THE SOVIET RUSSIAN RAILWAY COMMISSION ABROAD. An interview with Professor Lomonossov, who tells precisely what this important Commission is doing.

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION

110 West 40th Street

New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

IN 1919 there was a moment in the existence of the Soviet Republic when its position seemed almost hopeless. With Kolchak in possession of all Siberia and large parts of European Russia, with Denikin in the South, with the Ukrainian nationalists under Petlura as well as the Poles, the Lithuanians, the Letts, the Estonians and the Finns, in the West, with the British in the North, in addition to the hunger in the cities and the dissatisfaction of the peasants—who were perfectly willing to get the land through the Revolution, but were unwilling to feed the cities that made the Revolution—the days of the Soviet regime seemed to be numbered. That was the moment the Mensheviks chose to “get even” with their adversaries, the Bolsheviks, and to destroy them from within. Taking advantage of the exhaustion, the hunger, the depression of a great part of the working masses, they told them in their papers that they were starving because the soldiers were getting most of the food, and cried: “Down with the civil war!” Thus at a time when Soviet Russia—in spite of the Government’s repeated peace offers—was attacked by the entire world, they were placing the responsibility not on international capitalism and its White henchmen, but on the communists who, at the cost of unspeakable sacrifices, were defending the first socialist oasis against a world of brigands. For this appeal to the basest instincts of cowardice before the enemy, the Menshevik traitors *were not treated*, as e. g., pacifists would be treated in any country, if they should conduct a similar propaganda in the case of an invasion of that country. *They were not shot—only their papers were suppressed*—and since that time they have been treated with suspicion.

This of course did not stop their further activity. The difficult situation brought about by six years of imperialist war, revolution, civil war, and foreign intervention had of course created an atmosphere in which many workers—unable to see the end of their miseries—decided to abandon the continuous struggle and to return to their native villages, where they had at least enough to eat. Had this movement not been stopped through various compulsory emergency measures, the factories would have been completely deserted, all industrial

activity would have come to a standstill, any defense against the counter-revolutionary onslaughts would have become impossible, the Revolution would have died. The Mensheviks, of course, raised the cry of “slavery” and “forced labor”. Hypocritical servants of the bourgeoisie, they would have preferred the triumph of capitalist oppression as long as “individual liberty” was respected. They were especially successful among those layers of the working class that already under the capitalist system had enjoyed a certain amount of well-being—as compared with the great mass of unskilled and half-skilled workers. The highly skilled workers—whose earnings in most countries bring them nearer to the standard of the middle classes than to that of the large working masses—are everywhere the main support of those “Socialists” or Trade-Unionists who are ready to quarrel with the capitalists and to denounce their greed from time to time—but who will never declare open war on them. The famous words of the *Communist Manifesto* do not apply to them. They have *more* to lose than their chains. They are dissatisfied petty bourgeois—but not rebels. They prefer their position as well-fed underlings in capitalist society to the risks and hardships of revolution and civil war. Working class solidarity is unknown to them as in their hearts they despise the poorer laborers. In many countries the aristocracy of the working class are taking every step to bring about a combination with their employers and improve their situation at the expense of the great mass of the working population. Knowing their indispensableness they often make in Soviet Russia such demands as could only be satisfied at the cost of the hunger of other workers. In this attitude they are, of course, encouraged by the Mensheviks, who are glad in any way to embarrass the Soviet Government. Whenever this happens, the Soviet Government has of course to defend the Revolution and the working class as a whole against these counter-revolutionary machinations, which in such a situation as the present—may spell the death of the Revolution. The Bolshevik is like the Turk—a malicious animal—when you attack him, he defends himself—much to the displeasure of those “friends” of the working class who would like to do from within what Kolchak and Denikin did not succeed in doing from without.*

No wonder, therefore, that Gompers, a contributor to the defunct American organ of Kolchak, “*Struggling Russia*” steps in to defend those poor persecuted Mensheviks. In an article to the *American Federationist*, advance copies of which have been sent broadcast to all newspapers, he gives the Soviet Government a piece of his mind. By doing so the President of the A. F. of L. shows that he is a clever man and that he has not without profit taken a leaf from pro-revolutionary Russian history. Whenever the Tsar and his militaristic, clerical, and bureaucratic henchmen felt themselves menaced by

* A reply of Krassin to an inquiry of the British Labor Party concerning these “persecutions” will appear in our next issue.

the growing dissatisfaction of the workers and peasants — they took recourse to the medieval device of putting the blame for everything on the Jews. After the ignorant masses had vented their accumulated anger in the blood of the convenient scapegoats, the old system continued for a while to go on undisturbed. Now Mr. Gompers, the Tsar of the American labor aristocracy, for various reasons connected with the present situation, feels himself menaced in his autocratic power and prestige, and to stem the tide of opposition against him, as well as in order to ingratiate himself once more with his masters, he takes up the cudgels in a furious attack on all alleged forms of tyranny—in Moscow.

What matters it to him that the *official* report of the British Labor delegation on conditions in Russia was—despite its anti-Bolshevik majority—very favorable to the Soviet Government?

What matters it to him that the German “Independent Socialists” Crispian and Dittmann, who after their return from Russia started an anti-Bolshevik campaign, have been repudiated by a tremendous majority of their party?

What matters it to him that Merrheim of the French Metal Workers’ Union, the “pacifist and revolutionary syndicalist”, as he calls him, is branded as a traitor by all the best and oldest names of French labor unionism, such as Monatte, Yvetot, Griffuelhes, Delessalle, and is now writing prefaces to books by the renegade Hochschiller, who is the head of the anti-bolshevik and pro-interventionist campaign of the Paris *Temps*, the *Times* of the French imperialist and plutocratic gentry?

What matters it to him that the Italian Federation of Labor whose leaders he tries to put in line against Russia has according to the London *Times* just voted one million francs for the support of the Communist International?

After this statement was issued, some of the papers expressed the idea that Mr. Ralph M. Easley, chairman of the Executive Committee of the National Civic Federation was the inspiration of Mr. Gompers’ denunciation of the Soviet Republic. This turned out to be incorrect, and that gentleman declared that “rather does Mr. Gompers inspire us in what we are doing”.

* * *

A SHORT time ago the question of resumption of relations with Russia was again put forward in the German Reichstag. On that occasion, Dr. Simons, Minister of Foreign Affairs, stated that “a resumption of diplomatic relations was impossible, as long as no reparation is made for the murder of our Ambassador, Count Mirbach, committed in 1918.” To many readers this statement must have appeared as proof of a somewhat excessive German vindictiveness, for it had been reported at the time and repeated over and over again that 300 men—Social Revolutionists of the Left—were executed for that deed. The Soviet Government has often enough been attacked by all ‘lovers of free-

dom’ for the cruelty displayed in this dastardly servility toward the Kaiser’s Government. But now news comes from Danzig printed in all New York papers of February 12, that “Blumkin, one of the men who assassinated Count von Mirbach . . . is a shining literary light in Moscow, and holds a position with the Soviet Government.” This information, although it comes from Danzig, seems really to be authentic. For although Blumkin’s literary career is unknown to us, we have known for a long time that after spending a year in prison for his—temperamental outbreak, he joined the Communist Party and really held a position in the government. One year of prison, to 300 death warrants—that is about the real proportion of truth in the “news” about Russia.

* * *

UNDER the title “Not Our Sort of Thinking”, the Montrose (Colorado) *Daily Press*, of February 24, prints the following editorial dealing with this weekly:

“SOVIET RUSSIA,” the official organ of the Russian Soviet Government Bureau, has invaded our fair city, and, according to the statement of one banker here, they are raking in the dollars for subscriptions which, if every community gives similar support, bids fair to permit them to boast of a huge circulation.

“SOVIET RUSSIA,” the official organ of the Russian Soviet government may satisfy the citizens of that section of the world, the magazine “SOVIET RUSSIA” may have its place in the sun, but as far as *The Daily Press* is concerned the United States of America is too good a place for a magazine of that nature and the “SOVIET RUSSIA” should not be permitted to establish its home in these states.

Leon Trotsky and his friends may have a message of great import, but *The Press* is not interested and the reading of one copy of “SOVIET RUSSIA” quickly convinced us that it did not fit into our scheme of living and thinking.

We did not know that we had “invaded” that portion of the United States, but an inspection of our subscription and bundle orders for Colorado shows us that they increased 30 per cent between January 1 and March 1, 1921. As yet this does not justify the suggestion that we are “raking in the dollars”, but an influx of dollars would nevertheless be desirable from subscription sources in any portion of the world. It is true, as *The Daily Press* suggests, that “Leon Trotsky and his friends have a message of great import,” and we must also accept *The Press*’s word that “it is not interested”, and note with regret that SOVIET RUSSIA does “not fit into” its “scheme of living and thinking”. The system of civilization which has supplanted the old regime in Russia, which has made some progress in absorbing some of the border countries of Russia, and which, furthermore, has now for three years been causing the rulers of all the rest of the world to tremble at the possibility of its extension, is perhaps of sufficient importance to demand a kind of place in any scheme of living and thinking. In present-day society, unfortunately, most persons are obliged to give a larger place in their activities to scheming than to either living or thinking.

The Single Economic Plan

By LEON TROTSKY
(Conclusion)

The Unification of the Economic Departments and the Workers' and Peasants' Inspection

The fight with bureaucracy and procrastination has become, as I have already said, a very popular cry in our ranks, where bureaucracy is now regarded as an epidemic introduced from outside, which is to be fought by vigorous measures. Procrastination is not infrequently ascribed to sabotage. However, to formulate the question in this way means not to see the question at all. There can be no two opinions as to the necessity of applying strong measures against people guilty of sabotage. But to say that procrastination, slovenliness, and negligence on the part of the Soviet organizations is nothing but malicious 'sabotage or, putting it mildly, bureaucratic indifference to business in hand, betrays a complete failure to understand the very essence of our difficulties. The absurdity of the theory, which lays the blame of all our miseries upon "experts", becomes obvious when we call to mind how often complaints come in about bureaucracy and procrastination prevailing in the Party and trade union organizations. In reality, what we are dealing with is not a disease contracted from without, or mere sabotage on the part of the officials, but something far deeper, viz., the acute pains of adolescence.

The Smolny period of our Revolution was characterized by improvisation and arbitrariness in all branches. The Kremlin period is one of regular organization and Soviet law. Soviet law, with its system of trustified and nationalized industries, food levies, and card system of distribution, with the repair of engines according to order No. 1041, etc., means the deep and thorough-going regulation of our economic life. However, the Soviet machinery of organization, and the actual work of the departments lag cruelly behind the Soviet decrees pointed out above. To get practical results out of a decree, it is necessary, as a rule, especially for local organs, to ascend the ladder right up to the top of a center, then go down, ascend again to the top of another center, and so on. This is procrastination which, in essence, is bred and maintained by the lack of coordination between the economic work proper, the machinery of State, and the Soviet decrees. Sabotage, which may shelter itself in the crevices of this lack of accord, is only aggravating the evil, but is not the cause of it. There is no other way of breaking this front of procrastination except by violating or circumventing the decrees. But to observe Soviet law is just as important as the necessity to fight bureaucratic procrastination. When we investigate carefully the work of any Soviet institution dealing with things material, such as cloth or labor, we are forced to the conclusion that its work proceeds within the pretty narrow limit of procrastination on the one hand and arbitrariness on the other.

The Tsarist State Control was transformed by us into the Workers' and Peasants' Inspection, mainly for the purpose of assuring us victory over a criminal pair: viz., most lawful procrastination and most lawless arbitrariness. If it had to deal with intentional crime or vices introduced from outside, the Workers' and Peasants' Inspection might very likely have accomplished the task set before it. But the fact is that we are dealing here not with conviction and prevention of crime, but with the building up of an economic organization operating on a correct and coordinated basis. And that is why the methods of the Inspection proved ineffective. Procrastination springs from the fact that the ruins of the capitalist institutions are interlaced with the incomplete and badly coordinated socialist institutions. To defeat procrastination, it is necessary to build up socialist production so that it works smoothly.

The educational problem facing the Inspection, namely, to get the working masses interested in the business of controlling the work of departments and institutions, has, so far, not quite been solved; final judgment cannot be passed on this point before we have had indications from experience. However, with regard to the main problem interesting us; namely, the work of controlling the various departments with a view to ensuring efficiency and coordination, one thing may be said definitely: The Workers' and Peasants' Inspection has proved absolutely unequal to this task. It is utterly impossible to create a special department which should embody in itself all the wisdom of the State and really be able to control the other departments, not merely from the point of view of the conscientiousness and the business-like manner in which the work of each of them is carried out, but also from the point of view of the general efficiency, suitability, and regularity of the work as such. Every department knows that when a change of policy or the introduction of serious reforms of organization become necessary, it is useless to apply for advice to the Workers' and Peasants' Inspection. Moreover, the Inspection itself looks like a victim of the incongruity between the decrees and the apparatus for carrying them out, and in its turn serves as a potent factor of procrastination and arbitrariness.

To throw light upon the question, let us approach it on its simplest side. One might have thought that the functions of financial control by the Inspection were very clear. But even here, the Workers' and Peasants' Inspection falls into most difficult contradictions from which the work suffers greatly. Our accountancy offers one of the most glaring examples of the discord and incoordination obtaining between the various branches of the Soviet State and the industries. We continue to measure the expenditure of all departments, which

is the expenditure of human labor in the various branches of our construction, in terms of rubles which, however, long since have ceased to be the measure of anything. The credits asked for various works are often calculated by complicated methods, but the practical value of such calculations is more often than not, nil. It is perfectly clear, that in this respect, the widest avenues are open for bureaucratic pressure, connivance, arbitrariness, and downright sabotage, because the Inspection may demand from the departments complete "proof" in justification of the figures submitted in estimates or accounts. The formal criterion of control gives no guidance here. Even an energetic and experienced worker, say, in the food supply, or in the forestry business, or in the business of buying horses, may, after he has taken into consideration his recent transactions, fix the approximate sum which he requires for his operations, and making due allowance for locality and time, his figures may err, say, 50 or 100 per cent, or even more. But the representative of the State Control has no empirical criterion derived from experience. We have no index of prices to which one can refer and we cannot have such an index. The consequence is that the controller will either let things pass, attaching his signature to each and every estimate and assignment, thus easing the responsibility of the heads of the departments without improving matters; or he will combine delay with arbitrariness, be exacting, and demand elaborate reasons for estimated items which, however, cannot be given, and will impose prohibitions in cases when the nature of the business is not understood by him. The more cautious controllers who steer between the Scylla of controller's bureaucracy and the Charybdis of controllers' arbitrariness are straining at a gnat and swallowing a camel.

The position of the Workers' and Peasants' Inspection is yet incomparably more difficult when it passes from questions of formal control to those of the general estimate of the work of the department as such, from the point of view of its advantage to the State and to industry. Taking the work of a department, the following typical offences may be observed: (1) Extraordinary delay in consequence of inner departmental and inter-departmental friction and difficulties; (2) Infringement of decrees and of the rights of other departments in order to get through urgent business in time; (3) Carrying through smoothly, in accordance with the law, without any delay or arbitrariness, business that may be in itself unsuitable. Further, one may come across various combinations of these three faults.

If out of the activity of any large department, we pick out cases where precious time was lost on account of strict adherence to the letter of the law, any department might be represented as an organized center of arbitrariness. The question naturally arises: Why does the Workers' and Peasants' Inspection let such cases pass? The reply would probably be, that the controllers of a given department were convinced that delay arose from outside

difficulties, such as lack of commodities and incoordination of the organization, and that the circumvention of decrees was in most cases caused by the necessity to achieve practical results without inflicting any injury upon some higher interests.

It is much easier to pick out a dozen or so of sins of omission or discrepancies than to estimate properly the work of institutions and departments from the point of view of efficiency and expediency. For such estimates a broad statesman's outlook is required, a much broader one than the outlook of the people who do the work. It is necessary that the controller should have a clear idea of the general trend of the work of the given department, of the nature of the difficulties which he has to overcome, and in this connection should be able to estimate the results achieved. This is an exceptionally difficult task due to the lack of coordination and proportion in the work of the various departments; the most energetic and intelligently guided efforts in metallurgy may be reduced to naught in consequence of insufficient or badly coordinated work of the organs of food supply or transport; on the other hand, the well-organized work of engine repairs may be paralyzed by the low productivity of the metallurgical works, or by the lack of clothes for the workers. It would be naive to assume that the Workers' and Peasants' Inspection is capable of occupying a position above all the other departments, from which height it may review all their faults and shortcomings, apportion the value of each of them in the general scheme and in the perspective, and draw from this all the practical conclusions. This would actually mean to assume that the Workers' and Peasants' Inspection, standing above the departments, is in possession of precisely that single economic plan, which the ordinary departments have not yet been able to create. This is, of course, impossible. An independent organ which stands outside of the economic departments cannot unite and direct the work of the latter. This can only be done by the combined efforts of the economic departments themselves.

NEW PAMPHLET ON RUSSIA

We have just received a new pamphlet entitled "Medical Relief Work in Soviet Russia," published by the Soviet Russia Medical Relief Committee, Room 506, 110 West 40th Street, New York City. The price is fifteen cents.

The pamphlet contains an address delivered by Mr. Martens at Madison Square Garden, New York, on September 2, 1920 as well as a fuller version of Mr. J. L. Magnes' address at the Philadelphia Opera House that which was printed in SOVIET RUSSIA a few weeks ago. Particularly interesting is that portion of the pamphlet called "How the North-Western Government was Organized," which records the selling of supplies of American flour in Esthonia to secure money with which to finance Yudenich's military attack in Petrograd, as well as the political organization of his rear.

The Care of Children in Soviet Russia

By ARTHUR J. WATTS

(Conclusion)

The Health of School Children.

The People's Commissariat for Public Health is responsible for the medical and dental inspection of various school children and has its doctors and dentists attached to the various children's colonies and schools.

This Commissariat is also responsible for the physical culture of the children and cooperates with the Commissariat for Public Instruction in the organization of games and gymnastics and has established one or two special schools for physical culture in which boys and girls live and are specially trained to develop their athletic ability or to correct some physical defect.

Homes and Schools for Tubercular Children.

The Commissariats for Health and Public Instruction cooperate in the maintenance of special homes and schools for children suffering from tuberculosis, but who are able to receive lessons. These homes are all on the outskirts of the town or in the country. Fresh air treatment and sun baths are very thoroughly applied. The children are as brown as berries all over and in warm weather lie in the sun for six hours every day. Lessons are given out of doors and by graduated treatment the children become hardened to the cold.

The cases of bone tuberculosis look very healthy apart from the affected limb and many very remarkable cures have been effected. Very great care is taken of these little ones and special food is allotted to them, but unfortunately there is not enough to meet the need, and dried vegetables for the winter are also lacking.

Forest Schools.

Here again the two Commissariats unite in the establishment of forest schools where children recovering from fever and sickness are sent to recuperate, or children threatened with consumption are given a chance of regaining their strength.

Open air lessons, meals, and sleeping are the rule, with the sun bath and bathing pool, all in the middle of a huge wood.

The open air life develops a love of nature and the children have collected and arranged excellent Natural History Exhibitions. The school I visited had once been inhabited by two wealthy ladies with 60 servants, and now about 50 children enjoy a three months' period of recuperation here under ideal conditions.

As is the case in summer colonies and many other institutions, they wear a single garment during the summer days, with a loose overall to slip on in the cool of the evening.

Schools for Deaf and Dumb.

There has been some development of these schools

since the Revolution, and the two Commissariats cooperate in the management of such institutions. Those which were at one time limited to wealthy children are now open to all.

Schools for the Blind.

Petrograd is rather ahead of Moscow in this respect. Moscow has a very large institution for blind children, which was established many years ago, and though it is doing good work, it is old-fashioned both in its method and atmosphere. There is not the same spirit of comradeship between teachers and children as one finds in all the new institutions.

I understand, however, that all the blind are being registered with a view to something more being done.

The Children's Commission.

According to a decree, no child is to be tried by the ordinary tribunals, but is to be brought under the consideration of the Children's Commission. In Petrograd this decree seems to be efficiently complied with. In the provinces, however, and to some extent in Moscow, children are still tried and condemned by the tribunals, owing to the lack of sufficient people with the proper qualification to serve on Children's Commissions. In most cases, however, children are removed from the prisons by the action of the Children's Commissioners, though some delay often occurs.

The Children's Commission is also interested in the welfare of mentally defective children in all degrees of deficiency.

In Petrograd there is a very efficient reception home for children arrested for crime or sent by school teachers as being incorrigible or unable to benefit by ordinary school training. These children are not regarded as criminals but are well cared for, and during their stay of 28 days they are made as comfortable as possible. The staff consists of doctors, psychologists and teachers who carefully observe the children and decide what kind of treatment will best meet the individual case.

Some cases can of course be diagnosed at once, but all children remain 28 days in order to make sure that they are free from infectious diseases before being sent on to a home or colony.

In Moscow a similar reception house has just been established, but is inefficient through lack of a qualified staff and material equipment.

The Mentally Defective.

On Kamenney Ostrov ("Stony Island") in Petrograd there is a special home for mentally defective children. Here Professor Griboyedov with a staff of five doctors and eight teachers carefully examines the children, and either keeps them in his colony or sends them to some other home. There is a very

excellent laboratory and library of books dealing with the subject, on which he seems to be an expert. The same friendly spirit exists between staff and children as in other colonies and the children seem to enjoy life there very much. There is no hesitation about being examined; in fact the children are eager to be allowed to visit the laboratory.

Careful records are kept by the teachers and doctors alike, and when a child is discharged or sent to some other colony for mental cases, instructions are given as to the kind of training or treatment that is required.

Cases of paralysis are also treated by a system of electric therapeutics, though they are badly handicapped through lack of equipment. Six hundred children have passed through this home and 80 doctors and 220 teachers have received training there since it was established about two years ago.

Schools for Neurasthenics.

Special schools are arranged by the People's Commissariats for Education and Health for nervous and neurasthenic children, where special treatment is given and lessons arranged in accordance with the child's temperament. A very large extension of a Children's House of this type is now being arranged in Moscow.

Auxiliary Schools.

Special schools are arranged for children who at the age of twelve are behind in their schooling, but are capable of learning if given more individual help. They attend these classes in addition to their ordinary school course.

Schools for Backward Children.

For children who are unable to respond to the ordinary school training special schools have been arranged. These come under the care of the Health and Public Instruction authorities jointly.

There are 10 such schools in Petrograd and several in Moscow.

Special Trade Schools.

Special Trade Schools have been arranged for boys and girls who do not respond to ordinary mental training but are capable of developing some skill in manual occupations.

Care of Epileptics and Lunatics.

Special colonies are maintained by the Commissariats for Health and Public Instruction, for the care and training of epileptic, idiotic, and lunatic children. These are mostly in the country under the charge of competent doctors and much valuable research is being carried on with a view to improving the treatment of such cases. As a general rule children up to the age of 12 are in separate homes from the others.

Moral Defectives.

I have already mentioned in the paragraph on the Children's Commissions that children who are arrested for crime are carefully observed for a period before being sent to institutions.

Where the crime is found to be the result of a mental defect the child is treated accordingly without any distinction being made between it and any other child in the same institution.

Where the crime is due to evil surroundings the child is sent to an ordinary home or colony, but where some definite moral defect or social backwardness is manifested the child is sent to a home for Moral Defectives.

There is such a home in a house which used to belong to the tailor of the late Tsar. Here, under ideal surroundings, Professor Belski has charge of 34 boys and girls. He has on his staff a doctor and teachers as well as manual instructors. The principle on which they work is that the aim to be accomplished is to educate the socially backward in social responsibility and to re-direct misdirected energies into right forms of expression. Their method is to give a general education with special emphasis on manual work for those whose energies are misdirected, and special attention is given to the development of collective responsibility. Discipline is maintained without punishment, but a system of natural consequence (no food till hands are clean, etc.), and isolation for anti-social acts. The period for which a child is detained is not determined by the nature of the crime it has committed, but by the way in which it responds to the training.

Parents are allowed to visit their children and after three months children may go home for occasional week-ends. Such week-end visits to their homes form a valuable test and the child is observed on return to see if there is any tendency to relapse into former habits after contact with its old associations.

On discharge every endeavor is made to get the children sent to the country away from the temptations of town life.

There are also several colonies for morally defective boys and girls, run on the lines of the George Junior Republic.

From a visit paid to several of these institutions in Petrograd it is my impression that the results are good, and out of the cases which have gone through such homes and colonies during the past two years only four per cent have returned for a second offense.

In Moscow, unfortunately, there has not been so great an improvement as in Petrograd, nevertheless what was once a children's prison with cells and iron bars has now been turned into a reformatory school. The iron bars and military guards have been done away with, but unfortunately some of the old instructors and staff do not seem to be inspired with any great enthusiasm for adopting new ideas. Another institution has been transformed into a "Children's Home" for moral defectives (boys only), but they do not seem to have reached the efficiency of the Petrograd colonies and the spirit of the place is too institutional and not home-like enough. There are also a number of boys between the ages of 14 and 18 in one of the Moscow prisons. Several were condemned by the tribunals

to death or life imprisonment for murder and robbery with violence, but the Children's Commission has obtained commutations for them and it is hoped that before long they will be able to establish colonies and homes to which they can be transferred.

The Care of the Sick.

The People's Commissariat for Public Health has established special dispensaries, hospitals, and sanatoria for sick children. These are in addition to the schools and colonies which it manages in cooperation with the Commissariat for Public Instruction for weak children who are able to study.

Unfortunately the supply of medicines and appliances handicaps a great deal of this work.

The Feeding of Children.

The People's Commissariat for Supplies is responsible for the feeding of the whole population. This Commissariat supplies food to schools, colonies, and children's homes. It has also established special children's kitchens of its own where children receive one warm meal per day.

Children are also fed in the ordinary communal kitchens or their parents can obtain food for them by means of ration cards.

Special Kitchens for Undernourished Children.

The Commissariat for Supplies and the Commissariat for Health have both established special kitchens where weak and undernourished children receive an extra ration. There are already four such kitchens in Moscow and two more are being prepared.

Mr. Watts' Comments.

The foregoing is an attempt to give a general impression of what is actually being done for the care of children in Soviet Russia.

In the carrying out of the full program there are many difficulties and some failures. Many of the institutions are quite new types to Russia and there is not a sufficiency of trained personnel. Some homes are unsatisfactory because of inefficient staff, lack of suitable accommodation or equipment, and a few have had to be closed down. Every month, however, sees a distinct move forward towards the realization of the full program. Workers are being trained by special courses and the inefficient are learning by experience. Homes are being remodeled and renovated ready for new homes or colonies. Generally speaking the organization in Petrograd is superior to Moscow and the personnel better trained. Petrograd is also more fortunate in having a large number of buildings suitable for homes, etc.

The People's Commissariat for Public Instruction and the People's Commissariat for Protection of Health are uniting for a "Children's Week" which it is hoped will result in a greater development of child welfare work.

Schools, like all other institutions, have suffered through lack of proper personnel. Many of the old teachers are incapable of teaching according

to the new methods, and the new teachers have only had a very short training; but 1921 will see the introduction into the schools of the first batch of teachers who have received a full course of training under the new regime.

I have often heard the criticism that there are a few very good institutions of each type for show purposes, but that the majority are really very poor. This is a half truth. It is the aim of the authorities in each department to maintain Standard Institutions of each type which shall be as perfect as possible. In these Standard Institutions doctors, nurses, and teachers are trained with a view to their being sent to other institutions or to open new ones. The advantage of having Standard Institutions as training centers is obvious. They also form a standard which other institutions are urged to emulate.

Another common criticism is that the Russian Government is interfering with home life by putting children into institutions. So far I have not come across any instance of compulsion being used to put children into institutions other than in cases of crime. It is true, however, that the greater certainty of the children's receiving food and clothing in Soviet institutions results in a desire on the part of some parents to place their children in commune houses or colonies. A great amount of freedom is allowed to parents to visit their children and the atmosphere of the homes and colonies is not at all institutional, but very homelike.

Homes and colonies run by private organizations such as "The League to Save the Children," "Society of True Freedom", ("Tolstoyans"), or Trade Unions, receive from the Soviet authorities the same ration of supplies as are given to Soviet institutions.

No religion is taught in the schools or colonies except that the significance of certain religious holidays is explained. Parents may visit their children on Sundays and give them instruction in religion if they so desire. Children and teachers are allowed to hang ikons on their beds but no ikons are set up by the authorities.

Coeducation has been much criticized, but I am convinced that as a general rule the results are undoubtedly good. I have been much impressed by the natural comradeship which exists between boys and girls. In a few cases where coeducation has been suddenly adopted with older boys and girls unsatisfactory results may have occurred, but on the whole the change seems to be good and especially so as coeducation commences at the age of three and continues as the natural consequence throughout school life.

There is a great shortage of food and clothing, particularly in the provinces where the opening of schools, colonies, homes, and food kitchens is held up simply through lack of supplies.

It is my impression that in general the machinery for child-welfare already exists and that if Russia only had the supplies her children would be thoroughly well cared for and that in a very short time her institutions would be examples for the rest of the world to follow.

On the Way to Moscow

By LT.-COL. B. ROUSTAM BEK

GOTHENBURG, February 4, 1920.

FINE weather—rare in January—favored our journey from New York. The Captain of the SS. *Stockholm* called the voyage “exceptional”. And, indeed, it was an exceptional trip for our party. After our bitter experiences in America, here on board the Swedish steamship we enjoyed hospitality. The Captain and his staff, as well as most of the passengers, were most cordial. There were, as might have been expected, certain elements aboard which poisoned the fresh air of the ocean. But we took the proper steps to render these harmless.

All the comrades were happy and much refreshed by the voyage. Harmony ruled among the members of the Russian Soviet Government Bureau homeward bound to Soviet Russia. Every evening there was dancing and singing and, amidst the Swedish and American flags decorating the saloons, the “International” was sung frequently, while the picture of the King of Sweden watched this unusual performance. The smoking room was transformed into a “Red Club”, and sometimes, this being “Swedish Territory” and far from “dry”, became a rather noisy place.

Small incidents relieved the voyage of any danger of monotony. For instance, one of the “passengers” who occupied a neighboring cabin to that of Comrade Martens attempted to persuade some of the comrades not to go to Russia but rather to stay in Scandinavia. One young girl was even offered a good position and a considerable sum of money to desert our party—needless to say, without effect. On another occasion two “passengers” were caught entering one of our staterooms “by mistake”. I had the privilege of intercepting one such attempt. We took energetic steps to guard against such occurrences. Failing in these tricks, the “poisonous elements” fell back upon familiar provocative methods, equally fruitless.

On the evening of February 2, Comrade Martens was informed by the Captain that the Swedish Government had refused to allow us to land in Sweden and that the *Stockholm* would not enter the harbor of Gothenburg, but would be held out at sea where a small boat of 1,000 tons would take us on for the trip to Libau. Comrade Lomonossov and Comrade Ström, the Representatives of Soviet Russia in Sweden, confirmed this information by wireless and promised to come to meet us on board the *Stockholm*. It was rumored also that a strike of the engineers was on in all the Swedish ports and that the boat, the *South Sweden*, which was to take us aboard, was manned by scabs. (This subsequently turned out to be a misunderstanding.) It was natural, therefore, that Comrade Martens should inform the Captain that we would refuse to embark on that ship. Later in the evening, however, the following notice was posted: “All passengers holding tickets for Libau and Riga must

be ready for debarking at 5 o'clock tomorrow morning. Breakfast at 4:30. (Signed) Swedish American Line, February 2.”

This caused great excitement in our party, and especially in the third class where, under very difficult conditions, there were about two hundred Russians, seventy of whom had been deported by the American Government. There were meetings of committees representing the various groups, and after a general conference with Comrade Martens, it was decided not to obey the order. A special watch was organized and part of the comrades remained all night in the saloons and on deck. Great activity was shown also by certain of the “passengers”, who wandered throughout the boat almost all night. At 1 A. M., February 3, Comrade Martens saw the Captain and firmly declared that none of the Russians in either class would voluntarily embark on the *South Sweden*. Comrade Martens insisted that we must be allowed to enter the port of Gothenburg in order to meet the Representatives of Soviet Russia and to make necessary purchases in the town. The Captain, who had treated us with real courtesy, was much upset and assured Comrade Martens that the orders which he had received from the Swedish American Line were forced upon the latter by the Swedish authorities and that unfortunately he had to fulfill the order.

“What do you propose to do if we will not leave our cabins?” asked Comrade Martens. “I shall be obliged to use the fire hose,” replied the Captain half jokingly. Comrade Martens then sent wireless messages to the Swedish American Line and to Comrades Ström and Lomonossov. A plan of campaign was elaborated and the comrades were advised to go to their beds and to lock the doors of their cabins. Together with Comrade Safron and some others, I remained on watch in the saloon.

At five o'clock in the morning the pilot boat came up to our steamer, but there was yet no sign of any preparation either for the early breakfast or for our transfer to the other ship. About six o'clock all the self-styled “passengers” were on the deck looking rather excited. Then at last the *South Sweden* was brought alongside the *Stockholm* which had anchored about five miles off the harbor of Gothenburg. The Chief of Police with several officers and a crowd of detectives came on board and a long conference was held in the Captain's cabin, at which Comrade Martens reaffirmed his determination. Finally the Chief of Police declared that soldiers would be sent to take us by force from the *Stockholm*. A meeting was held at once, at which it was decided that all the party should lock themselves in their cabins and that when the soldiers knocked no answers should be given; no attention should be paid even if the doors should be forced, and no physical resistance should be offered when the soldiers entered. At about ten o'clock the alarm was given and we all barricaded ourselves in our

cabins. The Swedish police remained on deck. The comrades in the third class began to sing the "International" which encouraged the revolutionary spirit of all. The situation became rather perplexing to the Swedish authorities. Comrade Martens was once again invited to the Captain's room to confer with the Swedish police. The necessity of making a separate attack on each cabin made matters very difficult. Our dugouts were not only solid, but also numerous. It was impossible to use the water-pumps to dislodge us because of the construction of the ship. Moreover, they realized the scandal which would result from this stupid policy of the Swedish Government. The police finally had to capitulate. The Bolsheviki are not easily beaten, and when he saw this the Chief of Police acceded to Comrade Martens' request to allow the representatives of Soviet Russia in Sweden to board the *Stockholm*.

Meanwhile our friends on shore had not been inactive. On the morning of February 3, Comrade Lomonossov, head of the Soviet Government Railway Purchasing Mission in Sweden, with his wife and Comrade Attorney Hellberg and another Swedish comrade, Skjöld, and Comrade Mary Modell, who was formerly with the Bureau in New York, went to the pier in Gothenburg to await the expected arrival of the *Stockholm*. They had been told the day before that the *Stockholm* would dock about nine o'clock and that a Baltic-bound steamer would stand beside to take on the Russian passengers. When they arrived at the pier, however, they were told that the *Stockholm* had dropped anchor outside the harbor and that the "Bolsheviki" would be put off on another steamer and shipped away immediately. Angered by this trickery, our friends determined to see us at any cost. They hurried to police headquarters and demanded proper treatment. Professor Lomonossov bore with him a letter from the Swedish Ministry for Foreign Affairs permitting him and his companions to board the *Stockholm*. Arguments prevailed, and police headquarters sent a radio to the Captain of the *South Sweden* instructing him not to proceed until the party from the shore arrived. Our friends immediately hired a steam launch and set out for the *Stockholm*.

Amidst loud cheers, Comrade Lomonossov, with Mrs. Lomonossov, Comrade Modell, and the representative of Comrade Ström (Comrade Ström being ill) came alongside and boarded the *Stockholm*.

At about one o'clock it was officially announced that the *Stockholm* would be allowed to enter Gothenburg and that new arrangements would be made by the Swedish American Line to transport the Russian passengers in more comfortable conditions than those which were promised them on board the small steamer *South Sweden*, which could scarcely carry more than 70 steerage passengers and about 50 passengers in the second class.

It was finally arranged that the Russian passengers should be transferred to another large and comfortable steamer and the *South Sweden* should

take only the New York Bureau party and the deportees. Everything being settled satisfactorily, at about eight o'clock in the evening we entered the harbor of Gothenburg to the loud strains of the "International".

It was a real victory of the Bolsheviki over the reactionary Swedish Government.

Tomorrow the members of the Bureau staff and all seventy deported Russians will go aboard the *South Sweden* and proceed to Libau, whence the party will take a train to Riga. From there a special train provided by the Soviet Government will carry us at last to the heart of the world revolution—Moscow.

APPOINTMENT OF DR. DUBROWSKY

Important changes in the administration of relief work done in this country for Russia were announced on February 28 in a letter sent by Dr. D. H. Dubrowsky to the State Department.

Until that day the Representative of the All-Russian Jewish Public Committee, a private organization, Dr. D. H. Dubrowsky, has now been appointed by the Jewish Division of the People's Commissariat for Nationalities, to act as its Representative in the United States, with instructions to "supervise the relief work for all those nationalities for whose support or relief charitable enterprises may be or have been undertaken within the United States."

An Act of Congress of June 15, 1917, requires anyone representing a government, faction, or insurgent group to give notice of his mission in this country to the Secretary of State. Being uncertain as to whether his appointment comes within that act, Dr. Dubrowsky has brought the matter to the attention of the State Department in order to comply with its provisions. The letter follows:

February 28, 1921.

The Honorable The Secretary of State,
Washington, D. C.

Sir:

I beg to inform you that the Jewish Division of the People's Commissariat for Nationalities of the Government of the Russian Socialist Federal Soviet Republic (Evotdel pri Narodnom Commissariate po delam Natsionalnostei) has appointed me its Representative within the United States. My instructions are that I supervise the relief work for those nationalities in Russia, for whose support or relief charitable enterprises may be or have been undertaken within the United States.

Being uncertain as to whether this appointment comes within the Act of June 15, 1917, Chapter 30, Title 8, I have the honor to bring this matter to your attention in order to comply with the provisions of that act.

I beg to remain,

Respectfully yours,
(Signed) D. H. DUBROWSKY.

Commerce and Recognition

A NEW NOTE TO ENGLAND

[Next week's issue of SOVIET RUSSIA will contain a number of items showing what are the commercial relations now being resumed between Russia and other countries. The fact that Krassin is reported to have come back to London for further negotiations on the Commercial Treaty between England and Soviet Russia would indicate that the Treaty has not yet been signed.]

On February 4, 1921, Mr. George Chicherin, Commissar for Foreign Affairs, sent the following note to the British Government:

The Russian Government has duly acquainted itself with the Draft of the Trade Agreement and the various proposals and suggestions connected therewith which were transmitted by the British Government through Mr. Krassin. We are glad to ascertain that as regards the clauses of the Trade Agreement itself there exist no such profound divergencies between the two governments which would not admit of adjustment through further discussion between Mr. Krassin and the competent British department. The principal obstacle to the signing of the Agreement is, however, the preamble which the British Government desires to amplify and to enlarge without proper negotiations beyond the limits of the basis that was mutually agreed to by the exchange of notes of June 30 and July 7. Regarding this question, the Russian Government is of the same opinion as the British Government as to the fact that this basis expresses the principles of mutual obligations in the most general and vague form leaving ample room for misinterpretations, misunderstandings, and possible mutual complaints and frictions. Seeing that the British Government desires to attain as clear a definition as possible of these obligations and to remove all ambiguity from the relations to be established between both countries with the purpose of creating a real solid basis for their friendly relations and of elaborating the conditions for bringing about peace in the East so desirable to both parties as well as to the rest of the world, these considerations have impelled the Russian Government to insist upon political negotiations without which the Agreement will hardly produce the desired results. A glaring example, namely of the misunderstandings, false conclusions, and unjust complaints resulting from unclear definitions of the June-July Agreement as well as from misrepresentations and false statements of the real facts can be found in the notes of the British Government of October 2 and 9, and must be recalled in the following brief recapitulation.

It was untrue that the Russian Government was sending troops to Persia. As a matter of fact, as soon as the remnants of the White Guard forces in Enzeli had been dealt with, the Russian military and naval forces evacuated Persian territory and since then have not entered it. The fact of the liquidation of the White Guard forces in Enzeli was a necessary act of self-defence of the Russian Republic and can in no case be considered as directed against British interests. The assertion that Bolshevik troops were despatched to Asia Minor was further completely untrue and can only serve as an example of the British Government's misinformation as to the real happenings in the Near East. The Russian Government was not, and is not, engaged in any military conspiracy against British interests in Asia Minor. It has not threatened, and does not threaten the invasion of Khorasan and has not created in Tashkent any organization. We must also emphatically protest against the assertion that the Russian Government has brought about the revolution in Bokhara and that this revolution pursued the aim of an attack against British territory and interests, since as a matter of fact the liberation of the working masses of Bokhara was their own work, and that these working masses in liberating themselves had and have no aggressive designs against any other people or country. It is also untrue that the Russian Government attempted to conclude a Treaty with Afghanistan, with the aim of inciting a tribal rising on the Indian frontier. As to the attempts of identifying the Third International with the Russian Government, they have no more value than an attempt would have of identifying the Belgian Government with the Second International, which has its seat in Brus-

sels, or the British Government with International Organizations, having their center in London, or with the same Third International, to which a British Communist Party is affiliated on a par with the Russian Communist Party. The Russian Government strictly adheres to the conviction that analogous misunderstandings and misinterpretations will be inevitable, so long as both governments will not come together for an exhaustive discussion, and will not clearly and without ambiguity define their mutual obligations and the limits of the reciprocal interests which both parties must refrain from violating. Although the British Government, contrary to our opinion, considers the mutual obligations of the June-July Agreement as being already in force at the time of above Notes, it did not regard itself as violating this Agreement when undertaking, in the East as well as in the West, hostile actions against the Russian Republic in every possible way. In the same countries in which your Notes of October 2 and October 9 falsely attributed to the Russian Government hostile actions against Britain, it was in reality the British Government which conducted and is still conducting a policy of implacable hostility against Russia. In Persia, British military forces rendered help and assistance to the Russian White Guards who threatened the security of the Russian Republic, as well as that of her ally the Azerbaijan Republic, and up to the present date British influence in Persia is directed towards preventing the conclusion between Russia and Persia of a peace treaty advantageous to both countries and containing nothing that would bring prejudice to any other country or which would involve any menace to them. In the Caucasus and Asia Minor the Entente Governments incessantly try to bring about actions threatening the security of Russia and Azerbaijan. British and other Entente agents are constantly attempting to incite rebellions in frontier regions of the Soviet Republics. The incessantly defiant and provocative attitude of the Georgian Government towards Russia would be impossible were it not backed by Entente diplomacy. On the Black Sea, British as well as French vessels are attacking Russian ships or those of other nationalities which bring goods to Russian harbors, and the British destroyers, such as the "Invincible", are lurking in neighboring waters in order to conduct hostile actions against Russian trade and Russian shores. During the period when the working masses of Armenia had not yet thrown off the yoke of militarism and capitalism, the counter-revolutionary Dashnak Government that existed at that time systematically opposed all the lawful demands of the Russian Government and its action was rendered possible only by the approval of the Entente Governments. As to the Turkish National Government, no day passes without statements of the British press to the effect that Great Britain seeks to prevent the establishment of friendly relations between Turkey and Russia, and to drive the Turkish Nationalist Movement upon the path of hostility against the Soviet Republics, although without effect. Whereas the revolutionary movement of the toiling masses of Bokhara is remote from any aggressive intentions against Britain or any other country, we have documentary evidence proving that the previous despotic government of the Ameer of Bokhara relied upon the support of British agents when preparing attacks upon Russian territory. The efforts of the British representatives are also known to us, which are aimed at inciting Afghanistan against Russia, although the Afghan Government, cognizant of its true interests, deliberately refuses to enter the path of hostility against the Russian Republic. In all the western countries which are in some touch with Russia, Great Britain has invariably pursued the same policy of hostility against our Republic. The Polish hostility against Russia and Ukraine and the armed insurrection of the ex-General Von Wrangel would have been impossible without the active help of the Entente

Governments. The landing operations of Wrangel's troops would not have taken place without the help of the British Fleet and without British coal, and the enormous quantity of British equipment and ammunition that was in the possession of Wrangel shows how far the British Government was implicated in fomenting this counter-revolutionary insurrection against the Russian Government. Diplomatic action of the British and other Entente Governments opened the way for the transport of arms and ammunition to Poland, a great part of which was of British origin, as, for example, in the harbor of Danzig, it was British influence which, in spite of the opposition of the local workers, compelled the ammunition to be unloaded and transported to Poland. In the South, Bessarabia was incorporated with Rumania by the British and other Entente Governments, without the knowledge of Russia and Ukraine. Up to the present date, the Entente press gives daily proofs of the continued hostile activity of the British and other Entente diplomacy, aimed at inciting new foes and new hostile actions against the Soviet Republics, thus undermining at the very root the possibilities of trade with the latter. So profound and strong, nevertheless, is the Russian Republic's desire for peace and trade that, in spite of these facts it stands by its decision to conclude with Great Britain the intended trade agreement, but it considers as necessary at any rate the introduction of the following amendment in the preamble:

Since the British Government has already declared its consent to the enumeration in the preamble of those countries in which the British Government engages itself not to undertake any hostile action against the Russian interests, we demand that after the words "especially in Asia Minor, Persia, Afghanistan, and India" the following words should be inserted: "On the other part, the Government of the United Kingdom will desist and refrain from undertaking or assisting any hostile action or propaganda in any form against the interests or the security of Soviet Russia in the above-mentioned countries, as well as in the countries which formed a part of the former Russian Empire, and which have now become independent states on the ground of the right of the peoples to self-determination, and will also refrain and desist from encouraging or supporting in any way hostile actions against Soviet Russia on the part of Japan, Germany, Poland, Rumania, Hungary, Czecho-Slovakia, Bulgaria, Greece, Yugoslavia and will not interfere in Soviet Russia's relations with other countries, and will not hamper these relations. The contracting parties reciprocally engage themselves to respect the independence and integrity of Persia, Afghanistan, and the territory of the Turkish National Assembly."

The recent judgment in the Sagor case makes it more over clear to the Russian Government that the confirmation of this decision, by a higher court, by similar judgments with reference to Russian gold or goods would render the Trade Agreement unworkable and would be therefore a lawful ground for its immediate automatic annulment and that this point must be duly stipulated in the Treaty. The Russian Government must also point out that in the new Draft handed to Mr. Krassin a stipulation has been inserted referring to the general debts of the previous Russian Governments, which was absent in the earlier drafts and which must be removed at all events.

After the receipt of the British Government's favorable answer as to the adoption of the above three amendments the definitive negotiations of Mr. Krassin with the British Government will be continued regarding the adjustment of some minor divergencies of a purely commercial character and regarding the signature of the agreement.

(Signed) CHICHERIN.

TRADE RELATIONS WITH NORWAY

The following telegram appears in the Petrograd "Pravda" of January 16th.

MURMANSK, JAN. 15th. Faced with a growing demand for trade with Soviet Russia, the Norwegian Parliament, in secret session, passed a resolution permitting the entrance of Russian representatives for the purpose of negotiating trade agreements.

TO RENEW COMMERCIAL RELATIONS Latvia and Russia

RIGA, December 24.—*Latvian Vest* of December 23 writes: The Russo-Latvian commercial relations are improving lately and will soon assume concrete form. The Russian representative Hanetsky, before leaving for Moscow, had a very thorough conference with Ulmanis (the Latvian Premier) and the Minister of Trade and Industry; full agreement has been reached in all important matters. We are even informed that the representative, Hanetsky, is going to make a report about all this to the Congress of the Soviets. There are two projects for the renewal of commercial relations: the first of them has in view trade operations through the medium of the government, and the other one, elaborated by the Association of Latvian Merchants, has in view the organization of a special committee through which the trade with Russia will have to go on. During the governmental conference, in the presence of the representative, the first project was accepted, e. i. the trade will go on, on a governmental scale. This question has been recognized as extremely important, and in the course of the next few days there will be organized in Moscow a special commercial delegation. It is expected that after the return of the Russian representative concrete proposals will be made on his part.

RUSSIAN TRADE VIA ESTHONIA

The Statistical Department of the Esthonian Ministry of Trade has published the following statistics of Russian transit trade via Esthonia, from the conclusion of the peace treaty to December 1, 1920:

| Imports: | Tons |
|-------------------------------|--------|
| Total | 11,893 |
| Iron and Steel Products | 2,111 |
| Copper Manufactures | 1,638 |
| Chemical Products | 1,550 |
| Leather Goods | 1,399 |
| Salt | 839 |
| Textiles | 613 |
| Agricultural Implements | 562 |
| Paper | 470 |
| Foodstuffs | 385 |
| Exports: | Tons |
| Total | 3,514 |
| Wood | 2,382 |
| Flax | 1,132 |

Old Copies

SOVIET RUSSIA will be glad to buy copies of Volume I, No. 20 and volume I, No. 30. Will give one copy of "Marriage Laws of Soviet Russia" in exchange, if wanted. Subscribers who still have these copies on hand will confer a favor upon SOVIET RUSSIA by sending them to:

Wireless and Other News

NEWS FROM SOVIET UKRAINE

(Cable from A. Menshoy)

Moscow, February 6 (via Reval).—All rumors regarding an uprising in the Ukraine are absolutely false. I have been in Kiev, Kharkov, and Odessa. Having spent six weeks in Ukrainian cities, towns, and villages, I found everything peaceful and quiet. The peasants are readily accepting the Soviet rule.

New Soviet schools for children and adults have been opened in every village. One hundred per cent of the rural population are taking part in the Soviet elections.

There are no more Jewish pogroms in the Ukraine. The Jewish population now feels completely secure and satisfied. I spoke to hundreds of peasants and Jews and heard no complaints from any one, as was the case previously. The population is adapting itself, and getting accustomed to the new order.

All are satisfied.—From a Ukrainian daily appearing in New York.

RUBBER SHOES

The manufacture of rubbers in the rubber shoe division of the well-known Treugolnik Factory in Petrograd, which has recently resumed work, has been increased from 300 to 800 pairs of rubbers per day. A greater increase of the production cannot be undertaken at present, owing to the lack of fuel. There is sufficient raw material on hand for three years to come.

THE WOOLEN INDUSTRY OF RUSSIA

A recent number of *Pravda* states that according to data now available the production of finished woolen goods during the months of October, 1920, amounts to 660,403 arshins* of coarse cloth, 467,707 arshins of fine cloth, 399,807 arshins of worsted, 655,704 arshins of brushed wool, in all 2,187,624 arshins. These figures do not include the production in the Ural region, which would add somewhat more than 100,000 arshins.

As compared with the month of July, 1920, production has increased 113 per cent.

To train skilled workers for the woolen industry, courses have already been opened in most districts.

MILLING INDUSTRY

The milling industry in the Crimea is now being concentrated. It is expected that the total production from January to March will amount to 400,000,000 poods.*

MANUFACTURE OF PARAFFIN

In the Gachina district, province of Petrograd, a big factory has been established for the obtaining of paraffin from the mud that is found in great quantities at the bottom of the peat bogs.

* 1 arshin=2.46 ft.
* 1 pood=36 lbs.

LABOR ARMIES IN FORESTRY WORK

Moscow, January 26.—As it is impossible to carry out completely the forestry program for the season of 1920-1921 with the aid of volunteer labor the Central Committee for Forestry has found it necessary to requisition immediately for lumbering work certain sections of the labor armies in the districts in which such work is now particularly necessary, such as for example, in Murmansk and the Urals (110,000 men and 60,000 horses), the Caucasus, and the western governments, as well as northern Russia. In all 200,000 men and 91,000 horses are required.

THE STATE CREMATORY IN PETROGRAD

The procedure of cremating is not accompanied by religious ceremonies. But on the request of relatives, religious ceremonies may be permitted within the walls of the crematorium to be performed by clergymen of any religious denomination after a personal agreement between the relatives and the clergymen.

The ashes, after burning, are put into an urn and soldered up. The urn with the ashes can, according to the wish of the relatives, either be placed in the columbaries of the crematory, or buried in the cemetery, or given up to the relatives.

No charge is made for cremating the corpse, nor for the grave, nor for delivering the corpse to the crematory through the district burial division.

The furnace of the crematory works day and night.

POSTERS MADE IN GERMANY

The following letter recently issued from Berlin seems to indicate that the posters published in SOVIET RUSSIA two weeks ago were printed in Germany by order of the Soviet Governments

The Scientific-Technical Department of the Supreme Council of National Economy, Berlin Branch, has established a Bureau of Economic and Industrial propaganda. Its task will be to explain to the popular masses the tremendous importance of the means of communication, of the factories, shops, etc. for the reestablishment of the economic and industrial life of Russia. The propaganda is being conducted in a telling way, viz. through posters that are printed here in Berlin in large quantities and are forwarded to Russia. From among the posters that are being printed at present we may mention:

"There is bread in the villages but hunger in the cities — restore the railroads". "The city is without bread — the factories will stop running". "Comrade, your factory is your pride". "Improve what is bad — create what is good".

In ordering the posters the artistic side was emphasized. Important Russian and German artists were interested in the work.

Foreign Section of the Scientific-Technical Department of the Supreme Council of National Economy of the Russian Soviet Republic.

MOSCOW WORKERS' FIRST HOME

The Moscow Soviet has succeeded in establishing, 16 miles from Moscow, its first Recreation Home, the beginning of an entire series of such establishments.

By the spring the Moscow Board of Health expects to open so many houses of this kind, that it will be able to receive in them simultaneously one thousand workmen and women.

The request to assign workers to the recreation homes struck the factories and works like a bolt out of the blue sky. Opinions, discussions, conjectures, flew about in great profusion. The aged workers, those most in need of such recreation, at first seemed to be doubting Thomases as to the value of these improvements. Their conversations indicated that they did not believe it was possible anyone would be interested in their comfort to the extent of providing them with a few weeks of recreation.

I wish I could repeat the conversations that were held in the factories on this occasion, when the first workers reported in order to set out for the Recreation Home. But they did have a germ of faith in the possibility of the realization of the scheme, and therefore all marched to the Recreation Home. Almost all of these workers were non-partisans, some of them even illiterate. But their con-

fidence in the Soviet power was so great that they did not believe the insinuations spread among them by its enemies.

A man of about sixty was pointed out to me with the words: "When he came to the Recreation Home, he wept all day; so did his old woman. She came with him and cried."

I turned to him: "Is that true, Did you weep when you came here?"

"I did, it is true. It seemed impossible to me that anyone would think of looking after me in my declining years. But now I see it is really so."

And the whole company burst into genial laughter.

"Now when we go back and tell in the factories how we were received here everyone will want to come to this place."

"But it is hard to sit around without doing any work," one aged laborer observed, "very hard." "I have been working for forty years straight on without interruption, and now I have been sitting here for two days without doing a single thing."

A veritable revelation of the nature of capitalism. The idle bourgeois, when he comes to work, finds it hard to spend more than a single day on real labor.

But the proletarian, when he tries to take a rest after forty years of labor, finds he is not used to repose.

Paternalism in Soviet Russia

The Russian Workers' and Peasants' Republic has enacted progressive and common sense laws governing the registration of parents and of births, and establishing the paternity of children. Legitimacy, the validity of marriages, the personal rights and duties of children and parents are clearly defined in

The Marriage Laws of Soviet Russia

The Revolutionary Effort

By VICTOR SERGE

(The following letter from Petrograd appeared in a recent issue of "La Vie Ouvriere" of Paris.)

Petrograd, January 22nd.
FORTUNATELY the winter thus far has been very mild. This is indeed a piece of good luck for the fuel crisis is such that a number of factories have had to be closed in Petrograd during the last few days. This was heart-breaking to many of us.

The problem is always the same: it is not that wood is lacking—wood is plentiful for a hundred versts all around—but we have not the necessary workers to cut it down, on the one hand because of the mobilization, and on the other hand, because we have not the means of compensating the field workers.

What could we give them in fact? They need manufactured articles. To furnish these, we should have to restore production, cost what it may. So long as production is not sufficiently restored to satisfy the needs of the country districts, the peasant, defiant and hostile to the city, will refuse the city his work.

I may add that the peasant seems better disposed this year: propaganda, agitation, the "Weeks for Help to the Peasant," and finally, the victories of the Red Army at the fronts, have somewhat improved the state of mind, to the extent that in the fuel crisis the central factor still remains the lack of transportation.

The number of locomotives at our disposal is exceedingly small as compared with our needs. There results the impossibility of fully feeding the centers with wood as well as with other materials. This crisis therefore occupies all minds and the daily difficulties are enormous. I recently visited hospitals that are not at all or very badly heated. Think of what sufferings are involved in a fact like this!

However, among all these unheard of difficulties—which are being surmounted by reason of the fact that they are less terrible and less formidable than they were last year—the revolutionary work is being pursued step by step. It is a gigantic work of cultivation, a work over a stony soil, torn up shells, like the soil of former battlefields. Whatever is done, whatever may be the danger and the difficulty, whatever may be the ill-will of some, the stupidity of others, our revolutionary plow cuts its furrow so deep that its mark will be ineffaceable. To be sure it occasionally deviates for moments from the straight line but it would be stupid to be surprised at this.

The first great change that I observed this year as compared with the preceding ones, is a purely psychological one. The White, who was very numerous still among the population in 1919, and even in 1920, has disappeared. You no longer meet the emaciated intellectual who confidently informs you of the approaching downfall of Red Petrograd. The food speculators have also disappeared, and the plots seem to have come to an end. No one, even of those who are hostile, any longer doubts the stability of the Communist regime.

If you knew what persistent hatred had been sworn against it by all the former possessing classes, bourgeois and petit-bourgeois, how that class surreptitiously sabotaged, you would understand the importance of this moral victory. Today, all our enemies of yesterday have entered the service of the Communist state. Naturally this is equivalent to a new danger and will contribute not a little to the creation of the baleful bureaucracy that we have thus far been combating.

The struggle against bureaucracy, the heritage of the manners of the old regime, the consequences of famine,* of officialism brought about by the war and of our fumbings in the work of Communist construction—is one of the problems on the order of the day.

You know that I am somewhat a diffident person and less inclined to be cocksure in the matter of an agreement with what may be called official optimism. And I really admire these people and the revolutionary elite.

Hardly six weeks ago we were still at war and already the demobilization (that of the classes of above 32 years) is being effected, and already we breathe more freely.

For a month, from one end of the country to another, passionate discussions are being carried on concerning the economic reconstruction of the country. The pitiless criticism, coming from the masses themselves, meets those Communists in high positions who have not been able to resist bourgeois inclinations. I am sure the matter will be taken care of; the entire party is working on it.

Parallel with this it is necessary to get rid of the bureaucracy. This will be a long and difficult task to be sure; for it is only by organizing the Communist life, in other words, the well-being, the liberty, the true democracy of the workers that this task can be accomplished. But already today these words are on every lip, these ideas in every head.

In the Communist Party the chief debate at present is on the subject of the function of the trade unions in production (and of course on their mode of organization).

Should they take charge of the administration of production (decentralized in vast regions) and begin by restoring it at any price, without recoiling from the application of the military methods which have permitted the creation and the victories of the Red Army as Trotsky would like, or should they be chiefly schools of applied communism, making no use of force except after all means of persuasion have been exhausted, and constituting from now on a workers' organization, largely democratized, as Lenin and Zinoviev would desire?

These tendencies are not the only ones, and I shall be able to give you more information on this subject soon. The next Congress of the Party will settle the question. At present it inflames all minds.

You know the contempt which Red Russia has for the democratic methods of the capitalist state. The reason is that the latter have no other object than that of masking the actual monopolization of all powers by the plutocracy. For some time the forms of an entirely different democracy have been taking shape here. Certainly the Communist Party

*The bureaucracy is one of the consequences of famine in the sense that the distribution of the extremely small number of manufactured articles at our disposal demands an apparatus of statistics, of control, of supervision, etc., that is extremely complicated. When there are three pairs of shoes to 100 persons you may imagine how easy it is to allot them.—*Author's Note.*

exercises the dictatorship and has refused its enemies all the "liberties" that would have permitted them to kill it without fail in a short time. But I have been witnessing for a number of weeks this new spectacle: great crowds (for there are 30,000 Communists at Petrograd) of workers, of soldiers, of housekeepers in which the militants occupying the most important positions of confidence mingle with each other, are passionately discussing principles of the economic organization. Plebiscites or referendums might offer more in the way of formal guarantees; but they are far from being capable of comparison with this living debate, of daily recurrence, in speech, in writing, in action (for the material is chiefly that of the various experiences actually being undergone), in which there participate the six hundred thousand members of the Communist Party, and in another way, all the active members of the trade unions.

Other discussions of less scope are being taken up in the educational centers. The new element here is that in addition to the Communists, the parents of the pupils, the teachers, etc.—in short all those interested in the question—are called upon for their opinions. The principle of instruction is being constantly discussed. The school is called: the labor school. It is to mold men who are to be first of all producers. And this is logical: to be men—free men—in the full sense of the word, men must conquer—by producing—well-being and leisure. Is this school to be a polytechnical or a technical school? Shall it give instruction in a more general or in a more specialized form? That is the problem.

To give you an idea of the far-reaching significance of this revolutionary work, let me add that we are witnessing the disappearance—by the process of natural death—of money. Free food, free lodgings, free light, free railroads and tramways; free theatres under discussion (practically realized up to 70 per cent). Besides clothing and articles of prime necessity come from the Communist stores also free.

Action and discussion are constantly in progress. Advances are being made, with life, towards life, and all this under what painful conditions! I can give you an idea of this from some exact documents in my hands—of statistical nature—which I shall outline in a following letter.

The conditions are still terrible and sometimes such that the endurance and the vitality of the revolutionary people seem miraculous.

SOVIET DIPLOMACY

Relations with other governments during the last six months of 1920 are set forth in SOVIET RUSSIA, which printed the official texts of more than thirty notes sent out from Moscow during that period. These issues, bound (Volume III), comprising 652 pages, with illustrations and maps, sent postpaid for five dollars. Address

When Arms Are Fair

BY JOHN S. CLARKE

(From "The Worker," of Glasgow, Scotland, of which the author, who visited Russia in 1920, is editor.)

"The arms are fair when the intent of bearing them is just."
—Shakespeare.
"Thrice is he armed who hath his quarrel just,
And he but naked, though locked up in steel,
Whose conscience with injustice is corrupted."
—Shakespeare.

One of the humors of the Capitalist propaganda, if people could only see it, is the confident manner in which the glass-house propagandists throw stones at their opponents. Our Coalition hack-writers and some of our "most eminent" authors and artists, in this regard, meet on common ground. The British pharisee is, without exception, the most sanctimonious humbug on earth. The Russian's word is not his bond. He does not keep faith. He repudiates his contracts. These malpractices are entirely alien to the British character. But we haven't hanged the Kaiser yet, and it has recently been disclosed that our statesmen never had any intention to hang him. We haven't given Ireland, as a small nation, that self-determination we fought the war to preserve. Instead, we hush up the damning report of the atrocities perpetrated by the hired thugs called "Black-and-Tans," and issue blue papers on the atrocities committed or alleged to have been committed by the Soviet Extraordinary Commission. Our writers seldom mention Trotsky's name without prefixing "the one-time pacifist" to it as a sneer, yet the leader of the Allies' armies against the Germans, and the leader of the German armies against the Allies, if our priests and clergymen can be relied on, was the one-time pacifist Jesus Christ.

Pacifism is something that depends on time, place, and motive. Under certain circumstances everyone is pacifist. Under others most ordinary people with healthy minds will be bellicose. There was one celebrated occasion when even Jesus acted in a decidedly pugnacious manner—when he scourged the money-changers and kicked their tables over. A great deal depends on what one has to fight for, and under Capitalism, where hatred of an enemy is admittedly "organized," where the basest lying is indulged in, and most sordid subterfuges are resorted to, in order to inveigle men who have no quarrel into fighting each other for someone else's benefit, pacifism is the correct attitude. This was the pacifism of Trotsky and of all genuine Communists during the Great War.

Moreover we are all pacifists in the sense that we thoroughly believe that warfare, the systematic and calculated slaughter of human beings, is a wicked way of settling disputes. It is one of the reasons, in fact, of our being Communists. We desire a system, an international system of Communal ownership of property, wherein profit-making, surplus-producing, labor-exploitation, which are the

economic bases of most wars, will be totally extinguished. We fully recognize, however, with Hosea Biglow that under past conditions—

"Civilization has got furr'id
Sometimes upon a powder-cart."

and that the "powder-cart" will be a very necessary institution during the transition from the old system to the one we are anxious to bring to birth. During that transition, a period through which Russia is now passing, our pacifism is shelved for active militancy. Such is the period of dictatorship exercised by the new class which is "getting furr'id." It amounts to this. A gang of burglars have been forcibly occupying your house for many years. They have eaten your best food, worn your best clothes, slept in your best beds, and monopolized your leisure time for their own entertainment. They have never moved a finger to produce anything, to clean up, or to share your own good things with you. They have watched your children starve, grow bloodless, and die for lack of nourishment in sight of a table which groaned with the good things of life and which you produced. They quarreled among themselves over the loot, and persuaded you and yours to fight for them instead of fighting for themselves. All this they were able to do because they lied to you, debauched your mind, and threatened you with firearms if you raised a protest.

Suppose you awoke rather suddenly, and, during one of their periodical quarrels, snatched at a firearm and refused any longer to act the host to a crowd of parasites. Suppose further you insisted on their doing their share of the wealth-production and on receiving no more than an equitable share of the product, and suppose again that they were as equally determined to continue their vicious practice of living on you as you were determined to end it—what would you, a peaceful, inoffensive mortal, do? You would do this: You would have to terrorize this gang of bandits into accepting a higher morality even if it necessitated wiping half of them out of existence. Such in concrete form is "The Dictatorship of the Proletariat" and why the mighty Red Army of Soviet Russia obeys the commands of the "one-time pacifist" Trotsky. Russia has been clearing the aristocratic, plutocratic, and alien parasitic brigands out of her house, and doing it in many instances with their own firearms.

But the Army! The Red Army! Is it not militarism as naked and unashamed as the militarism of the brigands? No, reader, it is not. I have already in a previous chapter pointed out the essential difference. Let me relate an episode which will accentuate the point.

The Tretyakov Art Gallery

With nothing particular to do one Sunday morning, a small company of us left the hotel, walked through Kitaigorod,* crossed the Moskva, and visited the Tretyakov Art Gallery, which stands in a narrow grass-grown and ancient looking street. It is as spick and span in appearance as any gallery in this country, and the glorious collection is as intact and well-cared for as ever it was. Room after room is filled from floor to ceiling with the creations of Russia's master artists, with many of the works of the great foreigners hanging conspicuously in places of honor. Oil paintings and water-colors, etchings and engravings, chalk and pencil drawings, wood carvings and marble and bronze statuary are there in abundance. A great many of the pictures serve useful propaganda purposes. Here is an enormous canvas depicting Peter the Great's massacre of the Streltsi outside of St. Basil's. Here is one that literally curdles the blood in one's veins. It is an incident in the life of Ivan the Terrible. The Tsar is kneeling upon a gorgeous Persian rug holding in his arms a dying young man; the iron pointed staff which the Tsar always walked with is lying on the floor beside him. The face of the Tsar is haggard and colorless, the lower jaw with its fringe of beard has dropped, showing the pallid lips which appear to move; the eyes are bloodshot and protrude from the sockets, and a glare of fear and rage flashes from them as from the eyes of a wild beast. The face of the young man is hideous! frightful!! horrible!!! The portrayal of pain is ghastly; the pallor is accentuated, the eyes are closed, and across the left temple there is a rugged crack through which a stream of rich red blood trickles down the cheek, further intensifying the death pallor of the face. The delicate hands hang limply down to the rug upon which a pool of crimson is forming from the young man's ebbing life stream. The background is dark.

One shudders but is held fascinated by the almost living figure of Ivan, whose remorse for the murder of his beloved child tempers the savagery of those glaring eyeballs. One sees the escape of a human soul, and the soul of a human chained in the body of a jungle beast. The human part of the monstrous Tsar peeps pathetically from the blood-shot eyes, as, one might imagine, the soul of Jekyll sometimes wistfully peered from the orbits of Mr. Hyde. The lips tremble, one can almost see them tremble, as they mutter an incoherent prayer for forgiveness, as the terror-stricken father clutches his dying child. The atmosphere is maddening in its intensity, one wants to shut one's eyes and scream, but cannot. Those fearful eyes! They pierce the brain and linger there for days.

That iron-tipped staff! Look at this canvas! Ivan stands on the Red Staircase of the Palace. A courier has arrived and stands before him with a dispatch. The courier is reading; Ivan, surrounded by his suite and guard, is listening with apparent

interest. The courier's face is perfectly placid, but the corners of the mouth are drawn and the lips are thin. There is more than interest depicted on Ivan's face; there is a malevolent glint in those sinister eyes. One wonders why the artist has labored to produce so ordinary a scene, and with such indefatigable pains to ensure fidelity to detail. Every tassel and button, seal and ribbon, and every ornament of apparel is perfectly executed. Why the malicious look of glee in Ivan's eyes? Why the stiff lips of the courier? Look closely, reader, and you will observe something to chill your spine. That iron-pointed staff. Ivan leans his heavy body upon it. *The point of it has "accidentally" pierced the boot of the courier and is penetrating his foot to the ground.* Ivan pretends that he is unaware of the fact. The courier is reading as though nothing were disturbing him—erect, enduring the excruciating pain, too proud to wince. It is a wonderful but a gruesome picture. There are many paintings of prison life, and of the raids, arrests, and farewells of the revolutionaries of the past. The little dungeons, the Siberian boundaries, the "etapes" and the dying convicts, are all here, and all have their propaganda uses.

The appalling misery of proletarian and peasant life is contrasted with the affluence, gaiety, and prodigality of the upper classes. There are hawkling parties setting forth elaborately arrayed on sleek horses; banquet scenes, and palace interiors at festive seasons. And there are paintings of the great frozen Siberian "tract" with litters upon which the exhausted are dying; prisoners breaking their meagre ration of black bread, impatient to devour it; prisoners drawing themselves up to the barred windows six inches square, to catch one glimpse of the sweet sunshine; prisoners recumbent, with hope abandoned, despair freezing the heart, and tears falling upon the paved floor.

There are effigies of all the Tsars, and a half-dozen or more of Leo Tolstoi alone.

There are huge canvasses executed by the greatest of all modern Russian painters, Vereshchagin. They convey the one message—the utter rottenness of war. Battlefields are depicted in all their ghastliness and shame. Battles are painted with every horror that accompanies them. The desolateness and misery of military bivouacs and camping-grounds are faithfully reproduced. "The Spoils of War" is but a huge pyramid of human skulls upon which a number of carrion crows are perched, picking whatever morsels of decayed flesh remain. Had I been an artist myself, a great artist, there is one painting I would have liked to execute. It would represent the scene I witnessed in this very hall where the Vereshchagin pictures are hung.

Let me describe the subject, reader, then marvel at the depth, the profundity, and the honor of the Russian Communist spirit. We stood in the great gallery devoted to the artistic creations of Vereshchagin, the greatest anti-militarist genius of last century, if not of all time. It is divided into three chambers by means of permanent partitions. A bronze bust of the great painter occupies a pedestal

*The so-called "Chinese Quarter" in Moscow.

near the main wall. Opposite the large windows hang his tremendous canvasses, his protesting works of art, where the light may give them every advantage. In front of them in each of the three chambers stands a group of soldiers, men of the Red Army of Soviet Russia. They are without officers and number, perhaps, about fifty all told. They stare with lively and intelligent interest at the anti-war paintings in all their horror, while an art instructor (there were two men and one woman instructors) delivers to them a graphic lecture upon the message the picture is intended to convey, together with details concerning its achievement. Each instructor is an enthusiast, for enthusiasm is written on the brow and the voice vibrates with it. He points with delicate finger to the wealth of detail or lack of it, he explains atmosphere, movement, suggestion, perspective, and every fine point of consummate artistry. Then he takes the ensemble, and his gestures, facial and bodily, change, his voice alters, his eyes flash, the pink leaps to his cheek, he becomes twice as animated and twice as vehement, and his audience of Red soldiers is moved to the quick, as the orator points out to it the savagery and futility of war.

That is the difference between the Russian Communist "militarism" and the class-made, war-glorifying, hatred-organizing, truth-distorting, murder-sanctifying brigandage of Imperialist militarism. The latter teaches with calculating cunning that war is a noble calling and "brings out the best in human nature." In Russia they teach abhorrence of war, that it is cruel, bloody, vicarious and futile, and brings out the *worst* in human nature. Im-

perialism deliberately propagates its false doctrines, and elevates the ignoble trade of murder into the "noble profession" of warfare, because its whole existence is based upon mean and sordid theft, graft, spoliation, and slavery. Its propagandists dare not tell the truth, they must lie and equivocate or their rule could not last a week. Communism does not lie to its people, to its soldiers. Communism teaches its soldiers how to use the weapons of Imperialist militarism, teaches them militarist tactics and discipline, in order that they may the more successfully resist their would-be enslavers and preserve their freedom intact. And because the soldier of Communism knows the truth about the causes of war, he fights the better. His determination is that no servile army of Imperialist "hired assassins" shall ever succeed in imposing their system of banditry upon him and his fellows, if fighting will prevent it, and his strength, to use Tennyson's expression, "is as the strength of ten, because his heart is pure." The world has witnessed the coming of a military phenomenon in less than three short years. That amazing army, the creation of the "one-time" pacifist, has beaten invader after invader to pulp. Every army sent against it has gone forth a "conquering host," and returned a starving, ragged rabble. Churchill of the far north, Kolchak of the far east, Denikin of the south, Yudenich of the northeast, Wrangel of the Crimea, Balakovich and the Poles—one and all have danced their dance macabre to the music of the "International." Is not that a sufficient justification for having trained men in an art which they are studiously taught to abhor?

The Factory in Soviet Russia

By DR. ALFONS GOLDSCHMIDT

(A Chapter from the author's book, "*Wirtschaftsorganisation Sowjetrusslands*".)

HOW did the nationalization of industries take place? We have seen (early in this book) the rise of the factory committee, we have witnessed the struggle of the factory committee within its own membership, as well as in its quality as a whole, for the control of production. We have seen the swift, over-hasty, but absolutely necessary seizure of the controlling power after the outbreak of the November Revolution. This was a nationalization that had arisen organically, but had nevertheless been achieved inorganically, in a disjointed fashion. Nor was the composition of the administration of unified character. There was mostly a triple division with interlocking personal relations: business management, factory committee, controlling commission.

Let me here outline in essentials what I have learned from a report of the nationalization of the Prokhorov Factory. This report was rendered by the members of the factory committee about the end of May, 1920. The Prokhorov establishment is one of the biggest textile factories of Russia, a factory of the first order (see classification below),

and now under the direct administration of the *Glavk-Tekstil*.

From the March Revolution to the November Revolution, there was an opposition among the workers of this factory, an opposition between the radical demand for the control of production, and that of the Mensheviks. It was not an open struggle, but it nevertheless involved a laming of the will to seize production.

These interests were solidified, unified, by the struggle of the worker against the counter-revolutionary troops. This was a sharp struggle, weapons against weapons, the factory had become a fortress and in the long run had to be defended by its armed workers.

The first step in nationalization was the appointment of a control commission. This commission was appointed by the factory committee. The factory committee was appointed by the entire working force.

The *Glavk-Tekstil*, the textile center of the Republic, was then not yet in existence. The former administration was still in power. The commis-

sion therefore was faced with the task of controlling the old administration, in accordance with the general regulations for control which had already been issued by the Communist Party.

Until the foundation of the *Tsentro-Tekstil* (later *Glavk-Tekstil*) the factory still had funds of its own. The control commission had to supervise the application of these funds. Furthermore, it had to take care of the furnishing of raw materials, which had to be obtained chiefly by means of requisitions. The control commission took control of the funds. Every draft had to be signed by the business management and by the control commission.

This activity began the day after the conquest of the factory by its workers.

The control commission and the factory committee could at any moment be recalled by their worker constituents.

While the control commission as a matter of fact was already determining the business transactions of the factory, the factory committee was administering the interests of all the workers. The Communists in the factory committee were, during this period, engaged in the task of educating the Mensheviks to recognize the necessity of a complete control of production. The discussion of political questions was simultaneously a discussion of the practical affairs of the factory.

The foundation of the *Tsentro-Tekstil* was equivalent to substituting a central control for this control commission. The factory workers approved this substitution, as the central control was a national control, under the rule of the proletariat.

The foundation of the *Tsentro-Tekstil*, a centralization in administration, was equivalent also to the elimination of the factory owner, and the elimination of the factory owner in turn made the control commission superfluous, as the chief function of this commission had been the supervision of the business management as conducted by the owner.

Up to this point the workers were responsible for the appointments of administrators. Through their own organs, they had thus been the administrators. When centralization took place, this task also was eliminated. The appointment of administrative offices was now no longer undertaken directly from among the workers, but was transferred to the central organs, namely, to the central business organ, i. e., the *Tsentro-Tekstil*, and to the comprehensive representative of the direct interests of the workers, the textile union.

We have therefore been tracing the following steps: the elimination of the control commission, the elimination of the owner, the founding of the central administration with controlling functions, the founding of the union.

The influence on the appointment of administrators was now exerted through the unions. The central administration and the union, together, sought to determine the personnel of the factory administration.

The sole remaining direct workers' organization

was the factory committee. The factory committee is the nucleus of the trade union, and therefore also has an influence on the appointment of the factory administration. We shall discuss this problem later.

But the actual task of the factory committee, aside from the functions arising from the trade union according to the committee, was now the education of the workers to a socialist economy, essentially a task of making them better qualified for their work. It was no longer a direct task of guiding them toward the new system.

The workers had thus been woven into a total apparatus, into the organization as a whole by means of the trade union. They were no longer a direct instrument of the administration, but an indirect instrument. This division of functions became more and more sharply defined as the process of centralization progressed.

That is all I have to present from the report of the factory committee of the Prokhorov establishment.

Nationalization and Centralization

The First All-Russian Congress of Economic Soviets had to take up the task of drawing the administrative consequences of the already accomplished nationalizations, and simultaneously of unifying the factory administration.

The Congress naturally directed its attention chiefly to the industries that had been nationalized. They were placed under the influence of the central administration. The trade union functions were not yet so sharply defined, owing to the as yet comparatively loose organization of the trade unions.

But the necessity for appointing specialists was already apparent. The first step of nationalization was rather one of political nationalization. It was now time for the economic and technical nationalization to begin. The First Congress therefore determined that one-third of the members of the operative administration of nationalized industries should consist of technical men, and business and commercial employees. This definitely emphasizes the right of the central bodies to intervene and select.

Furthermore, administrative principles were drawn up for the trustification of a number of nationalized industries.

The term of administration was definitely set; the possibility of recall at any time had disappeared.

Certain technical and business tasks were assigned to the management of the industry, which were then still, essentially, tasks to render possible a socialist economy of orientation and transition, in other words, tasks of inventory and balance.

In addition, a personal union of management of industry and central organization (Provincial Economic Soviet, Regional Economic Soviet, The Supreme Council of National Economy) was provided for. The tendency is centralistic. To be sure, the lower centrals, especially the Regional Economic Soviets, had considerable power over the nationalized industries assigned to them. At

any rate, the determination of the Supreme Council of National Economy to hold the reins tightly was already distinctly visible.

The Second Congress emphasized even more definitely than the first the necessity of centralization, i. e., of eliminating autonomous administration. The resolutions say: "The organs of workers' control attempted to take control of the industry. They assume not only the functions of control but also the organs of the industry, not only the supervision but also the administration. Now, under the political and economic dictatorship of the proletariat, under the nationalization of industry, new conditions are arising for the active participation of the working class in the organization of economy. There have been formed regulating and organizing organs of economy, in which representatives of trade unions participate. Under these conditions, the task of workers' control must be a supervision of the running of the establishment and an auditing of the commercial activity of the factory management, as well as of the administration of entire industries. The industrial unions are chiefly interested in the carrying out of these tasks."

This was a clear formulation of the manner in which the functions of the workers, or, of the workers' organs, had been limited. The trade unions (industrial unions) took their place. The control commissions were now elected by the industrial unions, in the measure that they have been organized and centralized. The All-Russian Council of Trade Union Organizations was entrusted with the task of managing the control commissions.

The following was attained by this act: the business management was centralized, or made dependent, respectively, on the centralization, and was controlled by the unions, whose roots were in the industries. The industry was thus given a place in the national organization as a whole, but had not lost its relative function, which remained, however, not a direct but an indirect one.

In the report of the factory committee of the Prokhorov establishment mention is made of a substitution of administrative centralization for the factory control commission. The trade unions now assumed the functions of control of this centralization, in other words, the influence over these control commissions. But this control was not an administration in the strict sense of the word. It was just an administrative control, not a direct administration.

Meanwhile nationalization had advanced considerably. It now transpired how far the direct influence of the Supreme Council of National Economy and the influence of the Provincial Economic Soviets over the industries might go (accordingly a classification of industries was made by the Third All-Russian Congress of Soviets).

The enterprises were divided into three groups according to the technique of administration, into trustified enterprises (combines), and other important enterprises standing directly under the administration of sections of the Supreme Council of National Economy, further into enterprises stand-

ing under the administration of the Provincial Economic Soviets, which had again power of central administrative control over the two categories of factories: those of the second order and those of the third order (petty industry).

We therefore have to consider factories of the first order directly under the sections of the Supreme Council of National Economy and factories of the third order under the Provincial Economic Soviets. The factories of the second order are attached to sections of the Provincial Economic Soviets which have a relation of dependence on the sections of the Supreme Council of National Economy. This relation of dependence is of centralistic nature. By means of extension of their trustification, the factories of the second order are, as far as possible, transformed into factories of the first order, thus taking them out of the direct administrative jurisdiction of the Provincial Economic Soviets and placing them under the direct Administration of the Supreme Council of National Economy.

Factory Administration

The factory administration of enterprises of the first order and second order, remained for the time (and still remain) a collegium administration. The administration of the factories of the first order consists of representatives of the factory workers, of the trade unions, and of the Glavk, (the section, or center), each having one-third. To be sure, the Third Congress of Economic Soviets already permitted the possibility of individual administration in the industries of the first order, which is the desideratum set up by Trotsky.

If one-third of the administrative collegium consists of representatives of the factory workers, this is not to be confused with the control jurisdiction of which we have spoken above.

The administrative collegium of the factories of the second order have the same, or at least a similar, membership.

The administrative guidance of the factories of the third order (petty industry) is determined by the nature of these industries. Of course a collegium administration is not necessary in this case, as it may be in the factories of the first and second order.

The process of appointment is being simplified more and more. We shall speak of this again in the chapter on trade unions. At any rate, the trade unions together with the central organs have the right to confirm appointments regardless of what are the bodies from which the administrative members are chosen, or what are the bodies proposing or electing them. In the matter of appointments, the voice of the trade union is to have chief weight, but in practice the process of appointment is often of another nature, particularly when the quality of the appointee is a very serious matter.

As soon as the trustification of a series of enterprises has been accomplished, the administration of the combine ("trust administration") interposes between the industrial administration and the section of the Central (or Provincial) Economic Soviet.

The French Colony in the Baltic Sea

By A. D.

ACCORDING to the treaty of Versailles three districts located on the extreme northeast of Prussia have been separated from Germany and temporarily handed over to a French administration. This is the so-called "Memel-Land" numbering about 150,000 inhabitants. The central point of this territory is the port of Memel (in Lithuanian *Klaypeda*) the only seaport on the territory of ethnographical Lithuania.

The Allies most likely would not have made up their minds to detach "Memel-Land" from Germany if it were not for the persistent demands of the Lithuanian nationalists who kept insisting that so-called "Prussian Lithuania" should be united with "Greater Lithuania," and that the Lithuanian *hinterland* should obtain access to the sea. When, at the beginning of the World War, in the fall of 1914, the Russian troops occupied a part of East-Prussia, there was jubilation among the Lithuanian nationalists of Vilna and Kovno. Under the scepter of the Russian Tsar they had dreamt of an autonomous Lithuania which would include Memel, Tilsit, and Gumbinnen, the three main cities of Prussian Lithuania. As is well-known, their dreams collapsed with the defeat of the Tsar's army at the Mazurian Lakes.

After the victory of the Entente in 1918, the emissaries of the Lithuanian nationalists again went to work to prove to the French and English diplomats that Prussian Lithuania ought to be united with Greater Lithuania. As a matter of curiosity we may remark that many of them even asked for Königsberg, on the ground that in its vicinity there live a few hundred peasants who speak Lithuanian.

According to quite reliable statistical data, about 150,000 Lithuanians who still speak the Lithuanian language live in Eastern Prussia. In the past century Germanization has caused the almost total disappearance of the Lithuanian population, the Germanization of the city population going on with great speed. The Lithuanian peasants, the majority of whom are rich, have become one of the mainstays of the old system in Eastern Prussia. Some of the Lithuanian papers appearing in Memel and Tilsit were the mouthpieces of Prussian reactionary ideas.

For the Lithuanians in Russia, Prussian Lithuania had only this significance: that Tilsit was the center where illegal literature was being printed, to be smuggled in hundreds of thousands of copies over the Russian border, to the great discontent of the Tsar's officials.

The Lithuanian nationalists who called the attention of the Allied diplomats to the district of Memel have, up to the present, no reason to rejoice over the fruits of their policy. *In the treaty of Versailles there is no direct indication to whom the district of Memel will belong in the future*, and since the beginning of 1919 the master in that

place has been the French Governor-General Odry, and French prefects are the masters in the towns and villages. Up to the present there is not the slightest guarantee that the district of Memel will be attached to Lithuania. *But it is an almost generally known fact that the district of Memel has been already transformed into a French colony.*

The Lithuanian Telegraph Agency (Elta) has several times reported that the Memel district is being supplied all the time with more and more French troops. We are unable to indicate their exact number, but in the opinion of some reliable persons about 5,000 men have been sent there. (The whole population of the district of Memel is, as I have already said, 150,000.) Moreover the *Associated Press* reports from Warsaw: "The League of Nations' International Army to supervise the plebiscite at Vilna will probably establish its base at Memel, which is under the League's control." The Vilna plebiscite question may have important international consequences, and this can of course not be a matter of indifference to Soviet Russia. If Memel becomes the gathering point of this international expedition, then this fact is only another proof that the Frenchmen already have their own colony on the Baltic Sea.

When in the fall of last year, Russian counter-revolutionists were trying to recruit an army in Latvia, when Count Pahlen and other Tsarist officers established in Riga and other Latvian towns offices for the enlistment of volunteers, these volunteers were first sent to the Memel district, according to an agreement with the French authorities, and from there directed to the armies of Wrangel and Balakhovich. Thus the district of Memel was transformed into a meeting place of all the bought and deluded mercenaries who were destined to fight on the anti-Soviet fronts.

According to the information of the Lithuanian Telegraph Agency there was always a number of French warships in the port of Memel. *The French are guarding the shores of Lithuania in exactly the same way as the English are guarding the shores of Esthonia.*

A short time ago, according to reports of papers from Kovno, there arrived in Kovno agents of the Polish "mutineer" Zeligowski. These are a certain Lithuanian adventurer, Augsztolaytis, and his friend Vanagaytis. These gentlemen are partisans of the union between Lithuania and Poland, on a federative basis. The French imperialists are in perfect agreement with this plan, as a united Poland and Lithuania would be a strong barrier against the "Red peril," and this would secure to Poland a natural access to the sea. There is not the slightest doubt that in such a case the French imperialists would willingly cede the Memel district to Lithuania, which would be part of Poland, the ally of French imperialism. For it must be kept in mind that the deeper political meaning of Zeligowski's

adventure consists in the plan to unite Lithuania with Poland, in some way or other, to get rid of the opposing government in Kovno, and to transfer all power to the big and middle landholders in both countries.

The Lithuanian nationalist press is full of attacks against the French. They are full of resentment and indignation. They have always been eagerly asserting that France is "the defender of small nations," and now. . . . When in the beginning of 1919 the representative of France arrived in Memel, the Lithuanian bourgeoisie of that city greeted him with open arms. But the honeymoon of their political friendship did not last long. The French were not slow to find out that a Lithuania that is under the protection of British capitalism, is not a convenient executor of their plans. And thereupon they decided that it would be much better for them to remain themselves masters in the district of Memel than to give it back to Lithuania.

However, this is a splendid illustration to show how the French are anxious to preserve the rights of small nationalities. The Lithuanian bourgeoisie cringing before the Frenchmen, was rewarded according to its deserts. . . .

The French authorities in the Memel district are living in perfect harmony with the local German big land-holders and capitalists. In the directorship that manages the country, there are seven Germans and only two Lithuanians. The Lithuanian paper *Prusu Lietuviu Balsas* is indignant about it, but it forgets that no large imperialist power has ever taken care of small nationalities disinterestedly, due to a social system where profit is the basis of everything.

The strengthening of imperialist France on the Baltic, the acquisition of the Memel base by this power, in connection with her ever hostile attitude toward Soviet Russia, resulted in Moscow papers being quite disturbed in regard to events in the district of Vilna where Zeligowski is ruling, and in the district of Memel where the French Governor General Odry is ruling.*

The Lithuanian people ought to learn from this Memel experience. They suffered a great deal from the consequences of the French-Polish attack. They ought to see that their only friend is Soviet Russia.

GEORGIA A SOVIET REPUBLIC

The following cable was received on March 12 at the office of SOVIET RUSSIA:

Information has reached Moscow that Kutais, the last foothold of the reactionaries in Georgia, has been overthrown and the Government captured by the Georgian revolutionists, thus making the whole of Georgia a Soviet Republic:

—RUSSIAN TELEGRAPH AGENCY.

*A cable from Kovno (the seat of the independent Lithuanian Government) reports that the Polish authorities are forcibly impressing into military service all men between the ages of 19 and 30, inhabiting the northeastern part of Lithuania. The Polish Government is confiscating the property of those whose sons have escaped military service.—(*Ukrainski Schodenni Listy*, February 15.)

New Exaggerations Corrected

The following two cables were received on March 8 at the office of SOVIET RUSSIA:

I.

Moscow, March 5.—In view of the persistent rumors abroad, alleging uprisings, mutinies, etc., the following are the facts: Moscow and Petrograd are now absolutely quiet. A week ago, on the insistence of the workers, the food rations were equalized, thereupon workers of the Government Printing factory who had been getting extra rations protested, sending delegates to different factories, unsuccessfully endeavoring to foster strikes. The workers in other factories, insisting that the Government measures were right and justifiable, refused to join the demonstration which ended immediately. The soldiers maintained that the strike was without justification and wanted to demonstrate their disapproval of it. This is the only foundation for stories of soldiers' mutiny. A similar incident occurred at Petrograd, where the workers in a factory who had been getting extra rations objected to the equalization, but that was also quieted promptly.

Kronstadt is a separate incident and the facts are as follows, according to dispatches just received from the Petrograd Soviet: The fortress of Krasnaya Gorka, which dominates Kronstadt from the land, is maintained in our hands. The garrison of Krasnaya Gorka is absolutely hostile to the mutineers and is eager to fight them. In Kronstadt in the forts of Peredovoi and Ustye the same situation prevails. Until now the mutineers have not been dispersed only because the military authorities wish to spare the battleship *Petropavlovsk*, but if it should prove necessary Krasnaya Gorka will force the mutineers to surrender. Dissensions are breaking out among the mutineers, one faction supporting General Koslovsky, the other being against their officers and actually attacking them.

In Petrograd there is complete quiet. Even in the two factories where food and fuel difficulties caused demonstrations by some, the men now understand that they were made tools by a capitalist conspiracy. Eight thousand Petrograd sailors have held a meeting and unanimously passed resolutions supporting the Government.

At a meeting of the Petrograd Soviet, March 4th, Zinoviev gave the following history of the Kronstadt events: On February 13th the Paris "Matin" spoke of revolts in the Baltic fleet. The "Echo de Paris," February 14th, had similar stories. As at that time no unrest whatsoever existed in Kronstadt, but later occurred, it is proof that the whole affair was a deliberate plot by French agents, which fact is confirmed by the activity in Finland at that time of Czarist Russian officers and agents who managed to penetrate into Kronstadt using the food difficulties as basis. A few days later when Kalinin, president of the All-Russian Central Executive Committee, spoke at a large meeting at Kronstadt, the patrol of the battleship "Petropavlovsk" wanted to prevent his leaving, but sailors of that

battleship interfered and apologized. On February 28th, at a meeting on board the "Petropavlovsk" a reactionary resolution was adopted, but rescinded on demand of the ship's crew. On March 1st, a new resolution was adopted demanding the reelection of the Kronstadt Soviet, which was agreed to. The election thereupon began, but conspirators obstructed it, demanding that it be held on board the "Petropavlovsk." On March 2nd an actual mutiny commenced, the Mensheviks and Social Revolutionaries taking an active part, calling themselves non-partisans. The nominal leaders were Petrichenko, former purser of the Petropavlovsk and Turin, but the real leader is Captain Burksar, one of the former Czarist officers. General Koslovsky is a person of lesser importance. Following upon the meeting came the inevitable disillusionment, in spite of the frantic efforts of the aforementioned officers to maintain the morale of the mutineers by holding out hope of the possibility of escape to Finland. A Social Revolutionary paper, published in Reval and circulating in Kronstadt, held out the hope of Esthonian help. In a military sense Kronstadt was never for a moment in danger of coming under control of the mutineers to the extent of menacing Petrograd, as it was constantly covered by the guns of Krasnaya Gorka. "While mutiny now is no longer," said Zinoviev in his address to the Petrograd Soviet, "the time has come to completely liquidate this farce." Zinoviev was followed by other speakers, including Kalinin and a Kronstadt sailor, Feodorov, formerly under Burksar. The meeting then adopted a proclamation calling upon the workers, sailors and soldiers in Kronstadt to divulge the real sources of the conspiracy and stating that no attempts against Soviet power would be tolerated and calling the men back to duty, promising that those who had been misled would be distinguished from the real plotters and would be treated conciliatorily. After the meeting the situation eased as indicated above.

In a recent speech Lenin explained the food situation, saying that large stores of food accumulated had been too confidently distributed instead of being stored for a possible emergency and that when heavy snowstorms and temporary shortage of fuel brought down the train arrivals from 120 every five days to 20 the consequent lessening of rations produced a protest. The usual number of trains are now bringing food and the shortage is over. It is obvious that foreign plotters are endeavoring to use the rumors of unrest to counteract possible trade relations with England and other countries. No uneasiness is felt here, as the demonstration proved that the great masses of the workers adhere firmly to the policy of the Government and the soldiers immediately rallied to its support.

Washington B. Vanderlip arrived in Moscow two days ago and is now negotiating the consummation of his deals and projects. L. Martens and party arrived February 18th.

II.

Moscow, March 6.—The final stages of the Kronstadt adventure are marked by utter disillusionment among the participants in the mutiny. Fighting in progress among the mutineers themselves. A part want to surrender, realizing the hopelessness of their situation. This dissension began shortly after arrival of Trotzky to take charge of the situation.

The Revolutionary Military Council of the Republic has issued the following proclamation, signed by Trotsky, Kamenev, Tukhachevsky, and Lebedev: "The Government of the Peasants and Workers has ordered the immediate return of the mutinous ship into the hands of the Soviet Republic. It is ordered that all who have raised their hands against the Socialist fatherland should immediately lay down their arms, disarm the objectors and deliver them to the authorities without delay, release the arrested Commissars and other representatives of the Government. Only those who capitulate unconditionally may expect the clemency of the Republic. Simultaneously it is ordered to have everything ready to crush the mutiny and the mutineers with armed force. The responsibility for the suffering which thereby may come to the peaceful population will fall wholly on the White Guard mutineers. This is the last warning." Disillusionment was accelerated by the stores running low after the first days of pillaging. Frantic efforts by capitalist agents and other counter-revolutionists, together with Finnish White Guards who slipped into Kronstadt, to maintain the morale of the mutineers and create a counter revolutionary front went to naught. The sailors became disgusted when the aims of the agents behind the scene were divulged and refused to submit to common leadership. Some groups of sailors want to organize a new Soviet; the crew of the Petropavlovsk wants to organize an anarchist commune; others are indifferent, as there are no more stores left to pillage. Agent provocateurs tried to induce the mutineers to start bombarding but did not succeed. The whole affair is expected to dissolve at any moment.

III.

On March 10 the following cable was received: Moscow, March 9.—The fantastic stories abroad about revolutions, street fights and mutinies in Petrograd, Moscow and other cities are pure inventions. The Kronstadt affair is a separate incident without effect anywhere else. A gang of Tsarist generals and French spies took advantage of dissatisfaction among the Kronstadt sailors, whose extra rations were temporarily revoked; but now that the counter-revolutionary schemes of the plotters have been revealed, the sailors are deserting the generals and their gang. The reactionaries still control the battleship "Petropavlovsk," but our fortress guns are speedily ending the adventure. The reason why this was not done earlier is that we wanted to spare the ship and the men imprisoned aboard her. The Soviet forces, under the personal

command of Trotzky and Tukhachevsky, have the situation well in hand. Moscow is as peaceful as a Sunday in a New England village. Mild excitement, not unmixed with merriment, was caused by the receipt of wireless messages from abroad telling of bloody fights here. The alarmist reports are obviously aimed at preventing the attainment of peace between Russia and England and America.

Former members of Russian Soviet Government Bureau in New York are all busy working in various offices. L. C. Martens will make a trip through Russia to get acquainted with conditions. Arthur Adams, formerly head of the Technical Department of the Soviet Bureau in New York, is busy organizing factories with American emigrants, who are all eager to serve the Soviets.

(Signed) SANTERI NUORTEVA.
Commissariat of Foreign Affairs.

Mr. Santeri Nuorteva, formerly Secretary of the Russian Soviet Government Bureau in New York, returned to Moscow last summer. He is now Director of the Division of Entente and Scandinavian Countries in the Commissariat of Foreign Affairs.

IV.

The following cable was received on March 11: Moscow, March 10.—At the Congress of the Communist Party, attended by delegates from all over the Republic of Soviet Russia, discussing plans for the general agrarian and economic reconstruction, a speech by Lenin, voicing profound confidence, met with enthusiastic response.

Demobilized Red soldiers of the Moscow district have passed the following resolution: "Returning to civil life, we solemnly pledge ourselves to aid in the industrial and economic development of the Socialist mother country. Should the Workers' and Peasants' Government need us again for defense, we will report at the first call."

The foremost artists of the Moscow opera and stage will render a special program March 11th, commemorating the anniversary of the great Ukrainian poet Shevtchenko.

Yesterday was celebrated as an international holiday by the women workers in Moscow. A number of model day nurseries were opened for the children of women workers and for training mothers.

The Petrograd Economic Council is preparing to construct buildings and improvements on Soviet farms in the Petrograd provinces with the opening of the spring season. A special woodsawing train has been outfitted at Petrograd to carry a crew of workers to the forest regions. The train is fully fitted with the necessary tools and is equipped with all comforts for the workers.

Some one affected by crazy rumors about a counter-revolution in Petrograd, sent a radio from Reval to the Petrograd wireless station inquiring: "What government have you at Petrograd?" Petrograd replied: "We have the Soviet Government of Workers and Peasants, which possesses more stability and longevity than all bourgeois governments put together."

It is reported here that the Hoover relief in Soviet Russia has been made conditional upon the release of "innocent Americans" imprisoned in Russia. No innocent Americans are imprisoned in Soviet Russia, only a few spies, and even they might have been freed long ago had the American Government made any straightforward inquiry on their behalf to the Soviet Government.

Judging by wirelesses circulated abroad, the foreign press and public are much exercised over the alleged downfall of the Soviet Government. We are sorry not to oblige prospective undertakers, but feel too sturdy and in too excellent health just now to think of death. Therefore, please have the funeral indefinitely postponed.

Disappointed funeral directors may get good jobs here in the jolly task of sweeping out the last remnants of the counter-revolution.

(Signed) RUSSIAN TELEGRAPH AGENCY.

STATEMENT OF MEDICAL RELIEF COMMITTEE

The following statement was received from the Soviet Russia Medical Relief Committee:

New York, March 1, 1921.

We are receiving inquiries daily from people going to Soviet Russia, as to what kind of medical supplies are most needed in Soviet Russia, suitable to carry over with them. Also many of our local committees all over the United States and Canada request that we furnish them with a list of medical supplies and instruments which should be accepted from contributors.

The Soviet Russia Medical Relief Committee recommends that preference be given the following supplies when making up packages for Soviet Russia:

1. Quinine.
2. Aspirin.
3. Tincture of Iodine.
4. Protargol.
5. Castor Oil.
6. Cascara Sagrada Tablets.
7. Epsom Salts.
8. Calomel.
9. Gauze and Bandages.
10. Bland's Pills.
11. Bicarbonate of Soda.
12. Blue Ointment.
13. Green Soap, Castile Soap, Laundry Soap.
14. Hot Water Bottles and Ice Bags.
15. Combination Syringes.
16. Centigrade Thermometers, Clinical, Rectal and Mouth.

The following supplies are important, but may be used only under physician's directions:

1. Phenol or Carbolic Acid.
2. Bichloride of Mercury.
3. Chloroform.
4. Ether.
5. Ethyl Chloride.
6. Powder Digitalis.
7. Hexamethylamine.
8. Triple Bromides.
9. Aspidium.

The above medical supplies are suitable for collection by local committees for shipment to Soviet Russia. In addition to these supplies, donations of surgical and dental instruments of all kinds, rubber goods, such as surgical rubber gloves, sizes 7 and 8, and baby bottle nipples are very acceptable.

SOVIET RUSSIA MEDICAL RELIEF COMMITTEE,
Room 506, 110 W. 40th St, New York City.

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION

110 West 40th Street New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

SIR PAUL DUKES is at present in New York and on March 8 spoke encouragingly to a representative of the *New York Times* as to the prospects of the present counter-revolutionary attempt on Petrograd. When Sir Paul was in Petrograd as the head of the Petrograd branch of the British secret service, he was not yet Sir Paul, he was plain Paul Dukes: like Sir Philip Gibbs, he has since been knighted for services rendered less to the people of Great Britain than to the aristocracy that governs them. It is very reasonable that the *Times* should ask Sir Paul for his impressions of these events, for he has no doubt considerable interest in their outcome, and must be following their course very closely. His presence in Petrograd in 1918 and 1919 was not without a much closer connection with the counter-revolutionary attempts occasionally coming to the surface in that city than that of a Britisher merely interested in getting news to his home Government of the Russian events in which that Government was interested. For Sir Paul, then "Mr." Dukes, spent most of the period during which he was in Russia (December, 1918—August, 1919) in aiding to organize all bodies opposed to the Proletarian Dictatorship, in supplying them with money, in creating a spy system for the information of the intelligence department of Yudenich's army, in its attack on Petrograd, and in many other occupations of great value to the enemies of the Russian workers. Some of the facts concerning his activities in Russia were published in *Soviet Russia* for June 5, 1920, some time after their publication by the Soviet Government.

It appears that with the aid of a man named Kurtz, a former officer of the Czarist police, Dukes approached high Soviet officials, former Czarist military officers, and sought to (in some cases even did) corrupt them with money, in order to use them for counter-revolutionary military purposes, as well as for the obtaining of information that would be of value to Soviet Russia's enemies. One of Dukes' most able agents was a woman about forty years old, named Maria Ivanovna, who succeeded even in securing admission to the Communist Party, attending its meetings, and forwarding information on its activities to her employer. She regularly received information from the political section of

the Soviet Army, and stood in relations with the military censorship of Petrograd, as well as with a number of other political organs. Thanks to her, Dukes was enabled to secure contact at Moscow with the organization formed there by the adherents of Kolchak and Denikin—the so-called "National Center"—and to obtain an interview with Shchepkin, head of this body, who authorized Dukes to speak for him at London, and to whom Dukes made promises of money.

In a certain small way, the activities of Dukes had their effect. A number of his men were constantly at work spreading alarming reports throughout Petrograd as to an impending sharpening of the food situation, in order to anger the population against the Soviet Government. Wherever possible, attempts were made to emphasize evidences of discontent among the people, in order that signs of an allegedly growing disaffection might tempt those who felt in any way dissatisfied to seek contact with counter-revolution. Another object of these efforts was to produce a feeling of nervousness, insecurity, and fear on the part of Soviet leaders, in order to force them into acts of bad judgment, which very rarely ensued, however. Other bands were organized to serve as a nucleus for possible counter-revolutionary uprisings, and these bands, chiefly under the officer Kuskhev, were stationed in forests where it was hoped they would attract deserters from the Red Army to join their ranks. All of these bodies disintegrated very rapidly on coming in contact with the real attitude of the Russian people. To several leaders of such bands Dukes is known to have paid sums of money, to Skorzhinsky and Popov, for instance. In the month of March, 1919, alone, his payments to such men are known to have amounted to a considerable sum.

Dukes was officially recalled from Petrograd in August, 1919, and left Maria Ivanovna in charge of his intelligence and other work. Yudenich was then preparing his "dash" on Petrograd, which was destined so soon to turn into a swift retreat. As he approached the city, the organization created by Dukes concentrated its attention almost exclusively on military matters. In frequent reports to Yudenich's general staff, it communicated detailed data on the extent, the morale, the armament, and the distribution of the Red troops. When Yudenich was at the gates of Petrograd, it delegated a group of military men, among whom were the former admirals Bakchirev and Razvozov, as well as Lundkvist, formerly Chief of the General Staff of the Siberian Army, to raise a rebellion in Petrograd, in the rear of the Red Army. Kurtz undertook to hand out weapons to several hundred hooligans, who were to create disorder and disturbance in the streets. The plan was not carried out, however, by reason of the fact that, as Yudenich came nearer and nearer to the city, the sympathies of the population became so manifest, and the working class adopted such energetic measures for defending the city, that the conspirators felt it was safer not to risk any overt acts. Many of the participants

in these plots paid the death penalty in November and December, 1919, after Yudenich had disappeared from the stage of history and the details of the conspiracy had become known.

The movement on which Mr. Dukes' comments appeared in the *New York Times* of March 9 seems not unlike that in which he played so prominent a part two years ago. Disaffected elements have obviously been armed by foreign governments, Finnish or French, or English; forts have been seized in some cases (Krasnaya Gorka, by the way, which is still in the hands of the Soviets, was actually handed over to Finnish forces two years ago through the treason of a White Guard officer who had succeeded in worming his way into a position of confidence in the Red Army); there has been some looting, possibly by the hooligan elements that were also depended on for cooperation during Yudenich's drive. Altogether it is not an uninteresting parallel, and if Mr. Dukes will make it the subject of one of his lectures in America, we promise to attend. Thus far he has given us little information on the recent events, although we are reassured by his words: "it was easier to gain access to Nicholas II. than to the President of the Soviet Republic." We think Nicholas II. could more safely have been exposed to Mr. Dukes' access than could Nikolai Lenin.

JOHN SPARGO'S "Memorandum on Trade with *Soviet Russia*, submitted to the Committee on Foreign Relations of the United States Senate, January, 1921, in connection with the Hearing upon the Resolution of the Hon. Joseph I. France, Relating to the Resumption of Trade with Soviet Russia," has just been "reprinted with the permission of the Author" by the "Russian Information Bureau" (Mr. A. J. Sack), and circulated with an accompanying letter of praise signed by Mr. Sack himself. Like all of Mr. Spargo's work, it bears evidence of nightly toil and curious modes of thought. After beginning with an assertion that he has always considered trade with Russia to be desirable, and claiming that this proves him to possess a "sympathetic interest in the object of the Resolution by Senator France," Mr. Spargo goes on to prove, to his own satisfaction, that the United States should not trade with Soviet Russia. We shall not analyze his arguments; they are of the usual kind, but two little sentences of his pamphlet are worthy of special note. They are these:

1. "Soon or late—perhaps sooner than we are ready to meet the responsibilities which will thereby be placed before us—the Bolshevik rule will either collapse of its own rottenness or be overthrown." (P. 18).

We wonder has Mr. Dukes been giving Mr. Spargo any advance information on the so-called Kronstadt counter-revolution?

2. "Litvinov, who had been permitted to reside in Christiania, and to conduct trade negotiations on behalf of Soviet Russia, was ordered to leave the country by the Norwegian Government, again because of his participation in movements directed against the very existence of the Norwegian State." (P. 28).

Readers of *Soviet Russia* will recall the extensive correspondence between Litvinov and the Norwe-

gian Department of Commerce, printed by us on December 25, 1920, which contains not a word of any such activity on the part of Litvinov as is mentioned by Mr. Spargo. We may add that Litvinov left Christiania for Russia on October 6, the day following his receipt from the Norwegian Commercial Department of a letter, dated October 5, informing him that they saw no profit in a continuation of the correspondence.

* * *

IF the Soviet Government does not soon fall, the whole prophecy business will go to pot. Lt. General Sakharov told Mr. Cornelius Vanderbilt, at San Francisco, on September 15, 1920 (*Soviet Russia*, Vol. III, page 309), that the Soviet Government would not outlast the winter. We then gave Mr. Sakharov six months in which to prove the truth of his assertion. The six months are up, the Soviet Government still stands, and no doubt some other Lieutenant-General is about to start us on another six-month period. But we divide time more generously, and have really no reason to take these prophets seriously. Meanwhile, it will be very interesting to learn, when all the facts come out, who has been behind the latest attempt to overthrow the Petrograd Soviet and cut off that city from Moscow.

* * *

PERSONS with a good memory will perhaps recall that Senator Moses of Maine was the chairman of the Sub-Committee of the Senate Committee on Foreign Relations, which investigated the activities of Mr. Martens. The Senate resolution by which the Sub-Committee was created directed it to investigate not only Mr. Martens, but also "all facts relative to the activities of any other party, parties, or organization bearing upon or relating to Russian propaganda in this country." The obvious intent of that resolution was to investigate the activities of Mr. Bakhmetiev, who was maintained as an ambassador of a non-existing government by funds supplied by American tax-payers. Singularly, however, Senator Moses failed to carry out this part of the directions given him by the Senate. Immediately after the testimony of Mr. Martens had been closed, Senator Moses declared the work of the Sub-Committee ended. To be sure, a request for information was directed by him to Mr. Bakhmetiev, but the latter hid himself behind his alleged ambassadorial immunity, and was not called for examination. We shall pass over the question whether an envoy of a non-existing government has a better claim to immunity than an envoy of an existing *de facto* government. Of greater importance is the fact, admitted by Senator Moses in his report, that "Martens, in his testimony, had given the committee to understand that a misappropriation of American money had taken place." At the beginning of the investigation Mr. Martens had announced that he was ready to offer other testimony than his own, as well as documentary evidence, that would throw a light upon the activities of Mr. Bakhmetiev and the Kolchak Government

which he actually represented in this country. But Senator Moses apparently did not desire to let the American public have any of that evidence. Quite recently Assistant Secretary of the Treasury Nicholas Kelly testified before a Congressional Committee that by direction of the State Department Mr. Bakhmetiev was supported out of the funds of the United States Treasury. Senator Moses had satisfied himself with a whitewash of these business transactions of the Wilson administration. As soon, however, as he learned of the cancellation of the deportation warrant against Mr. Martens the valiant Senator rang the alarm with a resolution condemning in veiled language the action of the Secretary of Labor. The Senator's personal animus finds expression in the hackneyed phrase "self-styled ambassador of the Russian Soviet Government," although he knows from the evidence submitted to his own Sub-Committee, that Mr. Martens was officially designated as "representative," not as "ambassador," the latter title having been abolished by the Soviet Government. Senator Moses is worried by the possibility of Mr. Martens's return to this country and seeks the advice of the Attorney-General. The misgivings of Senator Moses were answered in a statement made public on March 2 by the former Secretary of Labor, who said that "the decision against Martens did not end Martens's legal resources, he could still have had recourse to the courts," and that "it would have been months before Martens could have been deported, *if at all.*"

The former Secretary of Labor by these words admits the weakness of his decision, which was apparently forced upon him by the disingenuousness of the Wilson administration. If anyone had been in doubt that the proceedings against Mr. Martens were of a diplomatic character, this fact was made clear by Ex-Secretary Wilson's decision. Mr. Martens personally was exonerated from all charges, except his connection with the Soviet Government, which was held to be "an organization that teaches the overthrow by force or violence of the Government of the United States," within the purview of the immigration law. It is perfectly evident that by no strained interpretation of the immigration laws can they be made the machinery for dealing with foreign governments which entertain hostile intentions against the government of the United States. Such matters come within the scope of diplomatic relations, and are within the jurisdiction of the State Department. But the Wilson administration, reluctant to commit itself, resorted to the pettifogging device of shifting the responsibility to the Department of Labor. It was the contention of Mr. Martens throughout the deportation proceedings that if his presence as a representative of the Soviet Government was objectionable to the American Government, all it had to do was to request him to leave, in the usual manner sanctioned by international law, but he could not admit that he was liable to deportation as an alien pursuant to the immigration laws. The decision of the former Secretary of Labor conceded his contention.

COUNTER-REVOLUTIONARY officers do not always fare well after the failure of the enterprise in which they were engaged. Frequently they become the rank and file of new military bodies, recruited for new invasions of Soviet Russia. It is somewhat amusing to note the various other activities to which such officers may be asked to resort in order to save themselves from death or imprisonment. A little item from the Vienna *Rote Fahne*, of January 30, will be of interest in this connection:

(Rosta, Vienna.) The counter-revolutionary newspaper *Golos Rossii* writes:

"We have received a letter from a Russian officer at Constantinople, stating that the French are employing Russian officers stationed at Constantinople, as street cleaners under the command of Singalese negroes. Although we have heard many strange things" the paper adds commenting on this report, "it is something unheard of that Russian officers should be compelled to do the most menial work under the command of negroes, for which, it appears, the French consider their own negroes too good."

We have no reason to feel that it is exceptionally humiliating for white (both Caucasian and Bourbon) officers to work cleaning the streets under the supervision of black soldiers serving under a White Government. In fact, there is a sort of gratification in the situation of white officers experiencing in their own persons the tyranny and compulsion of a foreign government that puts them to useful work after they have consented for years to be used as traitors and counter-revolutionists in the service of that foreign government. In aiding the government of France to oppress the Russian workers of the occupied districts—the districts temporarily governed by Wrangel or other agents of the French Government—these officers were attempting to restore in their native country a system that would enable them and their class once more to enjoy the privileged position they formerly occupied in Russian society. In this attempt they—and their French sponsors—failed, and it is for this failure that they are now paying when the French Government treats them as common laborers and sends them out in the streets to do honest and necessary work. Largely in order to escape physical or other work under the Soviet Government, these soldiers refused to support the government of their native country, and sought refuge with its enemies—the enemies of the workers all over the world.

Soldiers of this disintegrated army that once fought under France, many of them no doubt by reason of compulsion, may also now be doing work cleaning the streets of Constantinople or other cities under Allied domination. Some of them at least have been reported as having made an attempt to align themselves with other forces, possibly more friendly to the Soviet Government. A recent report giving some indication of such new enlistments, is contained in the following Moscow wireless, dated February 14, which we take from *Die Rote Fahne*, of Vienna:

"Troops of the former army of Wrangel have succeeded in making their escape to Anatolia, where they have joined the Kemalists."

Public Education

(No subject so much engages the attention of the leading spirits in Soviet Russia as that of providing a suitable care and education to the young. No sooner did the Eighth Congress of Soviets end, late in December, than there opened an educational congress attended by educators from all parts of Russia, on December 31. Thus congress succeeds congress in uninterrupted succession, and the population of the country is provided with every opportunity to learn of and participate in the administration of the country. The Tenth Congress of the Communist Party of Russia is being held this month.)

Delegates to Educational Congress:

THE party Conference on public education which was called by the Central Committee of the party opened on December 31, at 5 P. M. The decisions of the conference will have a vast importance for the whole organization of education in the Soviet Republic; the material and principles advanced await final decision at the Tenth Congress of the Party. The Conference likewise had to examine the question of the impending reconstruction of the organs of the Educational Commissariat, in conformity with the new tasks that are put before it as a consequence of the fact that the Soviet Government's work is mainly concentrated on economic construction.

Every one who is prominent in educational work, together with representatives of the National Trade Union Council, the League of Youth, delegates from the Eighth Soviet Congress, and directors of the provincial departments of public education took part in the Conference. Representatives came from Petrograd, the Commissariat for Education of the Ukraine, the Khirgiz Soviet Republic, Azerbaijan, etc. The number of participants was 134 comrades with decisive votes, and 29 with advisory capacity.

First Day

The Conference was opened by Comrade Lunacharsky, who, in a few words, outlined a number of problems and the importance of the work to be done. The agenda being announced, the following committee was proposed: Comrade Zinoviev (Central Committee of the Russian Communist Party), Lunacharsky (R.S.F.S.R.), Kozelov (National Trade Union Council), Grinko (Ukrainian Education Commissariat), and Lilina (Petrograd Education Department).

Then Comrade Lunacharsky, People's Commissar for Education, in an introductory report, indicated the perspectives of the Commissariat for Education and the series of problems which have been put before it in the sphere of child-training and polytechnical education.

"The Commissariat for Education"—said Comrade Lunacharsky—"is first of all the laboratory for the production and organization of a system of conviction, the basis, as Comrade Lenin said, upon which rests the coercion of the proletarian dictatorship. The Commissariat for Education is an organ of the Party. On the other hand it must carry out the orders of all the economic commissariats, training cadres of specialized and able men for all fields of industry. And in that sense it is an economic commissariat.

"Whereas the Party has hitherto concentrated all propaganda and agitation in the Party organs, it is now putting this work on the Soviet organs; i. e., on the organs of the Commissariat for Education. The Commissariat, similarly, is destined to unite the training of men scattered in various departments and organizations, as well as to establish scientific discipline.

"The maximum program of Communist education, put forward at the same time as the program of the social revolution, could not be realized, mainly because of the undeveloped status of the schools, the hostility and ignorance of the tutors, and still more, because in war time the Republic could not supply sufficient means for the work of public education out of its attenuated resources. That is why the facts are so far from the ideals contained in our declaration. Nevertheless, the Commissariat for Education still remains true to its first declaration concerning the uniform school, although perhaps with some modification in details. The pedagogic idea of Communism—political education—remains the same even in relation to the transition period."

Comrade Lunacharsky further defined the relationship between the system of social training for children and adolescents, which embraces them on the age-scale classification up to 15 years, in the form of the 7 years' schools, after which they are sent for 4 years to the technical high school for special education. Thus, we have the education system as a network of institutions, first of all the pre-scholastic type, then the 7 years' school and the 4 years' technical high school for various specialities.

Having further spoken in detail of these, his basic postulates, Comrade Lunacharsky dwelt on the idea of industrial and agricultural schools, closely bound up with production and primarily for the youth of the working class; he then drew the attention of the Conference to one question of tremendous importance—the formation of a pedagogic personnel, and defined the measures outlined in this sphere, as for instance, the recruiting to pedagogic work of men from the technical and agricultural high schools, to train workers and peasants for elementary pedagogic work in short-term courses.

Second Day

The second day of the Conference began with Comrade Lunacharsky's report on social training. Referring to the problem of family and school he said:

"The family is disintegrating with tremendous rapidity. On the other hand, I doubt whether there is a family at the present time that could afford any sound training for the children; not only our principles but want itself urges us in the direction of social training. In no case, however, can we adopt the principle of compulsion or persuasion."

Examining in the latter part of his speech the charky states that the approximate number of children being cared for (up to 400,000) is most insignificant in comparison with the vast mass of children that are in need of the attention of the State. Indicating the immediate perspectives as far as the growth of social training is concerned, the speaker laid it down that it is the basic task of the Commissariat for Education to further the work of building and perfecting schools.

"We should," said the speaker, "realize a higher type of school, a club school, a whole-day school; that is, a boarding-school. The schools and the children's homes are coming together, and with the development of our work we may look more calmly upon the fading of the bad influence of the modern family upon the children."

The Conference then attentively listened to the report of Comrade Litkens, concerning tuition reform. Comrade Litkens advanced postulates concerning the necessity of doing away with the method of instruction by means of lifeless routine, of ceasing to give the pupil abstract knowledge instead of the necessary abilities and habits on the basis of industrial labor processes. Comrade Litkens pointed out the necessity, pedagogically, to adopt finally the forms of school life that would give the child a first training, so that when it reached, let us say the age of 15 years, it could choose for itself a definite profession or speciality in the technical schools.

EDUCATIONAL REFORM (An Interview with Lunacharsky)

The reform of the Commissariat for Education is not at all confined to the appointment of new men and the concentration of the structure of the former Public Education Department. It is incomparably wider.

The basic functions of the Commissariat Education have been defined as follows: theoretical, administrative, and financial-supply. The theoretical work of the Commissariat has a special academic center, which draws up principles, works out plans and programs of a scientific and artistic character, administering purely learned and academic-art institutions and using them for pedagogic state purposes; all this is closely connected with the administrative center.

The organizing center concentrates all the work of financing, supply, and information, working in closest contact with the administrative center.

Finally the administrative center actually conducts both the model institutions under the direct management of the Commissariat, and the entire mass of educational institutions through the provincial educational departments.

The administrative center, in its turn, is split up into three head managing departments on the basis of the different functions of the Commissariat of Education. These are, the Chief Committee of Public Education, which carries on all the educational work among the children under 15 years of age; the Department of Vocational Education, which manages the work of preparing all kinds of workers for the State and for industry, embracing all the ages above 15 in the educational sphere; and the Political Education Department, engaged in general educational work (specifically Communist) among the adult mass of the population.

Having created a sufficiently strong leading Communist nucleus to take the lead, it is proposed to recruit the collaboration of the best experts on a much wider scale and with more determination than has been done hitherto.

I consider it likewise of great importance to create councils at all the more important centers in which representatives of the Party, of the National Central Executive and the economic commissariats would take part. Such an institution existed some time ago in the shape of the State Committee for Public Education but it was whirled away in the general stream of disorganization that prevailed at that time. At present this institution, in the form of councils working systematically and evenly, is being revived. The desire of the All-Russian Central Council of Trade Unions to combine the amalgamations of the labor unions in the center and in the provinces with the Commissariat for Education, fills me with the greatest joy. It certainly promises to infuse much freshness into the work and to facilitate the solution of the principal problem, which is, to bind the school stably with the population, and first of all with the workers.

ART IN SOVIET RUSSIA (From the Report of the Commissariat of Education)

In Tsarist Russia the enjoyment of art in all its forms was exclusively the privilege of the ruling classes. The "nation" only got wretched crumbs as a substitute. Knowing what a powerful means of agitation the theatre is for the masses, the police State kept a vigilant eye upon the so-called people's theatres, fencing them round with a censorship, and entirely subjecting them to the police authorities. Education, both musical, theatrical, and artistic, was quite inaccessible to the masses.

It became the aim of the Soviet Government to make art accessible to all, to bind it up in the life of the laboring masses, to put it on a new foundation, so that it should draw new forces from among the proletariat.

At the same time, while working persistently towards the creation of a new, purely proletarian art, we endeavored to familiarize the proletariat with the best achievements of former art.

At the start, in the realization of this task, we met with our principal difficulty, which was the lack of talented forces in the art world, who could

understand the tasks confronting Soviet Russian art, and could see them carried out. Only recently have we been able to make progress among the art workers and they have given us a number of prominent men, and helped us to put art on a sound basis.

The Theatrical World. Much has been done in democratizing the theatre. The repertoire of the biggest theatres has been greatly improved; in this connection, we are still working to acquaint the workers with the best models of the classic theatre. By a recent regulation a uniform price for seats at all theatres has been established; this measure is a step towards the complete abolition of all pay for theatrical shows. Considering the theatre as an instrument of education and propaganda, we should make it free of charge, as we do the school. Parallel with the classical repertoire, there is slowly coming up a new revolutionary repertoire, which we are endeavoring to foster by means of competition in the studios and workshops.

On the other hand, among the working masses themselves, such a tremendous striving towards theatrical creation is evident that it has proved extraordinarily difficult to manage and direct all the theatres and groups that sprang up so naturally.

The Musical World. In the musical field our path was generally the same as in the theatrical sphere, i. e., we aimed at drawing the wide labor masses to appreciate works of genuine musical art; extensive musical education was given and wide facilities for the production of new music, growing out of the proletariat itself and corresponding to the spirit of the times.

We are accomplishing the first task by creating a number of State orchestras, from our best orchestral forces. The Musical Department has formed five large symphony orchestras, about fifty small orchestras, and two orchestras of national instruments. These orchestras during 1919 and the beginning of 1920, gave in the provinces about 170 symphonic concerts from chosen works of classical music, 70 concert-meetings and over 170 concerts of various kinds. These concerts enjoy invariable success among the workers and Red Army men.

The work in the field of musical education is conducted along two lines; the musical education of the wide masses is attained by the establishment of a network of national musical schools, whose number at the present time is 75 (before the Revolution there was one); on the other hand the Musical Department of the Commissariat of Education is working extensively in the schools and children's homes. Thus in Petrograd up to 500 schools and 600 children's homes have included in their curricula the systematic teaching of music. Choir singing has been introduced in 80 per cent of all the schools; the practice of music in 60 per cent; the nurseries all have a musical staff attached to them.

The second line is the creation of professional music schools, the number of which is already 200,

with an attendance of 26,000. The percentage of worker and peasant students in the national schools is 70 per cent, in the vocational schools of the First and Second grades about 55 per cent, and in the higher musical schools it is not more than 30 per cent, which is naturally to be explained by the fact that a corresponding cadre of workers and peasants has not yet been prepared for the high schools.

Apart from this the Musical Department is engaged in the production of musical instruments; it is at present giving most attention to the revival of the noblest of Russian national instruments,—the "Dombra." The nationalization of instruments and of music enabled the Musical Department to adopt measures for the correct distribution of this stock, and to take stock of especially valuable old instruments, of which a collection has been formed. Thus we possess the only collection of the famous Stradivarius violins in the whole world; these are not hidden in the museums, but are given, on competition, to the use of the best violinists, who are obliged to let the masses hear good execution on the famous instruments.

The problem of realizing a new proletarian music is, of course, not going to be decided by means of decrees or by personal effort. In this regard our hope is with the proletarian youth who are training in our musical schools, and every spark of talent is supported by us by all possible means.

Fine Arts Department. This department carries on extensive work of practical nature. Having made the industrial principle the basis of its work, it has spread a wide network of workshops, both of a purely artistic type and of industrial art where on the one hand it strives in general to develop the artistic taste of the working masses, and awaken talent amongst them, and on the other hand directly introduces the principles of art and style in industrial work. With the latter aim, work-shops have been set up for chintz work, wood-work, stone-work, printing, pottery, and toy-making, etc. There are 35 such workshops in different parts of Russia. The total number of people in these workshops is 7,000.

Besides this the Department is organizing, both in Moscow and in the provinces, art exhibitions whose aim it is to acquaint the workers with all the tendencies of art in general. That fine art is not declining with us is proved clearly not only by the productivity, but by the quality of the work in our porcelain factories, whose productions are highly valued abroad. They now employ widely the watchwords and emblems of the times in their work. The State has given full freedom of development to all tendencies in the sphere of art, for it believes that its ever-growing contact with the working masses serves as the surest regulator for putting art on a firm and true foundation. The occasionally apparent preponderance of one tendency in art over another finds its explanation in the fact that energy and impetus is at times dis-

played by young art groups, which discover enthusiastically new ways or achievements. We regard this calmly and without apprehension. We are sure that the new artist, the proletarian-artist who has graduated from our art schools, will at the proper moment deliberately sweep away all that is superfluous and superficial; he will use all that is valuable, and will give to the world an art that will be unequalled for its vividness and expressiveness.

Museum Department. One of the most brilliant pages in our art work is the activity of the Commissariat for Education in the sphere of the safeguarding of the monuments of art and of the past.

Since the Revolution, our museum collections have been growing all the time. All the treasures that had been hidden from the eyes of the masses in palaces and manors have been collected and placed in the museums, being the property of all the workers. The network of museums in the provinces is growing with unusual rapidity. From 31 at the beginning of the Revolution their number is now 119, and practically every day brings news of the opening of a new museum. The treasures of the Hermitage have grown by half as much again. The museums of the capitals have been rearranged, redistributed, and supplied with experienced guides, who read lectures and conduct the excursions of workers and peasants. Visits to the museums have grown numerically, and have changed still more qualitatively; workers and peasants are overfilling the museums. The attendance at the museums, especially in the provinces, is hard to define. It is sufficient, however, to point out that according to a rough report, the museums of Moscow alone, during 1919, had over 500,000 visitors. A number of country manors have been wholly transformed into museums, which vividly illustrate the life and surroundings in the Ducal Estates of the XVIII and XIX centuries. Not less intensive is the work of restoration. The cleansing of ancient ikons has enriched our collection of very valuable productions of Russian ikon-painting.

In spite of all the obstacles and difficulties, the Museum Department of the Educational Commissariat, slowly but splendidly, is working to restore the Kremlin and the Yaroslav Mosques.

Finally, archeological excavation has not ceased for a moment, and the study of our past is making good headway. Archeological groups of amateurs are being formed in the provinces, carrying on excavation and research under the guidance of scientific leaders.

OUT OF SCHOOL EDUCATION

From the very first day of its existence the Commissariat for Public Education was confronted by the problem of out-of-school education, or, according to the present terminology, of political-educational work.

We have to deal with a country in which the percentage of illiterates is enormous, a country

which it was the policy of the Tsarist regime to keep in darkness and ignorance, a country which was in the power of most fanatical prejudices.

The old Out-of-School Department, now the Political-Educational Department of the Commissariat of Public Education, faced the problem of organizing public libraries, schools of all types for adults, clubs, people's houses, excursions, etc. The task was to broaden this activity and give it a communist direction.

In the field of library work the results were the following:

In 32 provinces there were 13,500 libraries in 1919. In 32 provinces there were 26,278 libraries in 1920.

The number of libraries taken over by the Soviet Government was 11,904; of these there were 8,229 school libraries. In 1919, the number of libraries amounted to 25,562; the number of school libraries being 11,467. It should be pointed out that these figures are in no way sufficient to show the growth of the libraries, because they do not include a great number of establishments of the library type, which have grown up in the Red Army, nor the libraries organized by the trade unions for their members, nor the small libraries of a primary type, which serve as a basis for the so-called reading huts, the number of which amounts to about 40,000 on the whole territory of Soviet Russia.

Very characteristic are the figures showing the growth of the library matter in Petrograd:

Before the Revolution there were 23 libraries with 140,000 volumes; after the Revolution 59 libraries with 865,000 volumes.

After the Revolution 59 libraries with 865,000 volumes.

Further, the Out-of-School Department was engaged with the work of organizing schools of different types for adults.

In 1919, there were registered by the Out-of-School Department 7,134 schools for adults and 101 people's universities.

A special task was the work of liquidating illiteracy. By a decree of the Council of People's Commissars an Extraordinary Commission for the Eradication of Illiteracy was created.

Here are some figures on the number of illiterates in Russia. There were registered:

| Province | Illiterates |
|-----------------------|-------------|
| Saratov | 2,400,000 |
| Viatka | 2,000,000 |
| Homel | 1,500,000 |
| Riazan | 1,200,000 |
| Penza | 300,000 |
| Vologda | 500,000 |
| Pskov | 600,000 |
| Kazan | 500,000 |
| Nizhni-Novgorod | 440,000 |
| Ural | 75% |
| Altai | 78% |
| Simbirsk | 80% |
| Tiumen | 93% |
| Astrakhan | 93% |

These figures are eloquent of the difficulties and

the vast scale of the work to be carried out in this field.

According to the plans of the Central Commission, courses are organized all over Russia for the preparation of a staff of teachers for the eradication of illiteracy.

In the province of Cherepoviets three-days county course-conferences were held, which were attended by 350 school workers; then two-days volost course-conferences, which were attended by 10,000 persons, and finally, special instructors' control courses, which were attended by 5,000 persons. Information was received about the organization of courses in the provinces of Archangelsk, Astrakhan, Vitebsk, Vologda, Viatka, Homel, Ekaterinburg, Kaluga, Kursk, Ivanovo-Vosnessensk, Moscow, Novgorod, Orel, Olonets, Orenburg, Penza, Samara, Saratov, North-Dvina, Simbirsk, Uralak, Ufa, Cheliabinsk, Tiumen. (This information is for the period up to the middle of the summer 1920.)

The work of the Commission has given good results. The pace at which the work is being carried on is shown by the following figures:

During three months the liquidation courses were attended:

In the province of Tambov by 40,000 people;

In the province of Cherepoviets by 57,807 people;

In the province of Ivanovo-Vosnessensk by 50,000 people.

In Petrograd by 25,000 people.

All over the Republic an enormous number of literacy schools have been opened; 10,000 schools were opened by the middle of Spring in the province of Cherepoviets alone; in the province of Tambov—6,000 schools, which were attended by 48,000 pupils in the month of April; in the province of Simbirsk—6,000 schools, in the province of Kazan—5,000 schools, which were attended by 150,000 pupils; in the province of Viatka 4,000 persons were attending the literacy schools, even before the decree was issued.

The information received from different cities furnish the following picture: In Petrograd there are 500 school establishments with 1 or 2 schools in each; 4,000 persons have already passed these schools, and 25,000 more are attending them at present. A great number of schools were opened in Moscow with 22,000 attending. There are 25 schools in Kronstadt, 190 schools in Kaluga, 150 in Tula, 130 in Kosmodemiansk, 65 in Uriev-Polsk, 45 in Kustanay, 40 in Gzhatsk, 20 in Zhisdrinsk, 20 in Romen, 300 in Berdiansk, 180 in Archangelsk, 190 in Omsk, 70 in Yelaguba, 30 in New-Omsk, 12 in Cheliabinsk, 15 in Ekaterinodar, 20 in Odessa.

It is interesting to point out the compulsory measures, which are practiced in different parts of the Republic: In the province of Kazan, those who refuse to attend the literacy schools are subject to 5,000 roubles fine, to 3 months of compulsory labor and the loss of their food cards. In Petrograd those who refuse to attend the schools are reduced to a lower food category, they are tried

in a people's court and excluded from the trade union. In the province of Tambov a signature for an illiterate has no validity.

Primers are printed in Russian, Polish, German, Tartar, Yiddish, and in the other languages of the peoples living in Russia, and a great number of copies are published.

According to our information, 2,700,000 citizens attended the schools during 1920.

But in order to carry out all this work, it was necessary to have a staff of Out-of-School education workers, of whom there were very few in Russia.

The Political-Educational Department developed its work in this direction, and by the end of 1919 a staff of 6,200 workers had been prepared. The number of courses was 65.

In order to complete the picture of the work carried out by the Department for out-of-school education, it is necessary to add the network of people's houses and clubs, which is continually increasing, covering the whole country, and the enormous number of lectures, concerts, meetings and debates which are held daily over the whole territory of the Republic.

The Next Issue of

Soviet Russia

THE DARKNESS BEFORE DAWN, by John S. Clarke. Another article by the editor of "The Worker," Glasgow, Scotland, reviewing some of the more interesting malpractices of the Romanov dynasty.

THE ROLE OF THE TRADE UNIONS IN PRODUCTION. Speeches by Lenin, Trotsky and Zinoviev, expressing the varying attitudes of these three leaders on the proper functions of the trade unions in the economic life of the country.

ECONOMIC RECONSTRUCTION OF THE SOVIET REPUBLIC by Eugene Varga, Chairman of the Supreme Council of National Economy of the Hungarian Soviet Republic. An interesting tribute from one of the leaders of a sister republic. He is a specialist in the field of which he speaks.

NOTES TO ENGLAND. Translations from the official Russian texts of several notes from the Soviet Government to the British Government, in the course of the trade negotiations at London. Hitherto unpublished in America.

THE REFORM OF THE MODE OF LIFE, by Alexandra Kollontay. The distinguished author takes up the question of the alterations in the life of the individual brought about by the economic changes now taking place in Soviet Russia.

SOVIET RUSSIA AND GERMANY, by Clara Zetkin. The well-known German Communist, in a spirited speech, points out the importance for Germany of resuming commercial relations with Soviet Russia.

How Industry is Managed in Soviet Russia

(The Vienna Office of Rosta, under date of February 11, communicates the following information that will excellently supplement the article of Dr. Goldschmidt above.)

Rosta, Feb. 11.—The management of industry in Soviet Russia at the present time is as follows:

The Supreme Council of National Economy is the central organ, defining the production program for separate branches of industry, and regulating and managing industry; in the provinces there are local councils of public economy. Each branch of industry, in its turn, is managed and regulated by the Head Department in the Center, and by the corresponding section of the Provincial Economic Councils in the provinces. Finally separate industrial enterprises or their combines are managed by the Shop or District Management.

All organs managing industry have as their basis the industrial unions. The apparatus of management is constructed on this basis, and on this basis only.

The guiding apparatus of the Supreme Economic Council is the Board, which at the present time consists of thirteen persons, formed by agreement with the All-Russian Central Council of Trade Unions (ACCTU). The Boards of the Provincial Economic Councils (P. E. C.) consisting of three to seven persons, confirmed by the Board of the Supreme Economic Council, are elected by the local executive committee in agreement with the local provincial Trade Union Council; the Chief Industrial Departments are appointed by the Board of the Supreme Economic Council in agreement with the Central Committee of the corresponding trade union, and in the event of disagreement, with the Presidium of the Central Council of Trade Unions. The District Management of enterprises is preliminarily indicated by the District Conven-

tions of representatives of the workers of the corresponding enterprises, and is confirmed by arrangement with the Provincial Branch of their trade union, with the Chief Department of the corresponding branch of industry or with the Provincial Economic Council according to what category the concern belongs to, the second or third. The management of an enterprise is appointed by the District (or by the Chief) Management.

The management of industry is thus based on the industrial trade unions, and the trade unions and their amalgamations take part in the organization of national economy just as they take part in organizing the apparatus for the regulation and management of industry. Here, the trade unions and their amalgamations only formally take part in organization of the managing apparatus, i.e. they agree on one or another candidate, put forward by the organs of the Supreme Economic Council; others, apart from agreement, also put forward their candidates which form the majority; and finally the degree of participation by a third class is deeper; they not only participate in the organization of the managing apparatus but also in the organization of industry itself; such form an absolute minority.

In summing up the participation of the wide labor masses in the organization of industry, the Board of the Supreme Economic Council establishes the fact that the participation of the workers in the organization of industry was businesslike and creative. The following table characterizes the degree of participation of the workers in the organs of management:

Board of the Supreme Economic Council and Provincial Economic Councils.

| Total: | Workers | % | Experts | % | Employees | % |
|--------|---------|------|---------|------|-----------|------|
| 187 | 107 | 57.2 | 22 | 11.8 | 58 | 31.0 |

Collegiate Chief Management:

| Total: | Workers | % | Experts | % | Employees | % |
|--------|---------|------|---------|------|-----------|------|
| 140 | 72 | 51.4 | 31 | 22.2 | 37 | 26.4 |

Collegiate and One-man-Factory Managements:

| Total: | Workers | % | Experts | % | Employees | % |
|--------|---------|------|---------|------|-----------|-----|
| 1,143 | 726 | 63.5 | 398 | 34.8 | 19 | 1.7 |

| Total: | Workers | % | Experts | % | Employees | % |
|--------|---------|------|---------|------|-----------|-----|
| 1,470 | 905 | 61.6 | 451 | 30.7 | 114 | 7.7 |

Here we have 61% of workers, among whom are many prominent administrators and organizers, and 30% of experts, with whom we cannot dispense especially now, when wide industrial perspectives of peaceful construction have opened up before the Supreme Economic Council.

The labor management changed its character in the course of the work itself. At first, large collegiums stood at the head of the management in the center, in the districts, and at the enterprises, a thing which made it necessary to have representatives of all kinds of experiments to decide all questions coordinately. These collegiums also aroused the mistrust of the workers for the administrative technical personnel and the officials, i.e., the department representatives. In proportion as the corresponding collegiums actually united the management in their own hands, the department representatives became superfluous; part of the workers became so familiarized with the work that they were actually able to conduct it themselves and the former distrust gave way. Parallel with these changes, there took place the transition from wide representative collegiums to narrow business directors of one-man management. At the present moment, most of the factories and works have gone over from collegium to one-man management; out of 2,483 enterprises 2,183 are under one-man management and 300 under collegiums.

It must be emphasized that in the practice of economic management at the present time the principle of automatic representation of separate institutions in the organs of management has already been done away with, and we have at present gone over to the principle of organizing the guiding collegiums or appointing individual directors and managers not by means of the joint confirmation of the activities of each industry or its branches but by the corresponding guiding organ of the State on the basis of business considerations. Owing to this, the possibility has been avoided of friction or misunderstandings between the trade unions and the organs of economic management, in view of the fact that persons belonging to the organs of industrial management or the leaders of these organs are responsible before the corresponding central committee of the trade union, and on the other hand the responsibility for their preparation in the execution of their tasks rests with the organs that appointed them, and with the trade union in agreement with whom they were appointed.

How the Central Apparatus Works

The Central apparatus of the Supreme Economic Council is split up into three groups of sections. First of all the Board of the Supreme Economic Council itself has six sections, with the aid of which it establishes the industrial plan for the current year and carries out the general leadership of industry. These sections are:

1. The commission for production which receives separate production programs for separate branches of industry, which are examined and submitted to the Board for confirmation.

2. The Financial, Economic and Accounting Sections, which examine the balance sheets of both central and local economic organs, and which finance industry.

3. The Utilization Commission which establishes the plan of distribution of the products of industry (its personnel also comprises representatives of the Food Commissariat.)

4. The Council of Supply and Distribution (in process of formation) which confirms the program of the distribution of semi-manufactured products which require finishing, and conduct all the technical work of distribution and supply.

5. The Factory Statistical Section.

6. Section for Contact with the Provinces which conducts communication with the local Councils of Public Economy.

The second group are production sections, there being 15 of them, in accordance with branches of industry. They directly manage and regulate the corresponding branches of industry, in respect to which they oversee the execution of the production programs and orders, distribute the raw material, take account of manufactured products, and subsidize the enterprises of the last group that are of special state importance.

The third group of sections are: 1. Industrial administration. 2. Inspectorate. 3. Juridical Section. 4. Editing and Publications, etc., which can be defined as auxiliary sections.

In each province, the local economic council is the organ directing and managing industry; i.e. the Provincial Council of Public Economy, organized on the same lines as the Supreme Council.

The local councils are divided into corresponding industrial sections; Metal, Textile, Chemical, Electro-Technical, etc., which are directed by the Boards of the Economic Council on the one hand, and on the other hand are likewise subordinated to the corresponding production sections, where they present their balance-sheets and whence they receive instructions and orders as to the management of the industry under their auspices and on their territory.

Enterprises of the second and third groups are under the management of the local councils. Thus the local councils subsidize the enterprises under their management, according to a budget, substitute and appoint directors, etc. At the head of the sections of the local councils are men confirmed by the Board of the Local Trade Unions. In order to keep pace with the growth of work arising through the Federation of other Soviet Republics, local councils for public economy have been created. These now number 81.

SOVIET RUSSIA

110 West 40th Street New York, N. Y.

The Soviet Russian Railway Commission Abroad

(The Rosta Office at Stockholm, on February 9, 1921, in its daily bulletin included the following interesting data that had been furnished it by the Russian Railway Commission in Stockholm.)

The Soviet Russian Railway Commission abroad, which does not function directly under any official Russian department, was definitely appointed in accordance with the decree of the Council of People's Commissars No. 18,312 of November 5, 1920.

The duty of the commission is to bring unity into all the orders of railway material abroad, including also the repairs of Russian locomotives in foreign countries.

The Commission is first to order:

1. 2,000 train locomotives valued at 500,000,000 Swedish crowns,
2. Locomotive parts valued at 60,000,000 Swedish crowns, necessary for repairing locomotives in Russia,
3. Accessories for pumping stations destroyed by Denikin and others, valued at 15,000,000 crowns,
4. The organization of the construction of 4,000 to 5,000 Russian locomotives abroad.

The following are the facts with regard to new locomotives:

In Sweden 1,000 locomotives of the Russian type have been ordered. The first of these will be ready by the summer, and the entire order must be completed by 1925. Locomotives of the same type are also to be ordered in Germany. The entire work of construction for both countries is to be centralized at Henschel's Shops in Cassel, where the drawings and model shall be prepared, after which Russian locomotives may be built at all the shops in question. At the head of this work stands Engineer Fren, a professor at the Engineering School at Moscow, one of Russia's foremost locomotive constructors. In order to insure the absolute similarity of all the locomotives, which are to be constructed at 19 different shops, and that any part may be transferred from one locomotive to another, a test is to be made by assembling a locomotive from parts that have been manufactured at all the various 19 shops. Another interesting provision in the locomotive agreement is this: the final test of the locomotive shall take place in Russia by attaching it to a complete train and operating it with the train, and the final acceptance of the locomotives shall not take place until each of them has been subjected to this test.

As has been already indicated, 1,000 locomotives were ordered in Sweden and 1,000 in Germany. Arrangements have already been made for the purpose of allotting these locomotives to the various shops, but it has nevertheless not been possible thus far to allot more than 100 locomotives to all the German shops, in accordance with the demands of the workers. The fact is that the bankers do not want to pay more than 70 per

cent of the value of the Russian gold on the London and New York exchanges. They are making use of the fact that the Soviet Government under present political conditions cannot itself transport the gold to these points. By such a policy the bankers are pursuing a double purpose: they hope to put 30 per cent of the value of the Russian gold into their own pockets and to undermine the proletarian finance which is so hateful in their eyes. Doubtless the bankers in all countries have come to an agreement on this matter, and this agreement has even been publicly designated by the name "The Gold Blockade Against Russia." However necessary these locomotives may be for Russia, nevertheless Russia can not afford to throw away 83,000,000 crowns in order to fill the pockets of the bankers, and it is for this reason that the allotment of the remaining 900 locomotives has been delayed.

In the ordering of the locomotive parts, which are necessary for repairs, the conditions are somewhat different. In this matter the sums involved are considerably smaller, and in spite of the unfavorable conditions for the sale of gold almost all the orders have been drawn up or are about to be drawn up within the next few days. About 80 per cent of these orders fell to the share of Germany, as Germany proposed a price that was hardly more than half that asked by Sweden. In addition to Germany and Sweden, Austria and Czecho-Slovakia have also received allotments. Aside from the low prices, Germany defeated its competitors by swifter deliveries, and that not only on paper. The first contracts were signed October 20, 1920;* the deliveries began in the second half of December, and in the first month 1,500 tons of railroad material were already being sent to Russia.

It is also interesting to note that while the English firms demand a guarantee payment of 100 per cent from the Soviet Government, the German firms are relying on the word of the Soviet Government and demanding no guarantee at all.

The orders for pumping machinery were placed chiefly in Sweden, although much might have been obtained more cheaply in Germany. As for the repair of locomotives, already 200 locomotives have been forwarded to Esthonia for such purposes, and an agreement has been drawn up with one of the biggest Esthonian concerns for the repair of 1,500 locomotives, and negotiations are in progress on the subject of the repairs of 2,000 to 3,000 locomotives in Germany, Norway, and Denmark.

*The text of one of these contracts will be found in "Soviet Russia," Volume IV, No. 6.

Notes to Persia and Lithuania

NOTE TO PERSIA.

Moscow, Feb. 15.—The representative of Chicherin, the People's Commissar for Foreign Affairs, Karakhan, addresses the following note to the Persian Representative:

Mr. Representative: The Soviet Government shares fully your view with regard to foreign troops on Persian soil. As soon as we received your note of November 9, the Soviet Government hastened to open negotiations with the Government of the Republic of Azerbaijan, on the subject of the sojourn of Azerbaijan troops on Persian territory, in the districts of Enzeli and Resht. Since the last meeting with you I have informed you as to the attitude of the Republic of Azerbaijan and as to the reasons why the troops of this Republic were stationed on Persian territory. The Republic of Azerbaijan finds itself obliged for reasons of self defence to maintain its troops in these districts, in order to prevent English troops now in Kazvin, or already moving forward against Resht and Enzeli, from attacking the territory of Azerbaijan. From the latest urgent communications of the Azerbaijan Government it is apparent that that Government is animated only by feelings of friendship and fraternity toward the Persian people, and that it is extremely unpleasant for that Government to be obliged to maintain its troops on foreign territory, all the more since the presence of these Azerbaijan troops on Persian territory may be erroneously interpreted and become an obstacle to the restoration of friendly relations between the two states. The Government of Azerbaijan will therefore withdraw its troops from Persian territory as soon as the English troops are also withdrawn. The Government of Azerbaijan has assured the Russian Government that, as far as the Azerbaijan Government is concerned, Persian territory would very soon be freed from foreign occupation. In the name of my Government I take the liberty to express the hope that the proposals of the Azerbaijan Government may be well received by the Persian Government, and that the latter will soon undertake all necessary steps to make possible the convocation of the commission, already discussed some time ago. I take the liberty to propose that the most suitable place for the meeting of this Commission would be the city of Kazvin or of Teheran. As soon as the Commissariat for Foreign Affairs receives information to the effect that the British Government also accepts this plan for liquidating the Anglo-Azerbaijan front on Persian territory, the Azerbaijan Government will of course also consider it its duty immediately to appoint its fully empowered representatives to the above-mentioned commission.

Please accept the expression of my esteemed consideration.

Representative of the Commissariat for Foreign Affairs,
KARAKHAN.

PROTEST AGAINST SENDING INTERNATIONAL TROOPS TO VILNA.

Riga, Feb. 16.—The Representative of Lithuania in Moscow, Mr. Baltrushaytis, has received the following note from Chicherin:

I have the honor herewith to request you to submit the following communication to your Government:

The Russian Government cannot witness without concern the disorders now prevailing in the city of Vilna and in the territory which was allotted to Lithuania in the treaty of July 12, 1920,* between Russia and Lithuania.

At the moment when the General of the Polish Army, Zeligowski, with the aid of a number of Polish troops occupied Vilna and began to collect in the city and in its environs officers and soldiers hostile to the Russian Republic, out of White Guardist detachments, the Russian Government lodged a protest with the Polish Government against this procedure, and made the Polish Government respon-

sible for the latest operations of this Polish general and his troops. The Russian Government can no longer refrain from calling the attention of the Lithuanian Government to the international obligations which the latter must fulfill with regard to the city of Vilna and its surroundings. On the basis of the treaty entered into between Russia and Lithuania on July 12, 1920, the Russian Government has the right to demand of the Lithuanian Government that the latter do all in its power to put an end to a situation in Vilna which constitutes a menace to the security of the Soviet Republic. I consider it necessary to emphasize that the preliminary treaty signed on October 12, 1920, at Riga, between Russia and Poland,** in no way alters or abrogates the Russo-Lithuanian treaty of July 12, 1920.

But the preliminary treaty, between Russia and Ukraine on the one hand and Poland on the other hand, provides that questions concerning disputed territories belonging to Lithuania and Poland are to be settled by Lithuania and Poland themselves. This provision is a logical conclusion from the fact that the sovereign power of the Russian Republic over the district and city of Vilna has ceased, but it by no means signifies that the Russian Government is obliged to look on passively while the present conditions in Vilna continue, if these conditions threaten its own security. In addition, the question of the ownership of the above mentioned region has been solved by agreement between Lithuania and Poland, and not to the advantage of Poland. The sovereign power over the district and city of Vilna is now with Lithuania, since the district was allotted to that state by virtue of the Russian-Lithuanian treaty. In view of this fact, the Russian Government has the right to demand of the Lithuanian Government that the latter take every step to put an end to the present condition in Vilna, since the city is a center for White Guardist elements, which are in a position to prepare aggressive enterprises against Soviet Russia. Besides, the Russian Government has learned that the group of states which calls itself the "League of Nations" has recently been elaborating a plan for sending international troops to Vilna. The Russian Government calls the attention of the Lithuanian Government to the fact that the arrival of such troops in Vilna cannot be considered as in accordance with the provisions of the Russian treaty with Lithuania. In the absence of any treaty and any contact whatsoever between the so-called "League of Nations" and the Russian Republic, and in view of the fact that the states constituting the "League of Nations" have not yet ceased their hostilities against Soviet Russia, such troops must be considered as troops hostile to the Soviet power. We therefore express the firm hope that the Lithuanian Government may not permit this appearance of armed forces in Vilna, since their presence would have to be considered by the Russian Government as an action hostile to Soviet Russia, an action threatening the security of the Soviet Government. The Russian Government is convinced that the Lithuanian Government will take all necessary steps to put an end to the conditions in the city and district of Vilna which violate the treaty, and that it will not permit the above mentioned armed forces to secure admission there.

I take this opportunity to request you to accept the assurances of my great esteem and my most upright respect.

People's Commissar for Foreign Affairs,
GEORGE CHICHERIN.

The Lithuanian Government has now answered the note of the Council of the League of Nations of December 20, and consented to the plebiscite in the Vilna district on the condition that the Polish troops shall be withdrawn and that the administration and the police authority be taken over by non-interested powers. Simultaneously however the Government

*Full text of this treaty was printed in *Soviet Russia* for December 4, 1920 (Volume III, Pages 562-565).

**The text of the preliminary treaty, with a complete discussion and map, appeared in *Soviet Russia* for December 11, 1920 (pp. 586-593).

informs the Council that in spite of repeated efforts it has been impossible to obtain the consent of the Soviet Government to the sending of international troop contingents to Vilna. As the intervention of troops of this kind constitutes a violation of the treaty between Lithuania and Soviet Russia, the Kovno Government must decline to receive the foreign contingents unless the Council of the League of Nations and Poland may obtain the consent of the Soviet Government.

—RUSSIAN TELEGRAPH AGENCY.

"Soviet Russia" four weeks ago (No. 8) printed a front-page cartoon (from a Dutch newspaper) illustrating the reaction of the proletariats of the small neutral nations that had been requested to furnish a "police" guard for the city of Vilna during the projected plebiscite.

RUSSO-POLISH NEGOTIATIONS

Riga, Feb. 13.—A representative of Rosta on the 13th inst. had an interview with the Russian representative in Riga, A. A. Yoffe. When questioned whether it was true that the Polish Delegation was delaying negotiations Yoffe answered:

"I do not believe that the delegation is doing this intentionally. There is no doubt that Poland is interested in having the peace treaty signed as early as possible, and this is emphasized by the entire Polish press. At any rate it is interesting to note that in spite of the fact that Chicherin declared himself ready, on Sapielha's proposal, to state a date by which the peace negotiations should be concluded, the Polish Delegation has always ignored all my proposals that such a period be set. I nevertheless continue to consider such a decision to be entirely feasible and am ready to sign the peace treaty within a period of even five days. In my opinion the delay of the negotiations is rather to be ascribed to the indecision of the Polish Delegation, which even in absolutely clear cases, when Russia and Ukraine could not assume the obligations demanded by Poland—and they certainly will not under any conditions assume them—keeps coming back again and again to questions that have already been settled, without possessing

determination enough to accept the only possible formulation. It is clear why under such circumstances they should wish to blame me for this delay, but the facts speak for themselves, and the extent of my participation in delaying the negotiations is evident from the fact that the Russo-Ukrainian Delegation is today as ready as it was two months ago, when the above described note of Sapielha's was handed to it, to sign an agreement with the Polish Delegation in which an extremely short period will be designated for the elaboration of the treaty and the signing of the peace."

When asked: "What do you think will be the consequences of Pilsudski's trip to Paris?" Yoffe said: "To my mind the most important event connected with this trip is the speech of Millerand, in which the latter said that the boundaries of Poland had not yet been definitely fixed. With the situation as it is today, this statement can only be understood as a reference to the failure of achieving a decision on the East Galician question. I therefore believe that Pilsudski's trip to Paris and the obvious failure of the hopes connected with it would make the Polish Delegation more yielding, since the fact that under these circumstances we did not reopen the question of the revision of the boundaries provided for in the preliminary treaty of peace, particularly the revision of the East Galician question, reveals the loyalty of Russia and Ukraine and particularly their fidelity to the conditions of the preliminary peace in a very favorable light. I hope it will be possible to sign the peace under the conditions drawn up by the conference. The conditions proposed by us to Poland represent the maximum in this respect, and from this standpoint the threats that France will aid Poland in a war against us would seem to suggest that Russia and Ukraine were demanding something from Poland and were threatening it with war. Of course France could not possibly force Russia and Ukraine to accept obligations which they are not capable of fulfilling, and any war, even if it should end favorably, would weaken both sides, and, by lowering the solvency of both, would render more difficult still the fulfillment of these unbearable conditions. I do not even touch upon the fact that the outcome of a war can never be predicted, and that the present situation is by no means such as would inspire Poland with a certainty of victory, even if it may count on the aid of France. For if France in the course of three years of intervention has not succeeded in imposing obligations upon us which we regard as intolerable, it is to be hoped that the Polish delegation will recognize that this is the fact, and that it may soon proceed to a signing of the peace."

The Freedom of Women in Soviet Russia

The laws regulating marriage in Soviet Russia are distinguished mainly by their recognition of the rightful social function and economic status of women.

No traces are left of the former legal and economic discriminations between the sexes.

The Paris Commune and Soviet Russia

By LEON TROTSKY

Short episode of the first Revolution made by the proletariat for the proletariat, ending in the triumph of its enemies. This episode (March 18-May 28) lasted seventy-two days. (The Paris Commune, March 18, 1871, by P. L. Lavrov, Petrograd: Published by "Golos" 1919, p. 160.)

The Socialist Parties of the Commune Were Not Prepared

The Paris Commune of 1871 was the first weak attempt in history at domination by the working class. We venerate the memory of the Commune in spite of its limited experience, the lack of preparation of its militant sections, the confusion of its program, the lack of unity among its directing elements, the indecision of its plans, the excessive fussing in execution, and the frightful disaster in which it so fatally ended. We hail in the Commune, as Lavrov puts it, the somewhat pale dawn of the first proletarian republic.

That is not Kautsky's view of the matter. After devoting the greater part of his book, "Terrorismus und Kommunismus," to pointing out a crudely propagandist parallel between the Commune and the Soviet power, Kautsky beholds great virtues in the Commune where we see misfortunes and mistakes.

Kautsky vigorously turns his energies to proving that the Paris Commune of 1871 was not "artificially prepared," but spontaneously produced, taking the revolutionists by surprise, contrary to the Russian Revolution of November, which was prepared down to the minutest details by our Party. This is indisputably correct. Not having the courage to clearly formulate his profoundly reactionary views, Kautsky does not tell us whether the Paris revolutionaries of 1871 should be praised for not having foreseen the proletarian insurrection and for not having prepared themselves for

it, or whether we should be blamed for having foreseen the inevitable and consciously proceeded to take time by the forelock. But all Kautsky's exposition is conceived in a manner to produce in the reader precisely this impression: A misfortune came upon the Communards (the Bavarian philistine Vollmar even went so far one day as to express the regret that the Communards had not gone to sleep instead of taking up the power) who therefore deserve all our indulgence; the Bolsheviki, on the other hand, consciously anticipated this misfortune (the seizure of power) and that is why they will never be forgiven either in this world or in the next. If you put the question plainly in this way it of course reveals itself as an incredible absurdity. It is none the less true, however, that such is the inevitable inference from the position of the "Kautskyian Independents" who withdraw their heads into their shoulders in order to see nothing, in order to foresee nothing, and who cannot take a step in advance if they have not first received a good kick in the rear. "To humiliate Paris," writes Kautsky, "to refuse it autonomy, to deprive the capital of its title, disarm it in order to risk later with certainty a monarchist coup d'etat, such was the capital task of the National Assembly and of Thiers whom it had elected head of the Executive Power. From this situation arose the conflict which led to the Paris insurrection." "We see to what extent this form of revolution differs from what was accomplished by Bolshevism, which drew its strength from the peace aspirations and had behind it the peasant masses; which, in the National Assembly, had not monarchists against it but Social Revolutionists and Mensheviks."

"The Bolsheviki came to power by means of a well-prepared revolution which suddenly placed

in their hands the entire Government machinery, of which they are availing themselves in the most energetic and most pitiless manner for putting down their adversaries including proletarians."

"At the beginning, no one was more astonished by the Communist insurrection than the revolutionists themselves, and for many of them the conflict was in addition very undesirable" (page 44).

In order to obtain a clear idea of the real meaning of what has been said by Kautsky on the subject of the Commune we shall quote the following interesting testimony:

"On March 1, 1871," Lavrov writes in his very instructive book on the Commune, "in other words six months after the fall of the Empire and a few days before the rise of the Commune, the guiding personages of the International at Paris had yet no definite political program."

"After March 18," writes the same author, "Paris was in the hands of the proletariat, but its leaders, disturbed by their unexpected power, did not take the most necessary measures for security" (page 71).

"Your role is more than enough for you and your sole care is to withdraw yourself from responsibility," declared a member of the Central Committee of the National Guard. "There was much truth in this," writes Lissagaray, a participant and historian of the Commune. "But at the very moment of action, lack of proletarian organization and preparation frequently comes from the fact that functions are imposed upon men who are not of a stature to discharge them." (The History of the Commune of 1871 by Lissagaray, Brussels, 1876, French Edition, page 106.)

It appears from what precedes (and it will be clearer later on) that the absence among the Paris Socialists of a program of direct struggle for political power is explained by their theoretical emotionalism and their political confusion and in no way by higher considerations of tactics.

It is beyond doubt that the fidelity of this very man Kautsky to the traditions of the Commune will evince itself above all in the profound astonishment with which he will receive the proletarian revolution in Germany, where he beholds nothing more or less than "an extremely undesirable" conflict. We doubt, however, that future generations will revere him for this view. The very essence of his historical analogy is nothing, we must not fail to mention this, but a mixture of confusions and reticences.

The intentions which Thiers had with regard to Paris, were those of Milyukov with regard to Petrograd, supported publicly by Chernov and Tseretelli. Daily they repeat—from Kornilov to Potressov—that Petrograd was isolated from the country, that it no longer had anything in common with the country, and that, demoralized to the marrow, it was attempting nevertheless to impose its will upon the nation. The first task of Milyukov and his acolytes was to discredit and debase Petrograd. And this was going on at a time when Petrograd was the true center of the revolution which had not yet succeeded in con-

solidating itself with other parts of the country. In order to give this city a good lesson, Rodzianko, the former President of the Duma, spoke openly of handing over Petrograd to the Germans, as Riga had already been handed. Rodzianko did nothing more than formulate clearly what was in reality the aim of Milyukov, supported by Kerensky's whole policy.

Milyukov wanted to disarm the proletariat as Thiers had done. But worse still, by the intervention of Kerensky, Chernov, and Tseretelli, the Petrograd proletariat had practically been disarmed in July, 1917. It had again taken to arms on the occasion of the offensive of Kornilov on Petrograd, in August, and this new arming of the proletariat was a serious element in the preparation for the November Revolution. In a way, therefore, those points on which Kautsky contrasts the March insurrection of the Paris workers with our November Revolution do, to a certain extent, coincide.

But in what way do they differ? Principally in that the sinister aims of Thiers were carried out, in that Paris was strangled and tens of thousands of workers massacred, while Milyukov went to pieces miserably and Petrograd remained the impregnable fortress of the proletariat, and leaders of the Russian bourgeoisie went down to Ukraine to beg the armies of the Kaiser to occupy Russia. This is evidently to a large extent our fault, and we are ready to take the blame. An essential difference also is this—and this difference has been felt more than once in the later development of events—that while the Communards began preferably with patriotic considerations, we acted from the standpoint of the international revolution. The defeat of the Commune led to the actual breakup of the First International. The victory of the Soviet power led to the foundation of the Third International.

But Marx, on the eve of the Revolution, advises the Communards not to rebel but to organize! We might add that Kautsky might adduce this fact in order to demonstrate to what extent Marx underestimated the acuteness of the Paris situation, but Kautsky desires at any cost to exploit Marx's advice in order to emphasize the harm done to the movement by insurrections in general. Like all the mandarins of the social democracy, Kautsky considers the chief function of organization to be that of embarrassing revolutionary action.

Even if we limit ourselves to the question of organization we must not forget that the November Revolution had been preceded by nine months of existence of the Kerensky Government, in the course of which our Party was engaged rather successfully both in agitation and in organization. The November Revolution was accomplished after we had been given an overwhelming majority in the Soviets of workers and soldiers of Petrograd, of Moscow and, in general, of all the industrial centers of the country, and transformed the Soviets into powerful organizations, directed by our Party. There was nothing like this among the Communards. Finally, we had behind us the heroic

Commune of Paris, from the destruction of which we had inferred that it was quite necessary for revolutionists to foresee events and to prepare for them. We admit that these are our crimes.

The Paris Commune and Terrorism

Kautsky makes use of a rather extensive parallel between the Commune and the Soviet power for the sole purpose of calumniating and deriding the living and triumphant dictatorship of the proletariat in favor of a mere attempt at dictatorship made at a sufficiently remote period.

Kautsky cites with an indecent excess of satisfaction a declaration of the Central Committee of the National Guard, dated March 19, on the subject of the assassination of the two generals Lecomte and Clement Thomas by their soldiers: "We say this with indignation. It is a blood stain with which they want to soil our honor. It is a miserable calumny. Never did we order these murders. The National Guard did not in any way participate in the perpetration of this crime."

It will be understood that the Central Committee had no reason to take upon itself the responsibility for a murder in which it did not have any share. But the rhetorical and sentimental tone of the declaration well indicates the political timidity of these men in the face of bourgeois public opinion. Should this surprise us? The representatives of the National Guard were for the most part men with a very modest degree of revolutionary training. "No one whose name is known," writes Lissagaray. "They are petit bourgeois, grocers, strangers in the organization, and mostly foreign to politics" (page 70).

"A discreet and somewhat timid feeling of terrible historical responsibility and the desire to remove themselves from it as soon as possible," writes Lavrov of them, "runs through all the proclamations of this Central Committee into the hands of which Paris had fallen" (page 77).

Having quoted this declaration on the shedding of blood in order to disgrace us, Kautsky, following Marx and Engels, criticizes the indecision of the Commune: "If the Parisians (in other words the Communards) had untiringly pursued Thiers, they might have succeeded in taking possession of the Government. The troops which were retreating from Paris could not have offered the slightest resistance to them. But Thiers was able to fight while retreating, without difficulty. He was permitted to retire with his army, to reorganize it at Versailles, to breathe a new lease of moral life into it, and to reinforce it" (page 49).

Kautsky cannot understand that it was the same men, and for the same reasons, who published the declaration above quoted on March 19, who, without striking a blow, permitted Thiers to retire and to regroup the army. If the Communards had been able to gain the victory by the exercise of moral influence only, their declaration would have had an immense importance. But this was not the case. As a matter of fact their humanitarian sentimentality was nothing more nor less than the complement of their revolutionary passivity. Men

to whom had fallen the lot of taking over the Government of Paris and who did not understand the necessity of immediately and exclusively using this power in order to undertake the pursuit of Thiers, to crush him irrecoverably before he had time to breathe, to take the army in hand vigorously, for the purpose of an indispensable cleaning up in the commanding elements, to take possession of the provinces—such men naturally could not be disposed to act rigorously against counter-revolutionary elements. It was impossible to rush the pursuit of Thiers without arresting his agents in Paris and without shooting conspirators and spies. If they considered the assassination of counter-revolutionary generals as an abominable crime, it was of course childish to attempt any rousing of energy among the pursuing troops, who would also be commanded by counter-revolutionary generals.

In a revolution, a higher force is equivalent to a higher humanity. "Just these men," Lavrov very correctly says, "who attach so much value to human life, to human blood, will bend all their energies to obtain a quick and decisive victory and will then act most swiftly to put down their enemies by force; for it is only by this mode of procedure that it will be possible to have a minimum of inevitable losses and a minimum of bloodshed" (page 225).

The declaration of March 19 may however be estimated more justly if it is understood not as a profession of absolute faith but as the expression of a temporary state of mind on the day after an unexpected victory, attained without the slightest bloodshed. Absolutely devoid of any understanding of the dynamics of the revolution and of the popular moods which pass through rapid changes by reason of internal conditions, Kautsky's thought follows dead formulas and twists the perspective of events by arbitrary analogies. He does not understand that this magnanimous indecision in general is natural to the masses in the first period of revolution. The workers do not pass over to the offensive except under the pressure of an iron need, just as they will not take up a Red Terror except under threat of counter-revolutionary massacres. What Kautsky interprets as a result of a particularly elevated morality on the part of the Paris proletariat of 1871 is in reality only a characteristic of the first stage of civil war. We have observed similar cases in our revolution.

At Petrograd we seized the power in November, 1917, almost without bloodshed and even without arrests. The Ministers of the Kerensky Government were released immediately after the Revolution. Even further—after the power had passed into the hands of the Soviet, the Cossack General Krasnov, who had attacked Petrograd together with Kerensky, and had been taken prisoner at Gatchina, was liberated on his word of honor, the next morning. This is a "magnanimity" which was very characteristic of the state of mind in the first days of the Commune, but which was none the less an error. General Krasnov, after having conducted guerrilla warfare against us in the south for nearly

a year, after having massacred several thousand Communists, recently made a new attack on Petrograd, but this time in the ranks of the Yudenich army. The proletarian revolution became more violent in its methods only after the uprisings of the military cadets at Petrograd, and particularly after the revolt (organized by the Cadets, the Social Revolutionists, the Mensheviki) of the Czechoslovaks in the Volga region, where thousands of Communists were slain, after the attempted murder of Lenin, the assassination of Uritsky, etc., etc.

These same tendencies, in their earlier phases only, may also be observed in the history of the Commune.

Impelled by the logic of the struggle, the Commune in principle entered upon the road of using force. The creation of the Public Welfare Committee (Comité de Salut Public) was dictated, in the mind of many of its advocates, by the idea of a Red Terror. This Committee was destined to have "the heads of the traitors cut off" (Journal officiel, No. 123), and to "crush treason" (same Journal, No. 124). Among the decrees of "menace" we should point out the ordinance (April 3) on the sequestration of all the property of Thiers and his ministers, the demolition of his house, the taking down of the Vendome column, and particularly the decree on hostages. For each prisoner or partisan of the Commune shot by the Versailles troops, three hostages were to be shot. The measures taken by the prefecture of police, conducted by Raoul Rigault, were of a purely terrorist character, although they were not always adapted to the end pursued. The real object was always paralyzed by the spirit of diffused conciliation of the directing elements of the Commune, by their desire to conciliate the bourgeoisie with the accomplished fact by means of hollow phrases, by their oscillations between the fiction of democracy and the reality of dictatorship. This last thought is admirably formulated by Lavrov in his book on the Commune.

"The Paris of the rich and of the miserable proletarians and of social contrasts, in as much as it was a political body, demanded in the name of liberal principles a complete liberty of speech, of assembly, of criticism of the Government, etc. But the Paris which had carried out the revolution in the interest of the proletariat, and which had undertaken to realize this revolution in institutions, demanded as a Commune of the emancipated working proletariat revolutionary—that is, dictatorial—measures with regard to the enemies of the new regime" (pages 143-144).

If the Paris Commune had not fallen but had been able to maintain itself by means of uninterrupted struggle, there is no doubt that it would have had to resort to more and more rigorous measures in order to crush the counter-revolution. It is true that Kautsky would not have been able then to compare the human Communards with the inhuman Bolsheviks, but on the other hand Thiers would not have been able to carry out his terrible blood-letting of the Paris proletariat. And history would not have lost by the exchange.

The Absolute Central Committee and the "Democratic" Commune

"On March 19," says Kautsky, "some of those present in the Central Committee of the National Guard demanded that they march to Versailles, while others demanded an appeal to the electorate, and still others that revolutionary measures be taken, as if each one of these steps," as our author assures us with great profundity of mind, "were not equally necessary and as if anyone of them would have excluded the other" (page 54).

In subsequent lines, Kautsky, speaking of the disagreements within the Commune, serves us with warmed over banalities on the reciprocal relations between reform and revolution. As a matter of fact the question presented itself in this form: if they were to take the offensive at Versailles and to carry it out without losing a moment it was necessary to reorganize the National Guard at once, to place at its head the most aggressive elements of the Paris proletariat, which would have brought about a temporary weakening of Paris in its revolutionary position. But, to organize elections at Paris while they were sending outside of its walls the elite of the working class, would have been absolutely without any sense from the standpoint of the revolutionary party. Of course marching on Versailles and the elections to the Commune would not have been opposed to each other in theory, but in practice they did exclude each other: to have success in the elections it was necessary to postpone the march on Versailles; for the success of the march on Versailles, the elections would have to be postponed. And finally, in taking the field the proletariat weakened Paris and it then became indispensable to assure oneself against all possibilities of counter-revolutionary surprises within the capital, for Thiers would not have stopped at anything in order to rekindle in the rear of the Communards a conflagration of reaction. It was necessary to establish in the capital a more military, in other words, a more rigorous regime. "They were obliged to struggle," writes Lavrov, "against the multitude of internal enemies who infested Paris and who only yesterday were still rebelling on the edges of the Bourse and the Place Vendome, who had their representatives in the National Guard, who had their press, their assemblies, who almost in broad daylight were maintaining their relations with the Versailles troops, and who became more and more resolute and audacious with each imprudence, with each ill-considered move, of the Commune" (page 87).

It was also necessary at the same time to take a series of steps of economic and financial character in order to satisfy above all the needs of the revolutionary army. All these most indispensable measures of a revolutionary dictatorship could only with difficulty have been conciliated with a great electoral campaign. But Kautsky has not the slightest understanding of what a revolution really is. He thinks that a theoretical conciliation is equivalent to a practical realization.

The Central Committee had fixed the elections

to the Communes for March 22, but lacking confidence in itself, frightened at its own illegal status, in a frantic attempt to act in accord with a more "legal" institution, it opened more or less fruitless and endless negotiations with the Assembly of Mayors and Deputies of Paris which had been deprived of authority, and was ready to share its power with this assembly if it should be impossible to come to an agreement. Valuable time was thus lost.

Marx, on whom Kautsky tries to lean, following an old habit, by no means proposed to elect the Commune and simultaneously to launch the workers in a military campaign. In his letter to Kugelmann of April 12, 1871, Marx wrote that the Central Committee of the National Guard had too soon abandoned its powers to leave the field free to the Commune. Kautsky, in his own words "does not understand" this opinion of Marx. The thing is quite plain. Marx understood at any rate that the task consisted not only in not running after appearances of legality, but in dealing a mortal blow to the enemy. If the Central Committee had been composed of true revolutionists, as Lavrov very justly points out, it would have acted quite differently. It would have been unpardonable for it to grant ten days to its enemies before the election and the convocation of the Commune, in order that they might strengthen themselves at the moment when the directing elements of the proletariat were abandoning their task and were not certain they had the right to guide the proletariat directly. The fatal lack of preparation on the part of the parties of the people now produced a committee which considered it obligatory to grant themselves ten days of inaction.

The aspirations of the Central Committee which desired as quickly as possible to hand over the power to a "legal" government were dictated less by the superstitions of a formal democracy, which on the other hand were not lacking, than by a

fear of responsibility. Under the pretext that it was only a provisional institution, the Central Committee, although the entire apparatus of power was centered in its hands, refused to take the most necessary and most urgent measures. Now, the Commune did not take away all the political power from the Central Committee, which continued, without much modesty, to meddle in all affairs. There resulted a duality of power extremely dangerous, particularly in view of the military situation.

On May 3 the Central Committee sent to the Commune a delegation which demanded a transfer of the control of the Ministry of War. Again, as Lissagaray puts it, this question was raised: "Whether the Central Committee should be dissolved or arrested, or whether it should assume the functions of the Ministry of War."

In a general way the trouble was not of the principles of democracy but the absence in these two parties of a clear program of action, and of the fact that they had a common desire both in the absolute revolutionary organization, as personified in the Central Committee, as well as in the "democratic" organization, the Commune, to shift responsibility to each other, and yet not to give up power completely. Such political relations are not worthy of imitation.

"But the Central Committee," Kautsky consoles himself, "never tried to violate in any way the principle by virtue of which the supreme power should belong to those elected by universal suffrage. On this point the Paris Commune was opposed outright to the Soviet Republic" (p. 53). There was no unity of government will, any more than there was a revolutionary vigor, but there was a duality of power and the result was a rapid and frightful disintegration. But to make up for this—and must we not regard it as a sufficient consolation?—there was no violation of the "principle" of democracy.

(To be concluded)

Economic Reconstruction of the Soviet Republic

By EUGENE VARGA

(The author, formerly a University Professor in Hungary, was Chairman of the Supreme Council of National Economy of the Hungarian Soviet Republic. He now occupies an important position with the Russian Government. The following article appeared in Moscow in No. 55 of "Vörös Újság" (The Red Daily) on December 19, 1920.)

In the next few days the Russian Soviet Congress will meet. The period in which its deliberations will take place is an extraordinary one in the history of proletarian Russia. Peace prevails on all the country's frontiers. As to the permanence of this condition of peace, we should not however surrender ourselves to any sweet illusions. The imperialistic states, whose existence has been made uncertain by the mere fact that there is a proletarian nation on earth, will make new attempts again and again in order to overthrow the Russian proletarian state by force of arms.

At any rate it is possible, even probable, that the state of peace will continue for a certain period, and this period must be utilized for the reconstruc-

tion of Russian economic life.

Without doubt this reconstruction is extremely necessary. The capitalistic order has been abolished, but the revolutionary task is by no means completed thereby: *a new mode of production must be created, whose yield will exceed that of the capitalist order.* In order to attain this, the following innovations must be made: first, the anarchy in capitalist production must be replaced by a systematic mode of operation, i.e., all the forces of production, technical equipment, labor power, sources of raw materials, transportation possibilities of the proletarian state must be exploited systematically in such manner that the labor of each worker may attain the greatest possible degree of efficiency.

Efforts have been made hitherto for a systematic operation of individual branches of production, but as yet there is a lack of an economic organ that would embrace the entire economic life of the country, and regulate and secure the interlocking operation of the various branches of production. There is no reason to deny this condition. The creation of this economic plan, as well as the determination of the guiding lines necessary for it will be the chief task of the Congress.

In the second place: the productive yield of capitalist economy was insufficient, and this is chiefly because only an extraordinarily small portion of the population was carrying on productive work. In capitalistic society entire great branches are occupied in *unproductive* work: for example, the capitalist classes, the organizations created for the protection and control of private property, the judges, lawyers, officials, watchmen and custodians, etc., the enormous number of merchants, agents, commercial travelers, and employees necessary under free competition, the workers producing articles of luxury for the rich alone, all the female members of the ruling class who are quite capable of doing work, etc., etc. In order to lift the production of the entire country it is necessary that those formerly concerned in these superfluous occupations shall be added to the productive labor forces. This has not yet been done in Russia. The task of the coming year will be the introduction of compulsory labor and a practical utilization of the labor power of the entire country. The guiding lines of this task must also be determined by the Soviet Congress.

The role of the trade unions in the proletarian state and in production is closely related to the above question. The experiences in Russia have not yet given final results in this field. The adherents of the militarization of labor are opposed by the advocates of the ideas of free discipline. But it is undeniable that labor discipline in the industries has thus far been a weak point of Russian economic life. The workers work only 18 or 20 days a month instead of 25, and the yield of their work is far behind what the capitalists got out of their workers in peace times. The Soviet Congress was convoked in order to draw up the proposed steps in this field also.

In spite of the undeniable improvement that has been recorded in the past half year the yield of production in the field of industry is insufficient: the same must be said also of agricultural production. The extent of the cultivated area has considerably diminished during the last five years, for instance, in the last fiscal year alone, seven per cent. In addition, the average yield has also gone down. This phenomenon unquestionably has its material reasons, such as: lack of good implements, decrease in live stock, cessation in the importation of artificial fertilizer, etc. A further reason for the decline is the lowering of the productive ability of the peasantry. Owing to the insufficiency of industrial production, the peasant cannot obtain the city products and instruments of production,

nor the commodities necessary for his personal consumption, at least not in sufficient quantities. Consequently the peasant, in the first place works less, and in the second place seeks to raise on his ground only such products as may be utilized by him in his own home: foodstuffs of all kinds, tobacco, flax, hemp, etc. Everywhere the attempt of the peasantry is to be observed, to produce, in his domestic economy, only those products necessary for the covering of his own needs. This attempt must be combated, and the Soviet Congress must take a definite attitude to the question of the regulation of the peasant economy by the State.

In the economic field, great tasks face the Soviet Congress. In addition to the main questions that have already been touched upon above, the Soviet Congress will occupy itself also with the possible dangers of the growth of bureaucracy, and with the relations of the great central organization to the local organs, and in general with the successful combining of the centralistic administration with the initiative of the local organs. We are sure that the representatives of all of the toiling Russian people will find the proper solution for their further evolution. At any rate it is an extremely interesting and reassuring fact that at the beginning of the fourth year of the Russian Proletarian Revolution the Soviet Congress is faced not with the question of how to secure the rule of the proletariat, but chiefly with the question of economic reconstruction. *The question of maintaining their power is no longer a problem for the Russian proletariat.*

In the Next Issue of

Soviet Russia

INTERVIEW WITH KERZHENTSEV, Chairman of the Soviet Russian Commercial Delegation in Sweden. Refutation of the fantastic reports about uprisings in Russia.

IN RED RUSSIA. Letters from Pierre Pascal, a French Communist. This article deals with the Extraordinary Commission, prison conditions, and the so-called Red Terror in Soviet Russia in 1920.

THE PARIS COMMUNE AND SOVIET RUSSIA, by Leon Trotsky. In continuation of the article in this issue Trotsky takes up "The Democratic Commune and the Revolutionary Dictatorship" and "The Workers of Paris of 1871 and the Petrograd Proletariat of 1917."

THE EXECUTION OF COUNT MIRBACH, by Victor Serge. A vivid description of the terroristic activity of the Social-Revolutionists of the Left that culminated in the execution of Count Mirbach, the German Ambassador to Russia. The author was formerly an exponent of Individualistic Anarchism in France.

SOVIET RUSSIA AND GERMANY, by Clara Zetkin. The well-known German Communist, in a spirited speech, points out the importance for Germany of resuming commercial relations with Soviet Russia.

The Darkness Before Dawn

BY JOHN S. CLARKE.

Once again I was privileged to walk abroad in Petersburg. Petersburg, the "city of dreadful night"—and radiant day; the city that owes its origin to Peter and Catherine, who, in the words of a writer in the "Contemporary Review" "loved the people and strove for their advancement."

Who would dream when gazing upon its pink and white vistas; green-mottled and golden-spired fanes; stately river beautiful-ised and palace-banked; and the sculptural wonders of its bridges, streets and prospects, that little more than two centuries ago its site was the boggy haunt of marsh fowl and jungle beast? Scarlet Petersburg—*Red Petrograd*; well is it named red. The soil on which it stands, the stones of its streets and buildings, are red with blood—the blood of the countless victims of sadistic Tsars and libidinous Empreses. But where Tyranny reigns there shall the imperishable spirit of Liberty brood, and it was so in Petersburg. That which once was a capital of iniquity has become a metropolis of justice.

Ere human wolves sought prey upon this spot the wolves of the Finnish forests claimed it as their own.

In time came Peter the "Great," and he, battling with Swedes who wished to own the Neva territory as their ancestors had wished before them in the days of Alexander Nevski, decided to build a fortified city, which would not only keep such enemies at a distance, but be "a window looking into Europe" out of dark and barbarous Russia. How this fiendish despot satisfied his whim may be told in few words. He selected the small island of Yanni Saari, or "Hare Island," as the Finns contemptuously called it (because the Russians were alleged to run away like hares in battle), and began the building of the fortress called Saint Peter and Saint Paul. Around this the city arose, and by means of a worse slavery than ever was known to ancient Egypt. Men were driven to the Neva marshes from every part of Russia, and forced to labor for the autocrat by every cruel form of coercion known to the wit of man. Digging implements were unknown there. The soil was dug by thousands upon thousands of finger-nails, and carried in the hands, in pieces of matting, and, in some instances, the tails of shirts. Frightful diseases arose from the stagnant swamps, and the slaves and criminals who toiled dropped dead by the thousand (over 100,000 slaves died in the course of operations). Others afflicted simply fell down, and, in the words of the historian, "obstinately refused to accept any assistance from the others, preferring to die." We learn that the one or two open routes through the bogs and fens to the embryo city were strewn with thousands of rotting carcasses of oxen, horses, dogs, and men—trapped by a rise in the floods which turned the pathways into treacherous bogs. Peter called it his "paradise."

Soldiers who deserted were no longer killed. They were knouted and sentenced to "assist in the building of the Tsar's city." In 1710 Peter enacted a law to the effect that the Provinces must provide 40,000 workmen per year for three years to hasten the building of his city, and that so long as it was being built no stone houses were to be erected in any part of Russia. This latter clause simply meant that skilled artisans (masons, etc.) were compelled to journey to Petersburg for work—to avoid death from hunger—the same form of coercion which today compels a "free man" to work for the enrichment of another. In 1714 the authorities in distant Archangel were ordered to contribute 3,000 slaves to work upon the fortress at Kronstadt. Think of the hideous march of these poor devils from Archangel to Petersburg! Decrees were issued compelling people of the higher classes to build stone houses and dwell in them at the new city, and one part of the city was marked off as an artisans' quarter wherein "free" craftsmen were compelled to live whether they liked it or not. This is how Peter "loved his people"; how he "strove for their advancement."

Even after the city was "completed" the wild beasts (few of them more savage than the city's founder) still frequented their invaded territory. In 1714 wolves tore two sentries to pieces and devoured them, and a woman was dragged down in the streets at midday by wolves opposite Prince Menchikov's house.

Year after year terrific floods came and destroyed not only the greater part of the city, but thousands of the inhabitants. Even in our time the Winter Palace has been half destroyed by the wild waters of the turbulent Neva. On one of these floods I shall write later. While Petersburg was being built on a foundation of human skulls and its buildings cemented by human blood and Neva slime, the peasantry were sinking into the vilest slavery ever known to Russia. Kennard tells us that Peter "brought a curse (bureaucracy) that bred nothing but corruption and reaction" in the country. Just before Peter's reign serfdom became slavery, and the serfs were bought and sold like beasts of burden. "Many ran away, but Peter had them severely flogged and sent to the mines, and the proprietors received the right to send them to the mines forever." This is how he evidenced his regard for the people—making even the slave's lot harder to bear. Read any Ukase issued in this monster's reign, and the penalties of the knout and death will be found on every page.

But if Peter was bad in this respect, Catherine was worse. It was illegal in the reign of Peter to sell slaves separately who were members of a family. Not so in Catherine's time. Besides the incredible tortures to which serfs had to submit, a father or mother could now be sold by proprietors who wished to retain the children. In short,

serfs were looked upon by the laws of Catherine as mere animals and treated as such. Writes Professor Ross: "They were among the merchandise offered at fairs." And again: "During the eighteenth century (Peter and Catherine's time) the trend was all in the direction of emphasizing the power of the master." Even in Little Russia,* where serfdom had been hitherto unknown, we find it flourishing under Catherine. Kovalevsky writes in *Ancient Laws* (p. 82): "Social distinctions remained almost unknown among the Little Russians down to the end of the eighteenth century, when Catherine the Second introduced among them the notions of a feudal nobility and serfdom." That this eighteenth century Zenobia (or Semiramis), who murdered her own husband, was incapable of feeling any of the higher instincts of humanity might be gauged from one of her letters to Grimm, the German writer. It was written on the occasion of the most disastrous flood in the history of Petersburg—September, 1777. A three-masted ship was hurled into the streets, and the waves washed the staircase of the Palace. In somewhat the literary style of Mrs. Snowden, Catherine writes:

"How many broken window panes! How many pots have been upset with flowers! This morning not a single hair-dresser will visit a lady. . . . The big window has fallen to the ground alongside the table where the dessert is standing. My wine cellar is full of water, and God knows what will happen to it."

Think of it! With hundreds of poor creatures drowned in the neighborhood, their bodies floating east the Palace windows, this "people-lover" could lament only over her window panes, flower-pots, wine cellar, and the fact that her ladies wouldn't be able to get their lousy heads attended to.

Memorable Places

There were many places in and around Petersburg I was anxious to visit, and the happy company I had fortunately become attached to were only too eager to show me round. The Nevsky Prospect is full of interesting objects despite its bleak, shopless appearance. The beautiful horse-group bronzes upon the canal bridge are themselves almost worth a visit to Russia. Near the Square opposite to them is the spot where the Countess Lopukhin was publicly punished for the dreadful crime of speaking too lightly of the amours of another sexual connoisseur, the Empress Elizabeth, daughter of a worthy father, Peter the Great. Carr's description of the public spectacle is horrible:

"The beautiful culprit mounted the scaffold in an elegant undress, which increased the beauty of her charms and the interest of her situation. Distinguished by the captivation of her mind and person, she had been the idol of the Court, and wherever she moved she was envired by admirers; she was now surrounded by executioners, upon whom she gazed with astonishment, and seemed to doubt that she was the object of such cruel prepara-

tions. One of the executioners pulled off a cloak which covered her bosom, at which her modesty took alarm; she started back, turned pale, and burst into tears. Her clothes were soon stripped off, and she was naked to the waist, before the eager eyes of an immense concourse of people profoundly silent. One of the executioners then took her by both hands, and turning half round, raised her a little from the ground; upon which the other executioner laid hold of her delicate limbs with his rough hands and adjusted her on the back of his coadjutor. He then retreated a few steps, and leaping backwards, gave a stroke with his whip, so as to carry away a strip of skin from the neck to the bottom of the back; then striking his feet against the ground, he made a second blow parallel to the former, and in a few minutes all the skin of the back was cut away in small strips, most of which remained hanging to her chemise. Her tongue was cut out immediately after, and she was banished to Siberia."

Nearby is the Anichkov Palace where the callous rulers of Russia preferred to live—every wall literally pock-marked with bullet-holes from the Bolshevik gunfire. Beyond is the Fontanka Canal, and on the other side, nearer the Admiralty Buildings, flows the Moika Canal. A great yellow palace stands upon its bank, once the home of Prince Yussupov, quite a celebrated young aristocrat, whom I possess a sneaking regard for. At any rate I paid his home a visit and found food for meditation. In the basement there is a dark room with a narrow spiral staircase. In this room on December 29, 1916, the Prince received a guest whom he had gone out of his way several times to invite to dinner. It was Gregory Rasputin. The Grand Duke Dmitry was also there. The treacherous priest had been lured here by men who hated him, and who were determined to end his rotten life. They first tried to kill him by poisoning his coffee, but the giant seemed proof against poison. In a dilemma the conspirators went upstairs leaving Rasputin to glut his enormous appetite below. They decided to try the bullet. But one bullet was not enough. The Prince came downstairs holding a revolver behind his back, and in order to secure a good aim he requested the priest to examine a crystal crucifix on the wall. As soon as Rasputin turned his back Yussupov fired at his heart and the giant fell screaming, but far from dead. Foaming at the mouth and with eyes still open, the gigantic figure struggled upward, launched itself upon the Prince, and hurling him aside rushed through the door into the garden. He was actually half over the railings when the conspirators reached the door, and was only prevented from reaching the public thoroughfare by Purishkevich who fired at him again and dropped him dead. Later they pushed his body through a hole in the ice of the Neva, but it was discovered and buried by the Empress at Tsarskoye Selo. It was afterwards removed and burnt.

Most of the other places directly and remotely associated with the Revolution were pointed out

*Ukraine.

to me by my equally interested companions. With glee they pointed out the green and yellow building, bullet-torn and shattered, which was once the dreaded offices of the secret police, the villainous *okhrana*, wherein the lives of countless men and women of the past had been sworn away by the servile creatures of tyrants. What infamies those rooms would narrate could they speak. How many unfortunate wretches have left that building to find a dreary death or an everlasting exile in Siberia, or what, strange to relate, was accounted infinitely worse—a living tomb in the horrible fortress-prison of Schlüsselburg.

The Russian Bastille

Schlüsselburg is a little village thirty-five miles from Petersburg on the shores of Lake Ladoga. Some of the peasants continue to live under the ancient "joint family" system, and to wander among them on a bright day is to taste medievalism in actuality. Over on the lake stands the hideous fortress, perhaps the most hateful spot in Russia. Horrors unspeakable have been perpetrated here, and screams have risen to heaven from tortured beings, which have never penetrated to the mainland. The prison was built on the grounds of the fortress in 1883 by the late Tsar's father, Alexander III., and between that year and 1905 the leaders of the "Narodnaya Volya," including Vera Figner and Herman Lopatin, were imprisoned therein. Of these, thirteen were executed, and three—Sophie Ginsburg, Klimentenko, and Grachevsky—committed suicide; the first cut her throat with rusty scissors, and the latter burned himself to death. The low bastions, drab colored and unromantic, fill one with despair to look upon. Even before the prison already mentioned was built, Schlüsselburg fortress was a tragic spot. In 1741 the Emperor Ivan VI. (grandson of Ivan V.) was imprisoned after the intrigues which made Elizabeth the Empress. In Tooke's "Life of Catherine II." we find an account of the fate of the miserable captive:

"The wretched captive, lately the envied emperor of a quarter of the globe, was lodged (for sixteen years) in a casemate of the fortress, the very loophole of which was immediately bricked up. He was never brought out into the open air, and no ray of heaven ever visited his eyes. In this subterranean vault it was necessary to keep a lamp always burning; and as no clock was either to be seen or heard, Ivan knew no difference between day or night. His interior guard, a captain and a lieutenant, were shut up with him; and there was a time when they did not dare to speak to him, not so much as to answer the simplest question."

From 1741 until 1762 the poor wretch suffered these horrors without a spark of hope in his breast, in 1762 Catherine ascended the throne and an attempt was made to rescue Ivan from his living grave by Vassili Mirovich, an officer of the garrison. This, however, resulted in disaster, if death to a tortured man can be spoken of as a disaster:

"At the noise of the firing, Ivan awoke; and, hearing the cries and the threats of his guards, he

conjured them to spare his miserable life. But, on seeing these barbarians had no regard to his prayers, he found new force in his despair; and, though naked, defended himself for a considerable time. With his right hand pierced through and his body covered with wounds, he seized the sword from one of the monsters, and broke it; but while he was struggling to get the piece out of his hand, the other stabbed him from behind, and threw him down. He who had lost his sword now plunged his bayonet into his body, and, several times repeating his blow, under these strokes the unhappy prince expired.

"They then opened the door, and showed Mirovich at once the bleeding body of the murdered prince, and the order by which they were authorized to put him to death, if any attempt should be made to convey him away."

Escape from the island fortress was next to impossible, so small wonder it is that the people-loving Tsars selected it as the ideal spot on which to build their "stone bags," as the prison is called. All the "dangerous" politicals were sent to Schlüsselburg, for the terrors of its "casemats," its knouts and gibbets, were expected to tame the wildest spirit. Tier after tier of hideous stone cupboards, barred with iron exactly like the front of a wild-beast cage in a zoo, now happily torn and twisted to scrap and ruin, meet the eye on entering. In these iniquitous dens in 1883 were incarcerated Gellis, Voloshenko, Butinski, Orlov-Malaveski, Popof, Shchedrin, and Kobylanski—all politicals who had served a term in irons at Kara and were removed here because they were considered "dangerous." Their subsequent fate is unknown. Myshkin who escaped from Kara in 1882, was sent to Schlüsselburg when recaptured, and sentenced to solitary confinement. Fearing that the torture would drive him insane, he decided to die. His method was one he had previously tried unsuccessfully. He succeeded this time. Waiting for the visit of an official he jumped up and struck him, and was immediately court-martialed and shot. This occurred in 1885 after two years of solitary confinement. Myshkin has been described as "a born orator who only made two speeches in his life; one of them cost him ten years' penal servitude, and the other fifteen." Scores of the Tsarist victims went insane. Among the celebrated prisoners of Schlüsselburg, Vera Figner suffered twenty years detention here, and wrote many poems during her living death; Madame Wolkenstein spent thirteen years, and left it only to be shot during a revolt; Polivanov entered it a young man of twenty-four and came forth an *old* man of forty-five—to commit suicide in France (1903). The most celebrated prisoner, perhaps, that Schlüsselburg ever had, was Herman Lopatin, the translator of "Das Kapital" into Russian. His career is well known. He was born in 1845, and entered the Petersburg University after studying at the grammar school of Stavropol. In 1870 he came to London and met Marx and Engels. He returned home and later was captured at Irkutsk, whither he had

gone to try and arrange the escape of Chernishevsky, the famous exile. For three years he remained in prison and then succeeded in effecting a marvelous escape. He was caught by secret police in 1883 and again he escaped. In 1884 he returned once more to Russia and was immediately arrested, serving three years before his trial. In 1887 he was condemned to death with several of his comrades, but the sentence was commuted to "penal servitude to be followed by solitary confinement in the fortress of Schlüsselburg." During the 1905 Revolution Lopatin was released.

What spirits were these! What modern European country has produced such spirits in such profusion? One thinks of those whose names are known, and rightly revered, but one thinks too of the thousands who suffered and died unknown. Of those,

"Whose names on earth are dark,
But whose transmitted offence cannot die."

One remembers, also, the priggish A. S. Rappoport's* sneer at the "feminine mind" of the Russian, and involuntarily the mind conjures up the picture of the cages at Schlüsselburg—and the heroes and heroines once immured within them for others' sake. No poem, no drama, no painting ever more vividly or more accurately depicted the absolute mastery of the higher mind over its weaker self and body, than the little suppressed vision called "The Threshold," written by Ivan Turgenev on the spirit of Russia's revolutionaries:

THE THRESHOLD

I see a huge building, in the front wall a narrow door, which is wide open; beyond it stretches a dismal darkness. Before the high threshold stands a girl—a Russian girl.

The impenetrable darkness is breathing frost, and with the icy breeze from the depth of the building a slow, hollow voice is coming.

"O you! wanting to cross this threshold, do you know what awaits you?"

"I know it," answers the girl.

"Cold, hunger, hatred, derision, contempt, insults, suffering, even death?"

"I know it."

"Complete isolation, alienation from all?"

"I know it. I am ready. I will bear all sorrow and miseries."

"Not only if inflicted by enemies, but by kindred and friends?"

"Yes, even by them."

"Well, are you ready for self-sacrifice?"

"Yes."

"For an anonymous self-sacrifice? You shall die, and nobody, nobody shall know even whose memory is to be honored."

"I want neither gratitude nor pity. I want no name."

"Are you ready—for a crime?"

The girl bent her head. "I am ready even for a crime."

"Do you know," persisted the voice, "that you

may lose your faith in what you believe now; that you may come to feel that you were mistaken, and have lost in vain your young life?"

"I know that also. Nevertheless I will enter."

"Enter then!"

The girl crossed the threshold, and a heavy curtain fell behind her.

"A fool!" gnashed some one outside.

"A saint!" answered a voice from somewhere.

* * *

"Without 1905," says Lenin, "1917 would have been impossible." Without that long line of martyrs whose natures were purged of vainglory and whose lives were Christ-like in the practice of self-abnegation and devotion to the ideal; without this illustrious line of pathfinders who blazed the trail and wrought in the darkness before the dawn—that dawn, 1905 or 1917, would have been impossible. My companion Sergiev was sent to Schlüsselburg before being dispatched to Siberia, I shall not readily forget the expression on his face when he vehemently exclaimed, "Of all the bloody places on earth, that is the bloodiest!"

At any rate it certainly had the appearance of being one of the most revolting torture-buildings erected since

"Men first penned their fellow men
Like brutes within an iron den."

It is a bloody place no longer. The Revolution has destroyed its unholy casemates and "stone bags" as effectively as the French proletariat destroyed the Bastille. The cages have been smashed to pieces, the buildings gutted, and the instruments of torture housed in the Revolutionary Museum of Petersburg. May a similar fate soon overtake Princeton, Portland, Pentonville, Wandsworth, Wormwood Scrubs, and—Barlinnie.

Worker and Peasant Women in Russian Life

For a long time the Communist Party of Russia legally sought means for making women take an interest in the social and political life. The revolutionary parties of Russia never occupied themselves with the "feminist question" as such before the rise of the Soviet Republic. Woman was always considered as having equal rights and also took part in the same work as man, as an organizer, propagandist, agitator. Like him she fought on the barricades, and in the terrorist parties the woman bomb-thrower was a characteristic figure. Of course, in the beginning of the revolutionary movement, and in view of the illegal character of this movement in its early period, only the elite of womanhood, those who had had the opportunity of acquiring a superior education, or who possessed an extraordinary amount of courage or energy, could succeed in emancipating themselves from their environment to a sufficient extent to take part in revolutionary work. Later the circle of women revolutionists widened and attracted a

*Not to be confused with the French Communist Rappoport.—Ed. Note.

greater number of workers. But they still remained an exceptional group. After the Revolution, Russia's need of revolutionary forces became immense. Unfortunately it was impossible to satisfy the demand for such forces, and much work had still to be done in this field. As the women were the more backward part of the population, it was necessary to create a special technical mechanism for work among women in the form of the organization of special sections in the party committees. To make the work among women an independent branch of the work was an innovation for Russia, which was not achieved without friction, but required endless discussions and protests from a minority before it was approved. When the task was undertaken, it was approached in a purely practical way. For it was impossible to approach illiterates, workingwomen and peasant women who had been oppressed by years of dependence, with the use of magnificent theoretical plans. Practical living work for the improvement of their situation, and the situation of their children and families would enable even the simplest workingwoman to grasp the difference between now and formerly. Therefore the *agitation by deed* became the slogan under which the work among the broad masses of the women in Russia was carried out.

The Women's Sections organized a great number of *non-partisan* conferences, which set themselves the goal of initiating women into those questions that required their participation for solution. These conferences proved themselves to be a mass-school of Communism and a source from which the forces could be drawn for the creation of the new life.

An entirely new form of agitation propaganda was that of meetings of delegates of women factory workers and women peasants. In all cities there are such delegates. They are usually elected at the same ratio, 1 to 50, for a period of three months. They remain in contact with the workingwomen of the factories, render account to them, and take active part in various labors that are being carried out by the organ of the Soviet power. In the meetings of the delegates, a systematic series of discussions is arranged, covering questions of platform and Soviet construction. It is a characteristic fact that after the expiration of the three months many non-partisan delegates of the women enter the Communist Party.

Just as is the case in our country, the most difficult task is that of getting at the housewives. But in this field also, work is beginning, and wherever it is undertaken systematically, yields good results. Each district has its men or women organizers, who make the rounds of the houses, get the housewives together in meetings, and seek to interest them in the work of the house committees. In Petrograd each such meeting of housewives elects a woman delegate to the workingwomen's section. In October, 1920, Petrograd had one thousand such delegates. The trade unions, being mass organizations of the working class, are also made use of for political education. The work among the peasant

women is very difficult and has hitherto led to no such excellent results as have been attained among the women factory workers. The petty bourgeois psychology of the Russian peasant woman, her ignorance, her dependence on her husband and her family, all these are obstacles that must be overcome if the consciousness of the woman peasant is to be awakened. But light is gradually beginning to shine in this age-long darkness, even though it be faint as yet. In the villages as well as in the cities, non-partisan conferences are convoked. The peasant women who come as delegates to these conferences often listen to Communist speakers with distrust, overwhelm them with a flood of questions, protest, and yet finally declare their readiness to join the Communist Party and to support the Soviet power in its work. The peasant women also take active part in the organization of clubs, of reading rooms, of circles, etc. The young girls are particularly energetic in this work.

The work in the village among the female farmers and the women workers in the communes and cooperatives plays a great part in revolutionary agitation. These classes constitute a semi-proletarian element, and when united in the agricultural communes they are comparatively easy to organize.

The copy of the periodical *Kommunistka* (Woman Communist) from which I take the above material is an old one of the time (October, 1920), in which it was still necessary to fight Wrangel.

Reports are accordingly found in the periodical of work done by women for the front, of energetic participation by them in the "Communist Saturdays." In September, 1920, there were 28,215 women participating in Moscow in the "Saturdays." Most of these women were not members of any party. Housewives also participated in the "Communist Saturdays." It is hard to say how gratifying is the fact that even these least organized women are arriving at the conclusion that a communal economy is more useful than an individual economy, and that the well-being of each individual family depends on the organization of the entire national economy.—From *die Rote Fahne*, Vienna.

AGENTS WANTED

in all cities to take subscriptions for SOVIET RUSSIA. Liberal commission paid. Write for terms and sample copies to

SOVIET RUSSIA

110 West 40th Street New York, N. Y.

SOVIET RUSSIA needs the following back numbers: Volume I—Numbers 8, 10, 20, 22, and 30. Volume II—Number 6. A copy of "Marriage Laws of Soviet Russia" or 25 cents will be given for each copy. Address

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION

110 West 40th Street

New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

AS we go to press the cable brings the news of the signing of the trade agreement with England and of the winding up of the Kronstadt affair. We have not received as yet the official wording of the final agreement, but from the tone of the British and American Tory press we infer that it constitutes a very substantial success for the Russian Government—even if not all the points upon which it insisted were agreed to by the other party. The fact that Lloyd George signed the agreement in no way proves that he and his associates are more “liberal” or “progressive” than their Conservative critics. It only shows that the Welsh politician has a deeper insight into the present situation and that the establishment of commercial relations was just as necessary for Great Britain as for Russia. With the whole of southeastern as well as central Europe plunged into the misery of abject beggary; with the continuous strengthening of revolutionary movements in all those countries—not as a result of “Bolshevik propaganda” but as a consequence of the unbearable conditions; with the uninterrupted growth of unemployment and dissatisfaction among the British workers, not to speak of the ever more menacing revolt of the subjected races; Lloyd George saw that he had to accept that “Unclean Thing,” as this historical event is called by the *London Morning Post*, the main organ of the English Junkers.

There is no doubt that the “bad example” set by powerful England will be in the nearest future followed by many other countries which up to the present, under the pressure of England and France, held aloof. The rage and the invectives of the *New York Times* which in one single editorial contrived to concentrate a whole encyclopedia of anti-Bolshevik vituperation, seem also to be an indication that the time is not so far when normal political and commercial relations will be established between the United States and Soviet Russia.

It is significant that even the smoke screen of skillfully disseminated propaganda concerning the impending fall of the Soviet Government, which, in connection with the isolated mutiny in Kronstadt, was undoubtedly organized and directed by the French financial interests from all the Finnish, Latvian, Turkish and Scandinavian centers of fabricated news, was not able to divert England from

its determination to settle this matter. This is a further proof how far the interests of the one-time Allies are now antagonistic and how deep is the rift between the powers which for so long had with touching harmony conducted and backed all the imperialistic and counter-revolutionary attempts against the Workers' and Peasants' Republic. But sooner or later even the French imperialists will find out that with all their irreconcilability, with all their intrigues and all the help which they may tender to future adventures, they will not shake the firm foundations on which Soviet Russia stands—the heroism of the Russian workers and the sympathy of the laboring classes all over the world.

* * *

AFTER a second reading of John Spargo's “Memorandum on Trade with Russia” we came to the conclusion that we were unjust to him by quoting only two passages out of the collection of gems that constitute his report to the Committee on Foreign Relations of the United States Senate. The gist of the whole masterpiece is the “conclusion that it is not possible for this country to enter into trade relations with Soviet Russia, under existing conditions, without incurring serious risk of unprecedented economic disaster and revolutionary upheaval.” Poor England that has just fallen into this trap!

In his role as champion of the established order, this “Marxian Socialist” draws his sword against the former Secretary of Treasury, the Hon. William G. McAdoo, who has openly endorsed the establishment of trade relations with Russia. Mr. Spargo, of course, being thoroughly conversant with the Russian situation—for has he not written half a dozen books on that subject?—proves that as far as America is concerned “practically all restrictions upon trade with Russia have been removed,” or at least that the restrictions amount only to a “limited embargo, and not a blockade.”

Mr. Spargo goes further than that: “The fact is that instead of our Government refusing to let the people of Russia buy our products, the present Soviet Government refuses that right to its citizens. No Russian citizen is at liberty to buy goods in this or any other country and to import them into Russia.” So you see it is not Russia that is blockaded—it is the whole world that is blockaded by the Russian Government.

As the Soviet Government has forbidden individual Russian citizens to conduct foreign trade on their own account, then, according to Spargo, in order to conduct business between the two countries, either the United States would have to adopt a Communist Government, or the United States Government would have to assume the functions of a trustee and agent conducting trade with Soviet Russia on behalf of its citizens who might seek profit through such trade. The third alternative, namely, that American citizens, or corporations could, the same as German, Italian, British and other firms, conduct their trade directly through the rep-

representatives of the Soviet Government, has apparently escaped this specialist on Russian affairs, who seems to think that Mr. Martens was in this country not to conclude business transactions but to put bombs in mail boxes and blow up explosive wagons in crowded financial districts.

* * *

MR. SPARGO dwells upon the fact that the sum total of gold, platinum, and available raw material that the Soviet Government can offer in exchange for the needed machinery and railroad material amounts only to a very small fraction of the value of the goods sought, and adds that "as far as that portion of the possible trade is concerned, we are in no position to compete with Germany." This is generous. The Russian Government is ready to conclude here business for several hundred millions, but this altruistic defender of American interests declares that Russia could get the goods cheaper in Germany and should not waste her money in America.

To prove the uselessness of all attempts to conduct trade with the Soviet Government, the "Memorandum" mentions the fact that until now only a very restricted amount of trade has been going on between Russia and the other Governments. Mr. Spargo infers that this is due to the fact that the Russian representatives always tried to "fool" the parties concerned. And for this purpose he quotes the story, long ago exploded, of the "large percentage of bismuth" in the Russian gold. As a matter of fact, attempts to "fool" were made—but not on the part of Russia. On the instigation of English commercial interests the financiers of all the countries concerned wanted the Russian gold at a discount of 30 per cent.—a piece of commercial piracy that has hardly its equal in history. It is quite natural that this has greatly delayed the conclusion of commercial transactions with those countries.

* * *

THE question of concessions offered by the Soviet Government to American and other capitalists takes up a substantial part of Mr. Spargo's pamphlet. He quotes a speech of Lenin's in which he especially takes exception to the following passage: "No doubt they (the concessionaries) will attempt to deceive us and to evade our laws, but then we have with us the All-Russian, the Moscow, the Provincial and all the other Extraordinary Commissions, so we do not fear them." To which Spargo indignantly adds that "the Bolsheviks are relying upon the Red Terror to deal with our investors." According to him it is probably correct that "our investors" should deceive the Russian people and evade their laws without in the slightest incurring the responsibilities therefor. He further dwells at length on a speech of Zinoviev from which he draws the conclusion "that there is not and there cannot be, any assurance that the Bolsheviks will not confiscate the capital invested in such concessions, and cancel the concessions themselves, if and when it suits their purpose so to do.

The menace of confiscation is clearly expressed in the utterances quoted." This "menace" is in the following way "clearly expressed" in Zinoviev's speech: "We must try to remain at peace with all countries as long as possible. Concessions are one of the means to this end. It is stipulated in our treaty that the owners of the concessions lose all the rights granted to them by the agreement as soon as hostile action is taken by the respective Governments.* It should be noted that questions of war and peace are decided by big bankers. War against us would obviously be against their interests." As to the Soviet Government—which never had any intention of starting war against other countries—aside from its anti-imperialistic policy, it knows that success in repulsing foreign attacks depends greatly upon the friendly attitude of the working people of other countries, which would certainly change if Russia should wantonly enter upon the path of a provocative war policy.

But the "danger of repudiation and its disastrous consequences rests not only upon the perfidy of the Bolsheviks, but equally upon the patriotism of the democratic anti-Bolshevist forces of Russia" who would repudiate all agreements entered into by the Bolsheviks. The author of the "Memorandum" considers that those patriots would be perfectly right in repudiating these agreements, and that neither the American nor any other Government would have the right to hold them bound to those agreements. But if the Russian "patriots" would be in the right in repudiating the agreements of their predecessors, why then call "perfidious" the Bolsheviks whose main crime consists in having done the same thing concerning the obligations incurred by the Tsar? Or was the Government of the Tsar an expression of the will of the majority, and its obligations therefore binding? Or does he suppose that the American investors will in such a—let us say "unfair" way,—take advantage of the Russian concessions, that any "decent" subsequent Russian government will have to repudiate them? Else why is Mr. Spargo so much worried about what fate may befall these gentry?

* * *

HIS crowning argument is of course the most convincing one. It rests on moral grounds. The gold and the goods the Soviet Government has to offer, are "stolen," and all its representatives in all foreign countries had sooner or later to be expelled because of "promoting intrigues and conspiracies subversive to the existing government." "This they have done without a single exception, so far as I have been able to discover."

Did he discover this in the case of Mr. Martens? If so, why didn't he inform the authorities of this government about it? They seem to have been perfectly unaware of it. No indictments were brought against Mr. Martens and the Department of Labor expressly exonerated the Russian Representative from any charges in this direction.

*Since 1914 this procedure has been generally established in all countries.

The Struggle for the Russian Trade Unions

(Under this title the well-known journalist Karl Radek recently drew up a very interesting and instructive report, the essential ideas of which are here presented.)

For the third time Soviet Russia is today making an attempt to go about her task of peaceful reconstruction, regardless of the constant threat of war by capitalism. The time for the first such attempt was thought to be favorable immediately after the peace of Brest-Litovsk. The illusion under which the workers labored, that they would be able to reorganize the country by their own efforts alone were overcome by that early date, and the work of reconstruction was begun with the aid of a systematic employment of bourgeois specialists and scientists. A systematic inventory of everything that had been left over from capitalism and might be used as a basis for further Communist activity was inaugurated. The foundation for a new labor discipline was laid. This first breathing spell ended with the beginning of intervention by the Entente. In the latter part of February, 1920, after the defeat of Denikin and the raising of the blockade, it seemed for the second time to be possible seriously to go about the work of economic reconstruction.

The chief task now was to solve the question of the economic plan and the economic organization. It was necessary to destroy in the workers the delusion that a planful organization of economy was possible under the (seeming) "freedom of labor" as it prevailed under capitalism. Trotsky in his theses points out the necessity of the self-organization and the self-disciplining of the proletariat, of a planful distribution of labor forces, of the greatest possible rigor of discipline at work. The war with Poland and Wrangel prevented the program of the economic reconstruction from being realized entirely. But a portion of it was, nevertheless, carried out. The more rigid organization of labor made it possible to hold up the disintegration of the transportation system, to increase the production of coal and the yield of the harvest. (Thus the extra rations that were delivered in 1919 to only 1,500,000 workers have been delivered since December, 1920, to 2,500,000 workers.) But "everything created by the labor of the Russian proletariat and the Soviet Government was devoured by the war. And therefore Russia today is still poor, lean, and hungry."

"The capitalistic states have at their disposal all the technical means for the control of nature; millions of human beings are available for healing the wounds of the war. But the capitalistic world, torn by competition and by class struggle, is not in a position to organize these powers, to overcome all the special interests opposing the development of these powers. The proletarian world of Russia has in the dictatorship a unified will, a will as hard as steel, which will once more set right a world that has gotten out of joint."

And again we shall be concerned—once the great tasks have been accomplished which will

make it possible to bring Russia forth out of chaos, when once the electrification of Russia has become a reality,—with the question of *what is to be the nature and form of the mobilization of the labor power of the masses*. And it is around this question that today free and public discussions are being carried on in the press and elsewhere.

"It is necessary for the proletarians of the world to understand this struggle, to orientate themselves in these problems. For they are most important problems of the international working class. And the Russian proletarians, fighting for the solution of these problems are protagonists of the world proletariat, just as were the English proletarians a century ago."

In order to grasp these problems it is necessary to bear the following in mind: Russia is a country with a predominantly agricultural population. The Government is therefore obliged to consider the interests and sentiments of the peasants. The Russian workers have not only bled and starved for three years in order to maintain their own dictatorship, after an imperialistic war of three years, but in answer to the severe compulsion of war, they sacrificed a great part of the rights that the Soviet Constitution had granted them. The best champions of the labor movement have fought in the Red Army. In this way the Soviets and the trade unions have been neglected. It has frequently happened that in the place of the workers, the revolutionary and non-revolutionary bureaucracy has been able to hold the scepter, and that abuses have thus gained a foothold. Now when it is no longer necessary to postpone all other activities in the interests of the national defence, it is time to give the masses themselves an opportunity to eliminate the abuses, of themselves to alleviate need, it is necessary to restore the organs of the dictatorship. It was the trade unions which during the years of war fought by the side of the party and the Soviets for the maintenance of the dictatorship. The trade unions counting 7,000,000 workers, of which 700,000 are communists, form the most important link between the Government and the proletariat. On the question of the task which the trade unions must fulfill in the construction of the Communist society there is now a conflict of views within the Russian Communist Party. Two groups, one led by Trotsky, the other by the trade unionist Shlyapnikov, are here rather sharply opposed in their views.

Shlyapnikov's View

Shlyapnikov holds that industry can be rebuilt only by stimulating the independence of the working masses. But this can only be done by the trade unions. Therefore the management of production must be in the hands of the trade unions. They can cope with the organization of production much better than the best workers' bureau-

crazy, or the bourgeois specialists, because they possess to a higher degree the ability of properly handling the worker, of awakening the necessary enthusiasm in him.

Trotsky's View

Trotsky's position is this: The trade unions cannot discharge this task. They lack the necessary technical understanding. Their production propaganda is still in its beginnings. It is necessary to rebuild the trade unions, reorganize them, so that they may learn to fulfill their tasks. But this can only be done by taking away from them temporarily a portion of their independence and putting at their head new men who have learned in the economic organs of the state and in the Red Army how to manage great organizations with an unyielding hand. In a state in which the workers hold the governing power in their hands, the care for the material welfare of the workers is chiefly in the hands of the Government and not in that of the trade unions.

Lenin's View

Lenin does not completely agree either with the view of Shylapnikov or with that of Trotsky. As opposed to Trotsky, he points out that the Russian Government is a government of workers and peasants, and is therefore itself interested in possessing a mass organization that will be able to feel the pulse of the mood of the working masses and be sufficiently concerned with the task of getting as much as possible from the state for the working masses.*

Radek's View

The view that Radek takes of this question is as follows: In a state in which 85 per cent of the population are peasants, the reconstruction of economy without first convincing the peasants that their interests are being considered is impossible. But they will not have this confidence if production is being led, as is Shlyapnikov's view, by the trade unions alone, and the plan of production is drawn up only by the trade unions. It is therefore impossible to hand over the conduct of industry exclusively to the control of the trade unions. *The state must participate.* Specialists and engineers must be represented in the management. This is all the more necessary since the trade unions are as yet little prepared for their tasks. Trotsky presents the matter as if the trade unions had only the single task of increasing production, and as if this task could be attained by a military discipline alone. There is a great danger in this procedure. The trade unions are today still the most important educator of the masses to Communism, the mediators between the Soviet Government and the millions of non-Communist workers. If they are deprived of their influence no organ remains that can educate the workers by conviction and persuasion to

*For a complete exposition of Lenin's views see following article, "The Trade Union Movement."

labor for the Soviet State, to increase production, and only if the Government remains under the control and the pressure of the trade unions permanently can the danger be avoided that the interests of the workers constituting 15 per cent may be neglected in favor of the peasants, constituting 85 per cent of the population. The second danger in Trotsky's view is in the fact that the transformation of the trade unions as above may very easily lead to their bureaucratization and militarization, for this transformation would be conducted chiefly by two thousand comrades who during the last two years have passed through the school of the Red Army. If now, these comrades make use of the same methods (the peremptory tone of command, the disciplinary punishment) that were necessary in the field for the maintenance of discipline, in their work in the labor field, production may be more harmed than benefited by this "sharp procedure." "The chief method here must be that of conviction and propaganda, which may be slower, but which works more surely." It is Radek's opinion that the differences in the views of the leading comrades will not develop into oppositions that might serve as an obstacle in the struggle for the reconstruction of economy. For the Communist Party is absolutely agreed that the trade unions must participate more than has been the case in the work of reconstruction. But if now the workers return from the battlefield and again enter the industries, their participation in the conduct of production will automatically increase. On the other hand the party will not renounce the task of guiding and influencing the trade unions. For this work the party will need to employ specialists and qualified comrades from the Red Army. But it will say to them: You are entering the trade unions not as the wise teachers of stupid trade unionists, but in order to work and learn together with them all the new tasks that may be thus carried out. The trade unions are to carry out national functions, and the better the proletarian state and the trade unions fare in this work, the more objections to a formal nationalization will disappear, and the more will this formal nationalization become unnecessary.

The Trade Union Movement

We print here the speeches of Zinoviev, Trotsky, and Lenin on the role of the trade unions in production, as expressing the different viewpoints on this question existing in the ranks of the Russian Communist Party.

Zinoviev's Report

The trade unions are at present the organizations in which the controversy between the Social Revolution and bourgeois social-democracy is being finally fought out, not only in Russia but on an international scale. This is especially manifest in those countries in which the bourgeoisie is in power because there the social democrats have shifted the center of the struggle on an international scale to the field of the trade union movement. It is no exaggeration to say that nine-tenths of the whole struggle waged at present by the Communist International, will in the near future be carried on in and round the trade unions. The trade union movement on an international scale is the last foothold of international Menshevism; and to conquer Menshevism in the trade union movement, will mean our final victory over the bourgeoisie. The trade unions are the largest organization of the workers that the history of the labor movement has known. That is why the struggle of the social-traitors on an international scale is waged within their boundaries.

The trade unions are the backbone of the dictatorship of the proletariat. Without the trade unions, as was correctly stated by Comrade Lenin, our Revolution would not have lasted for two weeks. The trade unions are the most important element of proletarian dictatorship, but this does not mean that the unions themselves are a direct instrument of the dictatorship. No, for this purpose we have the State, we have the Soviets backed by the Party. The trade unions have other functions to accomplish; first of all, they carry out the rough work of organizing the working masses, and they begin the great work of educating the workers in the proletariat, and then in the purely Communism, in which we are to educate millions of trade unions. We must not deal carelessly with these vast organizations. We must remember that these organizations have their specific and important tasks, which consist, in the first place, in the work of directing the masses into the current of the organized proletarian movement, of attracting into that movement the millions of non-party workers. We must remember that we have at present seven million workers organized, and badly organized, in the trade unions. This is all we have in the enormous territories of our country.

In order that the seven million members of the trade unions may influence the peasantry and draw it closer to themselves, we must have the fullest unity in the camp of this trade union movement. There can be no talk of our being able to carry out the Dictatorship of the Proletariat, if we do not pay the greatest attention to the trade unions. Every one should comprehend that we must regard the trade unions as an enormous laboratory of

Communism, in which we are to educate millions of the workers, and without which there can be no talk of the serious education of the workers.

Now I shall touch upon the question of democracy of production. In my opinion, it is an empty combination of words, which conveys no intelligible meaning at all. At our last All-Russian Party Conference, we attached special emphasis to the question of labor democracy. The difficulty does not lie in the fact that we weakened our democracy while the war was going on. That was necessary. It would be bad if, now that the war is ended, our Party hesitated and waited. But the Party immediately took the course of restoring labor democracy. We say that we are revolutionists, and, as soon as conditions changed, it was our duty to be the first to put forward this question and solve it together with the Party. This is the way we put the question of democracy in work.

At the same time a new term was introduced; "democracy of production." Of course, production is the most important thing at present. None of us doubts that it is the most important problem at present. But in order to solve this economic question, it is not at all necessary to resort to tangled and vague terms. It is true that at elections we shall have to put the question: Do you understand anything about economy; are you able to organize? But we say that this will be the only question which we shall put to the candidate. We require some political traits, Party experience, and the ability to organize, etc. I maintain, that the term "democracy of production" is lacking in sense, and is a false term, only likely to breed confusion in the Party. It points to no firm course; it does not help us to grasp the situation as it is. We say that in the same way as we educated the fighter, the Red Army man, the commissar, we shall also educate the trade-unionist, the economist, the man who can accomplish something real for the improvement of the conditions of the working class.

I return to the state of things in the trade unions at present. There are very many people who say that the trade unions are going through a crisis just now. It is with this that Comrade Trotsky starts out. Of course nobody would say that in our trade unions everything is perfectly correct. On the contrary, the apparatus of the trade unions is very weak, but this is only because we have not given them sufficient attention. We should have the right to ask more of the trade unions, if we had given them as much of our attention and love, as we have given to the Revolutionary War Council of the Republic. It is true that the trade unions are weak, owing to the civil war and our inattention to them. But the trade unions exist, and during the three years of the dictatorship they have rendered us great services. However it may

have been they held together the masses, the non-partisan and semi-partisan masses that were feeling their way to us, they held them together, kept them in their organization, and, in one way or another, they contributed to the fact that these masses are for us. We should consider the trade union movement in its present state as a result of three years of war strain, when the Party could not sufficiently care for them. We are dealing with transitional forms of the trade union movement, and we should see not only its weak points, but its great and strong aspects as well, assets which have proved a support for the proletarian dictatorship during the past years. We shall now start out to refine this apparatus and to strengthen it. I will quote figures to show what the trade unions have accomplished, in spite of the difficult conditions under which they were obliged to work. In 1919, when a special mobilization, beside all other mobilizations, was made of the members of the trade unions, 79,368 men came forward. The number of the members of the food-supply detachments mobilized by the trade unions during the first year exceeded 80,000, and all this was accomplished while the number of all the responsible administrative workers in the trade unions, including the All-Russian Central Council of the Trade Unions, was, according to latest data, not more than 1,313.

We now approach the basic and most important question, which is the main point in the controversy. Our trade unions have been little engaged in production—this is true. Our trade unions should increase their participation in production—this is also true. Our trade unions should start out to become more fused with the State organs—this is true, too. But everything following this is absolute confusion, an absolute misunderstanding of what the trade unions could and should be at the present moment. Fusion is certainly necessary. We do not oppose fusion on points of principle,—it is the decision of the Party Congress. The question is how this fusion is to be carried out. The Ninth Congress of the Party pointed out the way of fusing the trade unions with the Soviet organs. In the resolutions of the Congress there is a special chapter devoted to the forms of the participation by trade unions in production. This chapter dwells at length on these forms, beginning with the shop committees and ending with the councils of public economy. Practical methods for accomplishing this fusion, and the way in which the trade unions should participate in working out the programs of production are also pointed out. But if you understand by fusion, that the unions should be completely welded and fused with the organs of the State, we do not want it, and the trade unions do not want it, and they are perfectly right. They do not want this kind of fusion, because it would mean the absolute destruction of the trade union movement, which we must keep up in order to accomplish the Dictatorship of the Proletariat.

I declare openly that I am against the immediate turning of the trade unions into organs of the

State, and a great part of the Central Committee is also against it. We have more State organizations than we want. We have organizations for compulsion and for everything you can think of. We know that we have not yet cleared our State organization of bureaucracy.

What is the position of the working class in Russia? We have 700,000 members of the Party and 7,000,000 members of the trade unions. It is an enormous mass of non-partisan workers still connected with the villages. When are we going to educate them? Why should we turn the trade unions into State institutions? I have seen a leaflet about illegal trade unions which the Right Social-Revolutionists intend to organize. I have no doubt but that they will fail. But don't you think that by turning the trade unions into State institutions we should only assist the Right Social-Revolutionists? I am sure that such would be the case. Every comrade will confirm the statement that by such a policy we should only assist them.

It is in our power to give the trade unions an opportunity to play a greater role in production. Comrade Trotsky maintains that the essential traits of the trade unions in bourgeois society have become superfluous. This is not quite right. The necessity for striking has become superfluous. But there is still the necessity for educating the workers in the spirit of Communism, there is still the need to maintain the revolutionary organization of the wide non-partisan masses.

We should never forget that the trade unions represent 7,000,000 workers, and only when the relations between the trade unions and the Party are based on a mutual understanding of the tasks of the trade unions, shall we be really in a position to accomplish the dictatorship and build up our economy.

Trotsky's Report

The role and significance of the trade unions should be considered in the light of the developed and strengthened Communist Revolution, and it is evident that the definition of the trade union, the definition of its tasks, is different now from what it was before. The old definitions are not sufficient to embrace and determine the tasks of the trade unions in the workers' State, in a society which is passing from bourgeois to Communist relations.

"The trade unions are a school of Communism"—no doubt. But what of the soviets, of workers' meetings, congresses, non-partisan conferences of workers and peasants—are these not also schools of Communism? It would be very bad if the various organizations and the soviets, while carrying out their regular work, did not at the same time serve as schools of Communism. Perhaps the trade unions are a broader school of Communism. But what is the qualitative difference between them and mass-meetings, clubs, non-partisan conferences, etc.? What is the primary difference between them? Why are the unions constructed as unions of production? The definition "a school of Com-

munism" is a very valuable, theoretically and practically correct definition, but we should take care not to turn this definition into an empty commonplace phrase, which people use without realizing its real significance.

What should be the difference between my work in the trade unions and my work at any meeting of workers? We have heard no answer to this.

We have to face the question: what are the workers to do who are in the trade unions and are called upon to manage them? In the report of Comrade Zinoviev there was not a single word about this. There was not a single word about what a Communist should do in his trade union, what work he is to carry out, what contents he should put into his propaganda work.

I am reminded of the decisions of the Ninth Congress of the Party. If you would only consider these decisions from the standpoint of the experience of our work during the past year, there should be no differences between us. The essence of the problem is that the decisions of the Ninth Congress, which were an important step as compared with the previous decisions, should be subject to revision now. On the one hand we should make a new step forward, and on the other, we should deal with the problem of the trade unions along broader and more concrete lines and on a basis of principle.

There was much talk about the fact that the trade unions participated in the mobilization for the front, and for the food-supply campaigns, and statistical data have been cited to this effect.

Comrades, it is quite evident that, since the working class is the basis and the support of the dictatorship of the Soviet State, every organization and institution which has need of workers, must get them from the ranks of the trade unions, which enclose, theoretically at least, the whole working class. And it is quite evident that, when the Party had need of 500,000—700,000 workers, only the trade unions could give them. The unions expended their forces to create the different military and food-supply organizations, and so they weakened themselves. But was this the role of the trade unions; was this their destination? During the period when the trade unions mobilized their members, the whole attention of the Soviet State and of the Party was directed to the front. During that period the unions were becoming weaker, they were deprived of their best workers, the apparatus became exceedingly poor, because everything was given for the front.

Now, can we determine the work of the trade unions by their mobilization for the front, for the food-supply work? This is absolutely incorrect.

No doubt, we must preserve the unity of the trade unions. My standpoint is, in my opinion, an expression of the development of the primary postulate of this problem, the postulate of our Party program as to the role of the trade unions, which should master the whole of production, and become fused with the corresponding organs of the workers' State. From this standpoint the problem is so

great, that it should be made the work of a whole historical epoch. It is a problem of educating every worker of the Party, of the trade unions, and every worker in general to the full consciousness of the new role, the new attitude of the working class to production itself, and to the main task at present before the working class—the organization of production on Communist bases.

And here we approach the question of the role of the trade unions as such. What is a member of a trade union? Comrade Zinoviev has made no reply to this question. What was a member of the trade union in the bourgeois society and what is he all over the world? He is a worker who joins the union individually because he has learned by the experience of his life, by the experience of some strike or lockout, how necessary it is for him to have a collective organization. The joining of a trade union marks an epoch in the life of the individual worker; it introduces him to the collective struggle for his class.

I ask, do we observe this fact in our present conditions? Nothing of the kind. With us, every one who is working at a factory becomes a member of the trade unions by the mere fact of his so working.

I ask, what are our present day trade unions? On the whole they represent not subjective but objective groups. A subjective group we call one which everybody joins consciously, after having come to the conclusion that it is necessary. Such were the trade unions before the Revolution. But since then the trade unions have been made to include every worker. As soon as a man or woman starts to work at any industrial enterprise, he or she automatically becomes a member of the trade union. They have become members of the union not consciously, not from any subjective motives.

We ought clearly to understand what is going on. There is a certain small *cadre* of leading workers in the trade union movement. They enjoy the confidence of the older members of the trade unions. Then there are three-quarters, or a half, or quarter, and in some places even nine-tenths of so-called members of the unions who are not connected with the unions personally, subjectively. Previously, we used to be connected with the trade unions through the strike-committees. The strike-committees managed the strikes, which were the greatest event in the life of every particular group of workers. It would be the greatest disaster if the workers thought that this connection, which was created during the fight against bourgeois society, is the very connection which should determine the sense of the movement and its work under our present conditions too. No, Comrade Zinoviev himself and others have pointed out that during the period just concluded the trade unions became merely enlistment bureaus for the front. It was a great work; it corresponded to the need of the moment. In connection with this work, a general class propaganda was carried on, which had nothing to do with the special problems of production.

What should be the basis of the trade unions in a workers' State? Nothing else than participation

in production, the organization of the workers for production itself. In the midst of the working masses, a new productive atmosphere must be created. The same exertion and interest which was manifested in regard to the fronts, where, as we know, the fate of Soviet Russia depended on the steadiness of each section of the line,—the same exertion and interest should be manifested in regard to the economic front. It is only in this sense that we talk of an atmosphere of production. This atmosphere must be created. What we are doing now is, in its essence, only a first instalment of the work, the educational activity that we must develop, if we want to change, at every factory, the attitude of the workers toward their work.

And here we come to the essence of the problem. Have the workers this productive education? No. Previously, the task of both the revolutionary and opportunist unions was limited to the necessity of exerting a certain pressure on capital, for higher wages and a shorter work day, for a larger share in the sum total of the wealth produced. This was the practical work of the trade unions in bourgeois society, and it was also the basis of the work of the revolutionary trade unions, which also developed an agitational-educational activity. And I ask, what should replace these bases now? We should say at every factory that, in a workers' State, there is no more need to exert pressure on the State. In order to protect the interests of the toilers, we should increase the productivity of labor, improve the technique. And now I ask: has our working class acquired the habit of thinking not of how to defeat capital, but of how to use its time at the given machine or in the given factory in the best way, in the interest of higher production? Of course, some individual workers may have acquired this habit. But we want to make it the habit of the whole mass of the workers.

If we try to find what it is that fills up the life of the trade unions, we must admit that the whole work going on in Soviet Russia is being accomplished outside the trade unions. We have arrived at the conjunction of the economic Commissariats for the sake of this systematic economy. But do we observe in the trade unions a development corresponding to this apparatus? The trade unions are staying outside of the work, and they are satisfied with being a school of Communism.

We must have fusion. We should accomplish this seriously and systematically. Fusion means that the organs of the trade unions should gradually become welded together. What does the Council of Public Economy represent at present? It represents Communists who have specialized in the work of production, but we have no workers connected with the organizations of the producers, which should be represented by the trade union. On the other hand, we have representatives of the trade union movement, which is still to be turned into a mass organization of production. These two groups should become fused together.

Of course, this would not give us an immediate solution of the problem. But it would give us the

direction in which the trade unions should develop in their relation to the soviet economic organs. Otherwise we shall only be allowing disunion to develop. It is not a matter of nationalizing the unions in twenty-four hours. This is nonsense. It is only a matter of taking our course toward nationalization. But what should be the basis of our work? We ought to work on the basis of direct productive construction, on the basis of turning the workers' democracy into a democracy of production. These are not phrases only. What is our State? It is not a permanent organization. Our State must become a Commune. During the transitional stages, political democracy and workers' democracy which includes both is gradually turning into a democracy of production, in the degree that we apply these terms to the Party and trade unions.

The Party will always correct the work of the trade union worker. Comrade Zinoviev says that this should not be done in a sudden manner. Certainly. But the task of which I speak: productive education, fusion of the trade unions in their leading links, construction of trade unions along the lines of productive problems, the education of every single worker with a view to the new attitude toward production,—all this is a task for a very long period.

Lenin's Speech

The trade unions are not only an historically necessary but an historically inevitable form of the movement of the industrial proletariat, a form which, under conditions of proletarian dictatorship, includes almost the whole proletariat. This is the primary postulate, and from this we conclude that the trade unions play an essential role in the accomplishment of the dictatorship by the proletariat. But what is this role?

On the one hand the trade unions, including within the limits of their organization the industrial workers, are an organization of the ruling class, of the class which has accomplished its dictatorship, the class which accomplished State compulsion. But the trade unions themselves are not a State organization, they are not an organization of compulsion. They are an educational organization,—a school, a school of managing, a school of economy, a school of Communism. It is a school of an uncommon type, because in it we have to deal with the odd combination of remnants of capitalism, with new forms and new features born out of the dictatorship of the revolutionary vanguard of the proletariat. When we talk of the role of the trade unions, we should always bear in mind this particular nature of theirs, otherwise we shall always be in danger of arriving at false conclusions.

We are at present confronted with the problem of how to approach the masses, how to become connected with them. Now, where does the divergence of opinion come in?

According to Trotsky, the defence of the material and spiritual interests of the working class is not a task for the trade unions in a Workers' State. Comrade Trotsky talks of a "Workers' State." But

this is an abstract idea. When we wrote about a Workers' State in 1917, it was quite justified. But when you say: "Why and against whom defend the working class, if there is no bourgeoisie, if we have a Workers' State?" then we reply: "Not quite a Workers' State." As a matter of fact, our State is not of the workers, but of the workers and peasants. This is the first thing. And this means a great deal. But it is not all. The very program of our Party shows that we have a Workers' State with too much bureaucracy. It was a disagreeable necessity for us to put this label on our State. This is the reality of the transitional period. Now, would you say that there is no need for the trade unions to defend the material and spiritual interests of the working class in this bureaucratic State?

In reality the State is such, that the fully organized proletariat is in a position to defend itself, and we should make use of these labor organizations for defence against their own State, by a peculiar blending of our State measures and by agreement and fusion with the trade unions. This word "fusion" shows, that it would be a blunder to make an enemy of soviet trade-unionism; because there are different kinds of fusion, and the idea of fusion implies also something which should still be made use of by the State Government, viz., the defense of the material and spiritual interests of the fully organized working class against this State bureaucracy.

Now, I shall dwell on "productive democracy." The more I think of this "democracy of production," the more I see the theoretical faultiness of it.

Production is always necessary. Democracy however, is a category of thought and a political one at that. We can have no objection to using this term in a speech or a newspaper article. But it sounds quite strange, when you attempt to make a thesis out of it, or put it forward as a slogan to unite all those who do or do not agree. Production is always necessary. Not so democracy. "Productive democracy" leads to ideas which are absolutely faulty.

Then comes the question of fusion. The best thing would be to keep silent on this point of fusion just now. "Speech is silver, silence is golden." For we have tried fusion. There is not a single provincial council of public economy of any importance in which fusion has not been tried in one way or another. But did it prove useful?

We should learn from experience how fusion was worked and what was accomplished by it.

We entered the course of fusion, and I do not doubt but that it was a correct step, but we had not studied the experiment well enough. Therefore it is the wisest policy not to talk at all about fusion just now.

We should learn from experience. We have no doubt made many blunders. In the same way the greatest part of our decrees should, perhaps, be changed. I agree with this and I am not especially in love with decrees.—*Russian Press Review*, January 19, 1921.

THE GROWTH OF LABOR UNIONS IN RUSSIA

We take the following figures from a report on Trade Unions which was submitted to the Executive Committee of the Russian Communist Party by the Petrograd Committee of the Party and its Trade Union Committee. The report was signed, among others, by Lenin and Zinoviev and was published in the Petrograd *Pravda* of January 18.

The aggregate membership of the Labor Unions at present is 6,970,000. Immediately after the overthrow of the Tsarist regime in 1917 the unions comprised mainly the industrial proletariat. In 1918 they attracted new groups of workers, such as clerical employees, physicians, artists, etc. During the following two years, 1919 and 1920, the technical and administrative personnel of industrial establishments was also drawn into the ranks of organized labor. Lately the unions have begun to draw into their organizations the independent craftsmen and peasant elements, such as agricultural workers, lumbermen, and so forth.

In this connection illuminating data concerning the personnel of the administration of nationalized industrial establishments have been compiled by the Supreme Council of National Economy. The administration of Russian nationalized industries, from the Supreme Council of National Economy down to the local management of government factories, was distributed as follows:

| | |
|-------------------------------------------|--------|
| "Specialists" (Engineers, Chemists, etc.) | 30.07% |
| Clerical employees | 7.07% |
| Manual workers | 61.06% |

STATEMENT BY CHICHERIN

SOVIET RUSSIA has received the following radio message from George Chicherin, Commissar for Foreign Affairs at Moscow:

"Moscow, March 14: The Kronstadt situation is daily changing in our favor. Our deliberate action corresponds to a strictly predetermined plan to preserve the fortress and avoid unnecessary bloodshed. Our actions against Kronstadt are rather of a demonstrative character. Information which we have received confirms previous reports of the constant disintegration of the Kronstadt garrison. The feeling at Moscow and Petrograd, as everywhere else, is quiet and fully confident of a speedy end of the adventure. The unprecedented campaign of lies in the European press deserves attention. It was a real orgy of daily falsehoods and fantastic stories. Alleged risings have been reported in at least a dozen towns where in reality complete quiet prevails. This campaign of lies is obviously a preconcerted plan. Such an attack by a campaign of falsehood is a form of aggression against Soviet Russia. It is necessary for us to indicate the responsibility of foreign governments for this campaign, which was evidently inspired from above and planned by an invisible center without. We consider it a hostile act.

(Signed) "Chicherin,
"Commissar for Foreign Affairs."

The Reform of the Mode of Life and Rebirth of National Economy

By A. KOLLONTAY

THE execution of the general economic plan for the rebirth and the development of the productive forces of the country is unthinkable unless all the productive forces of the republic are utilized. The women form more than half of the entire working population. The unproductive loss of their labor power in the process of housekeeping, of child rearing, in overcoming a number of difficulties occasioned by our transition period, lowers the total labor energy of Soviet Russia.

In order to stimulate production, in order to increase the general sum total of productiveness of labor, it is necessary and inevitable to proceed immediately to a reform of the mode of life, and to an improvement of the conditions of work and life of the entire working class, and especially of the working women. It is necessary to include in the general economic plan all those changes that will free woman from all unproductive, socially useless work. It is necessary to work out plans and construct community-houses, organize public laundries, develop and further improve the system of public feeding; it is necessary, not by decree only, but in practice, to protect motherhood, improve the working conditions in the shops, thus protecting the working-power from being used up; it is necessary to improve the education of the children in city and country. It is necessary to create shops for mending, *artels** of scrub-women, etc.

The strongest incentive for the intensification of work and for the increase of its productivity in the present transitional period is to get the workers interested in the immediate practical improvement of the conditions of life. The economy ought to be organized in such a way that a certain part of the labor of working men and working women should be destined for the further production of national wealth, for the work in the factories, plants, workshops, offices, and that the other part should be used on the very spot for bringing about a change in the mode of life according to Communist principles. Only under such conditions will the work go on successfully and give a maximum of efficiency in the industrial field as well as in the field of transforming life on new, more rational principles.

For this reason, the Woman's Section of the Communist Party submits to the Congress a proposition that working and peasant women should be invited into all the organs that are concerned with the elaboration and development of the constructive work of the national economy, that there should be an increase in the number of working women in the factory committees, in the industrial administration, in the administration of the trade unions, etc. The Soviets in the centers, as well as in the provinces, should assist and encourage the initiative and the self-activity of the masses of proletarian

women of the cities and the country. The main activity of the Soviets will then immediately concentrate upon the execution of economic tasks.

In connection with the question of the reform of the mode of living, the introduction of women into the activity of the Soviets will strengthen our economic life and hasten our victory on the labor front.

THE UTILIZATION OF WASTE IN RUSSIA

The war has directed the attention of engineers to the possibilities of reclamation of waste products of modern industry. "Millions from Waste" is the title of a book written on that subject by Mr. Frederick A. Talbot and recently published in England. The chemical experts of the Soviet Government have given their attention to the same problem.

The recent Convention of technical directors of the factories of the "Centro-Fat" considered various technical measures which would tend to improve the quality of soap. In view of the scarcity of inedible oils the convention carefully considered the problem of finding new supplies of fats or of other substances out of which a soap substitute could be made. A report, received with great interest, described the production of a new kind of soap, "Bevos," made out of decayed albumines. Dr. Voskresensky, of the Moscow City Sanitation Division, made this report and presented to the convention a number of samples of various soaps made by him out of completely decayed eggs, decayed cheese, fish, and even out of old hempseed meal. The theoretical calculations leading to the foundation of such soap production may be summarized as follows:

No matter what bio-chemical process the decay of eggs depends on, it is primarily the result of the decomposition of the albumines, followed by the evaporation of certain elements. The fat, however, usually decomposes a long time after the food product containing the fat is disposed of, having become unfit for use. The relative weight contents of fat in a substance increases with the rapidity of the decaying process and with a greater amount of water evaporation and the volatilizing of the elements of albumen.

It was proved by research work on this subject that decayed eggs contain about 25 percent of fat, and even more. The method of soap-boiling is quite simple, and does not require any complicated apparatus or other adjustments.

After a lively exchange of opinions, the convention resolved that experiments in the production of "Bevos" soap should be made on a larger scale. Should satisfactory results be obtained, one of the Government soap boiling factories in Moscow will undertake to produce soap, in accordance with Dr. Voskresensky's method, out of decayed eggs, cheese, and perhaps later on, out of animal corpses.

*Cooperatives.

England and Soviet Russia

(Now that the Trade Agreement between Russia and Great Britain has been signed, it will not be without interest to read the notes exchanged in December and January between Chicherin, People's Commissar for Foreign Affairs and Lord Curzon of Kedleston, British Minister of Foreign Affairs, concerning the mutual relations of the two Governments in question. These notes have been retranslated from the Russian version.)

I

Note of the People's Commissariat of Foreign Affairs of December, 1920 sent to the British Minister of Foreign Affairs, Lord Curzon.

The Russian Government, while anxiously awaiting an answer to its notes of November 9 and December 4, and constantly affirming that it is ready at any moment, with duly empowered representatives as intermediaries, to enter formal negotiations concerning the political questions mentioned in the agreement arrived at through the exchange of notes of June 30 and July 7, has today, to its great astonishment, learned from radio-telegraphic information, that in the statement made by Sir Robert Horne in behalf of the British Government in the House of Commons, the blame for the adjournment of the commercial agreement is placed upon the Russian Government from which, as a proof of good faith, it is requested that it should accept the enlarged and extended reading—as suggested by the British Government—of the political preamble to the above-mentioned temporary agreement.

This statement is to such an extent at variance with the facts, that the Russian Government is compelled to direct its attention to it and express its most emphatic protest against it.

It states that the refusal on the part of the Russian Government to accept, without due and satisfactory deliberation, any interpretation which the British Government may deem necessary to attribute to any theses of the aforesaid preamble, or that the refusal on the part of the Russian Government to recognize as proper and satisfactory the point of view that may be taken by the British Government, forms, in the opinion of the British Government, an act of obstruction and bad faith.

The Russian Government is the representative of millions of toiling peasants and workers and strengthened by the unanimous vote of three thousand delegates of the Eighth All-Russian Soviet Congress just adjourned, it declares that it is an independent and sovereign nation, and that neither by the juridical nor by the *de facto* relation of forces, is it obliged to accept without deliberation and discussion, the opinion of the British Government concerning questions that are deliberated by both parties.

Taking into consideration the necessity of repeating what was said in the preceding notes, the Russian Government must again call attention to the fact that all responsibility for protracting the negotiations falls entirely upon the British Government which began with finding in the Russian-Polish conflict a pretext for the non-fulfillment of the June-July agreement, and, later on, removed the political section of the Russian Delegation. These facts which are known all over the world, and also a long sequel of conspiracies and intervention acts, accomplished by the Allied Governments under breach of all international laws, give, of course, not to the British Government, but rather to the Russian Government, the right to ask for proofs of good faith. But the Russian Government has over and over again expressed its readiness to forget the past and to inaugurate a new era of peace and commercial relations with the whole world.

While refusing to accept any changes or additions to the agreement of June and July, or to accept any new conditions without preliminary and duly organized negotiations, the Soviet Government even now, in spite of the changed situation, reaffirms its readiness to execute the above-mentioned agreement on condition that its political aspect will subsequently be elaborated by a special conference of representatives of both parties.

CHICHERIN.

II

Note of Lord Curzon of Kedleston, British Minister of Foreign Affairs to Chicherin, People's Commissar for Foreign Affairs, of January 7, 1921.

The Soviet Government, in the last of its numerous polemical notes which it publishes broadcast for transparent reasons, repeats the assertion that all responsibility for the protraction of the negotiations falls entirely on the British Government. This assertion is so decidedly at variance with the facts that the British Government considers it necessary to refute it for the last time.

The first decision to renew commercial relations with Russia was taken by the Supreme Council on January 26. Immediately after that there took place an exchange of telegrams between the Russian cooperatives in Europe and their central management in Moscow, and there was some hope for a quick success of the negotiations if it had not been for the telegram of the *Centrosoyuz* (Central Bureau of the Cooperatives) from Moscow, of February 25, which informed his Majesty's Government of the changes that had taken place in the organization of the *Centrosoyuz*, and of Litvinov's appointment as their main representative abroad. The Soviet Government knew perfectly well that the British Government, after its previous experiences with the activities of Mr. Litvinov, would not be in a position to receive him in England. Nevertheless, the Government of His Majesty sent a special delegation to Copenhagen with the aim of using every effort for the purpose of reaching with him a certain *modus vivendi*. The result was the second decision of the Supreme Council of April 26.

The short interruption between this decision and the arrival of Mr. Krassin in England was also occasioned exclusively by the Soviet Government, which persistently requested the admission of Mr. Litvinov. The subsequent negotiations with Mr. Krassin were concluded by the note of June 30 in which were mentioned the conditions upon which a trade agreement could be concluded and the acceptance of these conditions by the Soviet Government on July 7 should have led to a quick conclusion of the agreement. Unfortunately, then the Polish episode occurred, and the stand taken by the Soviet Government which more than once was an object of deliberation, bore such a character that it rendered a renewal of peace negotiations temporarily impossible.

Some weeks later, as soon as the British Government placed a warship at the disposal of the Russian Trade Delegation for its return to England and the continuation of the negotiations for arriving at a friendly agreement on an even larger scale, His Majesty's Government not only accepted Mr. Kamenev but also proposed to provide him with full power for the negotiations of the preliminary agreement concerning the peace conference. Nevertheless, Mr. Kamenev, apparently, was more interested in the internal politics of Great Britain than in the matter of Russian-English relations. More than that: at the critical moment, Mr. Kamenev grossly deceived the English Prime Minister in the question of the peace terms proposed to Poland by the Soviet Government, and this in spite of the fact that His Majesty's Government took pains to convince Poland that it should accept reasonable terms. The behavior of Mr. Kamenev led to his removal and to further interruption of the negotiations.

These successive lengthy interruptions have been entirely caused by the attitude of the Soviet Government towards British citizens in the territories that are under its administration or in the sphere of its influence. The facts relative to this side of the matter were specified in my telegram

of last October and in the subsequent correspondence. But as soon as the exchange of prisoners was arranged, the negotiations referring to the Trade Agreement were renewed with Mr. Krassin, and the fact that the agreement has up to the present remained unsigned was caused mainly by the extremely ambiguous attitude of the Soviet Government towards the conditions that it accepted on July 7. The question concerning the interpretation of the agreement of June 30 and July 7 was the subject of numerous deliberations with Mr. Krassin who was very well acquainted with the reasons that compelled His Majesty's Government to insist on including in the preamble to the proposed draft a special reference to the geographical territories in which the many-times stated obligation of the Soviet Government to refrain from propaganda or hostile activities directed against British interests or the British Empire, should especially apply. A mere general assurance without a special enumeration would be without any substantial value and would lead only to lengthy and perhaps useless discussions about each separate territory of which it will consequently be stated that it is included in the above-mentioned obligation. In the opinion of His Majesty's Government it would be preferable to prevent these disputes from the very start than to transfer them later to a political conference which, obviously, would be an excuse for a further protraction of the debates and for endless adjournments. If the Soviet Government is ready to execute its assurances in good faith, then not the slightest objection could arise against the statement that an exact specification of the territories to which these assurances mainly apply, corresponds to the interests of both parties. As far as it is concerned, His Majesty's Government expressed its full readiness to take into consideration any analogous geographical definition of territories concerning which the Russian Soviet Government could in justice request the recognition of its special interests as a basis for a corresponding obligation on the part of Great Britain.

In consideration of this, His Majesty's Government expresses the hope that instead of continuing useless polemics the Soviet Government will empower Mr. Krassin to sign the Trade Agreement after his return, and that the accomplishment of this may be not only a guaranty of the sincerity of both parties, but also the first step to the restoration of the economic welfare of Eastern Europe.

CURZON.

III

Radio of the People's Commissar of Foreign Affairs of January 9, 1921 to Lord Curzon of Kedleston, Foreign Office, London.

We have received your telegram of January 7 in which you endeavor to remove from the British Government the responsibility for the protraction of the negotiations concerning the Trade Agreement with Russia. Nevertheless, the Russian Government is compelled to persist in its affirmation that the responsibility for the fact that these negotiations have so long remained without concrete results, rests exclusively on the British Government.

The nomination of Litvinov as representative of the Russian cooperatives abroad did not in the least impede the opening of trade negotiations between Russia and Great Britain, if it is taken into consideration that already sojourning in Copenhagen he immediately proceeded to a conclusion of commercial transactions in behalf of Russia. The assertion that his preceding activity in Great Britain could have furnished any reasonable basis for not admitting him into this country, does not entirely correspond to the facts. In fact at that time he remained in Great Britain as long as the British representatives remained in Russia, and left London at the time when the Russian Government was compelled to ask for the recall of the British representative, Mr. Lockhardt, who was implicated in plots against the Russian Government and its most important members. We must categorically state that the Russian Government has not received from the British Government any single complaint concerning the activity of Litvinov at the time of his sojourn in Great Britain. The whole question of refusal to accept his

appointment can be viewed only as a conscious endeavor to obstruct and to create obstacles to a resumption of normal and peaceful relations between Great Britain and Russia which would benefit both parties. Up to the present time the British Government has not succeeded in offering a single concrete, positive proof for the justification of its unfounded objections against the appointment of Litvinov, objections that are perfectly unusual as far as participants in peace or trade agreements are concerned.

We must state, further, that the delay in the departure of Krassin for Copenhagen occurred entirely as a result of the endless delay on the part of the British Government in accepting the technical and commercial experts who were to accompany him. After the British Government had sent to Copenhagen a special delegation for these negotiations, they suffered again an interruption because of new obstructionist measures of the British Government. No reasonable person can believe that the British commercial representative, Mr. Wise, arrived in Copenhagen with a large staff of experts and many office employees only with the aim of informing the Russian delegates that the British Government intended to conduct the negotiations in London and not in Copenhagen. The reason for the sudden departure of Mr. Wise from Copenhagen, a couple of days after the beginning of the negotiations, has remained unexplained up to the present day. At the moment when the British Government asked that Krassin should proceed to London, the British Government stated officially that the negotiations in London would bear an exclusively commercial character; since the presence of Litvinov was indispensable for conducting negotiations of a political character. In spite of these statements, the British Prime Minister in his negotiations with Krassin put forward his well-known political demands thus creating new difficulties in the execution of a trade agreement.

Afterwards, as a result of the conciliatory attitude of the Soviet Government, the agreement of June 30-July 7 was concluded; the latter again, through the fault of the British Government, could not enter into force. Not a single point of this agreement gave any cause for the postponement of its execution by the British Government in connection with the Polish question, and only thanks to new concessions made by the Russian Government, granted in spite of this new obstructionist policy of the British Government, was the Russian Delegation able to proceed to London where, nevertheless, the negotiations were again postponed.

The Russian Government is again compelled to protest against the baseless charges raised against the chairman of our Delegation, Kamenev, which were used as a pretext for a further postponement of an agreement with Russia. The Russian-British disagreement concerning the interpretation of one of the points of the Russian armistice terms with Poland, which in the final draft, of course, would have been made known with all the details which were not available in the first summary, has finally been settled through an exchange of notes at the beginning of the Polish-Russian armistice negotiations, and only a month later the British Government suddenly discovered that this difference of opinion was sufficient reason for breaking up the negotiations and for expelling the head of our Delegation. As for the relations of Kamenev with the Council of Action, they were begun on the request of the British Government itself, which in this way tried to influence our decisions concerning the question of the peace with Poland. Kamenev had no relation whatever with the subsidies which were offered to the newspaper, *The Daily Herald*, by the Executive Committee of the Third International nor with the sale of valuables, and the Russian Government stated officially at that time that the British Government had become a victim of mystification and dishonorable machinations of petty agents. We have every ground to suppose that former officials of the Tsar's Government have grossly deceived the British Government and have been the main culprits in the misinformation of the British Government about the part played in this matter by our Delegation.

Several months after this, the British Government found a new pretext for further delays in the fact that there were British prisoners in a third country not under the authority

of Russia, namely the independent Republic of Azerbaijan—a circumstance that is not devoid of irony, since, at the present time, the British Government is using the diplomatic assistance, which was at that time offered to Great Britain by Russia for the settlement of that dispute with Azerbaijan as a justification for the delay in concluding an agreement with Russia, by putting the blame on Russia for the doings of a third party, i. e., Azerbaijan. At the present moment the British Government declines the terms of the Agreement of June-July, and is thus responsible for the fact that the trade agreement has not been signed up to the present time.

The Russian Government has many times declared that it stands by its decision put forward in its note of July 7 and after the conclusion of the trade agreement, it is ready to repeat every word of the agreement that was formulated in the notes of June and July. But it does not see any reason why one-sided additions should be made to this agreement against the interests of Russia. The fundamental point of the note of July 7 was the fact that Russia approved the principles of the June note as a basis for further negotiations, and all the happenings of the last six months are only apt to confirm the Russian Government in the conviction that only negotiations of such a nature will prevent conflicts between Russia and Great Britain, and keep those opposed to an agreement with Russia from accomplishing their sinister aims. It is clear that a settlement concerning the mutual interests of both states can be achieved only through political negotiations, and such a conference is provided for in the agreement of June-July, confirmed by our notes of November 9 and December 4. We hope that the British Government will not take upon itself the initiative of a break of the negotiations with Russia by withdrawing from agreements which have already been concluded between these two governments. As for Russia, it is animated with the most sincere desire to establish trade and peaceful relations with Great Britain.

The People's Commissar of Foreign Affairs
CHICHERIN.

STATEMENT BY CHARLES RECHT

As certain representations have appeared from time to time in the newspapers and otherwise that an authorization has been granted to organizations and individuals to charter a steamer or to make arrangements for the transportation of Russian citizens into Russia and as at times it has been stated that such representations were made by some authority of mine, in order to dispel any misunderstanding that might exist, I am constrained to inform all those who may be concerned that, so far as I know, no one in this country has any authority to issue or vise any passports or make arrangements for transportation to Soviet Russia or organize people for that purpose.

The Soviet Government has granted no authority to any person or organization to make arrangements for the transportation and all such representations are erroneous and are apt to mislead.

If in the future the Soviet Government grants an authorization to any organization or any individual, a public announcement to that effect will undoubtedly be made.

Persons who at this time purchase passage to Russia, do so at their own peril. All Russian citizens likewise should be careful in their dealings with steamship agencies against misrepresentation and fraud.

The Peasants and Three Years of Revolution

By V. KALININ

(The author of this article is the Chairman of the All-Russian Central Executive Committee—a position corresponding somewhat to that of president of a republic. He presents, so to speak, a personification of the present system in Russia—being himself at the same time a peasant and worker, whose life up to 1917 was divided between his farm, metal factories and the Tsar's prisons. His name was signed to the recent Russian note to President Harding.)

THREE years in the life of a government is a very short period of time, but nevertheless, in the course of these last three years, the Russian peasant has matured more, politically, than during the last one hundred years.

Three years ago the peasant of Great Russia particularly, gave an attentive ear to the Bolshevik watchwords defending his interests: the expropriation of the big land holders, the end of the war—these were alluring watchwords which always attracted the peasant.

It was the first period of the revolutionary development of the village population.

The second period may be termed the equalizing period. It began in the middle of 1918, when the peasants, having expropriated the land, the estates, and the implements and live stock of the land holders, began to proceed to an equal distribution of the land within the villages. The division of the land began. The important personages of the villages were assessed with contributions, their implements and live stock were confiscated. In a word the poor peasant and the middle peasant aimed at the liquidation of the rich landholders. The so-called "committees of the poor" were the external manifestations of these tendencies.

But the class of rich peasants resisted more than the landed proprietors and struggled against the seizure of its property. Each resolution of the "committee of the poor" or even of the needy population of the country, and the least requisition or confiscation, (unjust from the point of view

of the old code of laws), resulted in violent protests from the rich peasants. These complaints unnerved the middle peasant who began to fear that he in turn would be expropriated. These protests led to the belief that the poor peasant robs and violates the toiling middle peasantry in general. After all, the rich peasants in many places were stronger than the poor peasants combined, if not numerically, at least they had the better of them owing to the fact that they were accustomed to give orders and that they had administrative ability.

What is actually taking place, namely the division of land with a view to its best possible use, may be called the third period of the revolutionary development of the village. It is in this period that one can observe among the peasants the tendency to divide the land into parcels, the limits to coincide with the maximum profit of their exploitation.

The policy of the People's Commissariat of Agriculture corresponds entirely to the indicated periods of the revolutionary renaissance of the country. First the struggle for land, then its best exploitation, the tendency to organize the possessions of individuals from the economic point of view in the most rational manner for production.

It must be acknowledged that the forms indicated for the cultivation of the land—the division into equal parts, and the more or less rational rounding out of a piece of land did not convert the peasant masses to Communism.

The organization of the communes and economic councils alone brings us to the socialization of agriculture. But the conditions of their development were very unfavorable. That is why, if the Communist organization of the country had been based only on the organization of the communes and the economic councils, it would have been dragged along for many years. But the Soviet regime always blazes new trails and opens up new possibilities for the village and the peasant masses which henceforth will have to be taken into consideration. If, on the one hand, the People's Commissariat of Agriculture regards the peasant commune from the point of view of its territorial organization in order to improve production, the People's Commissariat of Food Supply considers it from the opposite angle in taking from the commune the results of its production. In that sense the People's Commissariat of Food Supply has radically transformed the peasant's point of view. The contact of the organs of the People's Commissariat of Food Supply with the population of the village on the questions which interest it profoundly, as for example: The expropriation of the excess of grain, the contribution in meat and eggs, the receipt of things of vital necessity from the organs of the People's Commissariat of Food Supply, finally the contact of the peasant cooperatives with the same organs of the People's Commissariat of Food Supply, all these are sure to have a tremendous effect in awakening the political consciousness of the population of the village.

At first the peasant masses were openly opposed to the People's Commissariat of Food Supply: the peasant sought in every way possible to refuse the levies assessed against him; he complained that the Commissariat disorganized his economic life. In fact, the organs of the People's Commissariat of Food Supply—often not very satisfactory from the technical point of view—weigh heavily on the rich peasant. But this negative side is compensated, thanks to the policy of the People's Commissariat of Food Supply, by the fact that the peasant is beginning to take cognizance of the Soviet organization. The peasant adds a good deal to the price of his products setting on them a price above the real value; that is why, obliged to submit to levies, he is beginning to question with zeal where and how his products are going.

The more he desires to find a moral justification for his conduct, the less he succeeds. The more deeply he looks into things the more he is impressed with the necessity of firmness on the part of the Government in questions dealing with the food supply.

And having recognized the moral justice of his contributions toward the State, he begins to take account of the malpractices of agents of the Commissariat of Food Supply, a thing which is very desirable.

It is in this way that the Commissariat of Food Supply inculcates the scattered mass of small producers with an understanding of the interests of the State. In fact, no institution, no establishment,

has to such a degree directed the thought of the peasant toward the interests of the State as the Commissariat of Food Supply. This is quite evident, if judged by the results obtained in the course of these three years during which the quantity of bread and other products has increased considerably.

The organs of the Commissariat of Food Supply cover the rural districts with a thick network of their institutions, and more and more encourage an exchange of products.

It is evident that only the pressure of the organs of the Government forces the peasant to carry out the orders of the Commissariat of Food Supply, for the Commissariat is almost entirely lacking in manufactured articles. But the more merchandise the Commissariat will have for exchange, the more its influence over the producing peasant will increase. This influence will be shown not only in the larger contribution of the peasants, but also in the progress made in production.

In summing up the three years which have passed, it can be affirmed, without danger of being deceived, that the political consciousness of the peasant has made more progress than during the last one hundred years. The Russia of the Soviets is very great, and its development goes on gradually from the center to the periphery. The Socialist consciousness of the peasant masses is awakening section by section. It is the peasant of Great Russia in the industrial provinces of the North and Center who is ahead of the others. He is in closer contact with the organs of Soviet Power; he is in contact with the working masses who work for the State.

The region which follows is that part of Great Russia where the peasant has to deal with the Soviet Power as an independent producer of food products particularly,—a domain where he has entirely recognized the power of the Soviets, where he seeks only to sell his products, in the most advantageous manner, to the organs of the Soviet power. And finally, the third region, that of Ukraine is in the psychological condition of 1917, and is passing through the first period of revolutionary development. It is quite evident that Ukraine will traverse the road of revolution with fewer steps and less mistakes due to the experience accumulated by the Russia of the Soviets.

It can be said that the three years past have strengthened the Soviet Power not only on the war front, but also on the peasant front, on the interior front. They have given a solid basis to the Soviet Power with which to promote the new principles and to fuse into one the economic life of the peasant masses and the Communist life.

BACK NUMBERS WANTED

To complete the files of SOVIET RUSSIA, copies of Volume I, numbers 8 and 22, and Volume II, number 6, are needed. A copy of Marriage Laws of Soviet Russia or 25 cents will be given for each copy. Address

SOVIET RUSSIA

110 West 40th Street,

New York, N. Y.

The Crime of Anatole France

[The following amusing parodies, on the style of three prominent Berlin newspapers, were apparently suggested by the effort to connect the fact that the author of "Le Crime de Sylvestre Bonnard" had joined the Communist Party with "Bolshevik" influence, more specifically the influence of Zinoviev. The parodies originally appeared in the Berlin "Rote Fahne."]

IN order to show that at least the feuilleton of *Die Rote Fahne* serves not only the purpose of lashing up the feelings of its readers, but also of aiding their general orientation, we are printing together three reports of Anatole France's joining the Communist Party of France, all taken from the daily press.

Freiheit, the leading organ of the Independents writes this:

A NEW ATROCITY OF ZINOVIEV

WHAT the Knout Heroes of the Third International are capable of has recently been shown by them, and not only by the division that has taken place in the French Social Democracy, but also by an act of violence which must make even the last honest Communist, if such there be, blush with shame.

In a peaceful little villa, in a suburb of Paris, there lived the great and aged French author Anatole France, the friend of Jaures, the benevolent mild thinker, who in spite of his skepticism and in spite of all the horrors of war had preserved his faith in the social democracy and its mission to liberate the nations. It is clear that in this joyous spirit of France, whom even the French bourgeoisie, in spite of its hatred against people-liberating social democracy, could not deprive of his dignity as a member of the French Academy, the barbarous terroristic theory and practice of the Asiatic Socialists in Moscow could arouse only the profoundest abhorrence. But when the Communists were obliged to renounce the attempt to gain our great friend Longuet, the bodily grandson of Karl Marx, because he had courageously declared that he would stand faithfully by Renaudel,* it was of the utmost importance for them to win Anatole France, in order to conceal the hollowness of their program with the prestige of his name. An emissary of Zinoviev slunk into the cozy home of the great poet in the time-honored manner of the conspirator. Anatole France sat unsuspecting, bent over the collection of articles and speeches that our great theoretician Rudolf Hilferding has given to the German and to the international proletariat. Zinoviev's emissary first attempted to ingratiate himself with Anatole France by telling him that he was sure that France was an even greater stylist than Hilferding himself. But Anatole France noticed the intent and instead of being offended merely smiled ironically. Then Zinoviev's emissary drew forth from the pockets of his coat, bundles of bank notes. Anatole France waved him aside with a single motion of his hand, a motion that he was all the more impelled to make by the crudeness of the attempt of this missionary, in attempting to foist

*Leader of French Social Patriots.

these absolutely worthless Soviet banknotes upon him. Thereupon Zinoviev's emissary took out a hand grenade, laid it upon the desk and declared:

"From our great master Bakunin we learned to have consideration for no one: You will sign your application or die."

"My dear friend," answered Anatole France, "if you explode this hand-grenade, we shall both die. I am old and do not fear death, but I am sorry for you, my young friend. For if you should continue to live you might acquire sense."

The Moscow emissary made wild and fanatical motions with the hand grenade and answered:

"We are not less fanatical than our Osmanli friends, the Young Turks. I shall go to death with you, if you do not sign." From his pocket he drew forth portraits of Lenin and Enver Pasha, the famous murderer of the Armenians, made obeisance before the pictures and said: "Make your choice quickly!"

While Zinoviev's emissary was fortifying his fanaticism with the aid of a bottle of vodka, Anatole France signed the application and said: "It is on your account, my young friend, and not on my account that I do this."

Zinoviev's emissary made off, grinning at his own misdeed. Anatole France remained long in the quiet of his villa, thinking! Attila also once existed, and no one knows where he is buried. Zinoviev's tyranny also will not last forever, and he continued reading the articles and speeches of our great theoretician, Hilferding, which he then placed in his bookcase among the other books of great philosophers. . . .

• • •

Vorwärts has the following to say:

BECOMES A COMMUNIST THROUGH SENILITY?

THE seventy-six year old French novelist, Anatole France, has become a member of the Communist Party. No one who has really followed his works during the last few years will be surprised at this act of a senile old man; for these works show this writer, formerly so brilliant, has been gradually subsiding into a condition of idiocy. The great scoffer toward the end of his life was reading nothing but medieval chronicles, whose style he sought to imitate. And the fact that, in spite of this inclination toward the Middle Ages and toward Christian mysticism, he could simultaneously write novels in which he preached revolution even to the angels, already showed clearly enough that his intellect was sufficiently confused to enable him to become a Communist. If Anatole France today openly confesses his Communism, this again shows not only that Communism has

nothing in common with real life, but is a vagary of weak-minded old men, who vacillate between the mystical belief in God and a mystical belief in Revolution.

* * *

The *Deutsche Zeitung*,* the leading organ of the German spirit, writes:

A JEWISH COMEDY

A well-known Jewish-Russian Bolshevik, Chaim Rappaport, a relative of the Jewish Bolshevik leader Apfelbaum-Zinoviev, who wrote lubricious novels for many years under the name "Anatole France," deriding the sacredness of faith, embracing Lucifer, has now publicly taken up Bolshevism. We hail the unmasking of this Jewish destroyer of souls and moral poisoner, who thus far succeeded in concealing his descent so well that he was even admitted as a member of the French Academy. If "Anatole France," in other words M. Chaim Rappaport, has thus far been able to

mislead the French, it is for the reason that he was able splendidly to manipulate the French language with the well-known Jewish dexterity. The German Jewish papers, such as *Frankfurter Zeitung* and the *Berliner Tageblatt* which elevated him to literary fame were impressed by him by reason of their similarity in spirit to him, for they also are daily undermining the foundations of every Christian state. This comedy is now to end. But should "Anatole France" deny that he is identical with Chaim Rappaport, he would thus only be following in the footsteps of his relative Apfelbaum-Zinoviev, who denies just as stubbornly that his name is Apfelbaum. *Der Apfel fällt eben nicht weit vom Baum.**

P.S.—We have just learned that Henri Barbusse, the author of "Under Fire" has joined the Communist Party. Senility will not exactly work here, but there must be some Bolshevik indecency behind it.

The Execution of Count Mirbach

By VICTOR SERGE

(Victor Serge was one of the most brilliant stylists among the younger generation of those Paris Anarchists who, averse to any labor movement, believed only in "individual action." After serving a five-year sentence in France, he went to Russia, where the November Revolution made him a complete convert to Communism. His real name is Kibalchich—his family, although of Belgian nationality, being of Russian descent.)

(Moscow, June 6, 1918)

TWO great revolutionary parties have for more than twenty years been bearing the burden of the struggle against the autocracy. These hostile brothers—immutably hostile, resemble each other in no respect. In the rival organizations of the *Russian Social Democratic Workers' Party* and the *Social Revolutionist Party*, and the anarchist groups, all the energies, all the varieties of temperament that existed in Russia were believed to find place. This multiplicity of forms of the revolutionary activity was the cause of its richness and its invincibility.

The Social Democratic Party, which was Marxist, which had fed on the science and on the method of Marx, Engels, Bebel, Kautsky, and was directed by a theorist** who was simultaneously a brilliant publicist, perhaps the most dogmatic spirit of the Russian intellectuals of his epoch, basing all its hopes on the proletariat of the cities, occupied itself in a tireless work of propaganda, devoting its forces simultaneously to political (parliamentary, in the three Dumas) and economic struggles.

This party seemed far from the fiery and active revolutionary aggressiveness of the Social Revolutionists, the heirs of the liberal Socialism of Lavrov and of Mikhailovsky, for whom the role of the individual was of greater importance than that of the masses. The Social Revolutionists, a party of intellectuals basing themselves on the other hand

on the peasantry, to whom they refused to apply the Marxist formulas, conspirators of an imposing daring, continued the traditions of the great terrorists of the *Narodnaya Volya*. From their fighting organizations there issued forth men like Gregory Gershuni, Ivan Platonovich Kalayev, the executor of the Grand Duke Sergius, Yegor Sazonov, who gave his life twice,** Maria Spiridonova—and some of the others! The fighting organization has hundreds of terrorist acts to its credit, and each time a man, a woman, or a boy or girl, chosen among the most trusty and most firmly grounded militants went voluntarily to the sacrifice. For months the act would be prepared by the militants, who lived only to accomplish their terrible work. Boris Savinkov one of these heroes—and who alas has since fallen to become the accomplice of the Kornilovs and the Kolchaks,—has set down the experiences of terrorists who were disguised as coachmen or traveling peddlers, with the task of executing a minister who had been condemned to die. Psychologists will discuss at a later date the mentality of these idealists, these intellectuals, who in their self-denial and bravery may be compared with the great mystics—but who, fed on science and on modern literature, and

* The apple falls not far from its tree, a pun on the name Apfel-Baum.

**The first time on the occasion of the execution of Minister von Plehve; the second time in the Akatoui Prison when he poisoned himself a short time before the date fixed for his liberation, as a protest against the sufferings inflicted upon his fellow prisoners.

*An anti-Semitic paper of the Black-Hundred type.

**Plekhanov.

scorning the old beliefs were matured by a profound sense of social duty, and by ideas of which it is impossible to deny a vision of a new faith.

History has been merciless to the Russian Revolutionary Socialist Party. Corrupted by too easy an accession to power with Minister Kerensky, swelled by the numbers of all the political and military adventurers of the crumbling period which followed the autocracy, intoxicated by its rule, beset by the chancelleries of the Entente and hounded by the revolutionary masses which were demanding peace and the social revolution, it proved itself powerless to bring about its own ideal even after it had been attenuated and impoverished to the proportions of a democracy,—that called itself officially a Socialist Republic. Its most energetic leader, Savinkov, compromised himself with reaction, in the pitiable adventure with General Kornilov, an improvised dictator who was defeated three days afterwards. The party was cast out from power by the storm of November, 1917, and replaced by the Bolshevik People's Commissars. Its most visible champion, the man who lasted for an hour, Kerensky, was only a violent and grandiloquent but mediocre orator*; the well-known, the great leader Chernov, who for a moment spoke in the name of the majority of the Constituent Assembly, was able neither to have the party's social reform program carried out, nor to defend it against an early parliamentary gangrene; Avksentiev, an elegant and distinguished orator, compromised himself stupidly with the directorate which permitted Kolchak to elevate himself to power, and which Kolchak in turn caused to be arrested; the heroic grandmother of the revolution, Breshko-Breshkovskaya, who has fallen into a sort of an anti-Bolshevist hysteria, was destined to be hooted in America by angry and disappointed Russian workers. How sad all this is! The Social Revolution in November was destined to be carried out against "these revolutionists" of the day before, to sweep them aside, to throw them into the worst reaction, to cause even their names to be shamed, even the name of the very party for which the Kalayevs and Sazonovs had died.

Brest Litovsk and June 6, 1918.

It was on June 6, 1918, that the Russian Social Revolutionary Party tragically put an end to its career. It had long before divided into two opposing groups, the party of the right, clearly reactionary, advocate of parliamentary democracy, which was gladly supported by the armies of the Allies themselves; and a party of the left which is ardently pro-Soviet, and which after November shared with the Bolshevik Communists the responsibility of power.

It was a terrible moment: one of the hours of history in which the destiny of nations seems to hang by a single hair. The Revolution was being strangled in a noose. The peace of Brest Litovsk, signed a few days before, left it demoralized, ruined, dejected; and only its most farseeing and

most stoical sons were still free from doubt. The victorious Germans were advancing, nevertheless, toward Voronezh, Kursk, Briansk, without a possibility of opposing any force to them. The Allies were disembarking at Murmansk and executing people at Kern. M. Noulens, Ambassador of France, and Savinkov who had become his accomplice, caused the insurrections of Yaroslav and Kazan to blaze forth, and produced the revolt of the Czecho-Slovaks. In the press of two worlds there was no question except that of Allied, Japanese and American intervention. The future was black. Lenin had said: "We must have a moment of respite." And such a moment really was necessary. There was among the few men who desired this moment and who paid for it stoically with a historical humiliation, a sort of cold, lucid, resolute heroism. The Fifth Congress of Soviets approved of them, but it was impossible to bring about this approval without a great internal struggle. Under other circumstances, in view of the complete disaster of the country, the revolutionary proletariat rebelled against the "capitulation" and caused the Red flag of the Commune to wave over Paris. An action in a contrary, purely national direction, was apparently the result in Russia. And the Social Revolutionist Party of the Left, until then allied, suddenly became a mortal enemy. And as a matter of fact, in times where compromise is dead and fanaticism supreme, in other words, in times of revolution *two* parties, the Girondist and the Mountain, The Commune and the Convention, cannot exist side by side. The mentality of men is such that the dissenter, the one who opposes our ideas, first a suspect, in a short time becomes a traitor, a treacherous enemy, the foreigner's stool pigeon, the possible murderer. The best of the Social Revolutionaries (Spiridonova) went so far as to repeat the base calumny that had been trotted out by the Allied newspapers: Lenin and Trotsky are agents of Germany. The Bolshevik press could not afford to delay reproaching the Social Revolutionists for playing the game of the Entente.

On June 6, about three o'clock in the afternoon, two terrorists, acting in the name of the Central Committee of the Socialist Revolutionist Party, Andreyev and Blumkin (Jakov Gregorievich), executed Count Mirbach, the German Ambassador. Moscow was in great excitement, for it might mean war. Yet all that came of it was street fighting, executions on the street corners, and cannon thundering in the squares. And it was in this street fighting that the Social Revolutionist Party of the Left perished.

. . . When they left the small mansion of the German Embassy, on Denezhny Pereulok, the two terrorists got away in an automobile and reported to the Central Committee of the Party, where they placed themselves under the protection of Popov's army contingents. Dzerzhinsky, President of the Extraordinary Commission for Combating the Counter-revolution, appeared without companions and demanded the surrender of the guilty ones

*Compare the picture by Sukhanov on this in his "Notes on the Revolution."

whose act was an open breach of the clearly expressed will of the Congress of Soviets. He was answered that the Committee would assume the entire responsibility for the act, and the Committee was arrested. A few hours later the battle opened. On June 8 at four o'clock it was over. For a moment the Social Revolutionists had been in control of the post office and the telegraph office. Their artillery had fired on the Kremlin where the Council of People's Commissars was in session. A few cannon balls had been enough to demolish the General Staff of the rebellious party, and 400 men in all were arrested. A contingent arriving in great haste from Petrograd was disarmed. And this adventure cost the life of the workman Alexandrovich, one of the fine characters of the early days of the Revolution, one of the leaders of the first Soviet of the pre-November days—who, now an assistant to Dzerzhinsky in the Extraordinary Commission (Cheka) had there prepared the uprising, the papers, the forged documents, which it would need in its course. He was executed.

Could this adventure have been avoided? It seems on the contrary that it was predestined by fate, in so far as we are the instruments of fate. Ambitions to govern, revolutionary fire, revolt against the odious peace of Brest Litovsk, the terrorist traditions and the organization of the party, all these are psychological factors that sufficiently explain their actions. The gravest of their consequences was the end of Russian political life. From now on only one party governed; a single party existed. There was no longer any rivalry, opposition, or discussion. The last rival of the Communist Party had committed suicide in the uprising of June 6, 7, and 8. And the eagerness of the Bolsheviki to remain exclusive was justified by their bitter experience: their only ally had at the most critical moment turned against them.

At present this is ancient history and almost forgotten. Many people no longer know how one of the great parties in the revolution met its end. Many heroes are consigned to oblivion, many are victims. But a number of them still survive and the future still may appreciate them at their proper value. Of the leaders of the June 6 movement, Maria Spiridonova, sick and poor, is now somewhere in hiding in Moscow; Kamkov,* lean, irritable, is imprisoned. Of the two men who killed Count Mirbach, one lives at Moscow with his wife at the Hotel Metropole, the Second Soviet House, and is therefore the neighbor of Bukharin and Chicherin.

* * *

A room in the Metropole opening on a gray court, so gray that in the scant daylight that comes in through the window it would be impossible to work without turning on the electric light. The moisture creeps along the walls of which the paper bulges and hangs loose in places, for the entire hotel is in a condition of advanced dilapidation.

*Concerning Kamkov, see Editorial in this issue.

The water pipes have burst in several places, flooding certain apartments. This room is one of the poorest in appearance in spite of its regular furniture, its divan and chairs burdened with books, two desks on which manuscripts and documents are accumulating and the large curtains cutting off the alcove. On the walls are several portraits.

Jakov Gregorievich Blumkin is rather tall, his face of a yellowish pallor, surrounded by a fringe of black beard, which is rather abundant, but short. His aquiline nose, his somewhat large mouth and thin lips are expressive and mobile. His black eyes are somewhat elongated, and look you straight in the face with energy. The head is handsome and regular. It may be that it is his hair or his beard; but you would say that he was a Romanticist of 1820 or 1848, one of those insurgents who were simultaneously poets, cavaliers, and gallants. He is at the prime of life: hardly more than thirty. His wife, a simple young woman of regular features, with black hair, listens to our conversation without apparent interest.

Jakov Gregorievich, now recovering from several wounds he received in the Ukraine—his former companions in arms had made up their minds to kill him because he was working with the Bolsheviki—is at present studying Oriental languages, and preparing a work on terrorism.

For terrorism is the great interest, the master idea of this man. He speaks of it deliberately, with learning, with conviction, with the persuasive tone of one who is not touched by any doubt. He is of the race of those who think that acts of revolution maturely reflected, conceived in cool blood, executed with daring self-denial may have a decisive effect on the course of revolutionary periods, or at any rate in social struggles.

We spoke of the act of June 6. I mentioned what joy had broken out among us, who were exiled and imprisoned in a foreign land, on the occasion of the execution of Count Mirbach, which proved after the execution of Marshal Eichorn, that the Revolution had lost nothing of its inner forces; but I also mentioned that we had understood this act as playing the game of the Entente, which desired a new war between Russia and Germany.

Jakov Gregorievich answered me as follows:

"This is one of the tragic sides of our situation. We never were in the pay of anyone. Do you think that people do things like that for anyone for anything?"

And, his head thrown back, he looked at me questioningly, with a tranquil pride in his eyes.

"One does such things because one must, because one's conscience, one's revolutionary conviction, dictate that imperatively. This act was necessary. The events in the sequel have proved that we were right. And immediately after, whatever might have been the anger against us, the atmosphere seemed purified. The Fifth Congress of Soviets had ended in a sort of collapse—and it was well understood later that we had washed a blot from the Revolution.

Why not take a position above considerations of party and tactics? History makes a game of all the forces and the greatest results in revolutions are sometimes attained by such unforeseen reactions. I remember at this moment that at the time when the drama was being accomplished, I marvelled at the fact that even in their most tragic contradictions the two great Russian parties were serving the revolution to which both had devoted themselves. While the Bolsheviki in signing the peace at Brest Litovsk were sidetracking all the plans of allied imperialism, the irreducible Social Revolutionists were turning against German imperialism the redoubtable army of terrorism.

"We wanted at first", says Jakov Gregorievich, "to clear the air after the shame of the treaty, to show to the world that our revolutionary vigor remains intact. And besides we know perfectly what was the internal situation of Germany."

Blumkin picked up from the table a small miniature photograph framed in brown wood, the portrait of a young man with the open countenance of a worker, a clear-cut, somewhat odd chin, doubtless a blond type—"Andreyev", he said to me. "My companion on June 6. He has since been killed in the Ukraine, where he was working in the General Staff, I think of the army of the anarchist partizans of Makhno.

Jakov Gregorievich is anxious to tell me in a few words about the tragic 6th of June. I can call up in my mind the little mansion on Denezhny Pereulok which was then the German Embassy. The street bordered with gardens, quiet and gay, the summer atmosphere, the rich houses, little palaces for the most part of one story only, where formerly the very rich lived, the Embassy with the wrought iron fence of its garden, topped with a border of green foliage, its elegant little building of cut stone, its austere balcony, its marble vestibule, than the splendid antechamber in a style half Gothic, half ancient Russian, recalling certain old apartments of the Kremlin: somber carvings of wood, a high gallery, tapestry and near the gate of the hall of honor, the tambour whose duty it was to announce visitors. (To be concluded)

PROTEST TO THE "CONSTITUENT ASSEMBLY"

Mr. V. I. Tyomkin, who was elected to the Constituent Assembly from the Province of Kher-son on the ticket of the Jewish National Election Committee, declining to participate in the conference of the members of the Constituent Assembly at Paris, addressed to them a communication in which he took occasion to protest against their indifference to the anti-Jewish massacres perpetrated by the various counter-revolutionary chieftains. His protest reads in part as follows:

"We must not forget that all actual attempts at an armed overthrow of the present Russian Government have resulted in more than the ordinary horrors of civil war as far as the Jews are concerned; heaps of Jewish corpses and an unceasing series of Jewish massacres have marked their way. His-

tory will not forget the gruesome deeds of the perpetrators of these latest massacres. With all the power at its command the Jewry will brand the names of those who led in the total destruction of great numbers of our people; who let loose their passions of hatred against the Jewish masses; who spread calumnies against our people throughout the world; and it will indict those who failed to repudiate the active or spiritual abettors of the annihilation of our nation...

"During the past two years massacres have been the principal event in the life of the Russian Jewry . . . Varying in time, place and guise, bestial counter-revolutionary bands, devoid of all sense of humanity, attacked Jewish homes, butchering thousands upon thousands of the Jewish population, assaulting Jewish women, and murdering Jewish infants. Like a devastating hurricane, they swept across our settlements, transforming what was once the 'Pale of Settlement' into a mass of ruins, where streams of fresh human blood have as yet not dried out, where frenzied people, hungry and naked, are wandering in wild despair, having lost their kinsfolk and homes, shattered to the very depths of their souls, by the horrors which they have survived.

"Nor are these tribulations of the Jewish nation at an end. The panic in which millions of the Jewish population are living, has never been known by any people in the world. As one day follows another, a single thought consumes them: will they still exist tomorrow, or will they be made the objects of brutal humiliations and extermination. The Jewish population against which the principle of joint liability has been proclaimed without immunity for old age and childhood, is placed in an exceptional condition which would seem to demand the special attention of every conference concerned with the fate of Russia. It is impossible to talk of a civil war for a new Russia, without voicing, in no ambiguous terms, a vigorous protest against the recurrence of such acts as were perpetrated against the Jewish population in Russia . . .

"I am unable to banish a certain feeling of doubt concerning the present conference of the members of the Constituent Assembly which is taking place at Paris at this time . . .

"How far removed from reality must be this conference of the members of the Constituent Assembly, how faint its anticipation of the spirit of the genuine future Constituent Assembly, if to this day no voice of protest has been heard within its walls against the atrocious massacres, which threaten to annihilate the Russian Jewry."

AGRICULTURAL SCHOOLS IN RUSSIA

There are at present 272 agricultural schools of all grades in Russia. Of that number 77 were established by the Soviet Government since 1918. Of the total number there are 16 agricultural colleges and 13 agricultural departments of universities, 63 agricultural high schools, 44 schools of horticulture and vegetable gardening, 16 schools of stock-breeding, 26 forestry schools, besides 16 lecture courses in forestry in other institutions.

An Interview with Kerzhentsev

(The Petrograd "Izvestia" of Jan. 12 reports that the Imperial Russian Embassy in Sweden, closed its offices with the beginning of the year. This "Embassy," headed by K. N. Gulkevich, successively represented the interests of Kolchak, Yudenich, Denikin, and Wrangel. The last hope of the White Guards being blasted, the "Embassy," which probably had not as much money at its disposal as the Russian "Embassy" in the United States, disbanded. The Swedish Government should therefore find no difficulty in recognizing the Representative of the Soviet Government M. P. Kerzhentsev, although it may still plead an embarrassment of riches in the presence of the old "Russian Consulate General" at Stockholm, who is reported to be still at his "post." The following interview with Kerzhentsev is taken from "Folkets Dagblad Politiken," Stockholm, of February 14, 1921).

The Chairman of the Soviet Russian Commercial Delegation, Kerzhentsev, as the Rosta office has already announced in its morning bulletin of Saturday, Feb. 12, arrived in Stockholm that morning from Moscow by way of Reval. On the same day Rosta already had an interview with him.

"In the first place I must begin, as usual, by refuting lies," said Mr. Kerzhentsev. "The Swedish Press in the last few days is more than filled with fantastic reports about Russia. It is very unfortunate that certain Swedish papers cannot take a more critical attitude towards untrue reports, based on forged documents, circulated in western Europe by the enemies of Russia. I need hardly say that as for circulars of Dzerzhinsky or decisions of the Council of People's Commissars signed by Lenin, in the struggle against counter-revolution in foreign countries, there are no such documents in existence. It is peculiar how this provocative report has succeeded in getting itself circulated in Europe. About a month and a half ago the Esthonian press printed a report that the Bolsheviks were preparing an assassination of French ministers. Somewhat later this version began to assume larger and larger dimensions which emphasized more and more the unreasonableness and impossibility of the report. I am surprised that our enemies should not be able to think out anything more clever than a return to the long since abandoned period of forged documents about Soviet Russia; you will remember that a few years ago a whole set of such documents was circulated in America and England by a few enterprising journalists.

"You may imagine how we laugh in Moscow when we read reports in the European bourgeois press concerning revolts of sailors in Kronstadt,* uprisings of the peasants, or exhibitions of Lenin bound hand and foot, to the Soviet Congress, etc. You would think that the Western European press would have had sufficient occasion to convince itself through eyewitnesses who have visited Russia how false any reports of this kind are, no matter how energetically they may be circulated from

Helsingfors. The serious press should long ago have given up the custom of lending an ear to the testimony of nervous ladies who represent a lack of automobile tires as an attack on Lenin with the aid of dynamite.

"It is entirely erroneous for certain press organs to represent the discussion at present in progress within the Russian Communist Party, as a sign of a schism in the Party or even of the fall of the Soviet. Anyone who speaks thus is either consciously lying or has no idea at all of the Russian Communist Party. We are strong enough to be able to bear the most outright and far-reaching discussion on the questions of the day in our own ranks. We are sufficiently disciplined to be able to defend and carry out a policy that is adopted as a result of our Party Congresses. I fear that after the 9th of March, when the Party Congress meets, *Social-Demokraten** will be very much disappointed to find not a coffin with a corpse in it, but a more vigorous, more fresh and more united party than the world has ever seen before.

The Russian People Now the Most Peaceful in the World.

"Completely idiotic are the reports of any aggression on the part of Soviet Russia. Our entire people is impregnated with the desire for peaceful work. The latest Soviet Congress** has clearly shown this. The only military question that was treated there was the question of demobilizing the army, and this question was decided in the affirmative. The entire attention of the Congress was turned to the work of economic reconstruction, the question of the electrification of Russia, and that of the regulation of commercial relations with foreign countries. I venture to say that the Russian people at present is the most peaceful people in the whole world, but this by no means signifies that we should not vigorously defend our interests, no matter by whom or in what way they might be menaced.

Russia's Commercial Relations with Western Europe, Particularly with Sweden.

"I believe," Mr. Kerzhentsev continued, "that the present year will be a year not only of vigorous

*This took place on February 12, when the Kronstadt mutiny had not yet started. A cable from Moscow, published in No. 12 of *Soviet Russia* referred to the fact that the French press was printing fantastic stories of revolts of the Baltic fleet—at a time when no unrest whatsoever existed in Kronstadt—a proof that the whole affair was prepared in France.

**Social Demokraten* in this case is the Stockholm organ, one of the most reactionary Socialist papers in Europe, and not the *Social-Demokraten* of Christiania, from which we frequently have occasion to quote in our columns.

**The Eighth Congress of Soviets began December 22, 1920.

work, a year of Russian economic reconstruction, but also a year of active commercial relations with western Europe and particularly with Sweden. Our economic bonds with Sweden, it appears to me will be strengthened particularly in three directions: (1) by the commercial relations and large orders placed by Russia, here in Sweden; (2) we have a common interest with Sweden in the matter of bringing about the most advantageous conditions for exporting forestry products from Russia to the other countries, in which matter we must work out a common policy; (3) I do not doubt that persons

can be found in Sweden who will be ready to draw up with us some of the concessions that Soviet Russia is now ready to grant to foreigners under certain conditions.

"Finally, may I correct a few errors I have noticed in the Swedish press? Litvinov is now filling the post of Representative Plenipotentiary of Soviet Russia in Esthonia. All questions touching Finland are taken care of by our Representative in Finland, Mr. Berzin, and all questions touching Sweden have been assigned to me to be disposed of here."

Clara Zetkin's Speech

In the course of the discussion of an interpellation in the German Reichstag on January 25, Mrs. Clara Zetkin, a Communist member of the Reichstag said among others the following things:

The relations between Germany and Soviet Russia are extraordinarily unstable, vacillating, and full of contradictions. Big industrials and mine owners would like to come to an understanding with the Entente, in order to create a great pool with the prototypes of Stinnes on the other side of the Rhine, on which all European manufactured products would depend. (*Shouts of Very Good! from the Communists.*) The manufacturer of finished products are demanding commercial relations with Soviet Russia. The necessity of obtaining a market for German goods made it necessary to seek economic relations with Soviet Russia. Mr. Kopp is here not only for the regulation of the war prisoners' question. He is the recognized economic representative of the Soviet Government. The speaker for the German Nationalist Party, whom you have just heard, said that certain idiots were carrying on commercial business with Russia. The number of such idiots is pretty big (*Very good! and hilarity among the Communists.*) Mr. Kopp has already arranged for about 200 to 300 million marks of business, and at the moment that the German Government declined to admit the specialists sent to Germany, Mr. Kopp threatened to cancel commercial deals amounting to a quarter of a billion (*Hear, Hear! from the Communists*) that had already been concluded (*Hear, Hear! from the Communists*), including 65 millions for agricultural machines and implements—what unemployment has been brought about by this cancellation!—31 millions for electrical supplies, 20 millions for pharmaceutical and chemical supplies.

The German foreign trade convention has come out with absolute definiteness for a resumption of economic relations with Soviet Russia. Are these people all idiots?

Specialists must be admitted without limitation. (*Shout from the Volkspartei: Has that not yet been done?*)—No, sir, the specialists were turned back. Such shameful deportations as that of the Technical National Commission must be stopped; they do not in any way provoke emigrations of German workers to Russia, but on the contrary regu-

late the emigrations.* The first batch went off without the knowledge and against the will of the Commission. Soviet Russia is now prepared to receive skilled workers.

Other actions also illuminate the anti-Soviet policy of the German Government.

The speaker reads a document in "Die Rote Fahne," Berlin, of December 29, which shows that the National Commissioner for Maintenance of Public Order had informed the Vienna Police Department that Kopp's work of mediation was not officially recognized. (Shouts of Hear, Hear, from the Communists.)

What right did the National Commissar for Public Order have to make such a denunciation? (*She also reads a document in which the National Commissioner for the Maintenance of Public Order is accused of having made a denunciation to the German Embassy in France, in other words to the Paris authorities, on the basis of Latvian detective work. She asks whether the German Embassy in Paris has not more important duties.*)

As late as this summer the German authorities were still recognizing a private association of counter-revolutionists, the Russian Delegation in Zelten 16 (Berlin address). They permitted these delegates to carry out international functions, draw up and visé passports, etc.

On the subject of the shootings of Red Army men, in violation of international law, I must say that these unhappy men were murdered on the basis of an ordinance not fully understood by them. The Russian text of the ordinance does not contain the passage which tells of the use of firearms if a challenge to stop is not heeded after repeated challenges as is stated in the German text (*Hear, hear! from the Communists*).

Before he was murdered, Count Mirbach had abused to an unheard of extent the courier service and the Red Cross in order to protect the property of Russian aristocrats and bourgeois from confiscation. Of course this is not to be considered an intervention in the internal affairs of Soviet Russia. (*Loud protests from the Right.*) This accusation

*Evidently objection had been made to the presence of this commission on the ground that the German workers, desirous in increasing numbers of emigrating to Russia, might find this ambition stimulated by the statements of the Commission.

was made by Germans to whom I spoke in Petrograd. They were the more indignant at his action, since Count Mirbach had declined to protect the small holdings of poor Germans. The murder itself is politically disposed of entirely by the measures which were immediately undertaken by the Russian Government.

Now let us take up the arguments as to the fact that the dislocation of Russian economy makes economic relations with Soviet Russia impossible. Side by side with the wretched peasant economy described just now by bourgeois speakers, there exist in Russia 500 great Soviet enterprises. In addition there are thousands of communal organizations, the greater part of which are developing very favorably. Besides, there are thousands of co-operative agricultural enterprises. The delivery of grain increased from 18 million tons to 120 million tons, between 1917 and 1920. (*Hear, hear!*)

I must emphasize the increasingly voluntary nature of the deliveries. In 1920 eighty percent of the obligatory deliveries were handed over voluntarily. The quality of the bread has improved and the highest bread ration is now given to two and one-half million workers instead of one and one-half as formerly. (*Hear, hear! from the Left.*) Is agriculture flourishing in our country? (*The speaker adduces examples to show the decline of German agriculture.*)

Every few weeks we read that in Bavaria or Upper Suabia villages refuse, with arms in hand, to deliver their grain. Of course these must be Russian villages that were smuggled over the German boundary in the dark of night by the infamous Bolsheviks in order to bring Germany into disrepute. (*Very good! from the Communists.*)

Russian industry before the war was not yet very highly developed. It suffered from the cutting off of raw materials, and by a succession of wars, civil war, and the great Revolution. But its development now is again proceeding favorably. The same is true of transportation conditions. The trains are running on schedule on all the lines. Since Baku and the Northern Caucasus have been freed, Russia has acquired great quantities of naphtha, exceeding the normal yield three-fold. Russian industry may be proud of the gigantic accomplishment of having clothed, equipped and kept victoriously in the field the great Red Army of two million men. The doubts of Mr. Wels* as to the Red Army arise from the ardor of his old Prussian servile faith in the indomitable quality of Mr. Ludendorff, veneered though it may be by a Social-Democratic surface. (*Very good! from the Communists.*) And yet he who has witnessed the defeat of Ludendorff, cannot believe in the victorious power of the Red Army!

(*The speaker describes in detail the social welfare activities for war invalids in Russia, comparing them with the gratitude shown to soldiers by Germany. She then takes up the question of the misery of the German children, on which subject*

she quotes extensive material from the pamphlet of Stegerwald, a Zentrum representative. The German Nationalists interrupted her with the shout: Why do you not go to Russia?)

We consider it our duty to remain here in Germany to fight and prepare the revolution, without your blessing, with your curse, and against all your objections! (*The speaker then takes up the creative work of education under Soviet Russia.*)

In 1920 there were 26,000 libraries in 32 provinces. The schools are open to all children free of charge, and each child receives food and clothing up to the age of 16.

Minister Simons is disappointed with the fact that the electrification project for Russian agriculture and industry was not carried out in one year. I should never have expected to find so much revolutionary impatience in the breast of a German bourgeois minister. The Russians themselves assign a period of ten years for the realization of the plan. (*Hear, hear! and hilarity from the Left.*) The Social Democrats should not deride the Russian concessions. These concessions merely express the fact that Soviet Russia is as yet an isolated island closely surrounded by capitalist states, depending on world capitalist relations, as does any other state. The Russian state must unfortunately assume relations even with capitalist states. This necessity is the shame of the proletarians of the other countries and not least of the German proletarians, who still drag along under the yoke of capitalist exploitation.

We behold a disorganized economy in Russia and in Germany. But the difference is this: In Russia there is a free workers' and peasants' society creating a new, higher social order, while in Germany, on the other hand, we witness a brutal effort to reerect the capitalist order by violence, with the aid of machine guns and White Guards. And at present a worse serfdom is threatening Germany's proletariat. Germany is to become an economic exploitation region, the political mercenary of the Entente, which is to force Soviet Russia to her knees. The German bourgeoisie is not unwilling to become a slave-driver in the employ of the Entente imperialists. The German empire of the rich collapsed in the world war. But Germany's national existence is by no means forever destroyed. The hour in which the German proletariat will take its place in the revolutionary front of the world proletariat, the hour in which it will seize the power and erect its dictatorship as a Soviet Republic, will be the hour of birth of the German nation. On that day a German people will arise that will be no longer a disunited mass of masters and serfs.

An alliance with Soviet Russia for revolutionary defence and offence would be a decisive step in this direction. This step will be taken, no matter what the Government or the Reichstag may decide. We shall call upon the masses to take this step. It means not only an act of international fraternity with Soviet Russia, but the achievement of our own liberation.

*One of the leaders of the German Social Patriots.

The Kronstadt Incident

The following dispatch from the official Russian Telegraph Agency was received at the office of SOVIET RUSSIA.

Moscow, March 19.—The Kronstadt adventure was ended the day before yesterday. By a smashing whirlwind attack, unparalleled in the annals of warfare, the Soviet troops captured this most formidable fortress in spite of violent machine-gun fire sweeping through their ranks as they advanced over the ice. One fort after another was taken with the rapidity of a motion picture battle. The Communist leader Kuzmin, imprisoned by the Kronstadt rebels, was set free immediately and joined in the command of the attacking forces, contributing by his valuable advice to the speedy victory. The mutinous warships "Petropavlovsk" and "Sevastopol" soon raised the white flag, begging for mercy. General Koslovsky with his staff succeeded in escaping over the ice to Finland.

The Kronstadt victory was a fitting contribution to the celebration of the 50th anniversary of the Paris Commune, now in progress all over Russia. It marks a week of notable diplomatic victories for Soviet Russia which have made her position stronger than ever. On March 16 an important treaty was signed between Russia and Turkey, forming a new link in the bond of friendship between Russia and Asia and putting the lid on imperialist intrigues in the Near East. On March 16 the British trade agreement was signed. Today the Polish-Russian peace treaty was concluded. Yesterday the Rumanian Foreign Minister announced the departure to Reval of delegates to negotiate an agreement between Russia and Rumania. The representative of Soviet Russia arrived in Italy on March 17, thus opening a new avenue of Russian international relations. All this is the appropriate answer to the international birds of prey who wanted to celebrate Soviet Russia's funeral. Nevertheless, the supply of American journalists who write fancy alarmist news about Russia is not yet exhausted. For instance, our wireless today caught a message sent by Gibbons to the *Chicago Tribune* from Bucharest, stating that Odessa had been bombarded by anti-Bolshevik forces and that violent fights were in progress around Odessa in Southern Ukraine. All that is an absolute lie.

The Soviet Government has granted Isadora Duncan permission to come to Russia and establish a dancing school for one thousand children.

The recently ended convention of the Communist Party of Russia resolved, as a temporary measure of relief and an inducement to peasants, to re-establish free trade in surplus agricultural products and to introduce a fixed tax in place of requisitions. This will necessitate important measures for stabilizing Russia's monetary system.

REPRINTS FROM SOVIET RUSSIA

Periodicals desiring to reprint any material appearing in this weekly may do so if they will give proper credit.

AMERICAN TECHNICIANS AND RUSSIA

Plans are being made by the Soviet Government for the employment of technical aid from America in the construction of the workers' state, according to the following cable received by Mr. Charles Recht from Mr. L. Martens:

"Moscow, March 19, 1921.

"Inform the Society for Technical Aid to Soviet Russia that a Committee has been formed here by order of the Council of People's Commissars to utilize technical aid from America. I belong to the same and will soon send full details and instructions. Keep on working. Soviet Russia needs and welcomes technical aid.

"(Signed) L. C. MARTENS."

As soon as the details promised by Mr. Martens are received they will be published in SOVIET RUSSIA for the information of all technical forces in America interested in bringing their services to the aid of Russia.

AMERICAN WORKERS THANKED

The following cable has been received by SOVIET RUSSIA from the People's Commissariat of Education in Moscow:

The Russian children have learned of the fact that the children of American workers are sending them a steamer with a million pencils, pens and copy books, and that the Jewish Workmen's Circle is sending a fully equipped children's hospital of 200 beds. The Russian children, their teachers and the People's Commissariat of Education wish to convey to the New York papers which have taken the initiative and to their readers who have responded to the appeal and to their young American brothers their warmest thanks both for the gift and for the expression by this act of the solidarity of the workers of the world.

(Signed) PEOPLE'S COMMISSARIAT OF EDUCATION.

In Next Week's

Soviet Russia

A PETERSBURG ARCADIA, by John S. Clarke. In a new article by the editor of the *Glasgow Worker*, an open-air performance of *I Pagliacci* at a Worker's Home near Petrograd is described, as well as a number of incidents from the life of Kropotkin.

PROSTITUTION AND COMMUNISM, By Alexandra Kollontay. The former People's Commissar for Social Welfare, in a special article, shows that the chief cause of prostitution is poverty, and how this cause is being eliminated in Russia.

RUSSIA CRUCIFIED. Professor Vanov, the statistical scholar, contributes an account of the depletion of Russia's resources brought about by the imperialistic war and intervention.

THE SOCIAL BASIS OF THE NOVEMBER REVOLUTION, by Preobrazhensky. Explains why the seizure of power by the Bolsheviki was successful.

SOVIET RUSSIA

A WEEKLY JOURNAL OF INFORMATION

110 West 40th Street

New York, N. Y.

This magazine endeavors to present its readers with the most recent available information concerning the Russian Socialist Federal Soviet Republic in the form of official documents and authoritative articles. The editor does not assume responsibility for opinions expressed in signed articles. Manuscripts are received only at the risk of the sender.

IT has become a standing habit of all adversaries of the recognition of the Soviet Government to point to its lawlessness and its disregard of all established notions of personal rights, respect for life and property and common decency. Its enemies are, of course, supposed to be quite different and to be imbued with a deep respect for all these prerequisites of civilized intercourse. The Russian Government has never concealed that in its struggle against foreign intervention and internal counter-revolution it has had to use extraordinary measures such as are always taken in revolutionary periods. But in the face of the general moral indignation against its dictatorial and terroristic methods, it had at least the right to expect that its opponents would try to live up to their own high moral standards. These expectations were unfortunately not always realized. The affair of the Sisson documents, forged in order to prove that all the Bolshevik leaders were German agents, and spread broadcast in all languages, all over the world; the British conspiracies in 1918 for the purpose of bribing the commander of the Moscow garrison for the sake of arresting the People's Commissars, and publishing forged documents finally exposing them as tools of Germany; the plebiscite in Upper Silesia, the most important part of which, namely the mining part, is going to be awarded to Poland, in spite of the outcome of the vote; the organization of Russian White Guards, recruited from among Russian war prisoners in Czecho-Slovakia, to be employed against Czech workers; the reference to—Turkish law (!) on the part of the French commissioner in Constantinople in order to prevent American ships from entering the Black Sea with coal for Batum; the organization of gangs of murderers in Spain and Italy, which, with the tacit approval of the Government are assassinating labor leaders, destroying all labor papers and institutions and taking by force all the City Halls after the elections have returned a Socialist or Communist majority; the tortures and executions in Hungary at the sight of which the members of the British and French missions enjoyed a kind of special pleasure; the fact that forged issues of the Moscow *Pravda*, containing anti-Bolshevist propaganda, were printed and distributed with the connivance of the British Government—as was irrefutably disclosed the other day by the London *Daily Herald*—all this proves that

honor, decency, respect for law, consideration of the will of the majority, humanity,—are exclusively the monopoly of “recognized” governments with whom therefore commercial relations are possible. . . .

* * *

“ON EST toujours le reactionnaire de quelqu'un.” The Russian Bolsheviks, although execrated and fought by the whole capitalist world, had to share this common fate of revolutionary parties of all historical epochs—to be attacked as standpatters and reactionaries by other factions that were or claimed to be more revolutionary, more extremist, more consistent in their movement to the left than they were.

Among their adversaries on this head there were especially two currents worth mentioning—the Anarchists and the Left Social Revolutionists—which themselves were subdivided into different varieties.

The Anarchists form a class by themselves. No revolution is good enough for the “irreconcilables” among them, if it does not aim immediately at the destruction of every form of government—even if it be a dictatorship of the working class. Every organized authority is anathema to them—even if for everybody who has not lost his senses it is absolutely clear that it is indispensable for the safety of the Revolution and the suppression of counter-revolutionary attempts. They would rather not make any revolution at all, or keep aloof from it, or even fight against it arms in hand and thus prepare the ground for pogroms by the “Whites” or the “Greens” as did those who joined the bands of Makhno or some of those who recently seem to have joined the Kronstadt mutiny—than recognize the necessity of a revolutionary governmental organization with its more or less inevitable evils. But aside from these “irreconcilables,” who are “consistent” to the point of helping unconsciously their own worst enemies—there are a number of real revolutionists among them. With the advent of the Social Revolution in Russia they understood that the realization of their beautiful ideal might be possible only at the end of the revolutionary transition period, after the total disappearance of all class differences—on the economic as well as the educational field—when the whole of humanity will be one family of freemen who, from the earliest childhood, equally enjoy all the material and educational advantages of civilization. And consequently they gave their whole-hearted support to the Workers' and Peasants' Government.

The Left Social Revolutionists took from the very beginning of the November Revolution quite a different stand. During the first four months of the Soviet Republic that followed November 7, 1917, they were closely united with the Bolsheviks, and a number of important cabinet posts (People's Commissariats) were in their hands. When the Constituent Assembly convened in Petrograd in January 1918, Maria Spiridonova, a member of their party, was the joint candidate of the Left

Social Revolutionists and the Bolsheviks for the chair in that body as against Chernov, the candidate of the Right Social Revolutionists. Their coalition with the Bolsheviks continued after the dissolution of the Assembly—until the signing of the peace of Brest Litovsk. When that peace was signed, in accordance with a majority decision of the Soviet Congress, they withdrew their members from the Council of People's Commissars and began a bitter struggle both against the German invaders and the Bolsheviks.

Brought up in the heroic tradition of the great terrorists of the eighties and of the "Maximalist" faction of the Social Revolutionary Party in 1905-1906 that had startled the world with its incredibly daring terroristic attacks against the Tsar's Government—they saw in the revolutionary struggle only the romantic side. They could not understand that there were moments when the higher interests of the Revolution demanded not only the courage of heroic death but also the courage of accepting temporary humiliation in view of obtaining a breathing space for a future revenge. And on their fateful day, June 6, 1918, they killed the German Ambassador Mirbach in Moscow and at the same time started a revolt in the capital in order to wrest the power from the Bolsheviks and continue a hopeless war against Germany. Their attempt failed. The party suffered heavily, but some of its leaders—especially the famous and heroic Maria Spiridonova—continued, even after the Kaiser's downfall, and in spite of Allied intervention, the most embittered struggle against the Bolsheviks. At that time the cities were starving and the peasants were unwilling to deliver the grain to feed the workers. The workers had to take the grain by force. Maria Spiridonova furiously attacked the Communists for "robbing the peasants." The Allies were pressing from all sides—the Soviet Government was ready to pay ransom and to buy peace even at the cost of very hard concessions. "You are selling out Russia to the Allies" cried the same romanticists who a year before were attacking the Bolsheviks for "selling Russia to the Germans"—and if the French or British Ambassador had come to Moscow, they would have killed him just as they killed Count Mirbach—to save the honor of the Revolution. They preferred their own death and the death of the Revolution—only to save their romantic conception of revolutionary honor.

The Bolsheviks are not romanticists. In spite of their admiration for Maria Spiridonova's splendid past and sincerity, they had to treat her and her associates as dangerous hysterical who, with their extravagant notions, threatened to wreck the Revolution. It was a pity that severe measures had sometimes to be taken against them, because they could by no means be placed on the same level with bourgeois counter-revolutionary elements, such as the Mensheviks or the Right Social Revolutionists.

But now news comes from Moscow that the "Left Social Revolutionists, with Kamkov, Ivanov-

Razumnik and Steinberg at their head who had changed the name of the party to the *Revolutionary Communist Party*, have decided to dissolve their party, to transmit all party archives and all party property to the Communist Party, and to join the Bolsheviks." As the above-mentioned names are the most brilliant in the party—Kamkov was one of its most important leaders, Steinberg was Commissar of Justice in the first Soviet Cabinet, and Ivanov-Razumnik is one of the most brilliant publicists in Russia—it may be taken for granted that this whole sad episode of internecine strife within the Soviet front has come to a conclusion. The Left Social Revolutionists have finally grasped that the path of Revolution is not only thorny but sometimes muddy too, and that the hand that brandishes the liberating sword does not necessarily soil itself if for reasons of expediency it has sometimes to shake the hand of a Mirbach or even of a Lloyd George.

ACCORDING to the counter-revolutionary *Novaya Russkaya Zhizn* (New Russian Life), published in Helsingfors, the defeat of Wrangel has brought gloom into the ranks of the counter-revolutionaries. Reviewing the events of the past year the paper records "a decay of the psychology and the will to fight among the rank and file of the Russian emigrés."

In another editorial the same paper utters a pessimistic note on the hope of the Entente that the Soviet Government will in the course of time be overcome by internal forces: "On what that hope is based is a riddle; why should the internal forces conquer now after they have been unable to conquer the Bolsheviks with the support of foreign fronts?"

The Cadet paper *Rool*, published in Berlin, has also lost all hope of a successful overthrow of the Soviet Government. Says the paper editorially:

"How often did it seem and was it predicted that tomorrow or the day after the end of the Bolsheviks would surely come, but all prophecies proved false, and now, after the defeat of Wrangel it is no longer good form to talk of the fall of the Bolsheviks—they must be reckoned with as any other existing government."

The best comment on these confessions of defeat is the recent announcement that the French Government has withdrawn its support from the 100,000 or more White Guards who fled to Turkey after the defeat of General Wrangel.

"France," says the *New York Times*, March 28, "has expended more than 200,000,000 francs caring for these refugees, and in view of the failure of other nations to shoulder part of the burden she feels she can do no more."

"In the last three months French agents undertook to scatter these refugees in different countries. Some 10,000 were placed and Brazil engaged to take 20,000. But recently it has been found that officers of General Wrangel have been working against this effort and trying to keep his army intact. Therefore the French Government is now considering means of obtaining the disbandment of a force of 45,000 men in the environs of Constantinople, considering an eventuality by which it might become a danger for the allied forces in Turkey.

"The fate of the refugees when French aid is cut off promises to become desperate."

The Paris Commune and Soviet Russia

By LEON TROTSKY

(Conclusion)

Democratic Commune and Revolutionary Dictatorship

COMRADE LENIN has already pointed out to Kautsky that to attempt to depict the Commune as a form of democracy is nothing less than theoretical charlatanism. The Commune, both in its traditions and in the intentions of those directing it—the Blanquists—was the expression of the revolutionary dictatorship of one city over the entire country. This was the case in the great French Revolution; it would also have come to pass in the Revolution of 1871 if the Commune had not fallen so soon. The fact that in Paris itself those in power had been elected on the basis of universal suffrage did not exclude the other fact which is much more important: military action of the Commune, of one city, against peasant France, in other words against the whole country. In order to satisfy Kautsky in all reason the revolutionists of the Commune would have had to question in advance, by way of universal suffrage, the entire population of France in order to find out whether or not war should be waged with the bands of Thiers. Finally, in Paris itself, the elections were carried out after the flight of the bourgeoisie, which favored Thiers, at least of its most active elements, and after the evacuation of the policing armies. The bourgeoisie which remained at Paris, in spite of all its impertinences, was none the less afraid of revolutionary battles, and it was under the impression of this fear—a presentiment of the inevitable Red terror to come—that the elections took place. To console oneself with the idea that the Central Committee of the National Guard under whose dictatorship—unfortunately a flabby and formless dictatorship—the elections of the Commune were being carried out, meant no violation of the principle of universal suffrage, is in fact like dealing blows with a sword to the waves of the ocean.

In his accumulation of sterile comparisons Kautsky is taking advantage of his readers. At Petrograd, in November, 1917, we also elected a Commune (the municipal Duma) on the basis of the same "democratic" suffrage, without restrictions of the bourgeoisie. The elections, as a result of boycotting by the bourgeois parties, gave us an overwhelming majority.* The democratically elected Duma voluntarily submitted to the Petrograd Soviet, in other words, it placed the fact of the dictatorship of the proletariat above the "principle of universal suffrage"; and some time later it dissolved, of its own initiative, in favor of one of the sections of the Petrograd Soviet. In other words, the Petrograd Soviet—the true father of the Soviet power—has for the latter a divine grace, a halo of formal democracy, which in no way is second to that of the Paris Commune.

At the elections of March 26, 90 members had been elected to the Commune. Among them were fifteen members of the Government Party (Thiers), and six radical bourgeois, who, although they were adversaries of the Government, none the less condemned the insurrection of the Paris workers.

"The Soviet Republic," Kautsky tells us, "would never have permitted such counter-revolutionary elements to enter even as candidates and certainly not as elected members. The Commune, out of respect for democracy, placed not the slightest obstacle in the way of the election of its opponents" (pp. 55-56). We have above witnessed Kautsky blithering over all the field in every direction. In the first place, in the parallel phase of the development of the Russian Revolution, the democratic elections for the Petrograd Commune were inaugurated, the elections during which the Soviet power allowed every liberty to the various parties, and if the Cadets, Social Revolutionists, and the Mensheviks, who had a press of their own, who were openly inviting the population to overthrow the Soviet power, boycotted these elections, it was for the sole reason that they were at that time still hoping to dispose of us swiftly by force of arms. In the second place, there was not in the Paris Commune any democracy which rallied all classes to it. For the bourgeois deputies, conservatives, liberals, Gambetists—there was no place.

"Almost all these persons," writes Lavrov, "either immediately or very soon left the Councils of the Commune; of course they might have been representatives of Paris—of the free city under the administration of the bourgeoisie—but they were totally out of place in the Commune, which fortunately or unfortunately, consciously or unconsciously, completely or incompletely, but none the less really embodied the revolution of the proletariat, and the attempt however feeble it may have been to create forms of society that might be harmonious with this revolution" (pp. 111-112). If the Petrograd bourgeoisie had not boycotted the Communal elections, its representatives would have entered the Petrograd Duma. They would have remained there only until the first insurrection of the Social Revolutionists and the Cadets, after which, with or without the permission of Kautsky they would probably have been arrested if they had not left the Duma in time, as by the way at a certain moment the bourgeois members of the Paris Commune really did. The course of events would have remained the same, except for the fact that

*It is not without interest to note that in the communal elections of 1871, there were 230,000 voters. In the municipal elections of November, 1917, at Petrograd, in spite of the boycotting of the elections by all parties except ours and that of the Social Revolutionists, who had hardly any influence in the capital, there were 400,000 voters. Paris in 1871 had 2,000,000 inhabitants; Petrograd in 1917 had 2,000,000. We must take into consideration that our electoral system was incomparably more democratic, as the Central Committee of the National Guard had carried out the elections on the basis of the electoral law of the empire.

certain episodes would have taken place in a different manner.

Glorifying the democracy of the Commune, and simultaneously accusing it of having lacked in courage toward the Versailles troops, Kautsky does not understand that the Communal elections that were carried out with the participation, in a double sense, of the Mayors and of the "legal" deputies, reflected the hope for a conclusion of a peaceful agreement with Versailles. Yet, this is the very foundation of the matter.

Class Harmony or Class Struggle?

The directing spirits wanted an understanding and no struggle. The masses had not yet exhausted their illusions. The revolutionary pseudo-authorities had not yet had the time to go to pieces lamentably and the whole business was called "democracy."

"We must rule our enemies by moral force," Vermorel put the matter. "We must not encroach upon the liberty and the life of the individual." Vermorel, whose aspiration it was to ward off "civil war", was inviting the liberal bourgeoisie which he had once so pitilessly branded, to form "a power that would be regular, recognized, and respected by the whole Paris population." *Le Journal Officiel* published under the direction of the Internationalist* Longuet, said: "The regrettable misunderstanding which in the June days (1848) armed two social classes one against the other,—can no longer be reproduced. The antagonism of classes has ceased to be" (March 30). Further on we read: "From now on all discord has disappeared, for never was there so little social hatred and antagonism" (April 3). In the session of the Commune of April 25, it was not without reason that Jouade boasted that "the Commune had never invaded the rights of property." It was thus that he thought he would capture the good opinion of bourgeois circles and move towards an agreement with them.

"These assurances," Lavrov very justly says, "by no means disarmed the enemies of the proletariat, who perfectly understood how much they were threatened by its triumph; on the contrary such assurances deprived the proletariat of all its fighting energy, blinding it as if intentionally in the presence of its immutable enemies" (page 137). But these enervating assurances were indissolubly connected with the fiction of democracy. The pseudo-legal form that had been adopted made one believe that the question might be solved without a struggle. "As far as the masses of the population were concerned," writes a member of the Commune, Arthur Arnould, "they believed, and not without reason, in the existence of a tacit understanding with the Government." Powerless to attach the bourgeoisie to themselves, the conciliators led the proletariat into error, as they always do.

The fact that in the inevitable civil war which had already begun, parliamentarism could reflect

nothing more than the conciliatory impotence of the directing groups, is evidenced in the most striking manner by the senseless procedure of the complementary elections to the Commune (April 16). At this moment "one had only to cast a ballot," writes Arthur Arnould. The situation had become tragical to the extent that there was no longer the leisure nor the presence of mind necessary to enable the general elections to do their work. "All the men faithful to the Commune were on the ramparts, in the forts, in the outposts. The people attached no importance at all to these complementary elections. At bottom it was a mere matter of parliamentarism. The hour was no longer one in which to count voters, but to get soldiers; it was no longer necessary to learn whether we had gone up or down in the opinion of Paris but to defend Paris first, to defend Paris against the Versailles troops." These words might have made it clear to Kautsky that it is not easy to unite in real life a class war with a democracy embracing all classes.

"The Commune is not a Constituent Assembly," Millier, one of the clearest brains of the Commune, wrote in his publication, "it is a Council of War. It can have only one object: victory; only one weapon: force; only one law: that of the public weal."

"They have never been able to understand," cries Lissagaray, in his accusation of the leaders, "that the Commune was a barricade and not an administration." They did not begin to understand this until towards the end, when it was already too late. And Kautsky has not understood it yet. There is no reason to believe that he ever will understand it.

"Democratic" Elements and Capitalist Restoration

The Commune was the living negation of formal democracy, for in its development it emphasized the dictatorship of Paris over the peasant nation. This fact outshines all others. Whatever were the efforts of the political routiners in the bosom of the Commune itself, to cling frantically to the appearance of a democratic legality, each action of the Commune, insufficient though it was to bring about victory, was sufficient to convince us of its illegal nature.

The Commune, in other words, the municipality of Paris, abolished national conscription. It entitled its official organ: *Journal Officiel de la Republique Francaise*. Although it was a timid invasion, it invaded the Banque de France; it proclaimed the separation of Church and State, and suppressed the budget of the religious denominations. It entered into relations with foreign embassies, etc., and all this it did under the name of the revolutionary dictatorship. The democratic Clemenceau, who at that time was still in his prime, would not recognize its right to do this.

In the Assembly with the Central Committee Clemenceau declared: "The insurrection has an illegal motive. The Committee will soon become ridiculous and its decrees despicable. Furthermore Paris has not the right to rise in rebellion

*Member of the First International.

against France and must formally accept the authority of the Assembly."

The task of the Commune was to dissolve the National Assembly. Unfortunately it did not succeed in doing this. Kautsky is now investigating in order to find extenuating circumstances for these criminal designs. He argues from the fact that while these Communards had Monarchist adversaries in the National Assembly, we had against us in the Constituent Assembly—Socialists, of the Social-Revolutionist and Menshevik brand. Astronomically speaking this might be termed a total eclipse of the mind. Kautsky speaks of the Mensheviks and the Social Revolutionists but he forgets the only enemy of importance, the Cadets. It was precisely they who constituted our Russian "Versailles" Party, in other words, the block of owners united in the name of property, and Professor Milyukov parodied as well as he could the *petit grand homme*. Very early in the game, long before the November Revolution, Milyukov had been looking for a Galliffet, believing successively to have found him in the persons of General Kornilov, Alexeyev, Kaledin, Krassnov; and after Kolchak had forced the political parties to the rear and dissolved the Constituent Assembly, the Cadet Party, the sole bourgeois party of importance, essentially monarchistic in its nature, not only did not refuse him its support, but even went so far as to regard him with an ever-increasing sympathy.

The Mensheviks and the Social Revolutionists did not play any autonomous role in our country, as seems to be the case with the Kautsky Party in the revolutionary occurrences in Germany. They had erected their entire policy on the basis of a coalition with the Cadets, thus assuring them a situation of preponderance which in no way corresponded to the alignment of political forces. The Social Revolutionist and Menshevik parties were nothing more than an apparatus of transmission destined to gain in the meetings and in the elections the political confidence of the awakened revolutionary masses, in order that the counter-revolutionary, imperialist Cadet Party might benefit—regardless furthermore of the outcome of the elections. The dependence of the Mensheviks and Social Revolutionist majority on the Cadet minority was only a poorly disguised irony on democracy. But that is not all. In every part of the country, wherever the "democratic" regime existed long enough, it inevitably ended with a counter-revolutionary coup d'état. That was what happened in the Ukraine, where the democratic Rada, which had sold the Soviet power to German imperialism, found itself cast out by Skoropadski's monarchy. That was what happened in the Kuban, where the democratic Rada disappeared under the heel of Denikin. That is what happened—and this is the most important experience of our "democracy"—in Siberia, where the Constituent Assembly, officially governed by the Social Revolutionists and the Mensheviks, because of the absence of the Bolsheviks—but actually controlled by the Cadets, led to the dictatorship of the Tsarist Admiral Kolchak.

That is what happened in the North, where the members of the Constituent Assembly, personified by the Government of the Social Revolutionist Chaikovsky, were nothing more than the figureheads behind whom the Russian and English counter-revolutionary generals were the real protagonists. In all the small border Governments things took place in this manner, or are still so taking place: in Finland, in Esthonia, in Lithuania, in Latvia, in Poland, in Georgia,* in Armenia, where under the formal banner of democracy the rule of the landed proprietors, capitalists, and of foreign militarism is consolidated.

The Paris Worker of 1871—The Petrograd Proletariat of 1917

One of the crudest parallels, and one in no way justified and politically an outrage, in Kautsky's comparison between the Commune and Soviet Russia, is the one as to the character of the Paris worker of 1871 and the Russian proletariat of 1917-1919. Kautsky depicts the former as a revolutionary enthusiast, capable of the greatest self-denial, while the latter is represented to us as an egoist, a profiteer, a frenzied anarchist.

The Paris worker has behind him too clearly defined a past to have any need of revolutionary recommendations—or to make it necessary to defend him against the praises of the Kautsky of today. Nevertheless the Petrograd proletariat has not and cannot have any reasons for refusing to be compared with its elder brother. The three years of the struggle of the Petrograd workers, first for the conquest of power,—then for its maintenance and the consolidation in the midst of sufferings that have never been paralleled before, in spite of hunger, cold, continual dangers, constitute an exceptional chapter in the annals of the heroism and self-denial of the masses. Kautsky, as we have pointed out elsewhere, in order to compare them with the elite of the Communards, chooses the most backward elements of the Russian proletariat. In this way he differs in no respect from those bourgeois sycophants in whose eyes the dead of the Commune are incomparably more sympathetic than the living. The Petrograd proletariat seized power forty-five years after the Paris proletariat. This lapse of time has conferred an immense superiority upon us. The petty bourgeois and craft character of the old Paris, and partly of the new Paris, is entirely absent in Petrograd, the center of the most concentrated industry in the world. This latter circumstance has made much easier for us our tasks both of agitation and of organization, as well as the establishment of the Soviet system. Our proletariat by no means holds the rich traditions of the French proletariat, but to make up for this, at the beginning of the present revolution, the great experience of the failure of 1905 was still living in the memory of

*But Georgia (as well as Armenia) now, as was reported in "Soviet Russia" two weeks ago, is entirely in the hands of its own Soviets.

the older generation, which did not forget the duty of revenge that had been bequeathed to it.

The Russian workers did not pass, as did the French workers, through a long schooling of democracy and parliamentarism, a schooling which in certain periods was an important factor in the political education of the proletariat. But, on the other hand, the bitterness of their deceptions, and the poison of skepticism, which has chained the revolutionary will of the French proletariat until an hour which we hope will be soon—had not had the time to gain a foothold in the soul of the Russian working class.

The Paris Commune suffered a military defeat before economic questions had arisen to face it in all their proportions. In spite of the splendid warlike qualities of the Paris workers, the military situation of the Commune very soon became desperate; the indecision and the conciliatory spirit of the higher circles had created a disintegration in the lower ranks. The pay as members of the National Guard was issued to 162,000 plain soldiers and 6,500 officers, but the number of those who actually went into battle, especially after the fruitless sortie of April 3, was only between twenty and thirty thousand.

These facts in no way compromise the Paris workers, and give no one the right to deny their courage or to designate them as deserters, although cases of desertion were not absent among them. The warlike capacity of an army requires above all the existence of a regular centralized directing apparatus. The Communards had not even an idea of this.

The Department of War of the Commune, according to the expression used by one author, had its office in a dark room where everyone was in everyone else's way. The office of the Minister was filled with officers, of National Guards, who were demanding military perquisites, supplies, who were complaining that they were not being relieved. They were referred to the Commandant of the place. "Certain battalions remained in the trenches from twenty to thirty days, while others were constantly being held in reserve. This carelessness soon killed all discipline. The most courageous no longer wanted to depend on any but themselves; the others ran away. The officers acted similarly; some left their post to go to the aid of others who were under the enemy's fire; others went to town to have a good time" . . . (The Paris Commune of 1871, P. Lavrov, page 100).

Such a regime could not continue without retribution. The Commune was drowned in blood. But Kautsky will furnish you with a peculiar sort of consolation: "The conduct of war," he says, shaking his head sadly, "is not as a rule the strong point of the proletariat" (page 76). This aphorism worthy of a Pangloss is fully on the level of another apothegm of Kautsky, namely this: that the International is not an instrument for the time of war, since by its very nature it is an "instrument of peace." The Kautsky of today may be summed

up completely in these two aphorisms: and his value is hardly superior to that of an absolute zero. "The conduct of war, you see, is not as a rule the strong point of the proletariat; all the more since the International was not created for the period of war!" The vessel of Kautsky was built to navigate the peaceful waters of ponds and not to face the open sea and ride the storm. If it is now beginning to take water and sink, the trouble is evidently due to the storm, the elements, the immense size of the waves, and a great number of other unforeseen circumstances for which Kautsky did not construct his magnificent instrument.

The international proletariat has set out to seize the power. Whether civil war is or is not "in general" one of the indispensable attributes of revolution "in general" it is nevertheless incontestable that the forward movement of the proletariat, in Russia, in Germany, and in certain parts of what was once Austria-Hungary, has taken on the form of civil war to the bitter end. And that not only on internal fronts but also on external fronts. If the conduct of war is not the strong point of the proletariat, and if the Workers' International is good only for peaceful periods, we must inter the revolution and Socialism with it, for the conduct of war is a pretty strong point with a capitalistic Government which will never permit the worker to take the power without a war. The only step remaining is to consider what is called "Socialist Democracy" as an accessory of capitalistic society and bourgeois parliamentarism, in other words, publicly to sanction what is being done in politics by the Eberts, the Scheidemanns, the Renaudels, and that against which Kautsky, it seems to us, is still objecting.

The conduct of war was not the strong point of the Commune. That is why the Commune was crushed. And how mercilessly it was crushed!

"We must go back," writes the liberal historian, or rather the moderate liberal historian Fiaux, at the time, to the proscriptions of Sulla, of Anthony and of Octavius, to find such assassinations in the history of the civilized nations. The religious wars under the last Valois, the night of Saint Bartholomew, the period of the Terror were child's play as compared with this slaughter. In the last week of May alone 17,000 corpses of insurgent communards were taken up. The killing was still in progress on June 15."

. . . "The conduct of war is not as a rule the strong point of the proletariat" . . .

It is a lie! The Russian workers have shown that they are capable of mastering also the "machinery of war." And we behold here an immense progress over the Commune. This does not mean that we renounce the Commune—for the tradition of the Commune is not to continue its impotence, but to continue its work. The Commune was weak: we, to complete its labor, have made ourselves strong. They put down the Commune. We are dealing blow after blow to its hangmen. We are avenging the Commune and executing its mission.

Of the 160,000 National Guards who received regular pay 20,000 or 30,000 went into battle. These figures serve as interesting material for inferences to be drawn as to the role of a formal democracy in a revolutionary period. The lot of the Paris Commune was not decided in the elections, but in its struggles against the armies of Thiers.

But as a matter of fact 20,000 or 30,000 men, the most devoted and most aggressive minority, decided the destinies of the Commune in battle. This minority did not stand aside, it simply expressed with more courage and self-denial the will of the majority. But it was nevertheless only a minority. The others, who hid at the critical moment, were not hostile to the Commune; on the contrary they actively or passively supported it, but they were less conscious, less resolute. On the stage of

political democracy, the inferiority of their social sense rendered possible the deception practiced by adventurers, impostors, by petit bourgeois parliamentarists, and honest blockheads who were fooling themselves. But when it was a question of an open class war, they followed more or less the devoted minority. This situation still found its expression in the organization of the National Guard. If the existence of the Commune had been prolonged, this reciprocal relation between the advance guard and the masses of the proletariat would have been more and more strengthened. The organization that would have been formed and consolidated in the process of the outright struggle, being an organization of the working masses, would have become an organization of their dictatorship, the Soviet of the delegates of the proletariat in arms.

Prisons in Soviet Russia

By PIERRE PASCAL

(Translated from "La Vie Ouvrière," by Eden and Cedar Paul.)

CAPITAL punishment no longer exists in Russia, except on the fighting fronts and in the disturbed regions where a state of siege prevails. Even here court martials are not empowered to carry out any death sentence without the sanction of the Supreme Army Council and the Supreme Court of the Republic.

I must refer once more to the Extraordinary Commissions which have been such a nightmare to the foreign world. Despite all the verbiage of the journalistic romancers, and of persons with a taste for the horrible, these commissions are orderly institutions which work in the most prosaic fashion in accordance with prescribed regulations. Nor is their name legion, as the capitalist press would fain have us believe. There is one such commission in each administrative district, so that there are forty-four in the whole of Russia, including the Siberian Commission and the All-Russian Commission. Their total staff comprises 6,290 persons, of whom a considerable proportion are engaged in perfectly inoffensive clerical work as copyists, classifiers, etc., and as messengers from one office to another. Furthermore, the Extraordinary Commissions have nothing in common with the police system of the Tsarist régime. Their members never exhibit the servile and bestial characteristics of the ordinary police. Nor will you ever find among them the callousness of the professional policeman, whose sensibilities have been blunted and whose reason has been stultified by habit.

I have been personally acquainted with several commissars of the Extraordinary Commissions. Their manners towards those with whom they had to deal as offenders were like their manners towards other men. They showed no brutality and used no abusive language. They were all characterized by the same earnest desire to fulfill their

duty, to be just even towards an enemy, and to defend the Revolution. Nowhere in the Republic, except in the Red Army, is discipline more strictly preserved. For a long time any abuse of power, any dereliction of duty on the part of an agent of an Extraordinary Commission was punished by death. The punishment now is penal servitude for life.

I do not deny that malpractices may have occurred from time to time, and here and there, in the huge territories of Russia. The Soviet Republic is not the kingdom of God on earth. It is realizing its possibilities slowly and painfully, feeling its way amid infinite suffering and in the face of enormous difficulties. Nevertheless, I have had ample experience to justify my assertion that the Extraordinary Commissions are amazingly well conducted. There is nothing haphazard about their procedure. I can hardly repeat too often that everything is done in accordance with carefully considered regulations, and that there are checks and counter-checks to prevent abuses of power and miscarriages of justice.

The case against those charged with offences is conducted with scrupulous care. Proper records are kept of all the evidence. Each prison has to make a return every morning at eleven, stating the number of persons kept under lock and key. There is an enquiry office where the public can procure all necessary information concerning the prisoners. The latter are allowed to receive visits from their relatives. The prisoners enjoy the same dietary as the warders, but are allowed in addition to eat anything that is brought them by their friends.

So much for the repressive functions of the Commissions. But they likewise have positive functions, which are far more momentous. Now (February 27, 1920), that the Republic has tri-

umphed over its enemies, the repressive functions pass into the background, and the positive functions are of increasing importance. The Republic has to face the problem which the collapse of capitalism has imposed or will impose upon all the nations.

The most important task of the Commissions is to assist in promoting economic recovery. They enforce the rights of the state monopolies. They confiscate the goods hoarded by speculators and profiteers, adding these to the stocks available for communal distribution. For example, at a time when a great many factories had been compelled to stop work for lack of silk, the Moscow Extraordinary Commission discovered more than 4,000 yards hidden away in the storehouses of an ex-shopkeeper.

Another way in which the Extraordinary Commissions contribute to the industrial recovery of the country, is by promoting labor discipline, both among the managing engineers and among the workmen. It will be remembered that in the early days of the Soviet régime there was a concerted sabotage among the higher grade employees. Now most of these have put their specialized knowledge at the service of the Soviet Republic. But a certain supervision is requisite for all grades, and this is carried out by overseers in the service of the Extraordinary Commissions. These men have the power of effecting arrests, but only upon a warrant from the Factory Committee. Moreover, arrests are extremely rare. A comrade who spent six weeks in the great factory at Sormovo, where from 7,000 to 8,000 workmen are employed, said that during that time only two or three arrests had taken place. The work of the overseers is preventive far more than punitive.

A similar corps of overseers secures the efficient working of the railway service; and under present conditions the rôle here is even more important than in the factories. The railway overseers are specialists familiar with all the conditions of the railway service.

Thanks to these peaceful, positive labors of the Extraordinary Commissions, the power of the Soviet Government has been coordinated throughout the immense domains of Russia. The organization of the Terror (improperly so called, as I have shown) was necessitated by the attacks of the counter-revolution from within and from without. Under the new conditions, however, the Extraordinary Commissions are able to devote themselves to the organization of production and transportation.

Since the death penalty has now been abolished, you will be wondering how the Soviet Republic deals with the dangerous criminals who would formerly have had to suffer capital punishment. Let me describe my recent visit to a labor camp, where such people are now being cared for.

Starting from the idea that criminals are the victims of capitalist society, and must therefore not be punished but reformed, the republic places these unfortunates in surroundings which will teach them to work, and where they will acquire

the elements of education. Those who are convicted are selected and placed in various categories, so that each may receive the special attention he needs. This particular work is done in the famous Butyrki prison in Moscow, and from here the condemned are sent to suitable establishments where they are to be taught how to become useful citizens.

There is a dearth of suitable buildings, so that the Republic is unable to carry out the scheme in all its magnitude. But, as far as the work goes, it constitutes a veritable revolution in the penal system.

Prisoner Camps

The different camps are arranged as follows: There are labor camps with internment, labor camps with no curtailment of liberty, a woman's camp, an agricultural colony; a special camp for young persons, an asylum for abnormal individuals. The old-fashioned prisons, those plague spots of capitalism, have been transformed; the fresh air has swept through them, making them clean and sanitary. Such places are reserved as asylums for professional criminals who are considered hopeless cases. The main object is to allow the criminal to lead as normal a life as possible, and to regenerate him by labor and education.

A typical establishment is the labor camp. To give an idea of how such a place is run I will quote a clause from an instruction, dated May 1 of last year. "Each camp must be furnished with baths, washhouses, and disinfecting chambers. The day's work shall not be more than eight hours; if overtime proves to be necessary, such overtime shall be worked in strict accordance with the labor code of the Republic. Wages shall be the same as those fixed for the ordinary trade in a given locality. The prisoners shall elect their own foreman, who shall act as intermediary between themselves and the administration. All complaints shall be entered in a book, which shall be placed in charge of the foreman, who shall see that the complaints are carried forward to the authorities. Any prisoner who shall display eagerness for his work shall be eligible for remission of sentence, etc."

Of course, I was well aware of these regulations, and yet I must say I was surprised to find how scrupulously and intelligently they were carried out. The camp which made the deepest impression on me was the Camp of St. John. Here the prisoners are subjected to a severer rule than elsewhere. For instance, they are not allowed to go and work in the neighboring town, a privilege that is granted in all the other camps. I spoke to practically all the prisoners who are living in this old monastery. As it was Sunday, the prisoners were not at work. They were in their rooms chatting, reading, writing, playing chess or dominoes, gathered round the fire. Not one complained of the food. Indeed, they receive a ration equal to the Red Army ration, when the soldiers are not actually on the fighting front. Bread, potatoes, oatmeal, cabbage, herrings, lentils, and fats, not to mention salt, sugar, and tobacco.

There are 424 prisoners in this camp, of whom
