GAS LOG
By Bob Finstein

The same gas that made the automobile go is now providing comfort and convenience in homes throughout the country.

The gas log is a portable unit that can be used in virtually any room of your house. It is easy to install and requires no special training. The gas log can be used to heat a room or to provide central heating for your home.

It is estimated that the gas log market is growing at a rate of 10 percent per year. This growth is expected to continue as more people become aware of the benefits of gas logs.

The gas log provides a warm and cozy feeling to any room. It is an excellent way to save money on your heating bill.

The gas log is also a safe and reliable source of heat. It is less likely to cause fires or other hazards than other types of heating systems.

In conclusion, the gas log is an excellent choice for those who are looking for a warm and comfortable heating system. It is easy to install, requires no special training, and provides a safe and reliable source of heat.
